The most important recent EB II site is Arad, E of Beer-sheba, where Ruth Amiran's exceedingly important excavations since the 1960s have revealed much of the 50-acre site's city plan. It includes a massive masonry wall with many round towers; an extensive and well-laid-out domestic quarter with broadroom dwellings; a "twin temple"; a "palace"; and an enormous catchment system and deep reservoir. Among the small finds are a potsherd with a signature of Narmer, the first pharaoh of Dynasty 1 in Egypt; imported Egyptian pottery; painted Abydos wares like those found in Dynasty 1–2 tombs; and materials linking Arad with a number of EB II "colonies" of Arad found by Israelis throughout the Sinai. ʿAi is also important, with massive city walls, several gates, and a large colonnaded temple with Egyptian Dynasty 1–2 alabaster vessels. Egyptian trade is further illustrated at ʿEn-Besor, a way station or trading emporium at the mouth of the Wadi Gaza, which has yielded more than 30 sealings for jars (or grain sacks) of Dynasty 1 date. Across the N Sinai, Israeli archaeologists have found small EB II camps along the caravan routes with both Palestinian and Egyptian materials, further evidence of a brisk trade. Current dates for EB II, ca. 3100–2650 B.C., emphasize the long-held correlation with the Archaic period in Egypt, Dynasties 1–2, and thus provide a relatively well-fixed chronology, although somewhat higher in accordance with the current tendency to raise the date of the beginning of Dynasty 1.

Early Bronze III, ca. 2650–2350 B.C., was a period of urban collapse in the N, still poorly illuminated. As previously, it was marked by lustrous "Khirbet Kerak" red and black pottery of Anatolian derivation. In the S, recent excavations have brought to light a renewed urban phase, with even larger fortifications. The main sites are Tel Yarmut, near Beth-shemesh, with massive embankments, city walls, towers, and gate; Lahav, near modern Gath; and Petrie's old site of Tell el-Ḥesi, reexcavated by an American expedition. At the end of this period, however, these sites declined, like those of EB II, and there were only scattered unfortified settlements (e.g., Nahal Rephaim).

Several recent discoveries in Jordan testify to the fact that the Palestinian urban EB II–III cultures flourished to a hitherto unsuspected degree in Transjordan. W. Rast and T. Schaub have excavated the extensive town site of Bâb edh-Dhrâʿ on the Lisan, which had large defenses, a temple area, and a vast cemetery that included unique charnel houses, nearly all abandoned by EB IV. To the S, Numeira is a one-period EB III walled site, destroyed (by earthquake?) at the end of EB III. A number of other EB II–III sites are now known in Jordan through surface surveys. In the N, German and Jordanian work at Mughayir, E of Irbid, has brought to light an urban center fully comparable to those in W Palestine. S. Helms' site of Jawa, far out in the NE desert near the modern Iraqi border, was founded at the beginning of EB I, but the date of the massive fortifications is not yet clear (i.e., they may belong to the Middle Bronze citadel). The Transjordanian sites, like those of W Palestine, generally ended as *urban* sites with EB II or EB III; but S. Richard's site of Khirbet Iskander, on the Wadi Wala, flourished precisely as a walled town in EB IV, thus far unique. Then it, too, like nearly all the other large EB sites in Jordan, was abandoned entirely throughout the MB and LB Ages.

The explanation for the end of the EB II–III urban period is sought today not in "Amorite invasions," as previously, but in a complex interrelationship of causes, among them possible climatic shifts, environmental degradation, overpopulation, bureaucratic mismanagement, and possibly the diminution of international trade with the beginning of Egypt's "First Intermediate period" (Dyn. 6–11).

Early Bronze IV, ca. 2400–2000 B.C. (Albright's "Middle Bronze I," Kenyon's "Intermediate EB–MB"), was the posturban phase. A former dark age, it is now illuminated by hundreds of newly discovered small settlements and seasonal camps in the marginal zones, especially the Jordan Valley and the Negeb-Sinai. Dozens of isolated cemeteries, represented by hundreds and hundreds of shaft tombs in S Palestine, have yielded secondary disarticulated burials. Thus the settlement at Be'er Resisim in the Negeb highlands, together with the vast cemetery at Jebel Qaʿaqīr in the Hebron hills, excavated by W. G. Dever, seem to reflect the way of life of migratory pastoral groups. In central and N Palestine, however, as well as in the Jordan Valley, an increasing number of small, permanent agricultural villages are known; most are not on the older *tell* sites, most of which remain abandoned. The new evidence seems to confirm the notion of several distinct "families," or regional cultures. The Transjordanian family may have preserved some of the urban character of the preceding EB II–III period, for S. Richard has brought to light an EB IV fortification system and urban-style occupation at Kh. Iskander, on the Wadi Wala (see further Dever 1980; Richard 1987).

Palestine appears to have been a relatively isolated hinterland of Syria in EB IV, where pastoral nomadism and rural villages characterized the socioeconomic structure. This contrasts with Syria, where in EB IV, "Palace G" at Ebla produced evidence of a network of international relations and a large archive of texts. Some contacts between Palestine and Syria are attested, however, in a few items, probably brought by migrating pastoralists or by trade, such as Syrian "caliciform" pottery at several sites in the N, and a silver goblet of provincial Ur III style found in a shaft tomb at ʿAin es-Sâmiyeh near Jerusalem. Contacts with Egypt, which was in its own "dark age" in the First Intermediate period (ca. 2315–1999 B.C.), were nonexistent.

C. The Middle Bronze Age (ca. 2000–1500 B.C.)

The MB has been well illuminated by recent archaeological work (see further Broshi and Gophna 1986; Dever 1987). The three phases designated by Albright as "Middle Bronze IIA–C" (using "Middle Bronze I" for the previous period) are increasingly termed Middle Bronze I–III, but not all authorities yet agree on the transitions, or on the absolute dates. Israeli archaeologists recognize only an "MB IIB" (i.e., combining the last two).

The first phase (ca. 2000–1800 B.C.), coinciding almost exactly with the renascent Egyptian Dynasty 12, witnessed a major shift in settlement patterns, back to the central agricultural zone (see further Gerstenblith 1983). This entailed the reoccupation of nearly all the older urban sites and the founding of numerous new, small unwalled settlements. Many of these sites would be fortified before the end of the period. Excavations of the Tel-Aviv University since 1973 at Tel Aphek are the most revealing, combined with extensive surface surveys throughout the Sharon Plain. Aphek exhibits an unfortified "pre-palace" phase, then a "palace" phase with city walls and a palatial administrative building. The rich ceramic repertoire is in the new fast wheelmade style, often beautifully burnished and sometimes painted, which seems to reflect Syrian influence. Recent publication of the earlier excavations at Dan, Akko, Beth-shan, Shechem, Gezer, and many isolated tombs reveal the same ceramic developments, along with the introduction of new cist tombs and the introduction of true tin-bronze metallurgy—often accompanied by early earthen ramparts and city walls. At Dan there was found an almost intact triple-entryway mudbrick and plastered city gate, still standing to its original three-story height (Biran 1984).

Middle Bronze II (ca. 1800–1650 B.C.), coeval with Egyptian Dynasty 13, saw the fuller development of highly urbanized city-states, nearly all of which were fortified (see further Kempinski 1983 on this and the following phase). Recent excavations at Dan, Hazor, Akko, Kabri, Shechem, Tel Zeror, Tel Poleg, Aphek, Jerusalem, Jericho, and elsewhere further document this trend. Some sites were first founded in this period, like Ashdod and its port, Tel Mor. Egyptian imports such as scrabs and alabasters increased, and Cypriot pottery was imported on a larger scale.

The final phase, Middle Bronze III (ca. 1650–1500 B.C.), marked the zenith of urban development in Palestine, and coincided exactly with the late "Second Intermediate" period and the Semitic "Hyksos" Dynasty 15 in Egypt. New sites like Gezer, previously unwalled, were heavily fortified; while existing defenses at other sites were augmented, often with several phases of construction in evidence. The typical system consisted of *terre pisée* embankments, a plastered *glaçis* (or ramp), at least one masonry and mudbrick city wall, often an outer revetment wall, and even dry moats or fosses. Both double- and triple-entryway gates were found, and both casemate and solid walls. Even tiny forts like Tel Mevorakh and Tel Mor on the coast near Tel Aviv, or small hill country sites like Shiloh, boasted massive fortifications.

Several small villages in the Jordan Valley, among the first such sites excavated, have brought to light MB III temples surprisingly like those formerly known at large urban sites such as Megiddo and Shechem. Among them are Kfar Ruppin and Tel Kittan near Beth-shan, and Tell el-Ḥayyat across the Jordan.

Two large urban sites demonstrate the main character of the period. Shechem had a massive embankment, revetted by an outer cyclopean Wall A (still standing 10 m high) and topped by casemate Wall B. Just inside the triple-entryway NW Gate was a two-story colonnaded palace, an attached tripartite private (?) temple, a barracks or citadel adjoining the gate, a large plastered plaza, and a *migdal* (or fortress) temple similar to the area D temple at Ebla. The entire complex is closely paralleled by stratum VII at Alalakh in Syria. Gezer exhibits an even larger wall and tower system, in places more than 15 m thick (the Inner Wall and Tower 5017), together with a large triple-entryway gate and a skillfully engineered, multilayered *glaçis*. To this period belongs the Gezer "High Place," an installation of 10 large steles in a N–S alignment with a stone basin and plastered pavement, probably a cult place of some sort.

The end of MB III saw virtually every site in Palestine violently destroyed, probably in connection with the expulsion of the Hyksos in Egypt under the renascent Dynasty 18 kings, ca. 1540–1480 B.C.. Nearly all the more recent sites noted above have produced clear evidence of these destructions, particularly Shechem and Gezer. The destruction of the Hyksos capitol of Avaris in the Delta, now positively identified by the excavations of M. Bietak at Tell ed-Dabʿa, must be related to these events. The site shows a Canaanite population and material culture, including tombs with Palestinian weapons and pottery, beginning as early as 1800 B.C. or even earlier (in Levels G–F).

Literacy seems to have begun in Palestine toward the end of the MB Age. A few more examples of the "Proto-Sinaitic" script have turned up (as at Gezer); and fragmentary cuneiform tablets are known from Hazor, Megiddo, Gezer, and Hebron.

D. The Late Bronze Age (ca. 1500–1200 B.C.)

The LB I, ca. 1500–1400 B.C., was a postdestruction horizon that is still not well illuminated (see further Gonen 1989; Leonard 1989). The LB IIA–B period, however (ca. 1400–1200 B.C.), is increasingly well known, especially the IIA phase of the "Amarna Age" in the 14th century B.C. The major sites recently investigated are Tell Abu Hawam, Tel Kittan, Tel Mevorakh, Aphek, Gezer, Jerusalem, Tel Batash in the Sorek Valley, Lachish, Ashdod, Tel es-Sariʿa in the N Negeb, and Deir al-Balaḥ in the Gaza area. Across the Jordan, important LB remains have come to light at Deir ʿAllā, Tell es-Saʿidiyeh, Pella, Irbid, Amman, and other sites.

Virtually all these sites, despite their strategic location and importance, remained unwalled, or simply made slight reuse of the old MB fortifications. The sole exception may be Gezer, where the "Outer Wall" system has been dated by the excavators to the LB IIA period.

Among the most important finds are new temples at Tel Kittan, Tel Mevorakh, and Lachish (the "Summit Temple"), and in Jordan at Deir ʿAllā and Amman. Large, multiroomed Egyptian "residencies" have been recognized now at major centers such as Gezer, Aphek, Ashdod, Tel es-Sariʿa, and Deir al-Balaḥ. Finally, rich LB II tombs have been partially published from Akko (the "Persian Garden"), Dan, Shechem, Gezer (Cave I.10A), Jerusalem, and elsewhere. The general picture of political conditions and socioeconomic structure in Palestine, as revealed in the well-known Amarna letters from Egypt, fits very well indeed with the most recent LB II archaeological discoveries. All indications point to Egypt's incorporation of Palestine into the New Kingdom empire.

There are now a number of confirmed destructions at the end of the LB and the beginning of the Iron Age, from ca. 1250–1150 B.C., but virtually none would any longer be attributed to an "Israelite conquest" under Joshua. Hazor appears to have been destroyed ca. 1250 B.C., Lachish ca. 1150 B.C., both by unknown agents. Tell Abu Hawam, Tel Mevorakh, Aphek, Ashdod, and other coastal sites were likely destroyed by the incoming Philistines and other "Sea Peoples." Many sites, such as Megiddo, Beth-shan, Shechem, and Gezer, show considerable continuity or were not destroyed at all. It is increasingly clear that Egyptian influence, despite declining Dynasty 20 power, continued even as late as Rameses VI.

E. The Iron I Period (ca. 1200–900 B.C.)

The early Iron Age ("Iron IA–B," 12th–11th centuries B.C.) saw the appearance of two new ethnic groups among the population of Canaanite Palestine, the Philistines and the Israelites. Both are well illustrated by recent archaeological finds, in what must be accounted among the most significant archaeological advances of our era (see further Dothan 1982; Callaway 1988; and especially Finkelstein *AIS*).

The main Philistine domestic sites are Ashdod, Gezer, and Tel Miqne (Ekron). The appearance of new architectural and ceramic styles is clearly evident, including both imported Late Mycenaean III:$C1_b$ monochrome pottery and its locally made bichrome derivatives—reminders of the Aegean origins of the "Sea Peoples." Tel Qasile, on the coast at the mouth of the Yarkon River, has revealed a sequence of several well-preserved temples with quantities of Philistine pottery and other Aegean elements. Deir al-Balaḥ, in the Gaza strip, has produced more than two dozen distinctive terra-cotta anthropoid coffins from the late 13th century B.C., similar to those long known from Beth-shan and elsewhere, but made in a local potter's workshop. These Egyptian-style coffins suggest that some of the earliest "Sea Peoples" appeared along the coast of Palestine as Egyptian mercenaries even before the time of Rameses III. Today many scholars believe, however, that the distinctive bichrome painted pottery of the Philistines came into vogue only in the second generation, ca. 1150 B.C., after these people were partly assimilated.

Early "Israelite" settlements (or better, "Proto-Israelite") have now been clearly recognized for the first time. Most were small, unwalled hilltop villages in central Palestine, Galilee, and possibly the N Negeb, established *de novo* and not on the ruins of Canaanite LB urban sites. Particularly important (although largely unpublished) are ʿAi, Raddanah, Shiloh, and Giloh, all near Jerusalem; ʿIzbet Ṣarṭeh, near Aphek (probably Biblical Ebenezer); and probably Tel Esdar, Tel Masos, and Beer-sheba, all in the N Negeb. These villages are characterized by early "four-room" courtyard houses, stone silos, rock-hewn cisterns, terrace farming, crude iron implements, transitional LB/Iron I pottery (including the well-known "collar-rim" store jars), and even a few Old Canaanite (or "Proto-Hebrew") ostraca (ʿIzbet Ṣarṭeh). Most sites were abandoned in the late 11th–early 10th century B.C. with the growth of urbanism under the United Monarchy of Israel. In addition, extensive Israeli surveys in ancient Ephraim and Manasseh, in Lower Galilee, and along the Sharon Plain have revealed several hundred small agricultural villages of the 12th–11th centuries, all probably "Israelite." These new discoveries clearly discredit the older "conquest" model of Albright. Instead, they support a modified version of the Alt-Noth "peaceful infiltration" model, or even the "peasants' revolt" model of Mendenhall, Gottwald, and others. *Any* model for the Israelite settlement must now take into account: (1) the *continuity* from LB Canaanite culture into early Iron I, especially in ceramics; and (2) the *indigenous* factors in the Iron I hill country settlement, i.e., changes in settlement patterns, demography, and socioeconomic structure, rather than supposed "invasions," from Transjordan or otherwise. See ISRAEL, HISTORY OF (ARCHAEOLOGY AND THE ISRAELITE "CONQUEST").

Two possible early Israelite cult sites are now known. The Mt. Ebal installation, a tower or large altarlike structure with pits containing many burnt animal bones, is dated clearly to the 12th century B.C., but its interpretation is disputed. The "Bull site" east of Dothan is of the same date, and its enclosed altar, standing stone *(māṣṣēbāh),* and a finely cast bronze bull strongly suggest an El (or Canaanite) sanctuary in the heartland of Israelite tribal territory.

The late Iron I period in the 10th century B.C. (Albright's "Iron IC," or Israeli "Iron IIA") is now best documented in a number of Davidic-Solomonic constructions at increasingly urbanized sites (see further

Dever 1983). Nearly identical three-entryway city gates and casemate walls at Hazor, Megiddo, and Gezer provide a commentary on I Kgs 9:15; and both Megiddo and Gezer also have 10th-century "palaces" that were probably residences of royal governors. Of the Temple of Solomon in Jerusalem, nothing remains. The plan of the structure, however, and details of its decoration and furnishings, may now be confidently reconstructed from the increasing number of Bronze and Iron Age Canaanite-Phoenician temples and cultic artifacts brought to light. These include the MB tripartite "Temple 7300" at Shechem; similar temples at Mumbaqat and elsewhere in Syria; more "Proto-Aeolic" capitals; artistic motifs on ivories and seals; bronze stands; a life-sized horned altar from Beer-sheba; and other data. See TEMPLE, JERUSALEM.

The extension of Solomonic power is well illustrated by a string of forts recently investigated through the Negeb, extending to the earliest fortress at the oasis of Kadesh-barnea in the Sinai. Finally, Jerusalem itself has been extensively dug, where Y. Shiloh has uncovered several 10th century B.C. pillared houses on the E slope S of the Temple Mount, on a terraced and stepped stone podium that recalls the biblical *millo,* or "filling." On the coast, Tel Mevorakh provides rich evidence of imported Cypro-Phoenician pottery; and Tel Miqne and Ashdod illustrate the continuing culture of the Philistines along the coast, never fully assimilated. Increasing evidence points to the end of Iron I with the convergence of the death of Solomon, the raid of Shishak, and the breakup of the United Kingdom, ca. 920 B.C.

F. The Iron II Period (ca. 900–600 B.C.)

The Iron II period, representing the full development of the Israelite monarchy and the zenith of Israelite material culture, has been especially well documented by recent Israeli archaeology (see further Shiloh 1980; Horn 1988; Gitin and Dever 1989). Nevertheless, there are still serious chronological difficulties, and the 9th century B.C. in particular is still inadequately attested.

We can only mention the main sites, moving from N to S. Dan, excavated since 1966 by A. Biran, remains largely unpublished but has revealed a massive 9th-century "High Place" of ashlar masonry; an associated shrine with altars, anthropomorphic figurines, a horned altar, bronze implements and shovels, and burned animal bones; and both outer and inner triple-entryway city gates, with a connecting roadway. Yadin's last campaigns at Hazor (1969–70) brought to light a magnificent 9th-century water shaft hewn into the bedrock, with an underground gallery reaching the water table deep underground. Megiddo, reexcavated by Yadin in the 1960s, now makes clear that the well-known "stables" (perhaps storehouses) are 9th century B.C. (i.e., Ahab, rather than Solomon), as is its water system. Tell el-Farʿah (N), dug in the 1950s–1960s by R. de Vaux, has finally published the Iron Age sequence, which has important domestic material and cultic remains. The 10th century B.C. elite quarter of the City of David in Jerusalem continued to develop, and it has yielded not only a good pottery sequence but also figurines, inscriptions, and a cache of late 7th century B.C. bullae featuring many Judean names known from the Hebrew Bible. Other Iron II Israelite sites include Yoqneam W of the Megiddo pass; Shechem, not yet published; and Gezer, with important domestic remains, reused and augmented city walls and gates, and destruction levels of the Neo-Assyrian period. Tell Keisan, near the bay of Haifa, gives evidence of Cypro-Phoenician cultural influence, as do Dor and Tel Mevorakh farther S on the coast.

In the S, both Arad and Beer-sheba, excavated by Y. Aharoni, yield nearly complete town plans of an Iron II Israelite fortress and district store-city, respectively, both with sanctuaries. At Arad, a collection of several dozen ostraca is especially noteworthy. Lachish, reexcavated since 1973 by D. Ussishkin, is perhaps the key site. The well-attested destruction of the gate area in stratum III can now be fixed to the raid of Sennacherib in 701 B.C. (not 598 B.C., as formerly). This raises the Iron II chronology of Judah by as much as 100 years and is of revolutionary import. Other important Judean sites recently dug are Khirbet Rabûd (now "Debir"), Lahav, and Tell el-Ḥesi. For the 7th–early 6th century B.C., both Tel Miqne (Ekron) and Tel Batash (Timna), in the Sorek Valley, provide a wealth of information, including evidence of industry and trade with the Philistine coast. The latter is also illustrated now by the upper levels at Ashdod.

In the Negeb-Sinai, some of the Iron I forts and the fortress at Kadesh-barnea continued into Iron II. The 8th century B.C. hilltop fort and shrine at Kuntillet ʿAjrûd, in the E Sinai, are known only from

preliminary publications. Kuntillet ʿAjrûd has yielded dozens of graffiti and votives of a cultic nature, including a painted stone jar with two Bes figures, a half-nude enthroned female, and a Hebrew inscription mentioning in a blessing formula "Yahweh of Samaria and his Asherah." To the extreme S, Nelson Glueck's excavation of Tell el-Kheleifeh, on the Gulf of Eilat (Ezion-geber?), has finally been published as well as possible.

Among scattered finds are numerous Iron II chamber and bench tombs, yielding large collections of pottery, figurines, weights, and several inscriptions. Judean tomb inscriptions are now known from Khirbet Lei and Khirbet el-Qôm, in the Hebron hills, as well as from Silwan (Jerusalem). The 8th century B.C. el-Qôm inscription seems also to mention Yahweh and Asherah together.

Outside Israel, the contemporary Transjordanian states of Ammon, Moab, and Edom are increasingly well documented by a number of excavations. The main sites are Pella, Amman, Tel es-Sa'idiyeh, Amman, Heshbon, Dhibân, Buseira (Bosra), Tawilan (Tema?), and ʿUmm el-Biyara (Sela?). The material culture is parallel to that of Israel, as are the closely related West Semitic dialects now reconstructed from a growing *corpus* of ostraca and seals (see further Dornemann 1983; Geraty and Herr 1986; Sauer 1986). The cult, however, differs substantially, to judge from the names of known deities and cult practices. The best evidence for the Edomite cult comes from a hoard of exotic 7th-century figurines found at Qitmit, S of Arad in SE Israel.

Both the Assyrian destructions in the N in 735–721 B.C., and those of the Babylonians in Judah in 587/586 B.C., are well attested in clear destruction levels at nearly all the sites mentioned above. Nevertheless, surveys have shown that many smaller sites escaped destruction, especially in Judah, where an "Iron III" phase may be detected extending well toward the end of the 6th century B.C.

WILLIAM G. DEVER

PERSIAN PERIOD

Between 545 and 538 B.C.E., the whole of the Middle East—including Palestine—was conquered by the Achaemenid kings of Persia. During the reign of Darius I (522–486 B.C.E.), its borders were consolidated and its interior division was determined. Accordingly, some twenty satrapies were established, each of which was divided into subprovinces (compare the description in Esth 1:1).

Palestine constituted only a tiny part of one of these satrapies, named "Beyond the River" (Ezra 4:10–11), a term which was borrowed from the former Assyrian administration and perhaps from an even earlier period (see 1 Kgs 4:24). In addition to Palestine, the province included Syria, Phoenicia, and Cyprus. According to Herodotus (3.5), its N border was in Poseideion (now al-Mina at the mouth of the Orontes), and its S border was at Lake Sirbonis (Bardawil Lake).

The subdivision of Palestine appears to have been based on the older divisions of the Assyrian and Babylonian administration, probably related to the territorial boundaries of the various peoples living in the country during that period. The best known of these provinces were Megiddo, Dor, Samaria, Judea, Ashdod, and Gaza. At the head of each province was a Persian governor or a local representative who was responsible to the satrap of "Beyond the River" for its efficient administration, payment of taxes, etc. This arrangement lasted for some two hundred years, from 538 to 332 B.C.E., when the entire Middle East was conquered by Alexander the Great.

A. Archaeological Research

From the standpoint of archaeology, the history of the Persian period in Palestine is obscure, despite the fact that it is relatively recent. The information provided by the Bible, our major literary source for the Israelite period, gives anything but a clear picture, and even this does not go beyond the middle of the 5th century B.C.E. The same is true of the following period with regard to the information provided by Greek literature (Herodotus, Pseudo-Scylax) and the Apocrypha.

Some epigraphic sources have been added through recent discovery. Among them are the inscriptions of Darius I found at Persepolis, the inscriptions of the Phoenician kings discovered at Sidon, the archives of the Jewish military colony from Elephantine in Egypt, the inscriptions found at Tell el-Maskhuta in Egypt, where a similar Arab military base existed, and the archive of the satrap, ʾArsam.

Palestine, too, has yielded some outstanding discoveries. Of prime importance are the Samaritan papyri dating to 375–332 B.C.E. discovered in a cave at Wadi Daliyeh, and the hoard of bullae from a postexilic Judean archive found near Jerusalem. Also important are some Egyptian steles found at Gezer and Acco. But the main epigraphic materials in Palestine are the ostraca, discovered at many sites and written in Aramaic, Hebrew, and Phoenician. Most are lists of proper names (Hebrew, Phoenician, Arabic, Babylonian, Egyptian, etc.) or receipts for consignments of food, merchandise, etc. Although they give no indication of contemporary events, they are of considerable importance for our knowledge of the everyday life of the period. They also shed light on the country's military and fiscal organization, and indirectly on the composition of the population. Short inscriptions, some with the titles of officeholders, have been discovered on seals, seal impressions, bullae, and coins.

However, the combined literary and epigraphic sources still provide little information of the history of Palestine during the Persian period, and the overall picture which emerges remains unclear. Unfortunately, our knowledge of the material culture of this period in Palestine has for many years been unorganized and has fallen short of that of the previous periods.

Significant advances in the study of the period have occurred relatively recently. Settlements of the Persian period have been discovered in Galilee and the coastal plain: Tel Dan, Tel Anafa, Hazor, Beth-Yerah, Taanach, Tel Qedesh, Tell Qiri, Tel Yokneʾam, Akzib, Acco, Tell Keisan, Uṣa, Gilʾam, Shiqmona, Tel Megadim, Tel Dor, Tel Mevorakh, Tel Zeror, Mikhmoret, Makmish, Jaffa, Tell Qasile, Tell Abu-Zeitun, Aphek, Tirat Yehudah, Ashdod, and Tel Seraʾ, as well as the more recent excavations at Gezer, Lachish, Tell el-Ḥesi, and Tell Jemmeh. Excavations revealing Persian occupation have been conducted in the mountain region at Shechem, Gibeon, Tell el-Fûl, Jerusalem, Ramat Raḥel, and En-gedi; and in the Negeb, Persian-period remains were found at Beer-sheba, Arad, and Kadesh-barnea. Further evidence has come from excavations and surveys in Sinai. Of special importance were the excavations at Hazor, Shiqmona, Tel Megadim, Tel Dor, Tel Mevorakh, Tel Michal, and En-gedi, since at these the Persian

strata were better preserved and could serve as a frame of reference to investigate the regional assemblages. These finds are now enriched by homogeneous assemblages from Shechem, Wadi Daliyeh, Qadum, the Sheikh Ibrahim cave near Jerusalem, the burial cave at ʿAin ʿArub, N of Hebron, as well as the recent finds from Tell el-Mazar E of the Jordan.

In some of these excavations the stratum of the Persian period contains two phases or more, while at other sites the finds belonged to only part of the Persian period. It is now possible to analyze the development of the Persian material culture in Palestine and to classify the finds into early and late.

Recent excavations have cast a new light on cult objects. Important collections of statuettes and figurines have been discovered at Tel ʿErani, Tel Ṣippor, and Tel Dor. Our knowledge of the various types of seal impressions has been expanded by the excavations at Ramat Raḥel and by the collection of bullae and seals from the Jerusalem area.

B. The Character of the Material Culture

1. Regional Diversity: Eastern and Western Influences. A study of the material culture of Palestine reveals that the country was divided into two distinct regions at the beginning of the period: one included the hill country of Judea and Transjordan (and to a lesser extent Samaria), while the other was Galilee and the coastal area. The border between these two cultural areas is at times very sharp—almost like a border dividing two countries. Without an understanding of this division of Palestine it is difficult to understand the material development of the culture of the period.

An analysis of the remains of these two regions demonstrates that the material culture of the hill country is basically "eastern" in character. It is made up of a local culture (which continues the Israelite tradition) and eastern influences (Assyrian, Babylonian, but also Egyptian). The coastal culture, on the other hand, is basically "western" in nature, containing eastern Greek, Cypriot, and Athenian elements. It is therefore probable that the Greek material culture considerably preceded the Macedonian conquest and that Greek materials had already been adapted to local traditions and customs. The main bearers of this new culture to Palestine were probably Phoenicians and only secondarily Greek soldiers and settlers.

It seems then that Albright's definition of "Iron III" for the culture of this period is justified if it is applied only to the mountain region of Judea and Benjamin; it seems much less appropriate, however, for other regions of the country. Moreover, it is now evident that the difference between the "coastal" culture and that of the "hill country" is not a chronological difference as proposed by Albright, but rather a question of concurrent influences from "western" and "eastern" cultures over these respective areas.

2. Achaemenid Influences. From all that has been said so far, the fact remains that in the case of the material culture in Palestine one cannot distinguish any influence of the *Persian* material culture (i.e., the culture of the rulers by whose name we identify the entire period). The scanty Persian influence is mainly expressed by isolated types of ceramics; by a small number of ornaments and Achaemenid style metal objects, which also appear to have been made by the Phoenicians; and by a few clothing accessories on some Phoenician figurines.

The main influence of the long period of Persian rule in Palestine is seen not in the material culture but only in those spheres immediately connected with political affairs, such as administration, military organization, finance, and taxation. In each of the few inscriptions from Wadi Daliyeh so far published, the dates given are according to the royal years of the Persian kings, and the officials named are local Persian administrators. Information about military organization is contained on an ostracon recently discovered at Arad, which mentions an individual who belongs to a certain "standard" (i.e., a Persian military unit also known from Elephantine in Egypt). The military strongholds and granaries discovered at nearly all the large sites in Palestine reflect the maintenance of the Persian military system. Many of the weapons and chariot accessories found in the tombs of the period are of the Scytho-Iranian type, just like those found in the guard rooms at Persepolis, confirming the earlier supposition that some of the tombs at Gezer were in fact the graves of Persian soldiers. Persian influence is most conspicuous, however, in matters of taxation and money. Whereas Persian rulers could be liberal and magnanimous toward the conquered people in matters of cult and administration, in matters pertaining to the economy and taxation they were rather severe. The taxes levied on the various provinces were determined according to their size

and prosperity, and had to be paid in precious metals only. The seal impressions on the handles of vessels from Judea, which give evidence of the taxation system, use motifs taken from Achaemenid royal motifs. Their stratigraphic contexts (only from the end of the 6th to the end of the 5th century B.C.E.) prove that matters of administration and finance in Judea were only initially conducted by officials of the Achaemenid empire. Subsequently, these Achaemenid seals were replaced by seals written in Aramaic bearing the name of the province, *yhwd.* This implies a change in the administration of the province at the end of the 5th century B.C.E., perhaps at the time of Nehemiah or a little later. Alt surmised that Nehemiah freed Judea from its subjection to Samaria and turned it into an independent province.

C. Stratigraphic Evidence of Conflicts

A detailed study of the sites of this period in Palestine allows us to conclude with some measure of certainty that there were two waves of destruction during the Persian period. We learn about the first through the excavations in the territory of Benjamin. A large number of the towns which had been spared the destruction wrought by Nebuchadnezzar were destroyed about a hundred years later (ca. 480 B.C.E.). No historical explanation has been found for this destruction, though it may be assumed that it occurred in connection with some minor war, such as that which threatened Judea in the days of Nehemiah. The picture is different concerning the second wave of destruction, which affected only the coastal regions and the Negeb apparently around 380 B.C.E. This destruction is connected with the Egyptian struggle for independence (ca. 404–400 B.C.E.), which spread two decades later to the lowlands of Palestine. This assumption is strengthened by two important finds: an inscription of Nepherites I (399–393 B.C.E.) at Gezer, and steles of Achoris (393–380 B.C.E.) at Acco and Sidon.

The end of the Persian period in Palestine is marked by staggered destruction levels that testify not to a single "death blow" but to sporadic conflicts associated with the demise of Persian power. Such conflicts included the Sidonian revolt of 351 B.C.E., which brought about the destruction of the province of Dor; the wars associated with Alexander the Great in the territories of Tyre, Acco, and Gaza; and the Samaritan revolt against Alexander, which resulted in the destruction of many major cities in these regions (e.g.: Megiddo, Acco, Tell Abu Hawam, Samaria, and Gaza). Several cities (Shiqmonah, Tel Ṣippor) may have been destroyed even as late as the wars of the Diadochi, as is proved by the coins of Alexander the Great which were uncovered within the destruction levels of the Persian period.

EPHRAIM STERN

NEW TESTAMENT PERIOD

Scholars did not systematically pursue the archaeology of the NT period in Palestine, (ca. 50 B.C.–A.D. 150) until roughly the second half of the 20th century. This was because of the relative paucity of Roman monuments in Palestine at a time when archaeology was dominated by interest in major architecture. Roman Palestine seemed to furnish few Greek and Roman temples, aqueducts, theaters, circuses, hippodromes, etc. This was at the very time when the imaginations of the 19th and early 20th century pilgrims and scholars had been captured by the splendid monuments of Egypt, Asia Minor, and Mesopotamia, most of which related to the OT period. On the other hand, Greece, Italy, and W Turkey still appeared to provide more than enough attractive architecture to illustrate the NT narratives, while the seemingly paltry finds of a few potsherds and coins from Hellenistic and Roman Palestine hardly seemed

worth the effort. Apart from the Temple Mount of Herod the Great in Jerusalem, most showpieces of Roman civilization came from other well-known Classical sites in the E Mediterranean. As late as 1960, W. F. Albright could cite relatively few discoveries of Roman Palestine in the revised edition of *The Archaeology of Palestine.* These included certain painted tombs of Tell Marissa, the mausoleum of the Tobiads at Araq el-Amir, the Hellenistic citadel at Beth-zur, the "fortress of Simon Maccabeus" at Gezer (now known to be misidentified), the town plan of Tell Marissa, ossuaries and tombs of the period, certain discoveries in Jerusalem (the walls, the Ecce Homo arch, the alleged Gabbatha pavement beneath the convent of the sisters of Zion), NT Jericho (excavated from 1950–51), the cities of Gerasa and Petra in Jordan, synagogues in Galilee (including Capernaum), and certain epigraphic discoveries, such as proper names, that echo those found in the NT. The Dead Sea Scrolls were not mentioned, but were discussed in detail by G. E. Wright in his 1962 work *Biblical Archaeology.* Thus interest in the archaeology of the NT period seemed to be dominated by the concerns of the classical archaeologist of the same period, including the hope of finding texts.

Researchers focused on sites mentioned in the NT. These included Capernaum, visited by Robinson in 1857, who identified the synagogue, but did not identify the site (Tell Hum) with Capernaum. The site was subsequently visited and probed by many until 1921, when it was systematically excavated by Dr. G. Orfali. In 1968, excavations resumed under Frs. Corbo and Lofredda. In Jerusalem, meanwhile, no less than 46 excavations were carried out before 1967 by a host of well-known archaeologists, including R. A. S. Macalister, E. L. Sukenik, J. W. Crowfoot, R. W. Hamilton, M. Avi-Yonah, K. Kenyon, and J. Hennessy. Among many questions pursued by excavators were the location of Golgotha and the tomb of Christ, the location and dates of the city walls of the Roman period, the search for Herod's palace, the discovery of the Ecce Homo arch, and the discovery and identification of the so-called Gabbatha pavement. Excavations at Caesarea, the political capital, were conducted from 1948 to 1963 by such luminaries as J. Ory, M. Avi-Yonah, A. Frova, A. Negev, and E. A. Link. Bethlehem and the Church of the Nativity fascinated generations of scholars, and publication of its remains by H. Vincent and F.-M. Abel began in 1914. Similarly Nazareth was excavated by M. Viaud from 1890–1909 and by B. Bagatti in 1954. Armchair archaeologists wrote about the archaeology of Antioch, Ephesus, Laodicea, and Athens.

A second focus of interest in archaeology of the period was on artifacts and items that illustrated the NT and other early Christian and postbiblical Jewish literature. Those who pursued this line described writing materials, the scroll and codex, the potter's craft, ancient tombs (so as to reconstruct on paper the tomb of Christ), inscriptions, ritual baths at Qumran as forerunners of Christian baptism, coins, and certain manuscripts discoveries (for example the Samaria Papyri, the Dead Sea Scrolls, the Bar Kokhba letters, the Bodmer papyri, and the Nag Hammadi finds), including papyri and codices containing alleged sayings of Jesus. This broad line of investigation promised less than the more narrowly defined study of inscriptions and papyri, which after all promised—and delivered—a host of evidence to solve various linguistic enigmas in the NT and other ancient literature. The study of the Roman period Egyptian papyri faced certain limits, namely, that one was extrapolating to Palestine from another Roman province with only similar, not the same, religious and political institutions.

On the other hand, the amount of archaeological knowledge about the NT period seems to have expanded exponentially since the 1960s. This is knowledge from systematic and large-scale excavations, thorough regional surveys, and pursuit of accidental discoveries. In this period the interests of the scholar have gradually shifted from those of Classical art and archaeology to include questions of the size and population of ancient cities and villages, reconstructions of rural and urban life, the nature and extent of Hellenism, the magnitude of Greek/Aramaic bilingualism, of the nature and extent of urbanism and of urban vs. village life, understanding of Jewish burial customs, evidence for the "God fearers" of the book of Acts, methods of identification of distinctively Jewish symbols, grasping more clearly early synagogue architecture, identification of house churches, understanding Herod the Great and his dynasty, developing the role of numismatics in historical reconstructions, realizing the dynamics of Roman-Jewish relations, and disclosing details of Roman rule. In addition, scholars have given attention to particulars of archaeological data of the period with a variety of goals in mind, such as determination of subsistence

patterns, study of regional Roman architecture, investigation of water systems, and deduction of ancient methods of olive and wine production. Other scholars have attempted to understand early Christian symbols, or to specialize in Roman Jerusalem and its archaeological history, or to research other "holy places" such as the Tomb of Lazarus. Others debate the identification of the Emmaus of Luke or uncover campsites of the Sixth Legion "Ferrata" in Galilee or the Tenth Legion "Fretensis" in Jerusalem. These developments in archaeology show promise of linkage with NT scholarship in a more direct and fruitful way. On the other hand, the unfolding of allied specialties in the archaeology of the period has often proceeded without regard for connections with NT scholarship, research in Christian origins, or the study of Rabbinic Judaism. Such developments include stratigraphic excavation of Roman sites for purely scientific reasons, advances in numismatics, studies in ancient glass, neutron-activation analysis of ancient ceramics and other technological studies, or the formation of theory and models in archaeology. Probably the dominant trend in recent archaeology of the period is an attempt to place the archaeology of the NT period into the wider discipline of Roman archaeology in ancient Palestine and the E Mediterranean.

It is within this wider understanding of archaeology that we must place recent excavations in ancient Palestine. For example, excavations at Khirbet Shema, Meiron, Gush Halav, and Nabratein, all in Upper Galilee, have disclosed a vigorous Jewish village life from the 2d century B.C. to the 4th century A.D. and later. Similar conclusions must follow from excavations in a series of ancient villages and towns from the Negeb to the Galilee. Local and regional trade networks bore goods to the remotest parts of Upper Galilee. That is, town and village life was not isolated, but movement of goods, services, and ideas was extensive. Excavations of tombs and structures in Nazareth Ilit, to cite only one example, indicate that there was a tiny Roman agricultural village above Nazareth about a fifteen-minute walk away. In a similar vein, excavations at the Herodium near Bethlehem reveal an entire support village around the fortress, suggesting that similar support villages might be found elsewhere. The density of occupation in ancient Judea in the NT period appears to have been nearly the highest in the Roman Empire, if not the highest. On the other hand, excavations in a variety of cities and large towns indicate a degree of urbanization in ancient Palestine that goes beyond traditional understandings. For example, excavations at Magdala-Tarichaeae have disclosed a small portion of a Roman-style city complete with paved streets. The excavations at Tiberias have revealed a very large city and a detached city of Hammath to the S in the 1st century, confirming certain literary notices in Josephus and the Jerusalem Talmud. The same situation pertains at Hippos-Susita on the SE shores of the Sea of Galilee. Excavations at Sepphoris have unearthed remains of a robust Roman city of large Jewish population whose toparchy surely extended to Nazareth, suggesting a degree of urbanization of Lower Galilee heretofore only suspected. Similarly, recent excavations at Bethsaida (Roman Julias) have disclosed a rather small urban complex of the 1st century. Other excavations at Caesarea Philippi-Paneas have only begun to show the extent of the ancient city. A similar conclusion is supported by excavations at Caesarea, Jerusalem, Antipatris, Azotus (OT Ashdod), and others. Probably the most spectacular example of excavations in an urban center of this period are those at Beth Shean. In this case a truly striking Roman city of grand proportions has emerged since 1986. Although most of the finds postdate the NT period, there are sufficient remains to suggest the thoroughly Roman character of this city. For example, various inscriptions and temple architecture suggest that paganism in various forms flourished at Beth Shean, including the worship of Dionysus and Zeus-Akraios. An inscription and Roman temple correlate with the ancient local tradition that Dionysus founded the city and buried his nurse Nysa there. Also town and village planning is evident in their traces, suggesting a clear governing and planning structure. Excavations at Capernaum have combined to reveal a very large, well-planned town that thrived from the 2d century B.C. to the Arab period. The same degree of planning is visible at Chorazin, although the remains are largely Byzantine. Excavations at Horvat Amudim at the E end of the Beit Netopha valley reveal a large, thriving Roman town of unknown name in the 1st century that continued to the Byzantine period. The accidental find of a fishing boat in the mud of the Sea of Galilee has revealed the only 1st-century boat thus far found from ancient Palestine. The sophisticated level of shipbuilding revealed in the construction of the boat suggests that an infrastructure

of shipbuilders and other artisans likely formed part of the population of the cities and villages of the lake. Interest in 1st-century synagogues, though the word is understood less as a dedicated cultic structure and more as a "gathering place" *(synagogēs),* continues unabated. Probably the best known of these structures are at Masada, the Herodium (though it seems to be 2d-century), Gamala, and Magdala. In the last case, the Franciscans unearthed a likely synagogue of the 1st century situated at the corner of two paved streets. Also at Capernaum, their excavations beneath the 4th-century synagogue unearthed what is simplest to identify as a 1st-century synagogue. In the Golan Heights, just inside the city wall at Gamala, breached by the Romans in the First Revolt against Rome, was found a rectangular building with interior columnation and benches that is usually interpreted as a synagogue. It went out of use with the destruction of Gamala by the Romans in A.D. 67. Identification of house churches, besides the one at Dura-Europos, is an emerging controversy. Beneath the 5th-century octagonal church at Capernaum, one block away from the famous Byzantine synagogue, is an Early Roman house likely converted to a house church, the so-called "House of St. Peter." This was identified by its continuous history and use as a holy place right up to the 5th century. It is an interesting question how many house churches we may not be able to identify because such structures did not acquire a fixed architectural form nor contain a fixed iconography until later centuries.

Excavation of hundreds of tombs of the NT period mainly confirms the outline of Jewish burial custom known from rabbinic sources of the early centuries. Jewish tombs are usually of the loculus type and are very sparing in their finds. Artifacts found in tombs of the period are predominantly lamps and glass phials, perhaps lachrymortaria. Only a few clearly Jewish tombs have had coffins, as the rule was to bury first in a shroud directly in the loculus with subsequent reburial in an ossuary. Some tombs have burial inscriptions. These inscriptions were intended for the family and are almost always in Greek, though many names and epitaphs in Hebrew, Aramaic, and other languages are known. This is the most telling archaeological evidence for deducing bilingualism or trilingualism in ancient Palestine, since Greek is the norm within the tomb, that is, for the family. Since tombs are often equipped with a forecourt and other architectural features not required for inhumation itself, there was obviously a well-developed ritual of mourning, as the noncanonical Mishnaic tractate "Mourning" *(Sem.)* indicates.

The archaeological picture of the architectural culture to be associated with the dynasty of Herod the Great is coherent and striking. Herod and his sons (and grandsons) relied heavily upon developments in Roman engineering and architecture to produce buildings in grand style, as witness Ramat el-Khalil in Hebron, the city gates of Caesarea, Sebasté, and Tiberias, the stunning Temple Platform in Jerusalem, his palaces at Jerusalem, the Herodium, Masada, Jericho, and Machaerus in Jordan, his extensive waterworks traced from Bethlehem to Jerusalem, the building of Tiberias, Sepphoris, and Bethsaida-Julias by his sons, and by many other remains. Herod the Great relied upon delicate and expensive media in his decoration of the Temple Mount, but he relied upon painted and molded plaster in Masada and Herodium. Nevertheless the architecture of the Herods bespeaks the aesthetic and political ascendancy of Rome and the place of the Herods as client-kings or client-rulers for Rome.

The evidence from archaeology suggests that the overlay of Roman culture provided symbols, architecture, and conventions of its own that the underlying Jewish culture might accept or reject. The degree of participation in the overlay varied with the Roman institution and the century under discussion. For example, it is as yet a matter of controversy whether any Roman theaters in ancient Palestine so far excavated were built in the 1st century A.D. apart from the Herodian theaters at Caesarea and Jericho. Other theaters associated with the Roman cultural overlay have been surveyed or excavated at Abila, Philadelphia (Amman), Gerasa (Jerash), Botzra (Bosra), Gadara, Pella, Philipopolis, Hippos-Susitha, Hammath-Gader (el-Hammeh) and Petra E of the Jordan, and at Flavia Neapolis (Nablus), Eleutherapolis (Beth Guvrin), Sebasté (Samaria), Beth Shean-Scythopolis, Dora, Dionysias-Soada (Suweida), Legio, Maiumas near Caesarea, and Sepphoris W of the Jordan. The sheer number of theaters suggests that investigation of the social structures associated with Roman theaters in ancient Palestine may be a fruitful line of inquiry. Baths also were introduced with Greek culture, though the presence of Rome spurred construction of baths, since they were apparently somewhat less offensive to Jewish culture. The

enormous bath complex at Hammath-Gader on the E shores of the River Yarmuk and S of the Sea of Galilee is almost totally Byzantine, but it raises the question of the degree of acceptance of a Roman cultural form such as public bathing in the period under discussion. In any case, it is clear that the architectural and aesthetic norms of Greek and Roman Hellenism, and certainly the Greek language, penetrated everywhere into ancient Palestine. What is not clear is the extent of penetration of other Hellenistic ideas such as rhetoric, Greco-Roman notions of the social position of women, or the relation of the human to the divine. Such abstractions are a greater challenge to assess archaeologically, though perhaps it is not impossible.

The future challenge to archaeologists of this period and to exegetes of the NT and other early Christian and Jewish literature is to combine insights from the two disciplines with the hope of achieving clear social-historical reconstructions of ancient Palestinian life. Since historical investigation at the moment is dominated by social history, and since exegesis of the NT and other ancient texts currently bears the same interpretative weight, it is possible to see a fruitful collaboration. For example, research into the social structures of Jewish society, of the imperial cult, and of the penetration of alternatives to the old Roman Religion, including Mithraism, into the cities of the provinces is in full swing among historians. Ever since G. Theissen and J. Gager, research into the social histories of early Christianity (the "Jesus movement") has expanded to include the social context of ancient Palestine, including aspects of temple and society or synagogue and society. It has already been suggested that one fruitful avenue of inquiry has been study of the structures of society relating to Roman theaters. This should be expanded to include study of other forms of Roman entertainment. Since 1931 archaeologists have excavated hippodromes at Bozra (Bosra), Kanath, Gadara, Gerasa, Caesarea, Jericho, and Beth Shean, with another possibly at Herodium. Josephus mentions one at Magdala-Tarichaeae (*Life* 132, 138) and at Jerusalem (*Ant* 17.193), though neither have been found. Another field of potential worthwhile inquiry is in the social norms of temple worship and cult in Judaism and the Roman world as revealed in texts and monuments, and there is no dearth of temple remains in Israel, Egypt, Syria, Lebanon, and Jordan. Recently considerable archaeological evidence has been adduced for reconstruction of the buildings and other remnants of Jewish cult on the S end of the Temple Mount, including ritual baths. Finally a potentially important area of study for the future is in theory and method in archaeology, especially the hermeneutics of monuments, and a comparative study of interpretation in archaeology and interpretation in textual studies. Some initial forays in this direction have been attempted.

JAMES F. STRANGE

PALESTINE, CLIMATE OF. The climate of any particular region, by which is meant the general pattern of weather which recurs from year to year, is directly related to that region's position upon the surface of the globe. Thus, the climate of a region cannot be considered in isolation from the climates of other neighboring regions, but must be observed in relationship to them, since shifts in the distribution of high and low pressure systems, together with corresponding changes in global air-flow, have a profound impact upon regional climatic patterns.

Most of Palestine, except for the Jordan Valley and the area W of the Dead Sea (which is in a steppe climate zone), falls within the subtropical or Mediterranean climatic region, a region which is characterized by two distinct seasons per year—a dry one and a wet one (the terms "summer" and "winter" are sometimes used, but are not really descriptive of the seasons in Palestine). Being on the N margin of the subtropical zone, Palestine is situated between a subtropical arid zone to its S, the great deserts of Arabia and the Sahara, and a subtropical wet zone to its N. Even though Palestine itself is relatively small, this location results in some marked climatic differences between the N and S regions of the area. The climatic boundary position refers also to the W-E direction with the proximity of the Mediterranean on the W and the large Asian land mass on the E, with corresponding regional differences within the area from W to E.

_____

A. Factors Influencing Climate

1. Atmospheric Pressure and Winds. One of the principal meteorological factors influencing the Palestinian climate is the shifting global system of high- and low-pressure areas. During the dry season, Palestine sits on the W edge of an extensive low pressure area which is centered over India (the cause of the Indian monsoons) and which extends over the Persian Gulf and Mesopotamia. There is also a secondary low centered over Cyprus. As the air circulates in a counterclockwise direction around the Indian low, and is in turn deflected by the Cyprus low, the resulting airflow over Palestine is from NW to SE, bringing what was known to the ancient Greeks as the "etesian winds."

The wet season commences when this entire system of low pressure areas is displaced southward by a shift in the path of the jet stream, which brings Palestine into the zone of the westerlies of the temperate zone, with its cyclonic storms, units of low barometric pressure with circular, counterclockwise airflow. These cyclonic storm systems move E toward Palestine following the path of a low-pressure trough in the Mediterranean, which is situated between one high pressure area in Central Asia and another in the Sahara. See Fig. PAL.03. As these cyclones (about twenty-five in an average year) travel across the Mediterranean (in four to six days), they are reinforced by the confluence of warm African air with cooler European air, producing unstable conditions in the atmosphere, commonly resulting in precipitation.

2. Latitude and Insolation. A second factor affecting Palestinian climate, especially with respect to sunlight intensity (insolation) and temperature, is its distance from the equator, since this determines both the amount of heating from the sun and the moderate seasonal variations in the length of daylight hours. Palestine lies between 31°15′ and 33°15′ N latitude, which is approximately equivalent to S California.

With the stable conditions of the dry (summer) season, Palestine is typically sunny and warm, with insolation intensified by the extremely low degree of cloud cover. There are no completely overcast days in the summer, and only a fourth of summer days are partly cloudy, with fair-weather cumulus and stratocumulus clouds. In most of the area, cloud cover is less than 10% in July and August. Summer sunshine hours may approach close to 98% of the possible. Even in the winter season this figure remains at 50%, which is higher than either W Europe or E North America. The latitude also means that the sun strikes the ground at a high angle, as high as 80° during the dry season. This results in solar radiation at the rate of an annual mean of 5 million calories per square meter. On a summer day this figure rises to 7.5 million cal./m^2, while on a clear winter day it falls to 3 million cal./$m.^2$ Even on a cloudy winter day, however, this figure is still 1 million cal./m^2 (Ashbel *EncJud* 10: 184). Expressed in another way, this means that horizontal surfaces receive illumination of some 90 kilo-lux-hours at noon in summer, and an area perpendicular to the sun's rays receives over 130 klh, nearly the absolute maximum possible. These quantities of klh are reduced by only one-third in the wet season (Ashbel *EncJud* 10: 184–85).

Palestine's general temperature patterns are also a product of its latitude. While temperatures vary within the area from N to S and depend upon regional topography and distance from the sea as well, they are generally comparatively high owing to the high insolation. Highest temperatures normally occur in August and the lowest are in January in all four orographic regions of the area. See Fig. PAL.04. January averages are 53.5°F in the Coastal Plain, 46.5°–50°F in the W Highlands, 53.5°–55°F in the Jordan Valley, and 47°F in the Transjordanian Plateau. August figures are 75°–79°F in the Coastal Plain, 71.5°–79°F in the W Highlands, 82°–93°F in the Jordan Valley, and 78°F in the Transjordanian Plateau (Orni and Efrat 1973: 136).

3. Relationship to Water and Land Masses. Palestine's geographic position—at the SE corner of the Mediterranean, where the sea is in close proximity to the desert, and between the Sahara and Arabian deserts on the one hand and the Russo-Siberian plains on the other—greatly influences its climate.

Local winds are generated by differences in temperature at the border of water and land masses. Land warms more quickly than the sea during the day and cools more rapidly at night. The land thus becomes cooler than the sea at night and develops higher atmospheric pressure over it, with the opposite occurring during the day. Therefore there are ordinarily offshore winds at night and onshore winds during the day. The onshore breeze is stronger and more persistent than the offshore breeze in the summer, owing to the low over the Persian Gulf. Rainfall tends to decrease and the temperature range tends to increase with distance from the sea.

The location of Palestine between the deserts and the Russo-Siberian plains also affects precipitation. Normally storms develop over the Mediterranean where the warm tropical air from N Africa clashes with cold air from Asia. Should, however, the high pressure systems in these two areas become linked at their margins instead of clashing, the resulting ridge of high pressure can block the progress of rain-bearing depressions, bringing drought to Palestine.

4. Regional Topography. While climatic contrasts between the S and N parts of the area are largely explained by Palestine's global position, other differences in weather within the area are due to the fact that there are four distinct orographic regions, whose lines of relief run in a N-S direction, at right angles to the movement of the cyclonic storms. Rainfall distribution is decisively influenced by landscape relief because air ascending a slope cools, while its relative humidity increases. Descending air warms and decreases in humidity. Not only do differences in elevation affect the flow of air, and thus the development of weather patterns, but also such things as the angle of slope and the direction the slope faces. While the general rule is that rainfall decreases with distance from the sea, an increase in elevation changes this. Higher elevations with seaward slopes show a true orographic increase in precipitation, while lee slopes of such elevations show a sharp orographic decrease in precipitation, in what is known as the rain-shadow effect. The angle of the slope is also relevant. The steeper the ascending slope, the smaller is the area where the amount of rain resulting from the cooling of the air can concentrate. While there is a general decrease in precipitation in the area from N to S and there are other variations within each region from N to S, the general climatic patterns of the four orographic regions can be described as follows:

The Coastal Plain, which includes the central section of the Esdraelon Plain, is naturally greatly influenced by the sea. Throughout the year, the relative humidity is high, averaging 65–70% (see Fig. PAL.05) and the diurnal temperature range (about 13°F) is considerably less than it is in the W Highlands. With a January average temperature of 55°F, both snow and frost are quite rare in this region (Orni and Efrat 1973: 151). The sirocco (see below) is less frequent here than in other parts of the country. Rainfall is both heavier and begins earlier than inland, with some 60% of the season's rain coming by the end of January. See Fig. PAL.06. Rainfall also increases from 10 inches annually in the S to 32 inches in the N (Orni and Efrat 1973: 152).

The Western Highlands, including Mount Carmel, have lower relative humidity than the coast, averaging 60%, and both the diurnal and annual temperature range is greater (Orni and Efrat 1973: 153). This area has the highest precipitation W of the Jordan, even though the onset of the rainy season is later than on the coast. Owing to considerable variations in topography, however, the rainfall map in the

Highlands shows significant variability within the region. Both frost and snowfall are common in the higher elevations.

The Jordan Rift Valley is both in the rain shadow on the lee side of the Western Highlands and is below sea level in most of its length. This results in sharply decreased precipitation from that in the Highlands and in markedly warmer temperatures as well. The general rule of decrease in precipitation from N to S holds for this region, but there are other differences as well. In the N part of this region there is a large annual temperature range, with frost common in the winter, but long, hot summers. For example, Beth-shan has six months with average maximum temperatures above 86°F (*GB,* 59). To the S, around the Dead Sea, which is both the lowest spot on earth and is surrounded by mountains on the E and W, there are unique climatic conditions. The relative humidity is quite low, averaging 57%, but is modified to some degree owing to the extremely high evaporation rate of water from the Dead Sea, resulting from the high temperatures. The annual mean temperature at the S end of the Dead Sea is 78°F, and falls to only 62.5°F in January. The highest temperature ever recorded in Palestine, 124°F, was recorded here (Orni and Efrat 1973: 157). Precipitation amounts are the lowest in Palestine, less than 5 inches annually.

The Transjordanian Plateau has a climate which generally resembles that of the Western Highlands. There are, however, differences caused by its higher elevation and greater distance from the sea. The seaward slopes of these higher elevations see more rainfall than do the Western Highlands. The annual and diurnal temperature ranges are also greater. Frost and snow are even more common.

B. Seasonality in the Palestinian Climate

1. The Rainy Season. a. Limits and Development. The terms "summer" and "winter," which are used to describe the seasons in the temperate zone, are not as descriptive of the seasons in Palestine as are the terms "dry season" and "wet season," since, as an indicator of seasonality, temperature variation is not as marked as is the sharp bifurcation in the precipitation pattern. In the Bible this season *(ḥōrep)* is one of rainy, stormy weather (Lev 26:4; Deut 11:14; Isa 4:6; 25:4; Job 37:9; Ezra 10:9, 13; Cant 2:11; John 10:23; Acts 28:2). The word *sĕtāw,* another meteorological term in Hebrew, occurs only once in the Bible (Cant 2:11); but its Arabic cognate, *sitaʾ,* is the common word for rain as well as winter in the dialect of Jerusalem. The Greek term *cheimōn* in the NT means both "winter" and "storm" (Scott *IDB* 3: 623) (see Fig. PAL.07).

The wet season begins first in the N part of the area, usually in mid-October, and ends last there in the spring, usually in March. The rainy season starts as the cyclones of the temperate zone create steep pressure gradients which cause more rapid and steeper movement of air masses, cooling them and causing them to gain in relative humidity. When this moist air reaches its saturation point, its moisture precipitates in rain or snow.

About 70% of the rainfall in Palestine falls from November to February, with January being both the wettest and coldest month (Orni and Efrat 1973: 146). There are differences in rainfall patterns as well as amounts in the four orographic regions. The Coastal Plain receives 50% of its annual rainfall by early January, the Western Highlands attain that figure about the end of January, and the Transjordanian plateau only in February (Orni and Efrat 1973: 146). At the beginning and end of the rainy season come what the Bible speaks of as "the former and latter rains" (*malqôš* and *yôreh*). See RAIN.

b. Variations in Rainfall. The rainy season in Palestine is, however, highly unpredictable—both in its temporal distribution within a season and in successive seasons. Five types of seasonal distribution have been observed: (1) normal, with even distribution throughout the rainy season—occurs about one-third of the time in Jerusalem and 42% of the time in Haifa; (2) a wet early season with a dry second half—occurs about 20% of the time in Jerusalem and the Judean Mountains, only 6% of the time in the N; (3) a dry early season with a rainy second half—more Ÿ common in the N than in the S; (4) heavy rains in the middle of the season with a relatively dry beginning and end—rare, occurring only 2–3% of the time; and (5) twin or multiple-peaked season with dry spells between the peaks—about 35% of the time in the Judean Mountains and 24% of the time in Haifa (Ashbel *EncJud* 10: 185). These variations in the temporal distribution of rainfall throughout the season have significant consequences for agriculture. Especially important for farming is the date of the initial rainfall that marks the end of the dry season and

the date of the last rain, since the former is needed to prepare the soil for plowing and the latter influences the maturation of crops. Rain at the end of the season, if the timing is right and not too late, serves to bring cereal crops to successful maturation, especially wheat. But such rains, if too late, can easily devastate barley, which is particularly susceptible to rain during harvest. Such rain during the harvest season is a rare occurrence. In 1 Sam 12:17 Samuel says: "Is it not wheat harvest today? I will call to YHWH and he will give thunder and rain …" When the prophet successfully called for rain in a normally dry period, his prophetic credentials were confirmed.

In addition to such variations in the temporal distribution of rainfall in a season, there are significant variations from year to year. Two parameters come into play here: (1) the frequency of abnormal (+ or –) precipitation; and (2) the extent of deviation from the mean. In assessing these two variables, Jerusalem can be used as an example, since there exists for Jerusalem the longest series of recorded rainfall for the area, beginning in 1846/47. In the 42-year period 1920–1962, there were two series of years when there was an average deviation of 30% (±) or more from the mean annual rainfall, one dry cycle and one rainy cycle as follows (Amiran 1964: 104):

Dry Cycle (1920/21–1937/38)

	Total Amount of Deviation	Number of Years of Occurrence
Number of years		18
Positive deviations	26	4
Negative deviations	365	14
Positive deviations of 30% or more	0	0
Negative deviations of 30% or more	283	7
Negative deviations of 50% or more	106	2

Rainy Cycle (1944/45–1961/62)

	Total Amount of Deviation	Number of Years of Occurrence
Number of Years		18
Positive deviations	85.4	4
Negative deviations	369	14
Positive deviations of 30% or more	79	2
Negative deviations of 30% or more	243	5
Negative deviations of 50% or more	117	2

What is most significant in these figures is the fact that even in the eighteen-year rainy cycle five of these years had negative deviations of 30% or more. Even more critical for agriculture, however, is the spacing of these years. A dry year in a series of more or less normal or wet years rarely has serious consequences for the farming economy. But while the farmer can weather a single dry year, a series of such years can be disastrous. Amiran (1964: 104) observes that three consecutive dry years, each with a negative deviation of 30% or more, are part of the experience of every farmer in Palestine. It is perhaps not coincidental that this same three-year figure is used to describe the disastrous drought in the time of Elijah (1 Kgs 18:1).

Jerusalem rainfall data for the years 1920/21–1949/50 are represented in Fig. PAL.08. The left side of the chart represents 1920/21 and the right side 1949/50 (Rosenan 1955: 151). On the basis of this data, it can be observed that a cycle of three or more consecutive years with 30% or more negative deviation occurs twice within this relatively short span of years. Put in other terms, this means that three years out of ten will experience accumulation of rainfall about 16% less than the mean and that one or two of these years will experience more than 25% less.

Perhaps the most meaningful way of assessing the variability of rainfall and its impact on agriculture in Palestine is one developed by D. Sharon (1965: 172), who presents rainfall data by calculating the standard deviation (in percent) of the annual amount of rain, and then plotting standard deviation isopleths (1965: 172). On such a plotting, Jerusalem, together with much of the central hill country, falls within the 30%–40% range in the measure of standard deviation, with most of Galilee in the 20%–30% range. The 40% range encompasses Beer-sheba, the Negeb, and the Jordan Valley S of Beth-Shean. Sharon then interprets such standard deviation figures of 20% and 40% by means of the following table (1965: 171):

	Probable Percentage of Years with Variation of			
Standard Deviation	≤ 20%	≤ 40%	≤ 60%	
20%	68	96		99.7
40%	38	68	87	

The conclusion to be drawn from this table is that wherever there is a standard deviation of 40%, variations of less than 20% from the average annual rainfall can be expected in only 38% of the years, whereas in 32% of the years, variations that exceed 40% will occur. Furthermore, in 13% of the years, deviations exceeding 60% can be encountered. Sharon concludes: "Thus, the data … supply valuable information on the variability of rainfall which might be expected at each specified level. The latter could also be interpreted in terms of the risk associated with the relative or absolute deviation of each size, at each station" (1965: 171).

c. Rain Days and Rainfall Intensity. While the annual amount of rainfall in farming areas in Palestine roughly approximates that of some agricultural areas in temperate zones, the difference between the two lies not in the annual amount of rain but in the number of rainy days and in the intensity of rainfall in a given hour or day (Ashbel *EncJud* 10: 185–86). A rain day, in international terminology, is one on which there is at least 0.1 mm of rainfall (Orni and Efrat 1973: 147). Thus, while Jerusalem and London have about the same average annual rainfall (22 inches), London has over 300 rain days while Jerusalem has only 50 (Orni and Efrat 1973: 147). The number of rain days per season (like the amount of annual rainfall) decreases from N to S and from W to E. Rain tends to be concentrated within a few hours of the day, with sunny intervals between showers (Karmon 1971: 28). The heaviest showers tend to occur at the beginning and toward the end of the season when there are clashing air masses which differ considerably in temperature and moisture (Orni and Efrat 1973: 146). The net result of these patterns is high-intensity rainfall, resulting in increased runoff and, consequently, frequent flooding.

2. The Dry Season. a. Limits. The dry season typically begins in May-June and lasts until September, with three to four completely rainless months. Even though the air moving into Palestine from the Mediterranean is moisture-laden during this season, rain cloud formation is inhibited by the presence of high pressure in the upper atmosphere, which causes air to subside and creates a thermic inversion over the E Mediterranean area. As air settles and is compressed, its temperature increases while its relative humidity declines, thus deferring rain (Hopkins 1985: 80).

b. Dew and Humidity. Although rainfall is not triggered during the dry season, the steady, moist W winds do bring dew, the formation and amount of which are dependent both on relative humidity and nighttime cooling as well as on the properties of the cooling surfaces of soil and vegetation upon which the dew falls. The distribution of the number of dew nights and the amount of dewfall, like that of rainfall, varies considerably from one area to another. But by comparison with dew amounts, the number of dew nights is relatively stable, just as the number of rainy days varies only slightly in comparison with variations in amounts of rainfall. There are three distinct dew regimes: (1) a coastal type with a summer maximum; (2) an interior type with a spring maximum; and (3) the hill type with an autumn maximum (Gilead and Rosenan 1954: 121). Dewfall is especially significant in the Coastal Plain (including the Jezreel Valley) and on the sea-facing slopes of the Western Highlands, where dew falls heavily and regularly during the dry season. See Fig. PAL.09. The Central Huleh Basin and the lower Beth-shan Valley also have considerable amounts of dew. Dew falls on nights when the soil becomes cooler than the air with which it comes into contact. The incidence of such nights increases as one travels S in the Coastal

Plain, where the moisture-laden air from the sea is coupled with the cool nights caused by the nearby desert. Studies of dew show that the richest month for dew in the Coastal Plain is August. The number of dewfall nights in the Coastal Plain ranges from 138 in the N to 250 in the S, with an average of 200 (*GB,* 44). In the Western Highlands there are between 100 and 180 nights of dewfall per year (Orni and Efrat 1973: 155). See Fig. PAL.10.

Dewfall is important for agriculture, especially in the S Coastal Plain, where melons can be grown as a typical dry season crop. Its presence and value are frequently attested to in the Bible (Gen 27:28; Deut 33:28; Judg 6:38; 2 Sam 1:21; 1 Kgs 17:1; Isa 18:4; Hos 14:5; Mic 5:7; Zech 8:12; Hag 1:10; Job 29:19).

3. The Transitional Periods. Palestine does not have a spring and fall as they are known in the temperate zones, but rather two short, irregular transitional periods which fall between the dry and rainy seasons and which are characterized by particular weather patterns. These periods typically last about six weeks, with one occurring from early April to mid-June; the second from mid-September to the end of October. These transitional periods are clearly demarcated from the dry season and merge into the wet season, there being some overlap with the end of the rainy season in April-May and with its beginning in September-October.

Two important meteorological phenomena characterize these transitional periods: the sirocco and desert storms (Baly, *GB,* 52). The name "sirocco" is derived from the term *sharqiyyeh,* meaning an E wind, and is known in Egypt as *khamsin* and in modern Israel as *sharav,* although these terms do not refer to precisely the same conditions and thus are not strictly interchangeable (*GB,* 52). Israelis commonly use the term *sharav* as a general term for any kind of hot air that moves into the area from the E desert. Actually, however, there are three distinct situations which may give rise to *sharav* conditions of E and SE winds or a rise in barometric pressure: (1) the *khamsin* proper (which Baly [*GB,* 52] prefers to call the sirocco), in which a low over eastern North Africa causes warm, dry winds to blow over Palestine from the E; (2) the *sharav* proper, where a high over the area itself causes subsiding air to be compressed and heated; and (3) a situation in which a low moves into the area from the direction of the Red Sea, bringing with it unseasonably warm air (Orni and Efrat 1973: 141). Baly (*GB,* 52) suggests restricting the use of the term "sirocco," which is limited to the transitional periods, to the first of these conditions.

The sirocco proper (or true *khamsin,* which occurs sporadically during the transitional seasons) is characterized by a set of phenomena which includes strong thermal inversions which compress, heat, and desiccate trapped stagnant air, and strong dust-carrying E winds blowing across Palestine from the Arabian desert whence they are attracted by a low over Libya or Egypt (Karmon 1971: 24) [cf. Ezek 12:10; 19:12]. During a sirocco, which may last from two or three days to three weeks, temperatures may rise rapidly by as much as 16–22°F, with a corresponding lessening of the diurnal differential. Relative humidity can drop by as much as 40%, and the air becomes filled with very fine dust (*GB,* 52). Although the mean maximum daily temperature typically occurs in August, the record high temperatures for the area have been recorded in May and June during a sirocco. In such conditions, "People with a heart condition, nervous complaints, or sinus trouble are particularly affected, but even the mildest-tempered person is apt to become irritable and to snap at other people for no apparent reason" (*GB,* 52). Relief from the sirocco comes when the low-pressure area moves on eastward, bringing to the area a sudden shift to cooler, moister westerlies. The sirocco is characterized by variable intensity and duration in different regions of the area. Intensity increases as one goes from E to W, and becomes especially oppressive in the Jordan Rift Valley. Since it is a descending wind from the E, the Western Highlands have more days of sirocco than the lowlands to their W. Biblical references to the sirocco are frequent (Isa 27:8; 40:6–8; Ezek 17:10; Hos 12:1; 13:15; Ps 103:16; Job 37:16–17; Luke 12:55; Jas 1:11).

The second situation, the *sharav* proper, develops with rising barometric pressure under anticyclonic conditions, bringing an E wind which blows toward the area from a center of high pressure over Iraq, and sometimes also Turkey. This kind of storm is not restricted to the transitional periods, but may occur during the wet season (Ashbel *EncJud* 10: 189). Such a strong E wind in the wet season is referred to in the Bible as a *qādîm* (Exod 10:13; Ps 48:8; Jonah 4:8). Such a situation brings conditions which resemble

those of a sirocco, but it is not only as hard to bear as a sirocco, but the high often becomes stationary and thus the *sharav* can last longer than the sirocco (Ashbel *EncJud* 10: 190).

C. The Climate during Biblical Times and the Climate Today

A theoretical comparison of the climate in Palestine in biblical times and today presents three possibilities: (1) that the climate during biblical times was more moderate; (2) that the climate was harsher than now; and (3) that the climate was similar to today's. Evidence for significant climatic variations in the ANE is diverse, multiform, of varying quality and applicability, and above all, widely open to competing interpretations. Among the various types of evidence that have been marshaled in support of significant climatic change are: (1) extrapolation from the reconstructions of climates of adjacent and climatically related areas (particularly NW Europe); (2) historical events (migrations, cultural breaks, etc.) purportedly tied to climatic variations; (3) hydrological evidence, especially regarding the level of the ground water table, the Dead Sea, and the fluctuation of the Mediterranean Sea coast; (4) dendroarchaeological and paleobotanical evidence; (5) palynological evidence; (6) fossil fauna (especially recovered from cave excavations); (7) pedological and sedimentary analysis; and (8) paleometeorological deductions (Hopkins 1985: 101). While individual pieces of such evidence may prove substantial, there have been no synthetic treatments of them with respect to their applicability in assessing climatic change.

Investigators have, however, established considerable support for the idea that in prehistoric times there were different climatic conditions in Palestine than exist there today. Animal bones characteristic of a hot and humid climate, for example, have been discovered in the Tabun F level in the Carmel Caves, which included small mammals that have become almost extinct today (Ben-Yoseph 1985: 226). It is thus concluded that archaeological data support the theory that, at least for some time at the end of the Pleistocene era, the Palestinian climate was similar to that of the tropics.

But have there been changes in the climate of Palestine during and since the biblical period? On the one hand, it seems clear that, in terms of what Butzer calls "third-order" changes profound enough to show up on the astronomical scale of climatic history (Butzer 1974: 730), the general pattern of the climate, with the alternation of dry and wet seasons, has not seriously changed since 6000 or 7000 B.C. in the Neolithic period. Below such third-order changes, paleoclimatologists speak of second-order variations, measured in hundreds of years, and first-order fluctuations which are observable within a lifetime (Butzer 1974: 730). With respect to such second-order variations and first-order fluctuations, Baly says, "That climate is not static but rather in a state of constant fluctuation is now beyond doubt, and it would be a great mistake to take any set of climatic figures as 'normal' " (*GB,* 65). But having said this, he also adds, "Any attempt to reconstruct theoretically the relationship between climatic fluctuations of western Europe [where there is more complete data than for Palestine] and those of Palestine is fraught with danger" (*GB,* 67). Ben-Yoseph concludes that the amounts of precipitation have not changed in Palestine, but their usefulness has decreased as a result of human land-use patterns. Erosion on hillsides, owing to poor land management, has led to an increase in the water lost to runoff after rain. Deforestation reduced the fog and the amounts of water that accumulated in the treetops. Thus the same amount of water falling on the land lost part of its effectiveness through an increase and expansion of human neglect of the land. The gradual decline of the land was not caused by a change in climate but rather by the people living there (Ben-Yoseph 1985: 237).

We can then conclude with Hopkins that the climate of Palestine in the biblical period has not changed appreciably from that of today, but only varied around a mean that closely resembles present conditions (Hopkins 1985: 107).

PALESTINE, GEOGRAPHY AND GEOLOGY OF. See GEOGRAPHY AND THE BIBLE (GEOGRAPHY OF PALESTINE).

PALESTINIAN FUNERARY INSCRIPTIONS. Palestine can be understood in a restricted sense as the "land of Philistia" but also in the sense intended by Greek and Latin authors to designate all the territory found between Syria-Phoenicia and Egypt, including the two banks of the Jordan. During the Byzantine period the word "Palestine" took on a still greater range, the area being divided into three provinces: *Palestina prima, secunda,* and *tertia* or *salutaris.* What will be presented here are the funerary inscriptions found in Palestine taken as "Cisjordan," from the most ancient times up until the Byzantine period, beginning with the reign of Constantine, and divided where possible chronologically by sites according to language and script.

A. Canaanite Inscriptions

The short inscriptions from tombs at Lachish are not, strictly speaking, funerary inscriptions, but neither should they be set aside too quickly. The "Lachish Dagger" from tomb 1502, dated to the 17th century B.C., carries an engraving of a four-letter name, best understood as Turanza (Puech 1986–87). The cover of an incense burner from tomb 216, from the early 13th century, still shows traces in red ink of a date and the name of a person, "The month of Ziv for Baʿal[x]." On the outside of a bowl from tomb 527 a date is painted in white, "The third of the month of […]" and is to be dated in the 13th century (Puech 1986–87). Do these dates refer to the inhumation of the deceased? Whatever the case, as the oldest alphabetic inscriptions discovered in tombs, they merit being mentioned along with the anthropoidal clay sarcophagi with hieroglyphic inscriptions, slightly more recent, that mention proper names also.

B. Hebrew Inscriptions

1. Jerusalem. A necropolis from the monarchic period was discovered by the Frenchman Clermont-Ganneau in 1870 and 1881 on the slopes of the village of Siloam to the east of the old city of Jerusalem (Clermont-Ganneau 1871: 103; 1885: 217–18; 1899a: 305–16). He soon suspected its importance since, despite the poor state of preservation of the two inscribed panels on the walls of the rock-cut tomb that

had served as a cell for Byzantine hermits and as a cistern during the Arab period, he suspected that this could be the tomb of Shebna, the steward of the palace (Heb *ʾăšer ʿal habbāyit*) mentioned in Isa 22:15 (Clermont-Ganneau 1899a: 313). This pioneer of archaeology and Palestinian epigraphy succeeded in removing the two inscribed panels on behalf of the British Museum, where they are exhibited.

In 1946 a fourth inscription was discovered above the entrance to a tomb adjoining the one on the N (Reifenberg 1948). From the remains of three lines, one can read only two or three words: (1) "Tomb of … (2) who will o[pe]n (?) […]," for the more usual "Tomb of PN[… Cursed be the person] who will o[pen …]." It was evidently the tomb of a person of high rank whose name still eludes a more secure interpretation (Ussishkin 1975).

It was not until 1953 that the longer inscription above the door of the "steward's" tomb was deciphered by Avigad with the help of photographs and a squeeze:

(1) "This [is the tomb of x]yahu, steward of the palace. There is neither silver nor gold here, (2) only [his bones] and the bones of his maidservant with him. Cursed be the man who (3) would open this (tomb)!"

Only the theophoric name with a Yahwistic element is not restorable. Following Clermont-Ganneau, Avigad (Yadin) (1953) and Gibson (*TSSI* 1: 24) want to restore [Sheban]-yahu after Isa 22:15–16, but Katzenstein (1960) proposed [*Helqi*]yahu, father of Eliakim (2 Kgs 18:18). These two propositions seem hardly likely because of their length, which exceeds the space to be filled. From the Lachish ostraca and recently published bullae, other names of royal stewards from the end of the 7th century are known. It is therefore useless to speculate on the name of the owner of this tomb. Of the one-line inscription engraved in a rectangular panel to the right of the preceding one, only the first half is preserved: " (Sepulcral) chamber next to the (funerary) ch[amber …]" At most three words are missing; they could refer to the deceased or to the interdiction against opening the tomb (see Avigad 1955; Ussishkin 1969). These two inscriptions on panels on the W face of the same monolithic tomb probably refer to two separate sepulchral chambers, each probably furnished with a sarcophagus dug into the rock for different inhumations, probably for the same family. The short inscription designates the interior room on the S side that has no access to the exterior and so it describes the composite aspect of the tomb.

The monolithic tomb to the N known as that of the "wife of the pharaoh" also carries a one-line inscription in a rectangular panel above the entrance, but enlargement of the door in the Byzantine period almost completely destroyed it, with the exception of the last two letters (*dalet/reš* and *reš;* Clermont-Ganneau 1885: 217–18 and pl. IID). Although the inscription is incomplete, the remaining letters date the structure to the end of the monarchic period, contemporary with the two other monolithic tombs.

2. Jerusalem: Ketef Hinnom. Several tombs located on the SW side of Gehenna between the road toward Bethlehem and the Scottish Hospice, and dating from the end of the monarchic period to the Roman period were recently brought to light. In tomb 25 two small silver rolls were discovered, measuring respectively 2.75 cm long and 1.1 cm in diameter and 1.14 cm long and.55 cm in diameter. These rolls are amulets or charms finely engraved with more than twenty lines, for which we have presently only a summary publication (Barkay 1986). The clearest passage concerns the priestly benedictions of Num 6:24–26 in an abridged form: *ybrk yhwh wyšmrk yʾr yhwh pnyw ʾlyk wyśm lk šlm* "May Yahweh bless <you> and keep you. May Yahweh make his face to shine upon you and may he bring you peace!" Num 6:25b–26a adds "and may he be gracious to you. May Yahweh lift up his countenance upon you." The double mention of the tetragrammaton is paired with the benediction, the peace and the illumination of the face. The amulets worn by the living accompanied the dead in the tomb in order to continue in their favor their protective and apotropaic role. In this sense, these inscriptions also interest the world of the dead. They date paleographically to the end of the 7th century.

3. Khirbet el-Qōm. Clandestine excavations at Khirbet el-Qōm, located about 11 km E-SE of Lachish (and perhaps to be identified with MAKKEDAH [Dorsey 1980]), brought to light in 1967 two tombs of the Iron II period with a quantity of ceramic materials and inscriptions on the walls. See KOM, KHIRBET EL-. Tomb I to the E of the site is composed of a central room and three side rooms with benches, rooms 1 and 2 to the right and 3 facing the entrance. Inscription number 1 was engraved on the W wall of the

central room, to the left of the entrance to room number 3. Inscription number 2 was painted on the lintel of this same entrance. Tomb II, to the S roughly halfway between the village and the wadi, contains a central room with two lateral rooms on either side of the entrance. Inscription number 3 was incised on the pillar-shaped wall between the two rooms on the right. The walls of Tombs I and II also bear a certain amount of graffiti.

a. Inscription 1. The deeply engraved inscription was cut out of the wall by its discoverers. The reading of the three lines is assured (Dever 1969–70: 151): "To Ophay, son of Natanyahu, (belongs) this room."

b. Inscription 2. The inscription painted on the lintel of the same room posed several problems with its reading (Dever 1969–70: 156–57), but the reading seems to be fairly certain: Ophay, rather than ʿUzah (Barag 1970), thus "To Ophay, son of Natanyahu." It thus concerns the same personage to whom belonged this burial chamber. The inscription incised to the left was meant to specify and fix through time the property already indicated by the dipinto. These two contemporary inscriptions date probably from the first half of the 7th century or even ca. 700.

c. Inscription 3. This inscription, less carefully incised above a very deeply engraved hand, has been the object of considerable research because of its importance, but its interpretation remains in dispute. The engraved right hand is hanging in the position of an amulet, as is well known, and it must have an apotropaic meaning (Schroer 1983). The maledictions and benedictions of the inscription should logically belong to the same literary genre, something that interpreters have generally not recognized. The inscription is an imprecation in favor of Uriyahu, as the first line says very clearly when correctly read and interpreted. The verb *hqšr* is of an assured reading (the letter *qop* is certain); the word should not be read *hqšb* "be careful" (*contra* Dever 1969–70), *hʿšr* "the rich," (Lemaire 1977; Miller 1980; Jaroš 1982; Zevit 1984; Hadley 1987), *hšr* "the singer" (Mittmann 1981; Spronk 1986: 307–10), *hśr* "the governor" (Naveh 1979a; Angerstorfer 1982), or *hʾšr* "the one who" (Shea 1990). However, *hqšr* does not mean "was added" (Garbini 1978; Catastini 1984) but in the *Hipʿil* "to conjure," "to bind by conjuration," as in Isa 8:12–13 (were one should read ***tqšyrw,*** which has been changed into *tqdyšw* by metathesis and the Yahwistic purism of a scribe). The entire inscription reads as follows (note that line 4 is written to the left of the engraved hand, and line 5 is written below the engraved hand).

1	*ʾrhyw. hqšr. ktbhr*	"Uriyahu conjured his inscription.
2	*brk. ʾryhw. lyhwh*	Blessed be ʾUriyahu before Yahweh,
3	*wmṣryh. lʾšrth. hwšʿ lh*	and from his adversaries by his asherah he saved him/saved him!
4	*lʾnyhw*	From/by ʾOniyahu
5	*wlʾšthr*	and by his asherah."
6	[…] *ḥ̊*	[…]

The third line is superimposed over another text; certain letters are repeated or displaced, and it is possible that the original phrase was a little different, perhaps "Blessed the Uriyahu (?) before asherah! Save him (from his enemies!)"; as a kind of doublet of line 2, this sentence was corrected to read "and from his adversaries by his asherah …" The suffix pronoun *h* ("his") of *ʾšrth* ("his asherah," probably referring to the cultic pole rather than the deity) does not agree well with a parsing of *hwšʿ lh* as an imperative ("save him"), as might be expected in an imprecation. The *waw* of *wmṣryh* (at the beginning of line 3) could be consecutive: "*because* from his enemies by his Asherah He saved him." The engraving is the work of Oniyahu (line 4), and line 5, incomplete (but not a graffito), could repeat a precative formula, parallel to lines 2–3.

Whatever it may be, the sense of this inscription is clear: it is a conjuration-imprecation of an apotropaic character in which the benediction of the deceased Uriyahu before Yahweh and his asherah assures him of salvation, and serves at the same time as a malediction against encounter with his adversaries or enemies, perhaps violators of the tomb and dark forces of the netherworld. The hand in the shape of an amulet with magic powers reinforces this interpretation. This inscription would date from around 700 B.C.

d. Graffiti. Some letters were incised on the left wall, opposite room 2 of Tomb I: *ʾalep* (or *ʿayin* ?); *ʾalep, bet,* and *mem* (not *nun-lamed,* as read by Dever [1969–70: 157]). These letters could represent the initials of the zodiac signs "lion (-scorpion?)," "lion," "virgo," and "libra," the four consecutive and central signs (five through eight of the zodiac, and for this reason endowed with magic and apotropaic powers. The graffiti on the pillars and in rooms 3–4 of Tomb II do not make any sense, but the engraved hand belongs to the same context as inscription 3. The inscriptions on vases cannot be called funerary inscriptions: a proper name on a pitcher, *yḥml,* and on a bowl, *ʾl* "El." (The letters of "El" are the first and twelfth letters of the alphabet, that is to say the beginnings of the two halves, *ʾalep* [to *kap*] and *lamed* [to *taw*]. This alphabetic significance is more likely if the inscription had any link with the burial.)

4. Khirbet Beit Lei. On the E side of Khirbet Beit Lei 8 km E of Lachish, a tomb was discovered dug into the rock. It includes a principal room (2 × 3 m) with two burial chambers, one to the NW and the other to the SW, of the kind with three benches well known before the Exile. It held the remains of eight people, of which two are children, still *in situ* at the moment of discovery, and without ceramic vessels in the interior. The small amount of pottery found in the entrance well dates from the Persian period. The walls are covered with pictures and inscriptions.

a. The Pictures. The pictures incised on the walls represent three subjects: human figures, ships, and camps.

(1) The human figures are three in number:

(a) On the N wall of the central chamber is a crudely incised stocky man holding what is perhaps a lyre (Naveh 1963) or a bow and arrow (Bar-Adon 1975; Lemaire 1976: 567).

(b) On the lower part of the E wall of the entrance to the S burial chamber is a lightly engraved person with extended hands on both sides, as in a position of prayer or surrender. These two figures seem to have been executed by the same hand.

(c) On the W wall of the principal chamber to lower part and to the left of the entrance of the funerary chamber is another deeply engraved person with a well-drawn robe that reaches to the knees and a tall headdress, perhaps a crested helmet of the Assyrian kind, the hands at the height of the face.

(2) On the S wall of the central chamber are two crudely incised ships with sail and rudder that do not seem to have religious significance (Naveh 1963) but rather a military one (Lemaire 1976).

(3) On the N wall, facing the ships, two vaguely circular incisings represent an encampment: one is divided into four quarters like the camps of the Assyrian army on campaign according to friezes, and the other is divided into three parts, perhaps a tent.

b. The Inscriptions. At least seven texts are inscribed on the walls.

(1) Above and to the right of the "camp" can be read *ʾ (w)rr* "cursed" (Naveh 1963 pl. 11 E, F).

(2) Also on the N wall, facing the entrance to the S burial chamber, can be read (1) *ʾrr ḥ*(2)*rpk,* "cursed be the one that challenged you!" (Lemaire 1976); if the *kap* that precedes is joined to this inscription, its translation is "like a curse done, be the one that reproached you!" (Naveh 1963 pl. 11 D).

(3) On the W wall above and to the left of the person with the helmet and between the two "long" inscriptions, *ʾr* "cursed!"; to the right, more deeply incised, is the word *ʾtt* "signs" (Naveh 1963 pl. 13).

(4) On the S wall, between the ships and the entrance to the S chamber, (1) *ʾrr* (2) *yšr mḥr,* a text capable of being understood in several ways depending on whether one reads the two lines together. Naveh corrects the reading to suggest "Cursed be the one who pillages the tomb!" Bar-Adon (1975) and Lemaire (1976) transpose the first *ʾalep* and *yod* and correct the final *reš* to *he* to understand *ʾrr ʾšr ymḥh,* "Cursed be the one who erases!" This formula is found elsewhere in funerary inscriptions, but at the end of the text. One wonders what the reader is adjured not to erase, because nothing precedes this text and because there is no personal name! Without emending the text, one could suggest that it be understood "Cursed be the one who will sing (*šyr;* or 'govern' [*śrr*]/'behold' [*šwr*]) tomorrow!" (The word *mḥr* "tomorrow" is attested in epigraphic Hebrew at Arad.) The passage perhaps alludes to the national catastrophe.

(5) Above, to the left of the same entrance, is incised the inscription *hwšʿ yhwh,* "Yahweh, save!"

(6) On the W wall above (3) is a very lightly engraved inscription of two lines descending slightly to the left under the vein of the rock. The second line, perhaps the longer, is the most difficult to read (Naveh 1963 pl. 13). One possible reading is the following:

1 *ḥbrt (?) yhwh ʾlhyk ... hʾrṣh* "Blows of Yahweh, your God. It is he who favored

2 *lḥṣ yhdh wlʾ lʾ<ʾ>ḥy yršlm* the oppresion of Juda, but not for the brethren (?) of Jerusalem."

Some have wanted to find biblical expressions in this passage, and therefore read it differently. One different reading is: (l) *kl hʾrṣ h*(2)*ry yhd (h) lʾlhy yršlm* (Naveh 1963; *TSSI* 1: 58; Lemaire 1976; Miller 1980); this reading disregards the dividers between words, traces of letters, and the lineation.

The fact of oppression inflicted by an enemy and the religious interpretation of oppression as permitted by the divine will are both well known in the Bible (Deut 26:7; 2 Kgs 13:4; Pss 42:10; 44:25), even with respect to Judah after the Assyrian and Babylonian campaigns. If God was favorable (*rṣh*, line 1) to or permitted this oppression (*lḥṣ*, line 2) of Judah (the reading *yhwd* is also possible in line 2), he did not allow it to touch the "living" (*ḥy*, or better, *<ʾ>ḥy* "the brethren") of Jerusalem, who were spared this time. A word perhaps preceded the beginning of the first line, to the left of the margin, but no clear trace can be made out.

(7) Below inscription (3), written with the same tool and above other crisscross patterns that were written earlier, another line in alignment with (6) seems to be the continuation of the preceding inscription. It reads: *(h?)bqd yhwh yḥnn ... nqh yh yhwh,* to be understood either as "He (= Judah) was punished. Yahweh will be gracious; acquit Yah, Yahweh!" or (with asyndeton) "Yahweh has punished, he will show grace; …" The translations differ according to whether one reads a *he* at the beginning of the line; the verb *bqd* (in the orthography attested at Arad; biblical Heb *pqd*) is either a *Hopʿal* or (better) a *Qal*, but with a different subject. There is no question of Moriah (Naveh 1963; *TSSI* 1: 58), nor of "God the merciful" (Cross 1970; Lemaire 1976; Miller 1980), but of punishment, a request for grace, and acquittal.

In conclusion, these inscriptions and graffiti represent a coherent and lively description of a catastrophic situation. An encamped enemy received reinforcements from the sea, it oppressed Judah but spared Jerusalem, according to the will of God. May the one that defied you be cursed! One asks God to save, to absolve, and to show grace, and curses the one who will sing/govern (?) tomorrow. It is a moment for the survivors to mourn and to realize cause of the punishment (disobedience to the divine will?). The incised figure with extended hands could be a supplicant or someone giving up to the conqueror (Hezekiah capitulated in 2 Kgs 18:14); the one with the "lyre" might be a musician or an archer. The atmosphere is not that of a festival but of mourning (Isa 22:12–13).

Even if their literary genre is more varied than normal, in view of the particular circumstances these inscriptions of national lamentation are appropriate in a tomb in which were probably inhumed members of the resistance of the highest rank, victims of this oppression (the seige of Lachish) for which one lamented and called God to their aid. The texts are not of a prophetic or poetic nature (Miller 1980). The ships could be Philistine or Phoenician vessels allied to Sennacherib after the capture of Sidon and the enthronement of Ittobaal. Because Beit Lei is situated very close to Lachish, and because in the Bible the verb *ḥārap* occurs a number of times in the account of the campaign of Sennacherib (2 Kgs 19:4, 16, 22, 23; 2 Chr 32:17; Isa 37:4, 17, 23, 24), it is very probable that Sennacherib's campaign in Judea is alluded to here (so Lemaire 1976). Jerusalem was not taken (Isa 31:5) but the strongholds of Lachish and Shephelah fell and Juda was oppressed (2 Kgs 18:13–14). The paleographic dating would lend support to association of the inscription with the campaign of 701 B.C. and not 587 (Cross 1970; Naveh 1963). The circumstances of these burials doubtless explain the absence of pottery on the interior. Whatever the case, this new interpretation corresponds perfectly to the historical situation as it can be understood with the help of biblical and extrabiblical texts (discussed by Gonçalves 1986). Consequently these inscriptions, having come down to us because they were hidden in a tomb, are another extrabiblical testimony of contemporary events.

5. Conclusion. The funerary inscriptions from the four sites of the monarchic period are all in keeping with a certain concept of life after death. It is prohibited (in the Siloam inscription) to open the sarcophagus and thus to disturb the rest of the deceased; the conjuration of the Khirbet el-Qôm inscription invokes the blessing of Yahweh and his asherah or the magic hand to assure the salvation of the dead; amulets bear priestly benedictions of divine protection, illumination of the face, and peace upon persons living and dead (Ketef Hinnom); maledictions curse an enemy who sowed oppression and mourning, and the lamentation leads to an act of faith in the just punishment of God and a call for divine pardon so as to be saved (Beit Lei).

C. Phoenician Inscriptions: Achzib

In one of the cemeteries from the Phoenician site of Achzib on the Galilean coast, several funerary steles have been discovered. They bear the name of the deceased and sometimes his profession: "for Zakarmilk," "for ʿAmsakar," "for ʿAbdšamaš, son of ʾUšay," "for ʿAma, the founder," followed in this case by the ʾ*ankh* or sign of life in Egyptian hieroglyphics. What significance could this sign have on a funerary stele? In order to draw the most precise conclusions, one has to take into account all of the archaeological evidence of these necropolises and not only the epigraphic evidence. The writing and name forms are typically Phoenician, and date the steles to the 7th century.

D. "Idumean" Inscriptions: Marissa-Maresha

Some very beautiful tombs from the Idumean capital Marissa have revealed engraved and painted inscriptions in the frieze above the *loculi* or above the *loculi* themselves. The tomb of Appollophanes (no. 1) was decorated with a hunting scene with a series of domestic and wild animals, in color, designated by their names in Greek. Also painted were a Cerberus and an eagle or a phoenix. The long funerary inscription gives the age of the owner and underlines his good reputation during 33 years as the leader of the Sidonians. The other inscriptions give us the names of the dead, Phoenicians, Greeks, Idumeans for the most part. One reads twice or three times the phrase "do not open," but in one instance (no. 29) the malediction specifies damnation: "Let no one touch it, or else there will be no salvation for him!" Another Greek inscription of four lines is of uncertain interpretation; it could be a "monologue of a couple separated by death." The other inscriptions are of the more common sort: name of the deceased (patronymic, age). Several of them mention dates that probably relate to the reign of a Ptolemy. Thus the tombs would date from the 3d to the beginning of the 1st century B.C. Some of them were reused after the rejudaization of Idumea by the conquests of John Hyrcanus, but no Jewish inscription relative to this period has been found, read, or published. Only a short Nabatean inscription above a reinhumation niche (Oren and Rappaport 1984: 146) is to be read perhaps *šlm*(?) *qymw* "Salam (or Salmay), son of Qayamu."

These funerary inscriptions are important for the dating and the sociological milieu of Marissa and its region. As elsewhere, it is stressed that the repose of the dead should not be disturbed. Did the drawings of the Cerberus and the eagle/phoenix in the tomb perhaps have a religious signification respecting belief in life after death? The question must at least be asked.

E. Jewish Inscriptions

By the expression "Jewish inscriptions," one is to understand the inscriptions in Aramaic, Hebrew, and Greek from the Hellenistic and Roman periods, the two great periods of ancient Judaism, since the Persian period has not yet revealed any epigraphic funerary texts.

1. Tomb of Jason. Discovered in 1956 in the Rehavia quarter W of Jerusalem, this tomb contains two chambers, one with a *kokh* or *loculus* (place of inhumation) and an *ossilegium* chamber, and a porch which was also cut into the rock, with several connecting rooms (a forecourt, outer court, inner court, and the porch proper surmounted by a *nepeš*), in part dug into the rock, in part built (Rahmani 1967). Inscriptions, graffiti, and drawings are traced on the walls of the porch that gives access to the chambers.

a. Drawings. On the W wall are traced two warships, a troop transport ship, and drawings of palm trees. A recumbent deer is painted on the N wall above the entrance to the *ossilegium.* On the plaster of the E wall are engraved five *menorot* with seven branches, probably later than the preceding paintings. Other graffiti remain difficult to identify.

b. Aramaic Inscriptions. Five Aramaic inscriptions are more or less legible in the tomb.

(1) An inscription of four lines was written in charcoal on the left part of the N wall. Cursive writing and its poor preservation make the reading of it difficult (Avigad 1967; *MPAT* number 89; Puech 1983a; Beyer 1984). It reads:

1 *qw/yn› ‹lm› ‹wbd lyswn br pynḥs ›› ḥy‹ šlm dy (?) bnt (?) lk qbwr ṭ/sb› hwh šlm*
2 *byr[w]š[l]m*
3 *kdyn qw/yn› ‹lm› rḥmy› lm‹bd› lk zy hwyt šw› h (wh) šlm*
4 *ḥny br ywsh mḥy qw/yn› ḥyk ylyn šlm*

(1) This eternal abode was (re)built for Jason, son of Phinehas, <my brother.> Peace! Because I have reconstructed for you a tomb, o good (man) [or: elder] be in peace (2) in Jerusalem!

(3) This eternal abode the friends were obliged to build [or: built as a monument] for you who were worthy. Be (there) (in) peace!

(4) Honi, son of Jose, restored this abode so that he could rest (there) (in) peace.

The Aramaic word *qwn›* or *qyn›* (a medially weak noun) means "plot, abode," excluding "lamentation" (Avigad 1967; *MPAT*), but one can hesitate between *dy bnt lk* and *(›)ry bnt lk* and between *ṭb›* and *sb›*. In line 3 for *kdyn* one can hesitate between "to be obliged to" (the normal sense) and "to do" (sometimes in Syriac). The phrase *lm‹bd›* could be nominal or infinitival.

(2) On the E wall are two lines of formal writing in black ink with a date; the numbers are written in figures, represented here As arabic numerals: (1) *b*27 *l*[false start!] (2) *b*24 *l›lwl šnt* 22 (?) […] "On the 24th (day of the month) Elul, year 22 […]."

(3) On the E wall, one line in black ink that can be read: … *kwhnt› w … ›l ybz› šṭn yt b* …, "… (of) the priesthood and (of his anointed?). Let no adversary destroy the t[omb!]."

(4) On the E wall, an inscription of four lines in black ink. Two lines in closely written formal script probably carrying the mention of a "thousand" or a "ship" and sailors *(gbry ›nywt),* and of the littoral of Kanope. The two other texts in cursive script probably mention "Leah, daughter of Joseph, son of Menahem, son of Menahem."

(5) On the W wall, two lines of crude script in charcoal beneath a warship, illegible, reading partly, *bnth* …

c. Greek Inscription. This text of two or three lines is written in charcoal under the Aramaic inscription (1) and is aligned to the right of it. The reading is certain (Puech 1983b).

1 *euphraineste (h)oi zōntes*
2 *adelphoi k (ai) pein (h)o (i) m (akarioi) a (nthrōpoi). O (udeis) ath/an (atos)*

(1) Feast, you living (2) brothers, and drink, y (ou), h (appy) m (en). N (o one) is immor (tal)!

d. Significance. The inscriptions introduce the person for whom the tomb was built, Jason, son of Phinehas. This was very likely the grandson of Jason, the high priest of Jerusalem who was ousted by Menelaus, took refuge in Ammon, then in Egypt, and died in Lacedemonia; he was neither brought back nor mourned in Jerusalem (2 Macc 5:10). The name and the inscription (3) suggest that this is a family tomb of (high) priests (note the *menorahs*) that had to be restored after a *damnatio memoriae* (see (1) and the archaeological evidence that indicates a first use ca. 200). This Jason was a great personage, influential, probably the commander of Cleopatra's III's fleet (see (4) and the warships). Either he ended his days in Jerusalem, rehabilitated, or his remains were brought back to Jerusalem, where it was hoped he would rest in peace. The dated inscription (2) refers to the 22d year of a reign, probably of Alexander Jannaeus (103–75 B.C.), and thus 81 B.C. but the tomb was in use until 31 B.C. (when it was damaged by an earthquake) and, after being abandoned, again around A.D. 30–31. Although it is a property of the Sadducean party, the plans and furnishings of the tomb attest, it seems, to the general conception of life after death in the Judaism of the period. The epicurian tone of the Greek inscription reflects moreover the practice of the *marzeaḥ:* mourning and rejoicing with and because of the dead (see Tob 4:17). Inscription (3), although poorly preserved, carries a curse against anyone who would destroy the tomb (Puech 1983b).

2. Tomb of Benê Hezîr. On the W slope of the Mount of Olives in the Kidron Valley has been excavated a funerary monument (a tomb and its *nepeš*) for the Benê Hezîr family, the Hebrew inscription

of which has been known for more than a century (de Vogüé 1864); but its exact reading was the work of Avigad (1954: 60). The inscription would date from the first half of the 1st century B.C., about two generations after the completion of the monument. It mentions the names of the deceased of the priestly family buried in the tomb: "This tomb and its *nepeš* (are) those of Eleazar, Oniah, Yo‹ezer, Judah, Shim‹on, Yohanan sons of Joseph, son of ‹Obed, of Joseph and Eleazar sons of Oniah, the sons of Hezîr."

3. Tomb Inscriptions. In the necropolis of Giv‹at ha-mibtar, an Aramaic inscription engraved in (paleo-)Hebrew letters, was discovered above a *kokh* (the niche in which the bones of the deceased are deposited) in a panel divided into seven bands, bands two and five being painted in dark red (Beyer 1984: 347; *MPAT,* 68). The text reads: "I, Abba, son of the priest Eleazar, son of Aharon the Elder, it is I, Abba, the oppressed, the persecuted, who was born in Jerusalem, exiled in Babylonia, and who brought back Mattatia, son of Judah. And I have buried him in the grotto that I acquired by deed."

The author of the inscription, recalling his ancestry, relates his own story and the act of piety that he accomplished in bringing back to Jerusalem the bones of Mattatia, deposited in a tomb that he himself had acquired. The return to Jerusalem of the bones of Jews who died in foreign lands is now well known from the inscription of Jason (?) (Puech 1983a) and an Aramaic inscription on an ossuary from the Mount of Olives: "Joseph, son of Elasah, *›rtq›,* brought the bones of his mother (or our mother; Aram *›mk/nh*) Amma to Jerusalem" (Puech 1982a). The family may have come from N Mesopotamia. Another example of this phenomenon is the return of the family of Queen Helena of Adiabene (tomb of the Kings). Even the transfer of bones buried within Palestine to Jerusalem is also known. A slab for the closing of a loculus carries an engraving: "Here were brought the bones of Uzziah, king of Judah. Do not open" (Beyer 1984; 343; *MPAT,* 70). The king Uzziah (8th century B.C.) could not be buried with his fathers because of his leprosy, but the transfer was noted by this Aramaic inscription of the 1st century C.E. (its provenance is unknown).

An Aramaic dipinto in the Kidron Valley mentions another loculus (and its dimensions) for the gathering of ancestors' bones: "This loculus was made for the bones of our fathers, two cubits long. Do not open!" (Beyer 1984: 340; *MPAT,* 67; *CIJ* 1300; see also 1334).

4. Inscribed Sarcophagi. Despite the number of sarcophagi found at Jaffa, Azoth, Caesarea, Haifa, Apollonia, Gezer, and Jifna, few carry inscriptions of any interest. The best known is that of Queen Helena of Adiabene, discovered in the tomb of the kings N of Jerusalem (now in the Louvre in Paris; Beyer 1984: 343; *MPAT,* 132; *CIJ,* 1388). The name and title of the deceased are engraved in two scripts, Estranghelo and Palestinian Aramaic, "Saddan/Saran (or Saddah/Sarah), the queen"; this must be the Semitic name of Helena (Jos. *Ant* 20.92–96), and allows us to identify the funerary monument which is dated to ca. A.D. 50–60.

A sarcophagus cover has recently been discovered in a necropolis E of Jerusalem with a unique Aramaic inscription. In the absence of the name of the deceased, his last wishes are engraved on the tectiform cover. On one end of the sarcophagus and on one triangular side of the tectiform cover, above the depression that served as a handle, the word *skr* can be read; and on one of the two long sides of the cover, *skr ›mr dy l› lhšnyh wlh ytqbr ‹mh b›rnh dnh kwl ›nš* "He (had it) closed. He said to not change it, and that no one should be buried with him in the sarcophagus" (Puech 1989). The dead man asked to remain alone for eternity and did not want to change his place of rest, for example by being placed elsewhere in an ossuary according to the practice of the period in order to reuse the sarcophagus. The cover should be considered as sealed by order (*skr*) and nobody else, not even a member of his family, should join him. Thus neither another inhumation nor a reinhumation was permitted, but only the first inhumation of the deceased, probably to avoid all impurity and/or the disturbing of the bones, in anticipation of general corporeal resurrection. These indications from the beginning of our era are based in the ancient practice "do not open" applied to tombs, sarcophagi, or *loculi.* The use of sarcophagi of wood or stone thus did not cease with the practice of reinhumation in ossuaries.

5. Ossuaries. Among the several thousand ossuaries brought to light in Palestine, a fairly large proportion carry signs and inscriptions more or less finely engraved on the coffin or the stone cover. Most of the inscribed ossuaries come from Jerusalem and its periphery (see *CIJ, MPAT,* Beyer 1984) and from

Jericho (Hachlili 1978, 1979) but a few from Gezer (Macalister 1906; *CIJ* 1176–84), Lydda (*CIJ* 1173), Jaffa (*MPAT* 135), Ziph (Rahmani 1972), Nazareth (*MPAT* 109). The major period of their use extends from the end of the 1st century B.C. (ca. 40–30) up until around A.D. 70 as indicated by the pottery, the coins, and the paleography of some inscriptions. A Hebrew-Aramaic bilingual inscription mentions "Simon, the builder of the temple" (Naveh 1970) and another (Greek-Aramaic) "the bones of Nicanor of Alexandria who made the doors (of the temple)" (*CIJ* 1256; Clermont-Ganneau 1903; see *y. Yoma* 41a; Acts 3:2). An ossuary contained the remains of the granddaughter of the high priest Theophilus (to be dated after A.D. 37) (Barag and Flusser 1986), and another from Jericho mentions the queen Agrippina, spouse of the Emperor Claudius, Empress from 50 to 54 (Hachlili 1979). Certain inscriptions advert to the reinhumation of as many as three generations prior to A.D. 68–70; the *loculi* of these tombs remained in use. This was the case for the tombs of four families: Goliath at Jericho (Hachlili 1979), Dositheus (Sukenik 1928), Simeon the Elder (Savignac 1925), and Qallôn of Jerusalem (*MPAT* 90–95). These indications are important cautions against classing these ossuaries as Judeo-Christian without other evidence. The occasional mention of professions has the same import: priest (Puech 1983a; Milik 1958: 22; Naveh 1979b; Barag and Flusser 1986; *CIJ* 1317), rabbi (*CIJ* 1266, 1268–69), scribe (*CIJ* 1308; *MPAT* 99), artisan (Milik 1958: 12), potter (*MPAT* 86), Nazirite (*MPAT* 121–22), proselyte, and others are mentioned. The signs in the form of an X or a cross on the cover correspond normally to identical signs on the case, and have no religious significance; they indicate the proper position of the cover in order to close it correctly (Smith 1974; Puech 1982b). The rare injunction "do not open" (*MPAT* 95) still plays the role of metal seals (see Puech 1984), as also the *chi-rho* sign (Colella 1973); a divine threat is another protection, as in the (Aramaic) warning, "Whoever will use this ossuary to his own profit, a curse [= offering] of God on behalf of the one who is [enclosed] within" (Milik 1956–57). To these brief formulas can be added indications of consanguinity, "son," "daughter," "wife," "father," "mother," and sometimes the place of origin: Alexandria, Cyrenaica, Ptolemais (Avigad 1962), Beisan/Scythopolis (*CIJ* 1372–74), Bethel (*CIJ* 1283), Capua (*CIJ* 1284), Tyre, Sheba (Puech 1983b).

If these specifications indicate a desire for inhumation in Jerusalem, others, perhaps even families of priests originating in Jerusalem, had their tombs at Jericho (Hachlili 1978–79): "Ishmael, son of Simeon, son of Paltiya, of Jerusalem" (ossuary and inscribed bowl). At other times a surname may characterize a family (e.g., Goliath), or the age of the deceased may be indicated in Greek (Hachlili 1978; Avigad 1962). Finally, an inscribed ossuary found in the excavations of the street Midbar Sinai in Jerusalem carries the specification *šl by dwd* "belonging to the house of David" in Hebrew, but with the Aramaic form *by* for Heb *byt* (Flusser 1986). As evidence of the survival of several families claiming to be of the House of David, this discovery is not without importance for the NT and the Davidic origins of the Messiah Jesus.

The inscriptions on the ossuaries in particular show a surprising diversity of scripts: Aramaic and paleo-Hebrew (*CIJ* 1264), NE Aramaic (Puech 1982a), Palmyrene (Puech 1983b), and Greek (Estranghela on Helena's sarcophagus). Bilinguals are not rare, but trilinguals exist as well (*MPAT* 145). The Semitic, Greek, and even Latin names allow us to have a fairly good idea of the population, all the while aware that the owners of the rock-cut tombs, the sarcophagi, and ossuaries really represent only the elite and prosperous families of the country.

A beginning of the Greek alphabet, apparently followed by the Hebrew letters *aleph* (perhaps for *ʾ[rwr]* "cursed" and *qop* (perhaps for *q[dš]* "holy") in paleo-Hebrew, written in charcoal on the interior face of a cover found at the corner of the bench opposite the entrance of a tomb at Jericho (Hachlili 1979), must have a magic and apotropaic meaning, equivalent to the benedictions and maledictions and the engraved hand at Khirbet el-Qôm, the Hebrew alphabet from a tomb at Tell Eitun (unpublished; see E.6 below), and the amulets of Ketef Hinnom and Emmaus, discovered in a tomb (*CIJ* 1185, Beyer 383). It is not impossible that the inverted writing of several proper names also has such an apotropaic value. Names in Greek script include *naduoI* (for *Ioudan* [*CIJ* 1232]), and in Hebrew script *mwlš* (for *šālôm* [*CIJ* 1258]) and *pswy* (for *Yôsēp* [Joseph; *CIJ* 1389]). Finally an ossuary cover brought to light in the tomb of Bethphage carries, inscribed in two columns, lists of names and sums paid. This reckoning is perhaps to be associated with work executed in the necropolis or in the workshop that made the ossuaries. By the

paleography it would date to the last third of the 1st century B.C. (Milik 1971). The use of ossuaries may have continued sporadically up until A.D. 135, but epigraphic indications are lacking on this matter. This practice would have been that of the dominant party, the Pharisees, and the epigraphic evidence does not contradict it.

6. Necropolis of Beth Shearim. An important center for Jewish activity from the second half of the 2d century (centered around Rabbi Judah ha-Nasi) up until its destruction in 352, Beth Shearim became the Jewish capital, succeeding in some manner to Jerusalem. See JUDAH THE PRINCE, RABBI. Thus its necropolis attracted numerous rich Jews from abroad who desired to rest in Palestinian soil.

Most of the inscriptions come from numerous catacombs dug into the hills. They are engraved or written in charcoal or in red paint on the lintels, stones, and walls, or on the sarcophagi themselves. Among the several hundred inscriptions found in better and worse states of preservation and corresponding degrees of legibility, the great majority are in Greek; only about a fifth are Semitic, many of these in Hebrew, probably because of the influence of the rabbinical school. Palestinian Aramaic is scarcely found at all, but Palmyrene is well represented. Thanks to these documents, it is possible to have an idea of the sociocultural milieu of the inhabitants of the region and their places of origin, be it from abroad, Tyre, Sidon, Beirut, Byblos, Yaḥmur, Beqaʿa, Phaene, Palmyra, Asia (Ezion Geber), Himyar, Meishan (Babylonia), Antioch, Pamphylia, or from Palestine itself, Gabara, Havara, Caesarea, Judea, Maʿon. Also, it appears that the personal names, principally Semitic, come first of all from the biblical world; but there are also names identifiable as Palmyrene (e.g., Mokimos, Sassos, Zenobia, Barazabedia), Nabatean (e.g., Arthis), and Canaanite (e.g., Enebelos [Hannibal]). The most frequently found Greek names are based on Hebrew names (e.g., Theodotos) or phonetic approximations (e.g., Simon), but others are typically Greek, (e.g., Symmachos, Kyrilos, Korinthis, Seleukos), including even Greek and Egyptian theophorics (Diodorus, Dionysius, Eisas, Kalliope, Ourania), which is even more surprising in this Jewish milieu. A certain number of Latin names are attested (e.g., Sabinus, Severius, Germanicus). The use of a second name is not uncommon: Sarah or Maxima, Rael Ourania, etc. But even if one does not press the evidence too much, the names, with the language used, reveal a cultural and religious milieu and denote certain divisions, tolerances, and openness to other cultures. This is confirmed by the two epigrams and figurative representations found on the walls and sarcophagi (victories, the god Eros, amazonomachy). The period of codified interdictions seems largely over, at least for the Jews of the Diaspora. It is notable that in catacombs number 14 and 20, where rabbis were inhumed, the Hebrew inscriptions are more numerous, and that their names are in Hebrew and those of their wives in Greek or Latin. The Greek inscriptions sometimes give the profession (goldsmith, doctor, banker, dyer) and titles (head of synagogue, rabbi, priest [these last also in Hebrew], priestess).

Other than the new words to designate a tomb, *hapsis, krepis, osta, nepeš,* the Greek inscriptions in particular instruct us about postmortem beliefs. The interdiction against opening a sarcophagus in which a husband and wife repose is accompanied with a malediction concerning future life: “Whoever would dare to open what is above us, may he not have any part in eternal life” (no. 129). Another threatens divine judgment at the resurrection: “Whoever would move this one (fem.), he who has promised to resurrect the dead will judge him” (no. 162; cf. John 5:21). The only Aramaic inscriptions are in the same vein: “Whoever would open this sepulcher above the one it encloses, may he die an impious death” (Avigad 1976: 1–2). The Greek inscription (no. 134) stipulates: “No one has the right to open this, in accordance with divine and secular law.” One cannot help but recall an imperial edict (exhumed in a village in Galilee and dating from the beginning of the current era) concerning the violation of sepulchers and the profanation or transfer of a corpse (Abel 1930). These unique formulas perfectly reflect Jewish beliefs of the period: a doctrine of the resurrection of the dead after the general judgment; the conviction that the wicked will not take part in the future life of the just; and the consequent opinion that the Jew who did not respect the eternal rest of the dead until the day of judgment as impious and merited the reward of the impious. A pious Jew hoped for the participation of the deceased in the resurrection of the just: *ʿmydt[n ʿm hṣdyqym*], “[their] resurrection [with the just]” (Avigad 1976: 15). Certain inscriptions express the need for courage to face the journey toward eternal life, sometimes adding “and your soul will have

immortal life" (no. 130). The use of the language "soul" and "immortality" translates the Jewish idea of eternal life that is not opposed to the resurrection of the body. But the Greek influence is perhaps felt more strongly in the Greek epigram of the mausoleum: "… I went to Hades … because the All-Powerful Destiny had decided it." If the Greek word "Hades" translates Heb Sheol in the LXX, the idea that the goddess *Moira* (fate) cuts the cord of life is not at all Jewish, and the formula seems surprising in this milieu. The second epigram (catacomb 18) expresses no Jewish ideas at all in designating the tomb as the riches in which a man rejoices after his death, a sentiment evidenced also by the Homeric inspiration of the poetic Greek phraseology.

On the arch of chambers II–VI in catacomb 1 are engraved the nine first letters of the Greek alphabet that must also have had a magic and apotropaic value (see B.2–3 and E.5 above) without having any direct or immediate relation to pagan influences. In catacomb number 35 an abecedary completely in Hebrew was discovered (unpublished). Graffiti represent the Menorah, boats, and animals.

7. The Coast. A series of tomb inscriptions dating from the first centuries of the current era have been discovered along the Palestinian littoral, in particular at Caesarea, Apollonia, Jaffa, Azotus, Ascalon, Gaza/Maioumas in particular. The contents of these inscriptions can be summarized in general as an indication of the name and patronymic of the deceased, sometimes the age, the profession, and the place of origin. Among this last are Babylonia (*CIJ* 902), Cappadocia (*CIJ* 910), Tarsus (*CIJ* 925, 931), Alexandria (*CIJ* 918, 928, 934), and Pentapolis (*CIJ* 950). Most often in Greek, they also can be written in Hebrew or Aramaic or be partially bilingual. The most important group was found at Jaffa. Several names of rabbis known in Jewish literature are found there (Klein 1931), but also a priest from Egypt (*CIJ* 930), and a centurion from a Jewish family (*CIJ* 920). Rarer, some inscriptions indicate Roman soldiers form the 5th Macedonian legion at Emmaus, in Latin (Landau 1976; Negev 1971) or others in Greek, at Beit Nattif (Savignac 1903), at ʿEitun (Tsaferis 1982a), and elsewhere.

8. Conclusion. These "Jewish" funerary inscriptions reveal a richness of sociocultural (languages, scripts, personal names, ethnography, history) and religious information (funerary customs of reinhumation, transfer of bones, beliefs, Sheol, immortality, resurrection, judgment, eternal life). The belief in resurrection seems already accepted, and is expressed to a certain extent in the practice of reinhumation in ossuaries, but not exclusively, because inhumation in sarcophagi or the gathering of bones in an *ossilegium* does not contradict that belief in any way. The attraction of Palestinian ground, and Jerusalem in particular, as a place of burial during the epoch of messianic effervescence is certainly linked. This attraction does not seem to have disappeared or diminished until the age of Constantine, according to the evidence that has been discovered.

PALESTINIAN JUDAISM. See JUDAISM (PALESTINIAN).

PALLU (PERSON) [Heb *pallû*› (פַּלּוּא)]. PALLUITE. The second of the four sons of Reuben (Gen 46:9; Exod 6:14; 1 Chr 5:3). Pallu was the grandson of Jacob and Leah. His name is included in the list of the seventy people who migrated to Egypt with Jacob and his family at the time of a great famine in Canaan (Gen 46:8–27). Pallu was the father of Eliab (Num 26:8). The redactor of Numbers provided

some additional information about the descendants of Pallu through Eliab in order to show that Dathan and Abiram (Num 26:9) were the leaders of the group that was dissatisfied with Moses' leadership and who had opposed him in the wilderness (Num 16:1–30). It is possible that Pallu may be identified with Peleth, a son of Reuben mentioned in Num 16:1. According to the second census list of Israel mentioned in Numbers, Pallu became the eponymous ancestor of the Palluites, one of the Reubenite clans (Num 26:5).

CLAUDE F. MARIOTTINI

PALM TREES, CITY OF. See CITY OF PALM TREES.

PALMYRA (34°33´N; 38°17´E). An oasis in the Syrian desert halfway between the Phoenician coast and the Euphrates. It was an important caravan city in 1st–3d centuries A.D., then became a Byzantine frontier fortress. Occasional references from the 19th through 11th centuries B.C. (archives from Kaneš, Mari, Emar, and Assyrian annals) indicate limited importance of the site, whose native name, Tadmor, was already in use, going back to an Amorite dialect (possible meaning "guarding post"). Biblical references that Solomon founded Palmyra are late: 2 Chr 8:4 mentions "Tadmor in the wilderness," and apparently derives from 1 Kgs 9:18, where the *ketib* reads *tamar*. The context of 1 Kgs 9:18 suggests a location for Tamar S of the Dead Sea (cf. Gen 14:7; Ezek 47:18–19; 48:28). If the Chronicler understood *Tadmor*, and adapted the context accordingly, it proves only that the desert station had already some renown in the early Hellenistic period. Josephus (*Ant* 8.6.1) abounds in the same sense, as does modern Arab folklore. See TADMOR.

The Greek name *Palmyra* remains unexplained; it can hardly be related to the Latin *palma*, in spite of Hebrew *tamar* meaning "palm." Latin texts are extremely rare in Palmyra, but there are about two thousand inscriptions in local Aramaic, including the longest known NW Semitic inscription, the Tariff, which is a text of the law passed in 137 A.D. to harmonize and complete earlier rules concerning municipal custom duties and taxes. The language is practically the same as the contemporary Jewish Aramaic of the Dead Sea Scrolls, and is very close to the biblical Aramaic. The script is a monumental version of the Achaemenid chancery ductus, but there exists also a cursive script.

A. History of Palmyra

Disregarding some Paleolithic flint finds and a few Bronze Age sherds, the earliest remains discovered in Palmyra date to the 2d century B.C., and consist of burial deposits in the underground family tomb of Yedi‹bel. The first safely dated inscription, commissioned by the priests of Bel in 44 B.C., is nearly contemporary with a failed attempt by troops of Mark Antony to loot the city, which had hastily been evacuated by the inhabitants (App., *BCiv* 5.9). A tiny chapel of the Arab goddess Allat was erected before ca. 50 B.C., but all other extant monuments were built around the B.C./A.D. transition or later.

The city was self-governed by an assembly composed of a number of tribes, four treasurers, and probably other elected officials, but it was at the same time a part of the Roman province of Syria. Statues of Tiberius and his kin were erected in the temple of Bel in 17 A.D. Under Nero, the Senate was created, and two archonts were placed at the head of the city, which was divided on territorial or religious criteria between four reformed tribes, in accordance with the Hellenistic institutions.

By the time of Nero, Palmyra had already risen to prominence as a major merchant power, with outposts in Babylon and Seleucia-on-Tigris, and later in Vologesias and Charax, river ports closer to the Persian Gulf. Its trade provided the Roman Empire with oriental luxuries and essentials such as frankincense, spices and scents, silk, cotton, and pearls, brought to the head of the Gulf from China and India. The Palmyrenes transported these goods by boat on the Euphrates and on camelback across the desert to the Mediterranean. To accomplish this, it was essential to maintain secure footholds on the river (such as the island of ‹Ana) and especially to maintain security of the desert tracks, which they assured by promoting positive relations with the nomads. The heyday of their trade was between 130–160 A.D.

The emperor Hadrian visited Palmyra in 129 A.D. and made it a free city (i.e., autonomous in fiscal matters). Further privileges were granted when it was given the status of colony, awarded by Caracalla after 212 A.D. However, with the mounting danger of Sassanian expansion, trade came to a standstill and

direct rule was introduced. Septimius Odainat, son of Hairan, is known to be the "Head of Tadmor" (Gk *exarch*) in 252, and then as Roman governor of the province Syria-Phoenicia in 258. After he defeated an attempted invasion by Sapor I in 260, he was proclaimed by Emperor Gallienus "corrector of the whole East" and took for himself the Persian title of "King of Kings." Such audacity was too much for the imperial government, and he was assassinated in 267/68, apparently the result of an official plot. His widow Zenobia, however, maintained power for her minor son Wahballat, and conquered Egypt and Asia Minor, forming a short-lived Oriental empire. The new "empire" was crushed in 272 by Aurelian who, after an uprising in Palmyra the following year, captured the city and devastated it.

Much reduced in size, Palmyra became then a legionary fortress of the *limes* of Diocletian (about 300 A.D.). It was restored in the 6th century by Justinian, but the caravan trade never revived. Taken by Moslems in 634, Palmyra continued as a town until the middle of the 8th century, and became a fortress again in the 12th century. After being an insignificant village for several centuries, Palmyra is now an expanding town of over thirty thousand.

B. Archaeological Remains

The present-day ruins correspond largely to the inner city of 2d–3d centuries A.D., as preserved within the reduced perimeter of the Diocletian's wall. The residential areas are practically untouched by research, but the street grid is clearly visible on the surface. The main thoroughfare was shaded, in a way typical of the Roman East, by two rows of columns. The road has been partly cleared, together with the neighboring complex of public buildings, which include a theater, a square agora, a caravan entrepôt, etc. A characteristic feature at Palmyra, which is found sparingly at other sites, is brackets fixed on columns at about two-thirds of their height; these held bronze statues of worthy citizens, but only the dedicatory inscriptions remain.

Immediately outside the city is the necropolis, which includes about 200 partly preserved tombs. The oldest type is the funerary tower, with multistoried loculi opening on each floor. There are also collective monuments sometimes called *nāpša* (i.e., "soul, person"), a term applied also to individual funerary stones. Other tombs are underground, which consist of long galleries with vertical niches, and in the 2d century the so-called funerary temples appeared, which are lavishly decorated mausolea of Classical inspiration.

The major monument of Palmyra is the sanctuary of Bel, erected on top of a mound which was the likely site of the early settlement and its temples. The present cella, dedicated in 32 A.D., but completed probably later, is outwardly Hellenistic, but contains at its short ends two deep, raised niches where cult images were exposed and sacred objects kept. The flat roof could accommodate some ceremonies, while other activities took place at the slaughtering altar, the lustration basin, and the banqueting hall, all set in the huge square courtyard surrounded by porticoes. The much smaller sanctuary of Baʿal-šamīn consisted of an irregular temenos divided into several colonnaded courtyards. Founded at the beginning of the 1st century A.D., it received a Classical cella just before 131 A.D. to enshrine an older cult-relief in a richly adorned exedra. There was also the temple of Nebo, raised on a high podium in the middle of its courtyard, which apparently replaced an older building. The shrine to the goddess Allat was for a long time a small chapel, but later was preserved within a 2d-century cella. The temple of Arṣū is utterly destroyed, while those of Atargatis, ʿAglibōl and Malakbel, and others, are not located yet.

The chief god of Palmyra was Bel, which reflects the Babylonian name of the archaic Bōl (apparently a dialectical rendering of common Semitic *baʿal*), and was preserved only in composite names (e.g., the Moon-god, ʿAglibōl; or the Sun-god, Yarḥibōl). These three, in company of Arṣu, ʿAštart, and others, owned together the great temple and formed a group of planetary gods with Bel, as Jupiter, governing the Cosmos. They appear, however, in different combinations in other sanctuaries, preserving disparate tribal traditions; thus ʿAglibōl was worshiped in the "Sacred Grove" together with Malakbel ("Angel of Bel"), a youthful vegetation god, but also a Sun-god distinct from Yarḥibōl, who presided over the source Efqa, the main water supply for the oasis. While these gods are unknown outside the sphere of Palmyra cults, others are more common: Arṣu is an Arab armed godhead equated with the Greek Ares and proceeding from the Safaitic Ruḍā; Herodotus (3.8) identified Orotal as the major god of the Arabs, and also

identified Allat with Aphrodite. While Ba‹al-šamīn, "Lord of Heaven," is known in the 10th century B.C., he arrived in Palmyra as the supreme deity of a tribe, parallel to, but distinct from Bel. A crowd of lesser gods, often undistinguishable from each other, were imported by their nomadic worshipers from the desert. Characteristically, they are always armed, either in the bedouin way or wearing an armor as Roman soldiers did.

The forms of cult are known very imperfectly. In addition to the traditional holocausts, there were simple frankincense offerings on altars of which several hundreds survive. Ritual meals, organized by particulars or by associations (with that of the priests of Bel paramount), consisted in solemnly sharing food and wine in the presence of a god. Cult images were most often graven in relief and not sculpted in the round, so that some traditional offerings and trappings were obviously no longer appropriate, and a more spiritual understanding of divinity might be supposed. Such an understanding is certain in the case of the so-called anonymous god, which was apparently Ba‹al-šamīn, who was worshipped outside his sanctuary with ritual consisting of incense burning on votive altars. These altars bear formulas expressing the transcendent and ethical character of the god, whom they never call by name. However, in spite of some modern speculation, this cult was not monotheistic.

In the art of Palmyra the gods and their faithful are represented in relief, aligned in a strictly frontal view. This convention is also constant in funerary sculpture, which consists of plaques with half-figures of men and women in high relief; these are applied on grave slits, and larger plaques with family banquet scenes are placed on sarcophagi. Artists strove to express a vivid presence of the deceased and their contact with the beholder via a frontal posture and large open eyes. While they are keen on details of dress, jewelry, etc., a portrait likeness is seldom attempted. The relation to Byzantine art strikes the eye though direct links are missing, since the art of Palmyra became extinct in the late 3d century, shortly after those of Hatra and Dura, which had shared in the same artistic and religious outlook.

PALSY. See SICKNESS AND DISEASE.

PALTI (PERSON) [Heb *pālṭî* (פָּלְטִי)]. Var. PALTIEL. **1.** Son of Raphu, and a Benjaminite (Num 13:9). Palti's name appears sixth in a list of twelve men sent by Moses to spy out the land (Num 13:1–16). Each man represented a tribe, Palti representing the tribe of Benjamin.

2. Second husband of Michal, Saul's daughter; and the son of Laish from Gallim (1 Sam 25:44, 2 Sam 3:15). Palti's name appears in a note about David's wives (1 Sam 25:43–44) and in the narrative concerning David's negotiations with Abner (2 Samuel 12–21). (In the latter he is called Paltiel.) Saul gave Michal, David's wife, to Palti. No reason is stated for this action. After Saul's death, David stipulated the return of Michal as a condition of his talks with Abner, commander of Ishbosheth's army (2 Sam 3:14). Michal is taken from Palti, as David requested (v 15). Palti follows her, weeping, all the way to Bahurim. When Abner orders him to return, however, he obeys (v 16).

LINDA S. SCHEARING

PALTIEL (PERSON) [Heb *pāltî›ēl* (פַּלְטִיאֵל)]. **1.** Son of Azzan; an Issacharite (Num 34:26). Paltiel's name appears eighth in a list of twelve tribal representatives designated by Moses to divide the land of Canaan (Num 34:19–29).

2. Second husband of Michal; son of Laish (2 Sam 3:15). See PALTI.

LINDA S. SCHEARING

PALTITE, THE [Heb *happalṭî* (הַפַּלְטִי)]. Occurs only in 2 Sam 23:26 as the gentilic designation of Helez, fifth in the main list of "the Thirty," David's corp of military elite *(haggibbōrim).* See DAVID'S CHAMPIONS. It identifies him either as a Calebite through Pelet (1 Chr 2:47) or as a native of Beth-Pelet (M.R. 141079), a Judean town near Beer-sheba (Josh 15:27). The latter is more likely in view of the context, though the two may be associated. The LXX's *phelōthi* reflects the confusion found in the Chronicler's parallel and related lists (1 Chr 11:27; 27:10), where Helez is "the Pelonite" (MT *happĕlônî;* LXX *phelōni*).

DAVID L. THOMPSON

PAMPHYLIA (PLACE) [Gk *Pamphylia* (Παμφυλια)]. A district in S Asia Minor bounded on the N by Pisidia and the Taurus Mountains, on the E by Cilicia Tracheia (later called Isauria), and on the W by Lycia. The district, which bordered the Mediterranean coast, covered a territory about eighty miles long and thirty miles wide. Several navigable rivers, including the Kestros and the Eurymedon, flowed through the region to the S coast of Asia Minor and emptied into the Pamphylian Sea. The major cities on the coast were Attalia, Side, and Coracesium and in the interior were Perga and Aspendus (Strabo 14.4.1–3; see also Bean 1968: 1053–81). The coastal towns were used as an operational base for pirates from Pamphylia and Cilicia (Strabo 12.7.2–3, 14.3.2). The climate along the coastal plain was uncomfortable and malaria was prevalent. The region produced abundant fruit crops and was renowned for its pharmaceutical products.

According to one tradition, Pamphylia was colonized by a mixed multitude of Greeks led by Amphilochus and Calchas after the fall of Troy (Herodotus 7.91; Strabo 14.4.3, 12.3.27, 14.5.23). Pamphylia literally means "many tribes, or nations," but the region had its own aberrant Greek dialect related to the Arcadian Greek (see Ramsay 1880 and Brixhe 1976; the city of Side had its own script and language which persisted until the 2d century B.C.E. and is still essentially undeciphered; cf. Acts 2:10). Pliny (the Elder) reports that the region was once called Mopsopia, after the celebrated soothsayer Mopsus (*HN* 5.26; Strabo 14.4.3; see Pausanius 7.3.2; compare with another earlier diviner by the same name in Pindar *Pyth.* 4.191; and Apollonius of Rhodes 1.1083, and 4.1502ff.). Mopsus shared an oracle-shrine with Amphilochus in Cilicia, where his name occurs in local place names and in 8th-century bilingual hieroglyph inscriptions from Karatepe.

Pamphylia was ruled by local kings before being absorbed into Croesus' Lydian empire. Pamphylia fell to the Persians and continued under Persian control until it submitted to Alexander the Great. Although Pamphylia was occupied by Ptolemy I and III, the district was generally controlled by the Seleucids. The region was surrendered to the Romans by Antiochus III in 189 B.C.E. The Attalids of Pergamum gained a small part of the W coastline, where they founded the city of Attalia.

Pamphylia was part of the province of Cilicia from 102 B.C.E. to 44 B.C.E. and then was included in the province of Asia. Antony granted Pamphylia to Amyntas in 36 B.C.E. and it was joined together with Galatia from 25 B.C.E. to 43 C.E. (see Smye 1934) when Claudius formed Lycia-Pamphylia. Pamphylia was reunited to Galatia by Galba, after the Lycians procurred a temporary independence, and was finally reunited again with Lycia by Vespasian. Luke's use of a common article bonding "Cilicia" and "Pamphylia" in Acts 27:5 was probably not to indicate a political entity (which did not exist) but rather a geographical unit, both sharing the S coastline of Asia Minor.

It appears that Pamphylia had a sizable Jewish population during the Maccabean period, considering that it was one of the countries notified by the Roman consul in 142 B.C.E. of a renewed alliance with the Hasmoneans of Judea (1 Macc 15:23). Side was specifically mentioned in the circular; however, inscriptions relating to Jews in this city date to a later period (*CLL* no. 781; Robert 1958: 36–47; Lifshitz 1967: nos. 36–37). Philo included it among countries having a significant Jewish population, and

Pamphylian Jews were reported in Jerusalem at Pentecost (Philo *Gaium* 281–82; Acts 2:10). It is likely that there were Jews in the city of Perga during Paul's missionary activities there (Acts 13:13; 14:25).

Paul, Barnabas, and John Mark visited Pamphylia during their first missionary journey. They sailed from Paphos on Cyprus up the Kestros River to Perga (or an adjoining port town, Acts 13:13). There is no indication that Paul or his companions preached to the Pamphylians at this time. After an apparent difference of opinion, John Mark left his colleagues and returned to Jerusalem (Acts 13:13). Paul and Barnabas crossed the Taurus Mountains and preached in Pisidian Antioch (Acts 13:14). A possible explanation of the unusual course of events is that the three agreed to evangelize Pamphylia but for some reason there was a change of venue and John Mark refused to acquiesce. Some scholars have conjectured that Paul, who was probably enervated by the intense efforts at Paphos, may have contracted malaria in the moist Pamphylian climate (cf. Gal 4:13), forcing a change in itinerary. On their return, Paul and Barnabas preached in Perga and perhaps Attalia before sailing back to Antioch (Acts 14:24–26).

SCOTT T. CARROLL

PANEL [Heb *misgeret* (מִסְגֶּרֶת)*; sippûn* (סִפּוּן)]. A word used to denote the sides of the lavers in Solomon's Temple and also the wooden (cedar) paneling of houses. The temple texts describe the elaborate stands for the lavers as having framed panels decorated with lions, oxen, and cherubim (see 1 Kgs 7:28, 29, 31, 32, 35, 36). See also LAVER. Otherwise, Jeremiah delivers an oracle against Shallum, who is berated (Jer 22:14) for building such a fancy dwelling, paneled with cedar. In Hag 1:4, the prophet urges the people to rebuild the desolate Temple since they already live in "paneled" *(sĕpûnîm)* houses. However, the Haggai passage may mean "finished" houses in contrast to God's ruined dwelling. An obscure Hebrew word *(śāḥîp)* is rendered "paneled" in Ezek 41:16.

CAROL MEYERS

PANTHEONS, MESOPOTAMIAN. In the polytheistic world of Sumer, Babylonia, and Assyria thousands of gods existed, and since the cuneiform scribes made and used all kinds of lists of signs, words, and numbers for various practical and theoretical needs, gods' names were also compiled in list form. In a restricted sense, the word "pantheon" can be used to describe these lists. The earliest such list is *ca.* 2600 from Ur (UET 2: 105), which consists of only twelve names, and its purpose is not clear. However, from Fara and Abu Ṣalābīkh *ca.* 2500 B.C. there are lists of between 600 and 400 names, as well as some shorter ones, which are clearly meant as comprehensive statements of the pantheon. The two longest, one each from Fara and Abu Ṣalābīkh, show set principles of arrangement. Both begin with the most senior members of the pantheon by rank, to express a theological statement, but later in the lists another principle of arrangement appears. For example, in the big Fara list there is a long section of names beginning with *Nin-*, put together only because they share the same first sign, something akin to our alphabetic arrangement, with no theological significance.

In the 2d millennium another type of list arose, which continued to be copied until the 1st millennium, namely gods' names written in signs which are not self-explanatory and so have the reading indicated in phonetic signs, thus being a philological tool. However, the 3d-millennium type continued to be compiled and used, at least for the first few centuries of the 2d millennium, and at least one of these survived into the 1st millennium. But before 1600 B.C. more systematic lists were being compiled, giving the major deities of the pantheon in order of rank, each with spouse, children, courtiers, and other related minor gods. Such single-column lists required considerable knowledge to use and understand, so a double-column format was introduced *ca.* 1500 B.C. The names were explained by being equated with another

name, on the analogy of Sumero-Babylonian word lists, and explanatory notes followed or took the place of the equivalent name, e.g. "Asallukhi = Marduk, prime son of Enki." This kind of list is, of course, extremely informative for modern scholars, though in need of critical handling, and the longest list of this type is called *An = Anum* after its first line, and contains not far short of 2000 entries. It was compiled by expanding older lists in the second half of the 2d millennium. It continued to be copied until at least the period of the Persian empire.

A still more elaborate type of list also appeared in the second half of the 2d millennium, utilizing three subcolumns. As before, the name in the first subcolumn was explained by an equation with another name, and then a phrase indicated the special reference of this particular name of the god being dealt with, e.g., "An = Anum, of mankind." Instead of simple phrases, more elaborate epithets are used in some of these lists.

All but one of these lists are Sumerian or Babylonian, the exception being a single-column Assyrian list, known from 1st-millennium copies, but perhaps of 2d-millennium origin. For further discussion see *RLA* 3: 473–79.

W. G. LAMBERT

PANTHER. See ZOOLOGY.

PAPHOS (PLACE) [Gk *Paphos* (Παφος)]. A city in the SW of the island of Cyprus (34°45′N; 32°25′E), seat of the island's administrative government during the NT period. The Paphos of Acts 13:6–13 is actually the newer of two neighboring cities bearing the same name, sometimes differentiated by the terms "New Paphos" (*paphos nea;* Pliny *HN,* 5.130) and "Old Paphos" (*palaipaphos;* Strabo 14.683).

The maiden missionary voyage of Saul and Barnabas took them to Cyprus at the very outset. They landed in Salamis and made their way to Paphos at the other end of the island. Here they encountered the Jewish magician Elymas and the proconsul Sergius Paulus, who was the first of many secular authorities to summon Paul to give an account of himself. Paul (as Saul is called for the first time in the course of this narrative) successfully curses one with blindness (the apostle's first recorded miracle) and converts the other. Given some of the external evidence, the references connecting this city to a Sergius Paulus, to proconsuls in general, and to a Jewish magician are not surprising. Cyprus had recently been made a senatorial province, and the capital, and therefore proconsular residence, was in Paphos. There seems to be evidence for the name "Sergius Paulus" in an inscription found in N Cyprus (*SEG* 20.302, lines 9–11), but the best conjectures at dating make it unlikely that it refers to the same man (cf. now Mitford *ANRW* 2/7/2: 1300, 1330). Josephus (*Ant* 20.142) mentions a Cypriot Jewish magician named Atomus, again unlikely to be identified with the man in Acts, unless perhaps one regards the Bezan text as preserving his name more accurately (*et*[.]*mas* for *elumas*). On all these matters see Hemer 1989: 108, 109, 166f.

Cyprus was annexed by Rome in 58 B.C. and, after a very short period as a province with a military governor, became a senatorial (proconsular) province in 22 B.C. Paphos was well known for its temple and cult of a goddess syncretistically identified as the Greek Aphrodite, who became known as the "Paphian goddess." She was allegedly born on the foam of the sea, and floated on a shell to the shore of Cyprus near Paphos. The city also had a history of earthquakes, and was virtually destroyed by one in the 4th century A.D. It was perhaps as a result of this that Paphos lost its title as the capital of the island to Constantia, which was the rebuilt city of Salamis. The modern name for Paphos is Baffo, and excavations have revealed parts of several public and private buildings from the Roman era, including the city walls, an amphitheater, and a luxurious villa which may have been the governor's palace.

PAPIAS (PERSON). The writings of Papias (traditionally, ca. A.D. 60–130) are known to the modern world only from fragments and would be neglected today if it were not for certain statements made by

him about Mark and Matthew that have intrigued NT scholars. This interest has rescued Papias from obscurity but has also distorted his importance and skewed the significance of his role in the early church.

A. Papias the Man

According to Irenaeus, our earliest witness, Papias was "a hearer of John and a companion of Polycarp, a man of primitive times," who wrote a volume in "five books" (*haer.* 5.33.4; quoted by Eusebius *Hist. Eccl.* 3.39.1). Eusebius already doubted the reality of a connection between Papias and the apostle John on the grounds that Papias himself in the preface to his book distinguished the apostle John from John the presbyter and seems to have had significant contact only with John the presbyter and a certain Aristion (*Hist. Eccl.* 3.39.3–7). Eusebius' skepticism was no doubt prompted by his distaste—perhaps a recently acquired distaste (Grant 1974)—for Papias' chiliasm and his feeling that such a theology qualified Papias for the distinction of being "a man of exceedingly small intelligence" (*Hist. Eccl.* 3.39.13). Nevertheless Eusebius' analysis of the preface is probably correct; and his further point that Papias' chiliasm put him to the same camp as the Revelation of John is surely relevant. It is notable that Eusebius, in spite of his desire to discredit Papias, still places him as early as the reign of Trajan (A.D. 98–117); and although later dates (e.g., A.D. 130–140) have often been suggested by modern scholars, Bartlet's date for Papias' literary activity of about A.D. 110 has recently gained support (Schoedel 1967: 91–92; Körtner 1983: 89–94, 167–72, 225–26).

It is also Eusebius who informs us that Papias was "bishop of the community in Hierapolis" (*Hist. Eccl.* 3.36.2). A somewhat different impression is left by Irenaeus, who is interested in the connection between Papias and the "presbyters" of Asia Minor. In this context the term "presbyter" refers not to church officials but to followers of the disciples (notably John) who handed on the orthodox theological tradition. It seems unlikely, as Harnack thought, that Papias was Irenaeus' source for his knowledge of the presbyters (Körtner 1983: 36–43). For in the crucial passage, Papias is evidently treated by Irenaeus simply as one who reinforces the authority of the presbyters in handing on the saying of the Lord about the wonderful fruitfulness of the earth in the millennium (*haer.* 5.33.3–4). The likelihood is that the presbyters were charismatic leaders in Asia Minor who in some quarters were believed to have been followers of the apostles and sometimes of the Lord himself and who were responsible, among other things, for promoting an apocalyptic form of Christianity; and it seems probable that John the presbyter and Aristion were the most important of these figures for Papias (Körtner 1983: 114–32).

B. Papias' Exposition of the Lord's Logia

What has become for many the standard collection of fragments of Papias (in Bihlmeyer) contains some thirteen items, the most important of which are derived from Irenaeus (*haer.* 5.33.4–5) and Eusebius (*Hist. Eccl.* 3.39). Other collections have additional materials, including a number of minor references to Papias from the church fathers. Körtner, for example, numbers twenty-two items in his edition of the fragments. Efforts to enrich the collection from the traditions of the presbyters in Irenaeus (Loofs 1930: 325–38) or from Armenian sources (Siegert 1981; Kürzinger 1983) are problematic (Körtner 1983: 31–43).

Papias' book was entitled "Exposition of the Lord's Logia" (Eus. *Hist. Eccl.* 3.39.1). Papias uses the term *logia* also in his discussion of Mark where the words and deeds of Jesus are under discussion (*Hist. Eccl.* 3.39.15). To judge from the fragments, the term "exposition" *(exegesis)* refers primarily to the act of collecting and correlating the materials. We do not know to what extent (if any) the shape of the book was determined by the written sources used by Papias (Mark and Matthew). We do not know what the scope or structure of the book was. We do not know whether the five divisions of the work represent anything more than perhaps an imitation of the Pentateuch, the Psalms, or some other collection. We cannot specify the genre of the work with any confidence (though perhaps the relevant parallel is offered by the *apomnemoneumata*—the memoirs—of antiquity). It is not known whether any polemical intent informs the writing of the work, although opposition especially in Gnosticism or to Paulinism or to the Gospel of John have often been named in this connection. We do know that the preface of Papias' book and his account of the gospels of Mark and Matthew reflect the horizons of Greco-Roman rhetorical theory and practice. But there is disagreement as to how deep the influence goes (for an extreme statement of the

case, see Kürzinger). It is possible that Papias was exercising a kind of rhetorical criticism on the tradition primarily for historical purposes with a view to establishing the credentials of his own chiliastic theology and thus promoting his work as a resource for the Christianity dominant in his immediate environment or at most (if we are not dealing merely with rhetorical flourishes) as a response to vaguely defined tendencies that involved (as Papias saw it) an openness to "those who have much to say" and a receptivity to "alien commandments" (*Hist. Eccl.* 3.39.3). In any event, it is not to be taken for granted that the anti-Gnostic use soon to be made of such theology necessarily illuminates Papias' own purpose.

Somewhat similarly, Papias discloses his preference for oral tradition in good rhetorical style as a preference for "a living and abiding voice" (*Hist. Eccl.* 3.39.4), yet he clearly is also well disposed to his written sources. Thus he apparently was a man who within certain limits sought to soften rather than to sharpen polarities and apparent contradictions.

C. Papias' Sources

Papias mentions "the presbyters"—or more precisely, those "who had actually attended the presbyters"—as his oral source and in this connection names seven (presumably representative) disciples (Andrew, Peter, Philip, Thomas, James, John, and Matthew) and two others, "Aristion and the elder John," whom he also calls "disciples of the Lord" (*Hist. Eccl.* 3.39.3–4). These lines from Papias' preface can be read in a way that identifies the presbyters with the disciples. But it is more likely that Papias regarded the presbyters as followers of the disciples. If the latter is correct, Papias claims to have his information from the disciples at third hand (Schoedel 1967: 98). It is also possible to read the passage in a way that identifies the apostle John with the presbyter John. But this reading also seems very doubtful (Schoedel 1967: 98–99). Presumably, then, Aristion and the presbyter John were regarded as personal "disciples" of Jesus who were not among the twelve; and presumably John was called "the presbyter" (whereas Aristion was not) to distinguish him from the apostle, who had just been named (Munck 1959). In any event, Papias "often mentions them [Aristion and the presbyter John] by name and sets forth their traditions in his writings"; and the assertion of Eusebius that Papias was himself a hearer of Aristion and the presbyter John is probably based on nothing more definite than that (*Hist. Eccl.* 3.39.7).

D. Papias' Theology

It is presumably from (followers of) Aristion and the presbyter John, then, that Papias derived his chiliastic doctrine. This connects Papias with a distinctive theological tradition that involves especially the presbyters of Asia Minor, Montanism, and later enthusiasts for millennialism. Interest in this tradition may have been reinforced in the case of Papias by the use of the NT Apocalypse (Körtner 1983: 82), but that is not certain (Schoedel 1967: 113–14). Papias' own theology left its mark in Irenaeus and elsewhere (notably, it seems, in Victorinus of Pettau, who died ca. A.D. 304). The background of the famous saying of the Lord about the miraculous fruitfulness of the earth in the millennium has been found in Jewish apocalyptic literature (Gry 1944, 1946), and there is little in the fragments of Papias that could not be seen as inspired by an apocalyptically oriented form of Jewish Christianity. But there are occasional hints of other theological concerns such as Papias' account of "a woman reproached for many sins in the Lord's presence" (*Hist. Eccl.* 3.39.17). And the interest in literary and historical questions evidently has intellectual foundations independent of Jewish Christianity. Moreover, Papias' accounts of miracles—the resurrection of a dead body (a story "received from the daughters of Philip," presumably Philip the evangelist and not Philip the apostle as Eusebius asserts), and the drinking of poison by Justus without any harmful effects (*Hist. Eccl.* 3.39.8–10; cf. Mark 16:17–18), or the gruesome account of Judas' death (in a fragment stemming from Apollinaris of Laodicaea)—suggest the atmosphere of the legendary acts of the apostles. That such events functioned as eschatological signs for Papias is possible, but that is not at all obvious from the fragments themselves. That Papias was in such instances adapting to his purposes stories that had Gnostic dimensions (Beyschlag 1961) is even less likely (Schoedel 1967: 111–12, Körtner 1983: 137–44; 148).

E. Papias and the New Testament

What the fragments have to tell us about Mark and Matthew is information that Papias himself traces to "the presbyter" (Eus. *Hist. Eccl.* 3.39.15–16). Eusebius separates the statements about Mark and Matthew,

but they may originally have followed one another and certainly seem closely related. Perhaps the simplest reading of the statement on Mark is that Mark served as Peter's interpreter (possibly in the role of *methurgaman*, or oral translator) and wrote down what he heard Peter say of the words and deeds of Jesus and that his writing is defective in "order," though not in accuracy or fullness of recollection, because Peter naturally referred to the Lord's *logia* in a random manner. Some have suspected that Papias did not have in mind the gospel of Mark that we know, but the arguments are tenuous. On another point, Kürzinger has attempted to show that Papias was speaking not of translation from the native language of Peter but of presentation of the reports of Peter (an interpretation which he applies also to Papias' statement about Matthew); but this seems to push a rhetorical approach to Papias' terminology too far (Schoedel 1967: 107; Körtner 1983: 203–4). On the other hand, an interpretation in rhetorical terms is somewhat more likely when it comes to the suggestion that Papias meant to say that Peter spoke "in *chria*-style" rather than "as needs *(chriai)* dictated." But the point that is debated more than any other is what Papias had in mind when he said that Mark did not write "in order." It is perhaps most likely that Papias was measuring Mark by Matthew (who is said by Papias to have made "an ordered arrangement" of the materials)—or perhaps more generally by Papias' own conception of what ought to be included in such an account—and that he had in mind completeness of information as well as "order" in the narrow sense of the term. In any event, Papias is defending Mark in spite of perceived deficiencies.

Perhaps the simplest reading of the much briefer statement of Papias on Matthew is that Matthew organized the Lord's *logia* in Hebrew (Aramaic?) and that people ("each one") translated them variously. Some have held that Papias had in mind something other than the gospel of Matthew as we know it (a collection of sayings like Q, for example, or a collection of *testimonia*), but such views enjoy little support today. Again Kürzinger thinks that Papias is speaking of materials written not in the Hebrew language but in a Semitic style and of the presentation of such Semitically colored materials in different ways by Mark and Matthew ("each one"); but this also seems to push the terminology unnaturally (Schoedel 1967: 110; Körtner 1983: 203–4). To be sure, it is unclear what Papias had in mind when he referred to the variety of translations of Matthew. Conceivably the Jewish model of the translation of Scripture orally by a *methurgaman* lies in the background, or it may be that Papias was trying to account for the existence of Jewish Christian gospels (like the *Gospel According to the Hebrews*) which rivaled the authority of our Matthew. In any event, it is likely that, in the case of both Mark and Matthew, Papias was offering an explanation of the fact that he possessed Greek versions of what he assumed must have had Semitic prototypes. In other words, the concern for the authenticity of the tradition is once again the main point. Clearly, then, Papias' purpose must be taken into account before his statements are scrutinized for clues to the origins of the gospels. For this and other reasons there is an understandable reluctance of scholars today to rely heavily on Papias in the unraveling of NT problems.

Some scholars have found hints in the fragments that Papias also knew the gospels of Luke and John (and was dissatisfied with them or, quite the opposite, used one or the other of them as the standard by which he measured the adequacy of Mark), but the evidence is fragile. In particular, the reference to Mark's lack of "order" has inevitably suggested a connection (positive or negative) with Luke's claim to have set his materials down "accurately in order" (1:3). And Papias' assertion that he will hand on only "commandments" given by the Lord and "coming from the Truth itself" has suggested dependence on the Gospel of John (14:6, 15). But it is hard to find much to support these points. Certainly the evidence of the so-called "anti-Marcionite prologue" that names Papias as the apostle John's amanuensis is not impressive (Schoedel 1967: 121–123). Also highly problematic, however, is the information contained in two interdependent fragments of Papias that links the (relatively early) martyrdom of James (Acts 12:2) with that of John and that has consequently often been used to question the apostolicity of the Gospel of John (Schoedel 1967: 117–21). At the same time, the distinction apparently made between the disciple John and the presbyter John in Papias' preface plays a legitimate role in assessing claims made for the authorship of the various writings attributed to John in the NT and in evaluating the tradition concerning the Ephesian ministry of John the apostle.

A complex relation obtains between Papias' story of "a woman reproached for many sins in the Lord's presence" (*Hist. Eccl.* 3.39.17), the *pericope adulterae* now located in John 7:53–8:11, and the *Gospel According to the Hebrews* that Eusebius names as containing the story (cf. Becker). Here it is worth noting only that it is Eusebius (and not necessarily Papias himself) who makes reference to the *Gospel According to the Hebrews*.

Finally, Eusebius says that Papias "made use of testimonies from the first letter of John and likewise from that of Peter" (*Hist. Eccl.* 3.39.17). If this is accurate, it seems unlikely that the theology of either of these two writings influenced Papias deeply. Conceivably an interest in the figure of Peter prompted by Papias' Jewish Christian orientation had something to do with his use of 1 Peter and his appeal to what the presbyter had to say about Peter's role in the formation of the gospel of Mark. But that is obviously tenuous, and it seems unlikely in any event that opposition between Peter and Paul would have been involved. Papias' Christianity was evidently non-Pauline, but it was not necessarily anti-Pauline.

WILLIAM R. SCHOEDEL

PAPYRI, EARLY CHRISTIAN. "Papyri" is used as a generic term to refer to texts written on papyrus or similar writing materials (in particular parchment, ostraca, and wooden tablets) which have emerged through stray finds or excavation, mainly in Egypt. The word conveniently distinguishes these from the "manuscripts" (mostly on parchment) handed down through the medieval library tradition. The writing materials of Mediterranean antiquity—of which papyrus was the principal one (Lewis 1974)—in general failed to survive the passage of time. Arid and desolate conditions along the Nile valley, however, proved especially favorable to their preservation (the moister Delta region much less so), and papyri have turned up in large numbers from scrap heaps and other sites in Egypt since late in the 19th century (comprehensive surveys of papyrology, including treatment of Christian materials, are given by Montevecchi 1973; Turner 1980; and there are several standard bibliographies for the field; for explanations of sigla denoting papyrus editions see Oates et al. 1985). Outside Egypt, papyrus finds have been on a very much smaller scale and the attestation of early Christianity slight. A parchment fragment of Tatian's *Diatessaron* (P. Dura 10) was found at Dura-Europus, where Christianity was practiced alongside other worshipping traditions in this remote Roman outpost, destroyed by the Persians in A.D. 256/57.

In filling in some of the considerable gaps presented by the literary, epigraphic, and archaeological sources, papyri offer a type of documentation of great directness, and extend the range of evidence to times and places for which documentation is otherwise unavailable (the full range of source materials for Christianity in Egypt is considered in Pearson and Goehring 1986). Alexandria, pivotal in the history of Christianity as in cultural history more generally, has itself yielded no papyrus finds, a major gap in the documentation scarcely alleviated by the finding elsewhere of texts which emanate from or refer to Christianity there, and by the assumption that Alexandrian practice had a decisive influence on scribal and other aspects of Christian books in Egypt. Middle Egypt has yielded much, particularly the Fayum and Oxyrhynchus, as well as Hermopolis, Antinoopolis, and other places. Finds from Upper Egypt are fewer but highly significant; from there have come, or may have come, some of the best-preserved texts (notably the Bodmer and Chester Beatty biblical codices in Greek, and the Nag Hammadi Coptic Gnostic codices), with monastic milieux providing an important role in the transmission of theological literature. There is evidence of the spread of Christianity westward to the Great Oasis by the 3d century, a process stimulated by the flight or banishment of persecuted Christians to remote regions (on Christianity in the oases see Wagner 1987: 355–72). Traffic beyond the First Cataract is likely to have carried Christian influence into Nubia as early as the 4th century.

The chronology of the Christian texts presents a formidable problem, owing to the uncertainties of paleographic dating (on handwriting and other aspects of scribal practices, see Metzger 1981, Turner 1987; Turner [1977] gives some important re-datings). Most datings are very approximate. None of the texts can be safely assigned to the 1st century. The 2d century provides the first sure glimpses of the penetration of Christian literature along the Nile. In the 3d century the number of biblical and theological texts increases substantially, and there are clear references to Christians in official documents. Official reaction to Christianity reached a turning point with the Diocletianic persecutions in the early years of the 4th century and then the toleration of Christianity under Constantine I, and these developments receive papyrus attestation. By the mid-4th century the Christianization of Egypt was considerably advanced, and ecclesiastical and monastic institutions were part of the social fabric (Bagnall 1982; 1987 uses the criterion of personal names to quantify the rate of the changes). Papyri reflect this consolidation in their number and range.

The papyri relating to Christianity add to the general store of textual data, and give firsthand evidence of the spread of Christian beliefs. They contribute to the question of defining "Christian," although owing to the limited evidence there is an inescapable circularity in the identifying of Christian elements in texts and the illumination of Christianity on the basis of the texts. The papyri bear out the view that there was a diversity of beliefs and practices, but the low proportion of specifically "unorthodox" material warns against overstating the diversity (Roberts 1979; Samuel 1985). Light is shed, albeit in a scattered and incomplete way, on some of the great developments, such as the introduction of Christianity into Egypt, the growth of Coptic Christianity, the rise of the monastic movement, the formulation of liturgy, and the transmission of the textual traditions of the OT (including pre-Hexaplaric and non-LXX material) and of the NT (including texts with "Western" affinities).

The bulk of the texts are in Greek (over 300 by the early 4th century; in the space available here only a representative sample of texts can be cited), a phenomenon reflecting the transplantation of Hellenic culture to Egypt through commerce and conquest and its continuance under the Roman administration (Lewis 1983, Bowman 1986 provide general perspectives on the period in the light of the evidence of papyri). Only a handful of texts are in Latin (Cavenaile 1987). Coptic scriptures (Metzger 1977: 99–152; T. Orlandi's survey of Coptic literature in Pearson and Goehring 1986: 51–81) begin to appear in the 3d century, as well as Coptic glosses to Greek texts (the glosses in a papyrus of Isaiah, P. Chester Beatty VII, being among the earliest specimens of Coptic). Some codices contain collections of both Greek and Coptic texts (as Hamburg Pap. bil. 1, with several OT books in Greek and Coptic along with the Acts of Paul in Greek), and there is evidence for Greek-Coptic glossaries (British Museum Pap. 10825 verso, for some or all of the Minor Prophets).

Papyri illuminate the cultural phenomenon of the form of Christian books, a feature which is of significance for questions of attribution and of the use to which texts were put, as well as for the cultural attainments of their copyists and readers. Typically (but not exclusively), Christian biblical papyri are written in informal styles of handwriting, are in codex form (varying in size from large to miniature, with one or two columns to the page), and have *nomina sacra* (distinctively Christian contractions of certain sacred names such as the word for God or Lord, e.g. *kȳ* = *kyrios*) (Turner 1977; Roberts 1979). This general picture of Christian books applies to both OT and NT texts. The possibility of a Jewish milieu, or at least the influence of Jewish scribal tradition, arises where an OT text is written calligraphically, is in roll form, uses the Tetragrammaton (the Hebrew *YHWH* = Lord, represented by paleo-Hebrew or square Hebrew characters), or carries a non-Septuagint Hebraizing version (as that of Aquila or Symmachus; on the various Greek translations and their attestation [Tov *ANRW* 2/20/1: 121–89]). A concurrence of several such features, suggesting Jewish attribution as unavoidable, occurs seldom. The Jewish presence in Egypt declined dramatically as a result of cycles of revolt and persecution, and Jewish papyri in this period are correspondingly few.

In the 2d and 3d centuries the Christian preference for the codex for biblical texts (the roll was not infrequent for Christian literary works) is in marked contrast with the still traditional use of the roll for works of classical literature, for which the codex did not become standard until the 4th century (Turner 1977; Roberts and Skeat 1983). In the same century parchment came into common use in Egypt; an increase in the proportion of parchment codices for biblical texts is part of this wider change. In addition to the codex form, Christian scribes used the roll form on exceptional occasions for biblical texts. Some biblical texts appear in the form of individual sheets, including instances (notably of Psalm texts) which are evidently for liturgical use, and texts used as amulets.

The consistency with which Christian scribes favored the codex is matched by the regularity with which they used *nomina sacra.* Like the codex, these are found in use in the earliest examples of Christian biblical papyri. The system shows some variety in its earlier stages, both in the choice of words abbreviated and in the methods of abbreviation. Abbreviations became normal for the following fifteen words, and could be employed whether in context the words had a "sacred" or "profane" sense: *theos, kyrios, Iēsous, christos, uios, pneuma, Daueid, stauros* (and *stauroō*), *mētēr, patēr, Israēl, sōtēr, anthropos, Ierousalēm* and *ouranos* (Paap 1959; Roberts 1979).

Biblical papyri (which are augmented by biblical quotations and reminiscences in apocryphal and literary papyri and in some of the letters) provide a core of evidence (biblical and literary papyri are catalogued in van Haelst 1976 [including a chronological list of early texts, pp. 409–13], with updates by Treu in his "Christliche Papyri" reports [Treu 1969–]; and Aland 1976 is confined to texts on papyrus specifically, as is the series of text volumes begun with Grunewald and Junack 1986). The biblical papyri are more abundant than texts in other categories, and provide a useful indicator of the geographical spread of Christianity along the Nile (Roberts 1979). They provide the earliest witnesses to many passages, and offer numerous variants. They shed light on scribal practices, on reading preferences, on the canon of scripture, and on text types current in Egypt. (Aland and Aland 1987 gives contents and textual evaluation of NT texts on papyrus and parchment. In these matters it needs to be remembered that statistical considerations are affected by the accidents of preservation and publication.)

Evidence for a complete Bible in a single codex is lacking. Most of the papyri survive as leaves or fragments of one book, and their original extent is unclear. Groupings of a small number of books frequently occur. There is evidence of varying clarity for collections of the usual subgroupings: the Pentateuch, the Psalms, the Wisdom books, the Minor Prophets, some of the Major Prophets, the Four Gospels, the Johannine books, the Pauline Epistles, the Catholic Epistles. From this list are absent as a group the historical books of the OT, which are weakly represented. The sequences of books within these groupings are frequently noteworthy (for example, the Pauline Epistles appear in descending order of length in P. Chester Beatty II). There are also some unanticipated groupings of biblical works (a striking instance is P. Oxy. VIII 1075 + 1079, from a papyrus roll with Exodus on the recto and Revelation on the verso), and combinations of biblical and other (such as patristic) material (where a theme may be

discernible, as with the apparently Paschal contents of the Savery Coptic codex, which has Melito, *On the Pasch,* as well as 1 Peter, Jonah, and other texts).

Best represented of all are the Psalms (P. Bodmer XXIV being especially extensive), a reflection of their importance in worship and also in the schoolroom. Other examples of substantially preserved OT papyri include texts of Genesis (Berlin, Cod. Gr. fol. 66 I, II; P. Chester Beatty IV and V), Numbers and Deuteronomy (P. Chester Beatty VI), Proverbs, Wisdom and Ecclesiasticus (P. Ant. I 8 + II 210), the Minor Prophets (Washington MS. V), Isaiah (P. Chester Beatty VII + other fragments), Ezekiel, Daniel and Esther (P. Chester Beatty IX + X + other fragments). P. Chester Beatty I has the remains of the four Gospels and Acts. The Gospels of Matthew and John are particularly well represented. Strong attestation for the gospel of John (including the substantially preserved codices of John and Luke-John, P. Bodmer II and P. Bodmer XIV–XV), and the occurrence of noncanonical material with Johannine affinities, lead to the conclusion that Johannine thought had very considerable influence in early Egyptian Christianity. A work of similar popularity (to judge by the numbers) was the *Shepherd of Hermas,* which achieved some canonical status for a time; the papyri show it to have circulated in several of its component parts. P. Bodmer VII + VIII has 1 and 2 Peter and Jude complete. P. Chester Beatty III has a third of Revelation. Some casual biblical excerpts appear in the margins of documents (such as the beginning of the Lord's Prayer written beside accounts, P. Erl. 105–10).

With the canonical books must be considered the extracanonical or apocryphal texts, bearing in mind that the idea and content of the canon were in the process of clarification, and that authentic material, such as new sayings of Jesus, may be transmitted independent of the canon. The papyri attest several apocryphal gospels not otherwise known, among them one of the earliest Christian papyri, Greek fragments of an unidentified gospel or gospel harmony (P. Egerton 2 = P. Lond. Christ. 1, with another fragment recently identified in the Cologne collection, P. Köln VI 255). The identified NT apocrypha include the *Protevangelium of James* complete (P. Bodmer V), and Greek fragments of the gospel of Thomas (P. Oxy. I 1, IV 654, 655; now reedited in Layton 1989), recognized after the discovery of a Coptic translation of the work among the tractates of the Nag Hammadi codices.

Literary papyri include identified works of patristic authors, works which may be attributed to known authors on the grounds of content or style, and works of unknown authorship, among which homiletic literature and works of hagiography are prominent. The variety of writers attested goes beyond specifically Egyptian circles and, in fact, the Alexandrian theologians are weakly represented (some identifications for Origen, uncertain attribution for Clement; Alexandrian textual criticism is represented in P. Grenf. I 5, a papyrus of Ezekiel in which the Hexaplaric system of signs is used). Melito of Sardis is relatively well represented. Other writers found include Aristides, Irenaeus, Julius Africanus, Eusebius, and Pachomius. An epistle against the Manicheans (P. Ryl. III 469) may be a pastoral circular from an Alexandrian bishop. Two versions of the anonymous *Acts of Phileas* (P. Bodmer XX, P. Chester Beatty XV) illuminate the development of martyrological compositions based on the form of official reports of court proceedings.

Knowledge of Gnostic and related writings has been revolutionized by the finding of the Nag Hammadi codices, containing over 40 tractates in Coptic (most if not all translations of Greek originals, reaching back into the early period). There is a small number of distinctively gnostic papyri in Greek from our period, including portions of the *Gospel of Mary* (P. Oxy. L. 3525 as well as P. Ryl. III 463, the latter likewise from Oxyrhynchus), the *Sophia of Jesus Christ* (P. Oxy VIII 1081; also found among the Nag Hammadi tractates), and a work regarded as probably from the school of Valentinus (P. Oxy. I 4). Several Coptic Manichean codices were discovered in the Fayum in 1930 and the process of their preservation and publication continues to the present day.

The liturgical texts, prayers, and hymns which survive are for the most part unknown from other sources. As well as individual prayers from formal and private milieux (P. Oxy. III 407 is a well-preserved example), there are collections, one of them conspicuously syncretistic (B.K.T. VI 6 1, which includes a hymn from the *Poimandres,* with doxology added). P. Oxy. XV 1786, a hymn to the Trinity with musical notation, offers the earliest extant specimen of Christian hymnody.

There is a miscellaneous group of "subliterary" papyri, including biblical oracles, glossaries, onomastica and word lists, biblical passages used for school exercises, and glosses and other marginalia. Through the magical genre, preserved in Greek and Coptic, run crosscurrents of thought which typify the period, when biblical excerpts could be used as amulets or Christian ideas could be drafted into magical formulations. Some Christian symbols occur in texts of various genres, such as the staurogram worked into an abbreviated form of the word for "crucify" in biblical texts, or the number 99 (the numerical value of the letters of *amēn*) added to a private letter (P. Oxy. XXXI 2601).

The private letters, from ca. A.D. 200 onward, show persons expressing their beliefs, incidentally or more deliberately, in the course of everyday affairs (whether some letters assigned earlier actually refer to Christians is debated; this is part of a general problem of attribution, since monotheistic or other usages may be consistent with Christian belief without being distinctive of it [Naldini 1968; Wipszycka 1974; Tibiletti 1979]). The standard conventions of letter writing were adapted so that Christian phraseology appears in greetings, prayers, and salutations. The conveying of Christian sentiments in the body of a letter becomes frequent in the 4th century, and some biblical quotations and allusions occur. The correspondence of churches and monasteries—such as letters of recommendation—begins to appear in the latter half of the 3d century. Some light is thrown on Christianity in Alexandria; there is, for example, an apparent mention of the late-3d-century bishop of Alexandria Maximus (P. Amh. I 3 [c]), and a description of conflicts between adherents of Athanasius and supporters of the Meletian schism (P. Lond. VI 1914). P. Lond. VI 1913–1922 is a series of letters from around A.D. 330–40 from a Melitian monastic milieu (now further illuminated, though with a slightly later focus, by the archive of Nepheros in Trier and Heidelberg). The mutually supportive roles of church and military functionaries is documented by the archive (early 340s–early 350s) of Abinnaeus, a cavalry officer stationed in the Fayum (P. Abinn.). The papyrus letters give evidence of social and cultural levels, norms (such as the ascetic), and customs (such as the bestowal of Christian names). On the whole, in both the 3d and 4th centuries, the writers are from the higher levels of town or village society (Judge and Pickering 1977, with a list of letters and documents).

Some official and other documents refer to or originate with Christians, or are concerned with events of relevance to the history of Christianity. There is a tendency in the evidence of the documents toward depicting a transition from confrontation to integration in the community, a result of the types of circumstances which could lead to the appearance of persons in public records (such as the holding of property) or the public designation of persons as church-related (as when ecclesiastical titles became commonplace). Documents have the advantage that, in most instances, they contain specific dates or are susceptible of reasonably close dating (even here doubts over dating may arise, owing to questions of reading or interpretation). Firmly dated texts begin to emerge in the middle of the third century. Between A.D. 250 and A.D. 350 the focus of the documents changes from the investigation of Christians (in the latter half of the 3d century and the first few years of the 4th) to the role of church institutions in the social and economic order (particularly from the early 320s onwards). At the beginning of that period are certificates of sacrifice from the Decian persecution (the so-called Decian *libelli* [P. Oxy. XLI 2990 was the 44th to be published], not specifically referring to Christians), and soon after (at or near to the time of the persecution of Valerian) investigative documents in which the word "Christian" occurs (P. Oxy. XLII 3035, XLIII 3119); at the midpoint, the dismantling of churches under Diocletian is attested (P. Oxy. XXXIII 2673; cf. P. Harr. II 208); toward the end of the period, ecclesiastics and monks have become part of the daily scene (e.g. P. Col. VII 171), Sunday is referred to as "the Lord's Day" (P. Oxy. LIV 3579), an Egyptian monk is summoned by Constantine to the Synod of Caesarea (P. Lond. VI 1913, A.D. 334), and bishops are found as substantial landowners (P. Herm. Landlisten), a signal of the large role of the church in the politics and economy of Byzantine Egypt.

C. Parabolic Interpretation

———

A. Parabolic Genre

The Greco-Roman literary tradition took the genre "parable" in a fairly restricted manner. In his *Rhetoric* (2.20) Aristotle distinguished two types of proof used in all types of rhetoric. First, there is the example *(paradeigma),* which is to be used inductively. This is divided into two classes, "one which consists in relating things that have happened before, and another in inventing them oneself." The former

is history, the latter fiction. Those fictional examples are again divided into two subclasses: the fable *(logos)* and the comparison *(parabolē).* Fables are impossible or unrealistic fictions. Aristotle gives an instance from Aesop: The flea-ridden fox refuses the hedgehog's offer of help because his fleas are now sated. Parables are possible or realistic fictions. Aristotle gives an instance from Socrates: "If one were to say that magistrates should not be chosen by lot, for this would be the same as choosing as representative athletes not those component to contend, but those on whom the lot falls; or as choosing any of the sailors as the man who should take the helm, as if it were right that the choice should be decided by lot, not by a man's knowledge" (2.20.4). Second, there is the saying *(enthymēma),* which is to be used deductively. Here again there are two classes. One is the maxim *(gnōmē),* for instance: "There is no man who is really free." Another is the proverb *(paroimia),* for instance: "An Attic [i.e., troublesome] neighbor."

The Hebrew literary tradition gave the genre a much wider understanding. As we shall see in more detail below, the word *māšāl,* with its most usual Greek translation, *parabolē,* meant a similitude or comparison and the expression had a very wide range of application. In fact it is almost synonymous with metaphor.

Contemporary literary criticism agrees with the Greco-Roman tradition in emphasizing the narrative element in parable but with the Hebrew tradition in allowing both impossible and possible stories into the genre. Three elements are stressed in modern parabolic theory. Parables combine the qualities of narrative, metaphor, and brevity. A parable must tell, in as short a space as possible, a story with a double meaning. One meaning will usually be quite clear on the surface of the narration. Another, and presumably deeper meaning, or other, and possibly multiple meanings lie hidden within the complexities of the narrative, and these challenge or provoke the recipient to interpretation. Parables are lures for interpretation and also revelations of the very process of interpretation itself.

B. Parabolic Corpus

1. The Hebrew Scriptures. In the Hebrew scriptures the parabolic genre, as *māšāl* or *parabolē* is not limited to narratives but is concentrated around the idea of comparison, of one thing said and another intended. It therefore includes everything from proverb to allegory (Boucher 1977: 86–89). The full continuum of its usage can be seen even in a single book, for example, in Ezekiel.

The term can designate what we would call a proverb, and specific examples are italicized in the following cases. In Ezek 12:22–23 God says to the prophet, "Son of man, what is this proverb that you have about the land of Israel, saying, 'The days grow long and every vision comes to nought'? Tell them therefore, 'Thus says the Lord God: I will put an end to this proverb, and they shall no more use it as a proverb in Israel.' " In Ezek 16:43b–45b, God accuses Jerusalem, "Have you not committed lewdness in addition to all your abominations? Behold, every one who uses proverbs will use this proverb about you, 'Like mother, like daughter' … Your mother was a Hittite and your father an Amorite." Finally, in Ezek 18:2–3, in a text very similar to the first one in 12:22–23, God again refutes an Israelite proverb. "The word of the Lord came to me again, 'What do you mean by repeating this proverb concerning the land of Israel, "The fathers have eaten sour grapes, and the children's teeth are set on edge." As I live, says the Lord God, this proverb shall no more be used by you in Israel.' "

There is a special instance of parable-as-proverb in the case of proverbs of warning or bywords of caution. In Ezek 14:8 God is threatening idolators who seek prophetic guidance despite their infidelity: "I will set my face against that man, I will make him a sign and a byword and cut him off from the midst of my people; and you shall know that I am the Lord."

At the other end of the continuum are instances of what we would term allegory. Once again there are very good examples in Ezekiel. Here the parable designates a narrative comparison with the hidden meaning carried by both the narrative sequence and details of the story. In Ezek 17:2 God tells the prophet, "Son of man, propound a riddle, and speak an allegory to the house of Israel." There follows in 17:3–10 the parable-allegory of The Two Eagles, which is explained in detail in 17:11–21. The first or "great eagle" is Nebuchadrezzar of Babylon, the "young twig" is Jehoiachin, the "seed of the land" is Zedekiah. The "second eagle" is Pharaoh Psammeticus II of Egypt. The turning of the vine away from the first eagle which had planted it and toward the second eagle is Zedekiah's pro-Egyptian intrigues which

will bring the wrath of Babylon down upon him. There is another parable-allegory in Ezek 20:45–49 where The Great Fire from the north will destroy the trees of the south, and Ezekiel protests, "Ah Lord God! they are saying of me, 'Is he not a maker of allegories?' " It should be noted that not every single element in the allegorical story has a specific referent in the allegorized history.

In those preceding instances the word *māšāl* or *parabolē* was explicitly used for those parabolic or allegorical stories. But even in Ezekiel there are allegories where the term does not appear. They are simply called prophetic lamentations. For example, The Young Lions in Ezek 19:1–9 has Judah as a lioness. Jehoahaz as the "young lion … brought with hooks to the land of Egypt," and Jehoiachin as "another of her welps … put … in a cage and … brought … to the king of Babylon." Similarly, The Vine's Branch in Ezek 19:10–14 has Judah as a vine, the "strongest stem" is Zedekiah, the "east wind" is Nebuchadrezzar, and the "transplantation in the wilderness" is the Babylonian Exile.

There are several instances elsewhere in the Hebrew scriptures where the specific term *māšāl* or *parabolē* is not used but which should also be considered as parables in the sense of allegories. Here the stories are taken not from natural events but from human actions. The most famous may well be The Ewe Lamb in 2 Sam 12:1–4. The "rich man" is David, the "poor man" is Uriah, the "ewe lamb" is Bathsheba, and Nathan traps David in his own indignation. Notice, once again, that even in such parabolic allegories, not every narrative element has an extranarratival referent. What, for example, in the story of David's adultery and murder corresponds to the narrative's "there came a traveler to the rich man"? Is it part of the allegorical challenge that the recipient must determine just how far such detailed references are to be passed? A similar allegorical trap is sprung on David by The Widow's Sons in 2 Sam 14:5–7. Here the first son is the murdered Amnon, and second son is the fugitive Absalom. One final example, which Aristotle would have termed a fable rather than a parable, is the case of the antimonarchic story in Judg 9:8–15. The trees sought a king but were turned down by olive, fig, and vine, and had to take in the end the useless and dangerous bramble. In that example there are no specific referents for olive, fig, and vine, but the bramble clearly applies to Abimelech.

Most of what will follow in this parabolic tradition is already set up by those preceding examples. Parable extends from nonnarrative proverb to narrative allegory, from fables with possible or impossible natural protagonists to stories with quite possible and plausible human protagonists, and with or without the specific title of parable being present.

2. The Jesus Tradition. The Christian tradition was consciously aware that Jesus spoke both in aphoristic parables and narrative parables. This is clear in two documents discovered at Nag Hammadi. The aphoristic parables are recalled by the comment in *Dial. Sav.* (NHC III.5) 139:8–11, "Mariam said, 'Thus about "The wickedness of each day," and "The laborer being worthy of his food," and "The disciple resembling his teacher." '" Those three sayings are known to us also from elsewhere in the Jesus tradition. The Wickedness saying is in Matt 6:34b. The Laborer saying is in Matt 10:10b; Luke 10:7b; 1 Cor 9:14; 1 Tim 5:18b; *Did.* 13:1–2. The Disciple saying is in Matt 10:25a; Luke 6:40. The narrative parables are recalled by the comment in *Ap. Jas.* (NHC I,*2*) 8:1–10, "It was enough for some ‹to listen› to the teaching and understand 'The Shepherds' and 'The Seed' and 'The Building' and 'The Lamps of the Virgins' and 'The Wage of the Workmen' and 'The Didrachmae' and 'The Woman.' " Those seven parables are also known to us from elsewhere in the Jesus tradition. The Shepherds (despite the plural) is probably Matt 18:12–13; Luke 15:4–6. The Seed is Mark 4:3–8; Matt 13:3b–8; Luke 8:5–8a; *Gos. Thom.* 9. The Building is Matt 7:24–27; Luke 6:47–49. The Lamps is Matt 25:1–13. The Wage is Matt 20:1–15. The Didrachmae (despite the plural) is Luke 15:8–9. The Woman is either Matt 13:33 or *Gos. Thom.* 97.

Following from the Hebrew scriptural usage, we would expect the term "parable" to cover both the aphoristic and narrative metaphors of Jesus. Thus, when Jesus is accused of Satanic collusion, Mark 3:23 continues, "And he called them to him, and said to them in parables, 'How can Satan cast out Satan? If a kingdom is divided against itself, that kingdom cannot stand. And if a house is divided against itself, that house will not be able to stand.' " In this case of Kingdom and House the term "parables" refers to nonnarrative or aphoristic metaphors. Later in Mark 12:1, the story of The Evil Tenants is introduced with, "And he began to speak to them in parables," and in 12:12 it is concluded with, "And they tried to

arrest him, but feared the multitude, for they perceived that he had told the parable against them; so they left him and went away."

This wide understanding of parable as including both aphoristic metaphor and narrative metaphor is present even within the same chapter in Mark 4. This opens in 4:2, "And he taught them many things in parables," and concludes in 4:33–34, "With many such parables he spoke the word to them, as they were able to hear it; he did not speak to them without a parable, but privately to his own disciples he explained everything." Yet inside those emphatic frames, the section includes both parables-as-narratives, for example, The Sower in 4:3–8, The Harvest Time in 4:26–29, The Mustard Seed in 4:30b–32, and parables-as-aphorisms, for example, Lamp and Bushel in 4:21, Measure for Measure in 4:24b. And both types of parable receive the warning, "He who has ears to hear, let him hear," in 4:9 and, "If any man has ears to hear, let him hear" in 4:23.

In general, therefore, the Jesus tradition follows the Hebrew scriptural precedent and places the emphasis on comparison or metaphor in applying the term "parable" to a unit. Whether the unit is aphoristic or a narrative metaphor is of no significance. The data of the Jesus tradition necessitates, however, the expansion of that double into a triple category: aphoristic parables, extended parables, and narrative parables.

a. Aphoristic Parables. There is a very high incidence of aphoristic metaphors in the Jesus tradition and these may be present with or without the explicit term "parable" being present. For example, Mark 2:21–22 says, "No one sews a piece of unshrunk cloth on an old garment; if he does, the patch tears away from it, the new from the old, and a worse tear is made. And no one puts new wine into old wineskins; if he does, the wine will burst the skins, and the wine is lost, and so are the skins; but new wine is for fresh skins." Matt 9:16–17 follows Mark in not calling this aphoristic metaphor about Patches and Wineskins a parable. And it also occurs without explicit parabolic characterization in *Gos. Thom.* 47d. But in Luke 5:36a the same unit is introduced by "He told them a parable also." Exactly the same phenomenon occurs in the case of The Blind Guide. Matt 15:14b reads, "And if a blind man leads a blind, both will fall into the pit." The aphoristic metaphor also appears in *Gos. Thom.* 34 and again without being explicitly called a parable. But Luke 6:39 reads, "He also told them a parable: 'Can a blind man lead a blind man? Will they not both fall into a pit?' "

It is already evident from some of the above examples that aphoristic parables often appear in doubled format. We just saw the doubled aphoristic metaphors of Patches and Wineskins. There are also several cases where an aphoristic metaphor appears as single in one text but as double in another. For example, the Dogs and Swine saying in Matt 7:6 reads, "Do not give dogs what is holy; and do not throw your pearls before swine, lest they trample them under foot and turn to attack you." *Gos. Thom.* 93 also has this saying as a doublet, "‹Jesus said,› "Do not give what is holy to dogs, lest they throw them on the dung leap. Do not throw the pearls to swine, lest they grind it [to bits]." Yet *Did.* 9:5 warns with a single aphoristic metaphor, "But let none eat or drink of your Eucharist except those who have been baptized in the Lord's Name. For concerning this also did the Lord say, 'Give not that which is holy to the dogs.' " Again, the sayings on Hating One's Family and Carrying One's Cross appear as a doublet in Matt 10:37–38; Luke 14:26–27; *Gos. Thom.* 55. But the latter saying appears alone in Mark 8:34; Matt 16:24; Luke 9:23; and the former appears alone in *Gos. Thom.* 101. Finally, the famous saying about the Prophet's Own Country appears as follows in *Gos. Thom.* 31 (P. Oxy 1.30–35), "Jesus said, 'No prophet is accepted in his own village; no physician heals those who know him.' " Instead of this double version, with prophet and physician present, there is a single version, with only prophet present, in Mark 6:4; Matt 13:57b; John 4:44.

In most of these cases it is almost impossible to decide whether a single saying has been doubled by analogous creation or an originally double saying has been contracted into single format. In that final instance, the second option seems more plausible. Prophet could be taken literally and the metaphorical physician could easily drop away. This is confirmed by Jesus' comment in Luke 4:23, "And he said to them, 'Doubtless you will quote to me this proverb, "Physician, heal yourself; what we have heard you

did at Capernaum, do here also in your own country." '" Luke, in other words, may have known the double aphorism but opted, unlike Mark and the rest, for the physician rather than the prophet.

There are even some cases where a single or double aphorism is moving on to become a triple version. We saw already the double saying on Kingdom and House in Mark 3:24–25 and Luke 11:17b. In this case Matt 12:25b almost triples it: "Every kingdom divided against itself is laid waste, and no city or house divided against itself will stand." One begins to glimpse a possible third saying about a divided city added to that on kingdom and house. Similarly the Serving Two Masters saying appears in single form in Matt 6:24, "No one can serve two masters; for either he will hate the one and love the other, or he will be devoted to one and despise the other." So also in Luke 16:13. But this is a triple version in *Gos. Thom.* 47, "Jesus said, 'It is impossible for a man to mount two horses or to stretch two bows. And it is impossible for a servant to serve two masters; otherwise he will honor the one and treat the other contemptuously.' "

Aphoristic parables, in other words, appear in single, double, triple, or even multiple units, and these may either expand or contract as the transmission progresses. And doublets, of course, could be formed either synonymously, with twin positives or twin negatives, or else antithetically, with a balanced positive and negative in whichever order. All the preceding doublets were in synonymous parallelism. Examples in antithetical parallelism appear in the next section.

b. Extended Parables. The distinction between extended and narrative parables may be clarified by an example. The narrative parable of The Treasure appears in Matt 13:44: "The kingdom of heaven is like treasure hidden in a field, which a man found and covered up; then in his joy he goes and sells all that he has and buys that field." On the one hand, this is much more than a simple aphoristic parable, as if it had said only, "the kingdom of heaven is like a treasure hidden in a field," and stopped right there. On the other, it is surely a minimal story, with beginning, middle, and end, with the three sequential elements of finding, reburying, and buying. Still, despite its brevity or maybe even because of it, one could certainly not guess from the opening sentence how the story would unfold. That is a narrative parable and the application depends on how one reads the entire story. There is, in other words, some at least minimal amount of surprise or unpredictability in narrative parables.

Extended parables, however, are but the predictable unfolding of what is implicit in aphoristic parables. Consider The Two Houses in Matt 7:24–27 or Luke 6:47–49, "Every one then who hears these words of mine and does them will be like a wise man who built his house upon rock; and the rain fell, and the floods came, and the winds blew and beat upon the house, but it did not fall, because it had been founded on the rock. And every one who hears these words of mine and does not do them will be like a foolish man who built his house upon the sand; and the rains fell, and the floods came, and the winds blew and beat against that house, and it fell; and great was the fall of it." That could be taken as a sequential narrative with beginning, middle, and end, with building, flooding, standing, or building, flooding, falling. It could be considered a narrative parable, just like The Treasure. But each half does no more than unpack the details already quite predictable in those opening aphoristic metaphors, "built on rock" or "built on sand." No doubt, the expanded metaphor is quite suitable as the climactic ending for Matthew's "Sermon on the Mount," but it is also a moot point in aesthetics whether expanded metaphors are not often ruined metaphors. It is sometimes best to leave the unpacking to the recipient's imagination.

In The Two Houses the extended parables were based on an aphoristic doublet but this doublet, unlike the synonymous ones seen earlier, was an antithetical formation. It balanced a positive with a negative rather than having a synonymous formation containing two of either. Several other extended parables contain antithetical parallelism. For example, notice the contrasted options in The Two Shepherds of John 10:11–13, The Two Positions of Luke 14:7–10, The Two Stewards of Matt 24:45–51; Luke 12:42–46; The Two Reactions of the master in Luke 17:7–9, The Two Refusals of the playing children in Matt 11:16–17; Luke 7:31–32; and The Two Sons of Matt 21:28–32. A graphic illustration of the difference between an extended parable and a narrative parable may be seen by comparing that last instance with the story of the two sons in The Prodigal Son of Luke 15:11–32.

Of course, not all extended parables have this antithetical format. Examples without it are the Fig Tree's Lesson in Mark 13:28 and Matt 24:32, but explicitly called a parable only in Luke 21:29–30; or Knowing the Danger in Matt 24:43; Luke 12:39; *Gos. Thom.* 21,103.

In the Jesus tradition, extended parables form the center of a parabolic continuum with clearly aphoristic parables at one end and clearly narrative parables at the other. There are, therefore, extended parables which are extremely close to aphoristic ones and others extremely close to narrative ones.

An example of the former instance is Before the Judgment. In Matt 5:25–26 and Luke 12:58–59 this reads: "Make friends quickly with your accuser, while you are going with him to court, lest your accuser hand you over to the judge, and the judge to the guard, and you be put in prison; truly, I say to you, you will never get out till you have paid the last penny." But the synoptically dependent version in *Did.* 1:5 is much shorter: "He … shall be tried … and being in prison he shall be examined as to his deeds, and he shall not come out thence until he pay the last farthing."

There are several examples of the latter instance, that is, of parables which stand on the exact borderline between an extended and a narrative parable. Examples are The Harvest Time in Mark 4:26–29; *Gos. Thom.* 21; The Mustard Seed in Mark 4:30–32; Matt 13:31–32; Luke 13:18–19; *Gos. Thom.* 20; The Leaven in Matt 13:33; Luke 13:20–21; *Gos. Thom.* 96; The Midnight Friend in Luke 11:5–8; The Tower Builder in Luke 14:28–30; The Warring King in Luke 14:31–32; The Unjust Judge in Luke 18:2–4; and all three parables from one of the Nag Hammadi texts, The Palm Shoot in *Ap. Jas.* 7:22–28; Grain of Wheat in *Ap. Jas.* 8:10–23; Ear of Grain in *Ap. Jas.* 12:20–27.

Finally, there is one very interesting parable, The Returning Master, which might be classified in any of the three categories. In Mark 13:34–36 and Luke 12:35–38, the combination of parabolic third-person and parenetic second-person discourse renders it hard to decide whether there might be a full narrative parable behind those units. But in any case, the synoptically independent version in *Did.* 16:1 is simply an aphoristic parable: "Watch over your life: let your lamps be not quenched and your loins be not ungirded, but be ready, for ye know not the hour in which our Lord cometh."

c. Narrative Parables. The most famous parables in the Jesus tradition are not the extended but the narrative parables. It is those, for example, that gave to our language the images of the prodigal son and the good Samaritan. It must be remembered, however, that Jesus was an oral teacher and that those stories may well be no more than plot summaries of stories which might have taken hours to tell.

In a famous article of 1909, Axel Olrik spoke of the epic "laws" of folk narrative, and those traditions of oral storytelling are still obvious even in the necessarily summarized versions of Jesus' narrative parables. The "Law of Three" appears in the path, rocks, and thistles of The Sower in Mark 4:3–8; Matt 13:3–8; Luke 8:5–8a; *Gos. Thom.* 9; in the three servants of The Talents in Matt 25:14–30, in the "improved" version in *Gos. Naz.* 18, and even in Luke 19:15–26 despite the initial "ten servants" in 19:13; and in the Priest, Levite, and Samaritan of The Good Samaritan in Luke 10:30–35. But those last two cases also follow the "Law of Twins," that is, the first two servants in The Talents and the first two travelers in The Good Samaritan form a twinned situation as contrasted with the third one in each case. The Law of Contrast, of clearly polarized protagonists, appears in the farmer and his enemy in the Wheat and Weeds in Matt 13:24–30; *Gos. Thom.* 57; in the Rich Man and Lazarus in Luke 16:19–31; in the Pharisee and Publican in Luke 18:10–13; in the former and latter guests of The Feast in Matt 22:1–13; Luke 14:15–24; *Gos. Thom.* 64a; and in the wise and foolish bridesmaids of The Closed Door in Matt 25:1–12. The "Law of Concentration" on one leading character explains the emphasis on the master in The Vineyard Laborers in Matt 20:1–15. The "Law of the Single Strand," of unentangled plots, is clear in the three successive scenes of The Unmerciful Servant in Matt 18:23–35. The "Law of Opening," moving swiftly from rest to movement, is evident at the start of The Prodigal Son in Luke 15:11–32 or The Unjust Steward in Luke 16:1–7. But "The Law of Ending," returning terminally from movement to rest, is quite absent in those two parables. It is as if they are deliberately left hanging to force the hearer into judgment and commitment.

Another feature of Jesus' narrative parables, apart from their oral character, is their normalcy. The realities of Galilean life peer out from the everyday actions of peasant women, in The Lost Coin of Luke

15:8–9 and The Empty Jar of *Gos. Thom.* 97; and from the lethal actions of peasant rebels, in The Tenants of Mark 12:1–11; Matt 21:33–43; Luke 14:15–24; *Gos. Thom.* 65–66, and in The Assassin of *Gos. Thom.* 98. Parables speak of a fish, in The Fishnet of Matt 13:47–48; *Gos. Thom.* 8; of a flock, in The Lost Sheep of Matt 18:12–13; Luke 15:4–6; *Gos. Thom.* 107; and of a tree, in the Barren Fig Tree of Luke 13:6–9. One might move up in such a world, but it would take luck or even cunning, for example, in The Treasure of Matt 13:44; *Gos. Thom.* 109; or The Pearl in Matt 13:45–46; *Gos. Thom.* 76. To make a point about riches, a rich farmer is chosen, in The Rich Fool of Luke 12:16–20; *Gos. Thom.* 63.

C. Parabolic Interpretation

In the rabbinical tradition the interpretation of a parable is usually quite clear from the context. The classical sequence for rabbinical usage is: (1) the problem requiring a parable; (2) the introduction of the parable, often with a redundant emphasis, "They parable a parable. Unto what is the matter like? It is like …" but also with several abbreviated forms all the way down to the simple, "It is like"; (3) the parable itself; (4) the application, often introduced with some word like "thus"; (5) biblical quotation, often introduced with "as it is written" (Johnston 1978: 1.164–65, 2.526–38). In the Jesus tradition, however, the interpretation of the parables is much more problematic. This is probably because the parables were often told concerning the Kingdom of God and that explained a symbol by a metaphor. This meant that the first hearers and final writers were themselves forced both to transmit and to interpret the parables at the same time. The presumption is that Jesus intended this effect, namely, that the parables would be both provocative and unforgettable so that the recipient would be forced inevitably to interpret.

The narrative parables of Jesus can receive external and/or internal interpretation. The most obvious mode of external interpretation is by commentary. In this usage the parable is given a detail-by-detail interpretation, somewhat similar to what was seen already for The Two Eagles in Ezekiel 17. The classic example is The Sower in Mark 4:3–8; Matt 13:3–8; Luke 8:5–8a. This is interpreted by Jesus in Mark 4:13–20; Matt 13:18–23; Luke 8:11–15. The seed is the word of God and the earth is the hearers; the birds are Satan; the rocks are persecutions; the thistles are temptations. Similarly, the Wheat and Weeds in Matt 13:24–30 is interpreted by Jesus in 13:36–43, and The Fishnet in Matt 13:47–48 is interpreted by Jesus in 13:49–50. What is striking, however, is that all three of those parables are also known in *Gos. Thom.* 9, 57, 8, but they receive no interpretation at all in that gospel. It must therefore be considered quite possible that such commentaries derived not from Jesus but rather from the tradition itself. In doing so, the tradition may have placed more emphasis on the details of the parable than they will plausibly bear. Although one should not distinguish parable from allegory by saying that the former applies only one point from story to referent while the latter applies every detail, it is correct that the application of Jesus' stories seems to derive more from their general structure than from specific detail.

Another mode of external interpretation is from context. Luke 15:1–2 reads, "Now the tax collectors and sinners were all drawing near to him. And the Pharisees and the scribes murmured, saying, 'This man receives sinners and eats with them.' " Next comes The Last Sheep in 15:3–6, with the conclusion in 15:7, "Just so, I tell you, there will be more joy in heaven over one sinner who repents than over ninety-nine righteous persons who need no repentance." Then comes The Lost Coin in 15:8–9, with the conclusion in 15:10, "Just so, I tell you, there is joy before the angels of God over one sinner who repents." Finally, the chapter concludes with The Prodigal [Lost] Son in 15:11–32. It is clear that the opening sentence sets the context for the interpretation of all three parables which follow it. Yet, on the other hand, The Lost Sheep appears in Matt 18:12–13 and *Gos. Thom.* 107 without the same setting. Context, then, like commentary, is from transmissional process rather than original situation.

Three different interpretations by three different contexts are given to The Feast in Matt 22:1–13; Luke 14:15–24; *Gos. Thom.* 64. First, in the *Gospel of Thomas,* there are three parables in 63–64–65 linked together by their openings concerning "a man." They are also linked by content. *Gos. Thom.* 63 is The Rich Fool, also known from Luke 12:16–20. Then comes 64 about The Feast. Finally, there is 65, The Tenants, also known from Mark 12:1–11; Matt 21:33–43; Luke 20:9–18. All three parables, in other words, involve the dangers and temptations of wealth or greed. This is a first contextual interpretation for the meaning of the middle parable on The Feast. And in case there might still be doubt, that parable as

found in the *Gospel of Thomas* concludes with this explanation from Jesus: "Businessmen and merchants will not enter the places of my Father."

Second, the Lukan version is located within Luke 14:1–24, which groups a series of Jesus' sayings concerning meal situations within an actual meal situation itself. There are four units involved and each one opens with a reminder of the symposium situation. Luke 14:1–6 has a healing "one sabbath when he went to dine at the house of a ruler who belonged to the Pharisees." Then in 14:7–10 he discusses The Two Positions "to those who were invited." Next in 14:12–14, "He said also to the man who had invited him, 'When you give a dinner or a banquet, do not invite your friends or your brothers or your kinsmen or rich neighbors, lest they also invite you in return, and you be repaid. But when you give a feast, invite the poor, the maimed, the lame, the blind, and you will be blessed, because they cannot repay you. You will be repaid at the resurrection of the just." Finally, in 14:15–24, the parable of The Feast is introduced with this dialogue: "When one of those who sat at table with him heard this, he said to him, 'Blessed is he who shall eat bread in the kingdom of God.' " All that preceding context serves to interpret the concluding parable. In it, those first invited are unable to come, and this reflects on the authorities among whom Jesus sits. Instead, their places are taken, in 14:21, by the outcasts of Israel, by the same four classes mentioned earlier in 14:13, the poor, maimed, blind, and lame.

Third, Matthew formed a parabolic diptych of two parables: The Tenants, concerning an owner and his tenants in 21:33–44, and The Feast, concerning a king and his guests in 22:1–14. He then placed as their interpretive hinge this statement in 21:45–46: "When the chief priests and the Pharisees heard his parables, they perceived that he was speaking about them. But when they tried to arrest him they feared the multitudes, because they held him to be a prophet." This means that Matthew intends each parable to throw contextual light on the other and for both to be understood against that dangerous situation noted in the middle.

Apart from those external interpretations from commentary and context, there are also manifold possibilities of internal interpretation by the very details imbedded in the story as it is told and retold. The same parable of The Feast may serve again as paradigmatic instance. First, in Luke 14:18–20, and despite the fact that in 14:16b the master had "invited many," only three guests have their refusals recorded. One had bought a field, another five yoke of oxen, and a third had got married. This same triad, reminiscent of Olrik's "Law of Three," reappears in Matt 22:5–6, although here it is almost totally swallowed up in the plurality of servants and refusals of that version: "But they made light of it and went off, one to his farm, another to his business, while the rest seized his servants, treated them shamefully, and killed them." But in *Gos. Thom.* 64 there are four guests and four refusals recorded and that is surprising within the "Law of Three." When you look closely at the four dialogues between servant and guests, the second one is doubly different from the other three. While they begin with "My master invites you" and conclude with "I ask to be excused (from the dinner)," that second one begins with, "My master has invited you" and concludes without any polite request to be excused. It seems most likely that *Gos. Thom.* is interpreting the parable internally by adding in that second instance to bring the total number up to four. This confirms what was seen already from external interpretation. The original three excuses involved claims against merchants, preparing a wedding for a friend, and buying a farm. That is, only two out of three involved business. But, since the concluding aphorism turned the parable against "businessmen and merchants," *Gos. Thom.* added in another commercial enterprise. Thus, he created his new second excuse, "I have just bought a farm" on the model of the old final one, "I have just bought a farm," and so had three out of four guests excused for the commercial activities which the ascetic Thomas considered an obstacle to heaven.

Second, we already saw that Luke had allowed the outcasts of Israel into The Feast instead of the authorities to whom Jesus was speaking. But that was not enough to fill the banquet. Therefore, besides those outcasts in 14:21, from "the streets and lanes of the city," the servant is commanded in 14:23 to "Go out to the highways and hedges, and compel people to come in, that my house may be filled." The new guests from near at hand are the outcasts of Israel but those from afar off are the gentiles. By these internal details Luke has interpreted the parable as an allegory of the history of salvation.

Third, after setting up The Feast in contextual parallelism with The Tenants, as seen above, Matthew also inserts internal details that draw attention to that interpretation. In The Tenants, instead of the single servants of Mark 12:2–5 and Luke 20:10–12, the owner in Matt 21:34 "sent his servants" and in 21:36 "again he sent other servants." Then, in parallelism with that plurality, and again in contrast with the single servants of The Feast in Luke 14:17–23 and *Gos. Thom.* 64, the king in Matt 22:3 "sent his servants" and in 22:4 "again he sent other servants." But by far the most striking interpretation through added internal detail is the incident of the wedding garment present in this parable only in Matt 22:11–14. This is best seen as Matthew's own creation and it interprets the parable as an allegory of Christian history, just as Luke had done, but now with a special terminal warning for Christians themselves. In Matthew's reading, God has invited his people to come to the marriage feast of Jesus. Their refusal has been punished by the destruction of "their city," presumably of Jerusalem by Titus in 70 C.E. Now the gentiles have taken their place at the feast. But, and this is characteristically Matthean, even among those actually at the feast, there are "both good and bad" (22:10). On the last day, at the final judgments, God will review the guests, and then it will not be enough to be at the feast, it will be necessary to be properly attired as well. Matthew, in other words, thinks certain members of the Church are destined for eternal condemnation. Possibly their attitude toward the Mosaic Law was one of which he disapproved. So also, in the preceding parable of The Tenants, the replacement tenants in 21:41 must make certain to "give him the fruits in their seasons." It is not enough just to have received the vineyard. And in the Wheat and Weeds, a parable recorded both in Matt 13:24–30 and *Gos. Thom.* 57 but interpreted only in Matt 13:36–43, Matthew knows that there are both wheat and weeds in the kingdom, but "at the close of the age," in the last judgment, "the Son of man will send his angels, and they will gather out of his kingdom all causes of sin and all evildoers, and throw them into the furnace of fire; there men will weep and gnash their teeth" (13:40–41).

All of those differing interpretations, with the difference most obvious in the case of The Feast, but actually present everywhere among the parables, should not be considered as the interpreter's failure but rather as the parable's success. It is a parable's destiny to be interpreted and those interpretations will necessarily be diverse. When the diversity ceases, the parable is dead and the parabler is silent.

J. DOMINIC CROSSAN

PARACLETE [Gk *paraklētos* (παρακλητος)]. Five distinct though related questions arise concerning the term *paraklētos,* which is found five times in the Johannine writings (John 14:16, 26; 15:26; 16:7; 1 John 2:1) and nowhere else in the NT. These are (1) the significance of the term in the Gospel (there is no problem about 1 John 2:1, where it is applied to Christ and means "advocate" or "intercessor"); (2) the meaning of the word itself; (3) the religious origins of the tradition concerning the Paraclete; (4) the functions assigned to him in the Gospel, (5) the relationship between the Paraclete logia and what is said about the Spirit in the body of the Gospel.

There is no single obvious meaning of *paraklētos* in the Gospel. As Lindars observes (1981: 63), the evangelist is aware that the title is not self-explanatory, since he accompanies each of its occurrences with an account of the Paraclete's function. If one of these occurrences could be shown to be the source of the

others, this would prove a useful starting point. In 1907 Wellhausen argued that the farewell discourse comprises two variants placed one after the other. This view has subsequently become increasingly popular among scholars, though few would share Sasse's opinion (1925) that the second of these, chaps. 15–16, is actually the earlier and some would divide chaps. 15–16 into two or even three independent sections. In 1927 Windisch argued that the Paraclete sayings could be excised from the Gospel without loss of continuity and concluded that they had been inserted into the discourse by the evangelist from a source in which they were grouped together. If this were right, then it would be impossible to recover the source of the tradition by working directly from the Gospel text as it has been transmitted. Although the arguments are inconclusive, the most likely hypothesis is that chap. 14 was composed before chaps. 15–16 and consequently that the Paraclete was first seen as Jesus' representative after his death (14:16) and his successor in his teaching role (14:26). In that case, the other functions assigned to him, of witnessing (15:26) and of convincing or convicting the world (16:7) may derive from a source closely affiliated to the synoptic tradition, perhaps even from that tradition itself.

There are four reasons why it is difficult to recover the meaning of the Greek *paraklētos:* (1) Although the form of the word (a verbal adjective ending in *-tos*) points to a probable passive sense (hence Old Latin *advocatus,* literally "called to the side of"), an active sense "Counselor," "Comforter") cannot altogether be excluded. (2) None of the possible meanings of *parakalein,* either active or passive, squares precisely with the various functions attributed to the Paraclete in the Gospel. (3) These functions cannot be reduced to or summed up in a single comprehensive term that could then be substituted for *paraklētos.* (4) The few earlier extant uses have been scrutinized by Grayston, who concludes (1981: 75) that "*paraklētos* was a word of general meaning which could appear in legal contexts, and when it did the *paraklētos* was a supporter or sponsor." This conclusion is too vague to be of very much use. Since all suggested The Feasts ("Advocate," "Counselor," "Comforter," etc.) are simply guesses, it is best to stick to the anglicized "Paraclete," which provides a distinct and recognizable *name* for the personage identified in the farewell discourse as "the spirit of truth" (14:17; 15:26; 16:13) or "the Holy Spirit" (14:26), thus performing for English-speaking readers the same service as *paraklētos* for readers of the original Greek and *Paracletus* for the readers of Jerome's Vulgate.

If the problem of the meaning of *paraklētos* cannot be solved linguistically, then can it be solved historically? Is it possible to find a figure in near-contemporary religious belief and practice who may plausibly be thought to have furnished a model for the Johannine Paraclete? Suggestions are wide-ranging and include the returning Elijah (Spitta); the Mandaean *Yawar* or helper (Bauer *Johannesevangelium* HNT; Bultmann); OT and Jewish intercessors, both angelic and prophetic, in particular the angel Michael or the mediator *(mēlīṣ)* in Job 33:23, translated in the Targum by the loanword *prqlyṭ* (Mowinckel, Johansson); the fusion of two figures from the Qumran documents, Michael and "the spirit of truth" (Betz), a fusion which, according to another scholar (Johnston), the Paraclete was designed to combat and displace, the second or successor figure in a tandem relationship: Joshua/Moses, Elisha/Elijah (Windisch), to which Bornkamm added John the Baptist/Jesus; late Jewish angelology and the figure of personified Wisdom (Brown 1966–67). Müller (1974) has supplemented these suggestions by arguing for a properly form-critical investigation into the testament or valedictory form. Another proposal comes from Franck (1985), who thinks that the Paraclete may have been modeled on the Methurgeman, who had to translate and (later) preach upon the Scripture readings in Aramaic-speaking synagogues. Lastly, one may mention Hermann Sasse's proposal (1925), revived by Culpepper (1975), that the Paraclete is simply to be identified with the Beloved Disciple. Of these suggestions two may be singled out as especially fruitful. The first is the comparison between the Paraclete's role as Jesus' representative and successor with that of Joshua, commissioned by Moses on the eve of his death to lead his people into the Promised Land. Here the *Testament of Moses,* itself largely a midrash of Deuteronomy 31–34, repays study along the lines proposed by Müller. The second is the evocation of the *angelus interpres* familiar from apocalyptic literature, a suggestion that may be reinforced by de la Potterie's study (1965) of the Greek verb *anangellein* (cf. John 16: 13–15), used by Theodotian to render Heb *pšr* in Daniel 2. It must be acknowledged, however, that arguments based on the methods of the history-of-religions school turn out

to be almost as inconclusive as those based on lexicography. A good up-to-date summary of the various theories is to be found in the work of Burge (1987).

Fortunately the uncertainties concerning meaning and origin need not stand in the way of the actual exegesis of the farewell discourse, which is quite explicit about the roles assigned to the Paraclete. Most of these are straightforward, since they echo, as Brown (*John xii–xxi* AB, 1135–44) insists, the teaching and revealing activities of Jesus. Two of the terms employed by Windisch to describe the Paraclete's role are particularly suggestive: he is Jesus' *Doppelgänger* or *alter ego* (1927: 129), a term especially appropriate to the first logion (14:16); he is also Jesus' successor, his *Kalif auf Erden* (1933: 311), a term reminiscent of Tertullian's *vicarius Christi*, which well fits the second logion (14:26). The function of reminding (14:26) is probably to be associated with the passages earlier in the Gospel where the disciples are assured that they will remember Jesus' words (2:22) and actions (12:16), but only after he has been glorified. The function of witness (15:26) is in all likelihood derived from the Synoptic tradition (Matt 10:19–20 = Mark 13:11–12; Luke 21:16).

By far the most difficult saying is John 16:7–11, for it is impossible to give a single meaning to the verb *elenchein* "convince" (RSV), while at the same time taking the three words that follow, *hamartia,* "sin," *dikaiosynē,* "righteousness," and *krisis,* "judgment," in their natural sense, unless the phrase *elenchein ton kosmon peri*, "convince the world concerning …," is taken to mean simply "to prove the world wrong in its ideas about," a usage which accords ill with the other instance of *elenchein peri* in 8:46. Windisch (1927: 120, n.2) suggested that the phrase concerning righteousness is a corruption. Worth mentioning, because it has been ignored by subsequent commentators, is Bammel's idea (1973) that the original logion spoke of the teaching functions of the Paraclete concerning themes which are the object of christological controversy elsewhere in the Gospel: the world's failure to respond to Jesus (= *hamartia,* 8:40); Jesus' justification by the Father (= *dikaiosynē*); the defeat of the prince of this world (= *krisis,* 12:30). Bammel admits, however, that this is not how the editor of the text, who added the three explanatory clauses, saw the matter.

Few commentators have attempted to link the Paraclete sayings with the other references to the Spirit. Exceptions are Porsch (1974) and Burge (1987). They can appeal to the fact that in many of its occurrences (e.g. 3:34; 6:63) the term *pneuma* is used in direct connection with the words of Jesus. Furthermore, even if the Paraclete passages came from an independent source, the evangelist felt able to identify him with the Holy Spirit (14:26), thus providing some justification for attempting an integral exegesis of all the allusions to the spirit in the Gospel. Additional support comes from the editorial comment interjected at 7:39: "for the Spirit did not yet exist (*oupō gar ēn pneuma*) because Jesus had not yet been glorified." Some allusions to the Spirit, however, e.g., 1:32–3; 3:5–8, are aligned with the Paraclete passages only with great difficulty and the editorial gloss in 7:39 cannot altogether disguise the conceptual differences.

PARADISE. A loanword from Old Persian *(pairi-daēza),* which means "enclosure," then "park" or "garden." It appears in Late Biblical Hebrew as *pardēs,* only with profane meaning (Neh 2:8 [RSV: "forest"]; Cant 4:13 [RSV: "orchard"]; Eccl 2:5 [RSV: "park"]). The profane meaning continues in Mishnaic Hebrew *pardēs* "park" (e.g., *t. Beṣa* 1.10) and in Jewish Aramaic *pardēs (āʾ)* "garden" (e.g., *B. Meṣ.* 103a).

The Old Persian etymon is also the source of the Greek loanword *paradeisos.* In the LXX *paradeisos* denotes God's garden (Gen 2:8–10, 16), and the shift from secular to religious meaning has been made. The religious meaning—God's garden or Paradise—entered Jewish thought and vocabulary after the Babylonian Exile, was combined with the hope of a blessed eschaton, and appears in the Apocrypha (2 Esdr 4:7; 6:2; 7:36, 123; 8:52) and frequently in other early Jewish writings (*Psalms of Solomon* 14; *Sib. Or.* frag. 3.46–48; *2 Enoch* 8–9; *3 Baruch* 4; *Joseph and Asenath* 18; *4 Baruch* 9). In the NT, the religious meaning "Paradise" alone is evident (Luke 23:43; 2 Cor 12:3; Rev 2:7).

The biblical Garden of Eden attracted non-Jewish conceptions of a paradisiac garden. The development of "Paradise" within Judaism was aided by the image of a special garden, Eden, free of any trouble or inconvenience, in which the human and divine were close and collegial, in which every tree was "pleasant to the sight and good for food" (Gen 2:8), and from which flowed four rivers (Gen 2:10–14). Mixed with these images were the following concepts: the Isaianic words that Zion will become like Eden and the garden of the Lord (Isa 51:3), that God's people will be as a watered garden (Isa 58:11), and his planting (of special trees in the desert [Isa 41:18–19]) for his glory (Isa 60:13); Jeremiah's vision that the righteous are those whom God will plant in the promised land in faithfulness (Jer 32:41). Related images are Ezekiel's images of the garden of God, the trees of Eden, and the trees by the waters (Ezek 31:8–9; cf. 36:35). Equally important for the understanding of the Jewish development of Paradise are the Psalmist's words, which were memorized by devout Jews: "Blessed is the man who … delights … in the Law of the Lord, … He is like a tree planted by streams of water, that yields its fruit in its season, and its leaf does not wither" (Ps 1:1–3).

This symbolic language, as well as other images and myths, combined in numerous ways to produce the Jewish concept of Paradise. One of the earliest passages is *1 Enoch* 32, according to which Enoch journeys to the east and "came to the garden of righteousness and saw beyond those trees … the tree of wisdom … from which (his) precursors, ate and … realized that they were naked and (so) … were expelled from the garden" (*1 En.* 32:3–6). Another early image is found in *Jubilees.* Abraham "perceived that from him there would be a righteous planting for eternal generations …" (*Jub.* 17:26). One of the most interesting early examples is found in the sectarian psalms from Qumran called the Hodayoth. According to column 8, the Righteous Teacher probably looks back on his life and allegorically forsees his community as the one that will produce the eternal planting from which shall issue the shoot for the glorious Eden (1QH 8, cf. 1QS 8.4–5; CD 1.7–8). The image of Paradise is fully developed in *2 Enoch* 8, according to which Enoch is taken "up to the third heaven, and … looked downward, and … saw Paradise. And that place is inconceivably pleasant … And in the midst … the tree of life, at that place where the LORD takes a rest when he goes into paradise" (*2 En.* 8:1–3 [J]). According to the *Apocalypse*

of Moses, Paradise is not only in the third heaven (40:2), it is also on the earth (38:5). Paradise is thus obviously situated in different places according to early Jewish documents. It is on the earth either far to the east (*1 En.* 32:2–3, *2 En.* 42:3–4), to the northeast perhaps (*1 En.* 61:1–13), between the northeast and the west (*1 En.* 70:3–4), to the north (*1 En.* 77:3–4), to the far west perhaps (Jos. *JW* 2.155–56), but never to the south (but see *1 En.* 77:1–2). It can be readily seen, from this brief list, that the books collected together as *1 Enoch* are a repository of many diverse Jewish ideas.

Paradise is sometimes perceived as the (post resurrection) intermediate abode of the righteous (*1 Enoch* 37–70), or as the hidden eschatological place of the righteous (*2 Enoch* 8). Other passages describe the righteous enjoying life in Paradise or Eden, but provide no indication of their duration there (*Apocalypse of Abraham* 21). It is also frequently portrayed as closed (*4 Ezra* 7), as one would expect from the Genesis account of the expulsion; note *2 En.* 42:3[J], "And I ascended into the east, into the Paradise of Eden, where rest is prepared for the righteous. And it is open as far as the third heaven; but it is closed from this world." This passage seems to result from an attempt to resolve the tension arising from placing Paradise on the earth and also in the third heaven. Jews did not think about diverse places, but only one and the same Paradise. In *4 Ezra*, Ezra is told, "for you … Paradise is opened, the tree of life is planted, the age to come is prepared, plenty is provided, a city is built, rest is appointed …" (8:52; cf. *Apocalypse of Abraham* 21). The Jewish apocalypses contain the conviction that the final (or second) age will be characterized by the blessed state at creation of the first age, but without the possibility of disobedience, disharmony, discomfort, and discontinuity. Only in this sense can it be said that the Paradise of the first age reappears in the second (final) age. The Jewish myth of Paradise is so developed by the end of the 1st century C.E. that the author of *Joseph and Aseneth* freely borrowed from it in describing the garden beneath Aseneth's tower.

Such creative ideas in early Jewish theology influenced Christians. According to Luke 23:43 Jesus tells the repentant thief that he will be with him that day in Paradise. Paul reveals that he was taken up into the third heaven, and thus probably into Paradise (2 Cor 12:3). The author of the *Odes of Solomon* describes Paradise; as also in the *Psalms of Solomon* but in contrast to many other texts according to which the righteous eat the fruit of the trees (see *T. Levi* 18:11; Rev 2:7), the righteous are portrayed as "blooming and fruit-bearing trees." The poet proclaims, "Blessed, O Lord, are they who are planted in your Land, and who have a place in your Paradise" (*Odes Sol.* 11:18; cf. *Gos. Thom.* 19).

JAMES H. CHARLESWORTH

PARAH (PLACE) [Heb *pārâ* (פָּרָה)]. A settlement in the E half of Benjamin (Josh 18:23). The exact location of the site is unknown. Z. Kallai (*HGB*, 401) has recently argued that the settlement is likely to be situated near Bethel or Ophrah on grounds that the names in the list in which it appears are geographically grouped. Long-standing scholarly opinion has, however, identified the site with the modern Tell Fara some 6 mi (10 km) N of Jerusalem (M.R. 177137). It is possible that this latter site, being located both by a substantial spring (it still provides Old Jerusalem with water) and in close proximity to Anathoth, is also known by the name "Parath," the river to which Jeremiah went to hide his linen belt (Jeremiah 13).

PARALEIPOMENA IEREMIOU. See BARUCH, BOOK OF 4.

PARALLELISM. Parallelism is the most prominent rhetorical figure in ancient Near Eastern poetry, and is also present, although less prominent, in biblical prose. It can be defined as the repetition of the same or related semantic content and/or grammatical structure in consecutive lines or verses. For example, in Ps 103:10 we find that both the sense and the structure of the first line are echoed, in different words, in the second:

Not according to our sins did he deal with us;
And not according to our transgressions did he requite us.

But, while the definition cited here works well for the most part, and the example of Ps 103:10 would be universally accepted as a parallelism, there is no consensus on precisely what parallelism is or how it works, and therefore no absolute criterion for identifying parallelisms. As we move farther away from identity or similarity between the two lines, more questions arise and there is more disagreement about the identification of a parallelism. For instance, some scholars would consider Ps 106:35 to be a parallelism while others would insist that it is not.

They intermingled with the nations;
They learned their ways.

What does seem certain, though, is that parallelism is a matter of relationships—between lines and/or parts of lines. The history of the study of biblical parallelism can be understood as a quest to determine the precise nature of the relationship between groups of words which give the strong impression of being related in at least one of a number of ways.

A. The Study of Parallelism, Past and Present

Biblical parallelism became the focus of scholarly attention as the result of Bishop Robert Lowth's discussion of it in his *De sacra poesi Hebraeorum (Lectures on the Sacred Poetry of the Hebrews)* in 1753 and his *Isaiah: A New Translation with a Preliminary Dissertation and Notes Critical, Philological, and Explanatory* in 1778. To be sure, Lowth was not the first to notice the phenomenon of parallelism (for the pre-Lowthian history of the study of parallelism see Kugel 1981: 96–286), but, due to the then-current trends in biblical studies and his own prominence in the field, it was his definition, articulated in the introduction to *Isaiah*, that became the classic definition of parallelism.

> The correspondence of one Verse, or Line, with another I call Parallelism. When a proposition is delivered, and a second is subjoined to it, or drawn under it, equivalent, or contrasted with it, in Sense; or similar to it in the form of Grammatical Construction; these I call Parallel Lines; and the words or phrases answering one to another in the corresponding Lines Parallel Terms.

Lowth spoke of the correspondence of parallel lines and terms. This was generally understood as sameness or identity by most of Lowth's successors; so the emphasis was put on the synonymity or redundancy in parallelism to the neglect of parallelism's other dimension: variation and continuity. Studies of parallelism from the late 18th century until the 1980s reiterated, with ever-increasing refinements, the basic sameness of parallel lines. Not until the work of J. Kugel and R. Alter was the balance rectified. Kugel rejected the notion of the synonymity of parallel lines, replacing it with the notion of continuity: "A, what's more, B." In a similar vein, Alter spoke of the "consequentiality" of parallel lines. The views of Kugel and Alter place the emphasis on the *difference* between parallel lines. Parallel lines could now be seen as adding new information, containing an intensification or a progression, rather

than just going over old material in new words. This shift in perception can be illustrated in Ps 18:9—Eng18:8 (= 2 Sam 22:9).

Smoke went up from his nostrils;
From his mouth came devouring fire;
Live coals blazed forth from him.

Most biblical scholars would view these lines as synonymous; Kugel and Alter would see in them an intensification and/or a progression. Actually, it is not a question of either sameness of difference, either synonymity or continuity; both dimensions are equally present in parallelism, and it is the creative tension between them that makes this such a pleasing figure.

Both Kugel and Alter came to the study of the Bible from literary criticism, and both brought their finely honed skills as readers to parallelistic texts. But literary criticism often eschews precise analysis in favor of more diffuse observations. So, while achieving a reorientation of the view of parallelism, Kugel and Alter achieve it only at a level of extreme generality. They offer only the vaguest definitions of parallelism and do not provide the criteria for deeper analysis of its workings.

There are at least two potentially more "scientific" models for the analysis of parallelism: the mathematical and the linguistic. A mathematical approach, stressing the symmetries between parallel lines, is espoused half-heartedly by W. G. E. Watson (1984: 114–119), but for the most part Watson relies either on grammatical models or those preceding them. Linguistic models have been proposed by S. A. Geller, E. Greenstein, and A. Berlin. All three draw on modern linguistics, especially transformational grammar and the views of R. Jakobson (see below).

While there are major differences between 18th and 19th century studies and the most recent studies of parallelism, they have some things in common. All attempt to analyze parallelistic texts with the most current literary and linguistic tools available; and all seek to define the relationships that pertain between parallel lines. In some sense, therefore, Lowth's definition remains classic, and his terms like "correspondence," "equivalent," and "contrasted," if interpreted in their broadest sense, remain relevant to the study of parallelism.

B. Types and Categories

The preceding section presented a simplified summary of the major approaches to the study of parallelism. But most scholars' energy was spent in the detailed analysis of specific types and subtypes of parallelism. Here, too, Lowth's work served as a guide to his own and later generations, for in his *Isaiah* he provided a framework for the classification of types.

1. Synonymous, Antithetic, and Synthetic Parallelism. Based on the semantic relationship of the parallel lines, Lowth reduced parallelism to three sorts: synonymous, antithetic, and synthetic. In synonymous parallelism the same sense is expressed in different but equivalent terms: "When a proposition is delivered; and is immediately repeated, in whole or in part, the expression being varied, but the sense entirely or nearly the same." An example is Ps 112:1:

Happy is the man who fears the Lord;
Who is greatly devoted to his commandments.

Notice that the meaning of both lines need not be identical, only "nearly the same," and that terms found in the first line may be lacking in the second (and vice versa). In fact, there is considerable latitude in all of Lowth's categories, which later biblicists sought to constrict.

In antithetic parallelism "two lines correspond with one another by an opposition of terms and sentiments." The antithesis may range from "exact contraposition of word to word" to "a general disparity." Prov 10:1 illustrates:

A wise son makes glad his father;
But a foolish son is the grief of his mother.

In synthetic parallelism (also called constructive or formal parallelism), according to Lowth,

> the parallelism consists only in the similar form of construction; in which word does not answer to word, and sentence to sentence, as equivalent or opposite; but there is a correspondence and equality

between different propositions, in respect of the shape and turn of the whole sentence, and of the constructive parts …

Eccl 11:2 is an example:

Give a portion to seven, and also to eight;
For you do not know what evil shall be upon the earth.

This is the loosest of Lowth's categories, and the one that received the most criticism. Some viewed it as a catchall of miscellaneous, difficult-to-categorize cases, and others did not think that it was a legitimate form of parallelism at all.

2. Additional Types. As parallelism was studied more closely, its many permutations became evident: word order might vary from line to line; some terms might be ellipsed and others added (i.e., the parallelism might be termed complete or incomplete; incomplete parallelism might or might not have compensation), and so forth. To some extent, Lowth had allowed for these permutations within his three types, but, given the scholarly penchant for categorizing and labeling, it was not long before the number of types grew. Many of the additional types are not of the same order as Lowth's; that is, in one sense they can be considered subtypes and in another sense they cut across the lines of the original three types. The most well-known of these additional types will be presented here.

a. Chiastic Parallelism. The order of the terms in the first line is reversed in the second line, yielding an AB//BA pattern, as in Jer 4:5a:

Proclaim in Judah;
And in Jerusalem announce.

More than two sets of terms may be involved: ABC//CBA, etc. Chiastic patterning is not limited to parallelism, but it is often found in parallel lines.

b. Staircase Parallelism. A steplike pattern in which some elements from the first line are repeated verbatim in the second and others are added to complete the thought. Judg 5:12 provides an illustration:

Awake, awake, Deborah;
Awake, awake, chant a song.

(Cf. Greenstein 1974 and 1977; Loewenstamm 1975; Watson 1984: 150–56).

c. Emblematic Parallelism. A parallelism in which a simile or metaphor forms one of the lines, as in Ps 42:2:

As a hind yearns for watercourses;
So my soul yearns for you, God.

d. Janus Parallelism. This type of parallelism hinges on the use of a single word with two different meanings, one of which forms a parallel with what precedes and the other with what follows. Thus, by virtue of a double entendre, the parallelism faces in both directions. An example is Gen 49:26:

The blessings of your father
Surpass the blessings of my ancestors/mountains [*hwry*]
To the utmost bounds of the eternal hills.

(Cf. Watson 1984: 159; Rendsburg 1980).

3. Parallel Word Pairs. Although 20th-century scholars continued to refine the distinctions involving the relationships between parallel lines as a whole, the major efforts were placed on the analysis of certain sets of parallel terms, or, as they came to be known, fixed word pairs. Lowth had mentioned parallel terms ("words or phrases answering one to another in corresponding lines"), but it was the discovery and decipherment of Ugaritic poetry, together with the ascendancy of the Parry-Lord theory of oral composition, that spurred the collection, from biblical and Ugaritic poetic texts, of sets of terms that recur frequently in parallelisms. The emphasis was on recurrence—those terms, like "day" and "night," "heaven" and "earth," which were found together frequently. It was thought that such pairs were the functional equivalents of the formulas in Greek and Yugoslavian poetry that enabled a poet to compose orally. Lists of these pairs grew long (they number over 1,000), as did the bibliography on word pairs (See primarily Dahood *Psalms* AB, 3.445–56; Dahood 1972, 1975, and 1981. See also Avishur 1977; Berlin 1983, 1985: 64–80; Boling 1960; Cassuto 1971; Craigie 1971, 1979a, 1979b; Culley 1967; Gevirtz 1963;

Held 1953, 1962, 1965; Kugel 1981: 27–39; Melamed 1961, 1964; O'Connor 1980: 96–109; Watson 1984: 128–43; Watters 1976; Whallon 1963, 1969; Yoder 1970, 1971.) Attention was paid to frequency, to the order in which the members of a pair occurred, and to their grammatical form. Inevitably, there were attempts to categorize the semantic relationship between words in a pair: synonyms, antonyms, a whole and a part, abstract and concrete, common term and rare or archaic term, the breakup of stereotyped phrases. In the last, a conventional phrase is split, one part occurring in one line and the other in the next line (cf. Melamed 1961, 1964). For instance, the phrase "horses and chariots," a conventional combination (cf. Josh 11:4), is split in Zech 9:10:

I shall banish chariots from Ephraim;
And horses from Jerusalem.

Likewise in Ps 20:8—Eng 20:7:

These (call) on chariots;
And those on horses.

It was also noticed that numbers obey a formula, x // x+1, when they appear in parallelism. Thus "three" parallels "four" (Amos 1:3); "six" parallels "seven" (Job 5:19). The principle may employ a factor of 10: "one thousand" parallels "ten thousand" (Ps 91:7).

Many scholars saw in word pairs the essence of parallelism, the *sine qua non* without which parallel lines could not exist. Furthermore, it was suggested, these pairs formed a kind of "poet's dictionary"—a poetic substratum on which poets might draw in order to compose parallelisms. These conclusions reflect the fact that the impetus for the study of word pairs was intimately bound up with theories of oral composition, unproved and unprovable at least for biblical poetry. But even when these theories came under criticism, the collecting of word pairs did not cease, for word pairs had taken on a life of their own in biblical studies. As such, this enterprise represents one of the most extensive lexical studies of ancient texts. The preoccupation with word pairs focused attention on the similarities between Hebrew and Ugaritic poetry, and on certain of their lexical aspects, but it did so to the neglect of the rest of the parallelism and the pairing of other terms in it which did not occur with any notable frequency. Moreover, it threatened to perpetuate certain misunderstandings about the nature of parallelism and the nature of word pairs. (Cf. Kugel 1981: 27–39; Berlin 1983, 1985: 64–80.)

4. Linguistic Models. By the 1970s the influence of modern linguistic research, especially structural linguistics and transformational grammar, began to be felt in biblical studies. Interest in the grammatical analysis of poetry grew, and with it, the grammatical analysis of parallelism. A number of scholars (Berlin, Collins, Geller, Greenstein, O'Connor, Pardee, Watson), working independently, offered grammatical treatments of parallelism. They varied somewhat in type and level of analysis (cf. Berlin 1985: 18–30), but they all signaled a return to the analysis of the line as a whole, rather than the concentration on word pairs; and they all showed that linguistics had something new and important to contribute to the study of parallelism.

No modern linguist has had more impact on the study of parallelism, both within and outside of the Bible, than Roman Jakobson. Jakobson's (1966: 423) most famous dictum on the subject was

> Pervasive parallelism inevitably activates all the levels of language—the distinctive features, inherent and prosodic, the morphological and syntactic categories and forms, the lexical units and their semantic classes in both their convergences and divergences acquire an autonomous poetic value.

This was taken by both Stephen Geller (1979) and Adele Berlin (1979, 1985) as a programmatic guide for the analysis of biblical parallelism. Geller limited his treatment to the grammatical aspect, as did Berlin 1979 (cf. also Greenstein 1982), but Berlin's 1985 work offered a more comprehensive linguistic description, including areas and issues previously dealt with in word pair studies. Since this is the broadest and most recent study, a detailed summary of it will be presented here.

Parallel can be viewed as a linguistic phenomenon involving linguistic equivalences and/or contrasts that may occur on the level of the word, the line, or larger areas of text. (For the most part, biblical parallelism operates at the level of the line.) Equivalence does not mean only identity, but a word or construction that, linguistically speaking, belongs to the same category or paradigm, or to the same

sequence or syntagm. One can discuss four linguistic aspects which may be activated in parallelism: the grammatical aspect, the lexical aspect, the semantic aspect, and the phonological aspect.

a. The Grammatical Aspect. In grammatical parallelism the syntax of the lines is equivalent; i.e., their deep structures (and perhaps their surface structures as well) are the same. For example, the surface structures are the same in both lines (in the Hebrew) of Ps 103:10:

Not according to our sins did he deal with us;
And not according to our transgressions did he requite us.

Many parallelisms, however, employ lines of different surface structure which can be related back, using the methodology of transformational grammar, to the same underlying deep structure. A nominal clause may be paired with a verbal clause, as in Mic 6:2b.

For the Lord has a quarrel with his people;
And with Israel will he dispute.

A positive clause may be paired with a negative clause, as in Prov 6:20:

Guard, my son, the commandment of your father;
And do not forsake the teaching of your mother.

The subject of one clause may become the object in the next clause, as in Gen 27:29:

Be a lord over your brothers;
Let the sons of your mother bow before you.

There may be contrast in grammatical mood: an indicative may parallel an interrogative, an imperative may parallel a jussive, etc. In Ps 6:6—Eng6:5 a negative indicative is paired with an interrogative.

For in Death there is no mention of you;
In Sheol who can acclaim you?

The seeds of grammatical analysis are present in Lowth's definition ("similar to it in the form of Grammatical Construction"), but Lowth and his successors did not develop it because their understanding of grammar was quite different from that of modern linguists and they lacked the tools for this type of analysis.

Parts of lines are also subject to grammatical, or morphological, analysis. Parallel terms may be of different word classes: e.g., noun // pronoun; noun, adjective, or participle // verb, etc. The first is illustrated in Ps 33:2:

Praise *the Lord* with a lyre;
With the ten-stringed harp sing to *him.*

The second can be seen in Ps 145:18:

The Lord is near to all his *callers;*
To all who *call* him in truth.

This type of morphological pairing is possible because the forms paired can be substituted for each other in a sentence. That is, they belong to the same paradigm and are, therefore, linguistically equivalent.

When parallel terms are from the same word class (e.g., both nouns), there may be other morphological contrasts present: the tense or conjugation of verbs may be different; there may be contrast in the number, gender, or definiteness of nouns. In fact, to quote P. Kiparsky (1973: 235): "the linguistic sames which are potentially relevant in poetry are just those which are potentially relevant in grammar." One could easily substitute the word "parallelism" for "poetry" in this statement, for in parallelism any grammatically equivalent form ("linguistic same") can be paired with another. Some examples follow:

(a). The tenses contrast (*qtl* // *yqtl*) in Ps 26:4:

I do not [Heb: did not] consort with scoundrels;
And with hypocrites I do not [Heb: will not] associate.

(b) The conjugations contrast (*qal* // *niphʿal*) in Ps 24:7:

Lift up, O gates, your heads;
And be lifted up, O eternal doors.par

(c) A singular parallels a plural in Prov 14:12 = 16:25:

There is a right *path* before man;

But its end is *paths* of death.

Note that the same word is used in both forms. Often different words, one in each number, are used, as in Deut 32:7 ("remember" [sing.] // "consider" [pl.]) and Lam 5:17 ("this" // "these").

(d) In Lam 3:47 the terms in the first line lack the definite article while those in the second line have it.

Panic and pitfall were ours;
The desolation and the destruction.

There are other types of grammatical equivalences and contrasts, and numerous examples of each. The benefit of such a grammatical approach to parallelism is that it can account for the many permutations which earlier approaches were at a loss to explain, and it can relate, under one rubric, in a holistic manner, many phenomena which were previously considered disparate.

b. The Lexical Aspect. Earlier approaches dealt with one facet of the lexical aspect of parallelism—fixed word pairs. But actually, there is no reason to limit the discussion only to fixed, or frequently recurring, pairs. All parallelisms involve the pairing of terms, and all lexical pairings can be better understood through recourse to linguistics.

The process whereby terms are paired in parallelism is similar to the process which generates associations in psycholinguistic word association games. That is, parallel word pairs are the product of normal linguistic association. Every word has a potential mate, and it does not require any special training or talent to produce one.

Linguists have discovered rules that account for the kinds of associations that are made. They have noted that in word association games a word may elicit itself; and so in parallelism, a word may be paired with the same word, or with a word from the same root (cf. 2 Sam 22:7; Job 6:15). They have also noted that a word may have a number of different associates, and that some are likely to be generated more often than others.

The rules for word association are categorized as paradigmatic or syntagmatic. In paradigmatic operations, a word is chosen from the same category and may substitute for the given word. The most common type of paradigmatic choice is one with minimal contrast, which produces an "opposite," as in *good-bad, man-woman.* A related type of operation invokes the "Feature Deletion and Addition Rule." The features of a word are listed hierarchically by linguists; for example, *father* = noun, singular, animate, human, parent, male. When a feature is deleted it is usually done from the end of the list, so that *father* will more likely generate *mother* (changing male to female) or *son* (changing parent to its reverse) rather than something involving a change higher on the list, like *ram.* The preferred change is the change of a sign (plus or minus), i.e., +/– male, +/– parent. This yields minimal contrast. If a feature is deleted, the result is a superordinate, as in *father-man.* An added feature produces a subordinate, as in *fruit-apple.* If another word is chosen with the same list of features, we have a coordinate, as in *cat-dog* (both are noun, singular, animate, mammal, domesticated, etc.). The higher on the list a feature is, the less likely that it will be changed. This accounts, first of all, for the tendency toward paradigmatic responses (i.e., associations involving the same class of words). It also explains why certain responses occur more frequently than others.

Syntagmatic responses involve the choice of an associate from the same sequence rather than the same class. Often this is realized in the completion of idioms. In English the word *cottage* will often evoke *cheese.* This is similar to the phenomenon described by Melamed (1961; 1964) as the breakup of stereotyped phrases. Conventional coordinates, like *sws-rkb* ("horse-chariot/driver"), *ḥsd-ʾmt* ("loyalty-truth"), may be paired in parallel lines. Another type of syntagmatic pairing in the Bible involves the splitting up of the components of a personal or geographic name: *Balak* // *king of Moab* (Num 23:7); *Ephrathah* // *Bethlehem* (Ruth 4:11). There are also other examples of syntagmatic pairings such as *chair* // *sit* (Isa 16:5; Lam 5:19) and *write* // *book* (Job 19:23).

While lexical parallelism, that is, the pairing of associated words, generally accompanies grammatical parallelism, it can occur in lines which are not grammatically parallel (at least paradigmatically). An example is Ps 111:6:

The power of his deeds he told to his *people (ʿmw)*

In giving to them the inheritance of *nations (qwym).*

The syntactic structure of the lines is not equivalent, but the pair *people-nation* is a known association. There are other cases in which the lexical pairing occurs in addition to semantic pairing; a creative tension between the two may be at play. Job 5:14 provides an illustration:

By day they encounter darkness;
And as in the night they grope at noon.

The semantic and grammatical pair is *day-noon,* but the common lexical associates *day-night* gives an added dimension to the parallelism.

c. The Semantic Aspect. The semantic aspect pertains to the relationship between the meaning of the parallel lines. It was this relationship that Lowth categorized as synonymous, antithetic, or synthetic; and which Kugel described as "A, what's more, B" (see above). From a linguistic perspective, the semantic relationships in parallel lines, like the lexical relationship between word pairs, can be viewed as either paradigmatic or syntagmatic.

It is not always so easy, however, to categorize particular examples as one or the other. Sometimes the relationship is ambiguous and would be interpreted differently by different readers. Take, for example, Hab 3:3:

His glory covers heaven;
And the earth is full of his praise

It is possible to analyze these lines as paradigmatic—each conveying a similar meaning; on the other hand, the second line may be perceived as a result of the first, in which case there would be a semantic sequence, or syntagm.

In many case both paradigmatic and syntagmatic elements are present, as in Isa 40:9:

Ascend a high hill, herald (to) Zion;
Lift your voice aloud, herald (to) Jerusalem.

The actions of the herald are sequential, but the vocatives ("herald to Zion/Jerusalem") are paradigmatic. It appears to be in the nature of parallelism to combine these two forces, so that the expression advances even as the lines are bound firmly together. In this way the second line of a parallelism often disambiguates, or clarifies, the first; or on a more abstract level, parallelism may serve as a metaphor.

A thorn comes to the hand of a drunkard;
And a proverb to the mouth of fools. (Prov 26:9)

d. The Phonological Aspect. Sound equivalences may be activated in parallelism just as grammatical and lexical equivalences are. Often this takes the form of sound pairs—the pairing of terms that are phonologically equivalent (i.e., they contain the same or linguistically related consonants). In some cases the sound pairs are also word pairs: *šlwm* // *šlwh,* "peace // tranquility" in Ps 122:7; *bwrk* // *bʾrk,* "your cistern // your well" in Prov 5:15; *šwṭ* // *šbṭ,* "whip // rod" in Prov 26:3. More often, it seems, sound pairs are not lexical or semantic pairs; they may not even be from the same word class.

He made the moon for *time-markers* [*mwʿdym*]:
The sun *knows its setting* [*ydʿ mbwʾw*]. (Ps 104:19)

I will cut off your horses *from your midst* [*mqrbk*];*your chariots* [*mrkbtyk*]. (Mic 5:9)

(In this last verse the lexical pairs are *horses* // *chariots.*)

Several sound pairs may occur in a parallelism and they may be patterned in different ways: AABB, ABAB, ABBA. The effect of sound pairs is to reinforce the bond created by the other forms of equivalence between the parts of the parallelism. Sound pairs provide an added dimension, an additional type of linguistic equivalence. The more equivalences there are in a parallelism, the stronger is the sense of correspondence between one line and the next. This, in turn, promotes the perception of semantic unity. The various linguistic equivalences may act in concert, or they may produce an artistic tension, creating an interplay that adds to the interest of the parallelism.

Because there are infinite possibilities for activating linguistic equivalences, there are infinite possibilities for constructing parallelisms. No parallelism is "better" or "more complete" than any other.

Each is constructed for its own purpose and context. The device of parallelism is extraordinarily flexible, and its expressive capabilities and appeal are enormous, as the poets of the ANE discovered long ago.

PARALYSIS. See SICKNESS AND DISEASE.

PARAN (PLACE) [Heb *pā·rān* (פָּארָן)]. The name which designates the wilderness area S of Israel, W of Edom, and N of the wilderness of Sinai (*IDB* 3: 657). While this location is not given directly, it can be inferred from the several OT references to the wilderness of Paran. In particular, Num 13:3 and 26 report that the spies sent to scout out Canaan from the S were sent from and returned to Paran. Num 13:26 adds the specific note that the spies returned to Kadesh, apparently a town within the larger area designated by the "Wilderness of Paran." In Deut 1:22, the location is also given specifically as Kadesh-barnea. The site of Kadesh-barnea is located at Tell el-Qudeirat in N Sinai at the juncture of two ancient routes: the Way of Shur and a branch of the Via Maris (*EAEHL*, 697).

While Deuteronomy names the departure point of the S reconnaissance of Canaan as Kadesh-barnea at Deut 1:22, Deut 1:1 includes Paran in its list of locales which define the wilderness in which Israel encamped and locates this wilderness in the Arabah, which lies S of the Dead Sea and N of Sinai.

Additional information about the location of the Wilderness of Paran can be gleaned from the account of Abraham's victory over the coalition of kings in Genesis 14. Gen 14:6 states the limit of territory taken by the king Chedorlaomer to be "as far as El-paran on the border of the wilderness." n. Glueck (1935: 104) places the route of this action in the Arabah on the way to Sinai. From thence Chedorlaomer turned back to Kadesh (Gen 14:7), a note which strengthens the geographical tie between Paran and Kadesh.

Num 12:16 reinforces this general location for the Wilderness of Paran as it notes that the people of Israel travelled there from Hazeroth, which Numbers locates on the journey from the Wilderness of Sinai to the Wilderness of Paran. Gen 21:21 names the Wilderness of Paran as the place where Ishmael grew up, and the rest of the chapter allows us to infer that this must be placed beyond Beer-sheba (cf. Gen 21:15) on the way to Egypt (cf. Gen 21:21b); that is, in the general area S of Israel and N of Sinai. Such a general picture of the location of the Wilderness of Paran is confirmed in 1 Kgs 11:18, where Solomon's adversary Hadad the Edomite flees from Edom to Egypt by way of Midian and Paran (that is, W from Edom).

Num 33:36 has an additional geographical reference lacking in the MT which equates Paran and Kadesh, but this cannot be relied upon, as it could well be an attempt to harmonize the various references to Kadesh and Paran.

The other references to Paran are of a different sort. Deut 33:2 and Hab 3:3 bear great similarity to each other, as both describe in poetic terms the appearance of YHWH on the path of the Exodus (cf. Exod 15:15, Ps 68:7f, and Judg 5:4 for similar descriptions of the Exodus and the entry into Canaan as divine appearances).

1 Sam 25:1 should be read as "the Wilderness of Maon" with the LXX, since the continuation of this story about David, Abigail, and Nabal takes place in Maon (see McCarter *1 Samuel* AB, 388).

PARAN, EL-. See EL-PARAN (PLACE).

PARAPET. See TEMPLE, JERUSALEM.

PARAPHRASE OF SHEM. See SHEM, PARAPHRASE OF (NHC VII,*1*).

PARBAR [Heb *parbār* (פַּרְבָּר)]. An outer building or court mentioned by the Chronicler as one of the places where temple gatekeepers were stationed (1 Chr 26:18). The meaning of the Hebrew word is uncertain. It is often identified with *parwār* in 2 Kgs 23:11 referring to a structure attached to the side of the temple. Allegro (1960: 117), on the basis of usage in the Copper Scroll from Qumran, suggested that the word refers to a toilet or waste chamber for the high priest or king. *Parbār* in 1 Chr 26:18 would, thus, probably refer to a waste chamber connected with the temple. The word *parwār* is generally supposed to be a Persian loanword meaning "open pavilion." In an Aramaic-Lydian scroll from Sardis (Littman 1916: 26–27) *parwār* refers to the open anteroom of a tomb. In the Mishnah the word often means "suburb" or "adjunct."

A. Background and Definitions

Dibelius' comparison of the letters of James and Paul with the Mandates in the *Shepherd of Hermas,* the synoptic speeches of Jesus, and Greco–Roman parenetic works (*James* Hermeneia, 2–7) disclosed the common character of all of these as diverse collections of older sayings material arranged in no particular order and not focused on a particular situation or thought. In the Jewish milieu parenesis appears in the maxims in the didactic poetry of the Wisdom tradition and *Ps-Phocylides,* in the properly prose parenetic of Tob 4:5–19; 12:6–12, and the "Two Ways" teaching (*Didache* 1–6 and *Epistle of Barnabas* 19–20), in the sayings of Ps-Menander, and in the legendary and apocalyptic *Testaments of the Twelve Patriarchs.* In form, the didactic poetry of Hesiod, the prose tractates of Isocrates and Plutarch, the letters of Seneca, and the maxim collections of the *florilegia* parallel the Jewish and Christian parenesis. In content, too, the Christian authors, like the writers of Jewish Wisdom, incorporated into their generally applicable parenetic guidebooks or guidebook sections a vision of the correct way of life common to their Greco-Roman contemporaries.

Hartlich (1889: 328–29) distinguishes protreptic (*protropē,* protreptikos logos, an exhortation or persuasion to a commonly agreed upon good, associated with *paraklēsis* or exhortation) from parenesis (*parainesis,* proposal by precept of a debatable good, associated with *symboulē* or counsel, advice). Burgess (1902: 299) finds that the ancient theoreticians are not consistent in distinguishing the two terms, although many refer to a predominance of precept in parenesis. Vetschera (1911–12: 4–9), while agreeing

that parenesis is distinguished by its use of precepts ("principles by which one should live"), also finds the parenetic work to be broader in content than the protreptic one. For him the protreptic piece, in popular philosophy as well as rhetoric, hopes to lead the addressee to obtain a certain knowledge and its *aretē* ("virtue"). The parenetic work, on the contrary, covers many areas of life, e.g., culture, friends, fortune, under the aspect of their usefulness for obtaining a happy and virtuous life. Thus, the distinction rests on both content and form. Given this mixed verdict from antiquity, Vetschera's definition of parenesis is a reasonable guide: "a literary work which by its structure and aim delineates a collection of precepts which relate unexceptionally to the practical conduct of life, indeed to promote it, as far as it can, and to lead to virtue." Protreptic is treated along with parenesis here since, though different, both apply to a range of hortatory devices to urge the audience to a virtuous and happy life.

A vital, though not yet fully clarified, role in the employment and development of the hortatory devices which serve parenesis in popular philosophy and education was played by the progymnatists (teachers of elementary rhetoric) and their handbooks of rhetorical theory and exercise. Clark (1957: 186–88) notes a protreptic-apotreptic (persuasion-dissuasion) end in the exercises (see Nicolaus and Aphthonius) on how to develop and apply a *chria* ("clever saying) and *gnomeē* ("epigram" or "proverb"). Coleman (1974: 280) finds this put to work in the moralist Seneca's letters. Epistle 104, for example, associates ideas, precepts, and rhetorical devices in a hortatory argument which parallels the school exercises.

B. Literary Forms

Burgess (1902: 186–87, 234–44) finds moralizing parenesis both in epideictic (displaying praise or blame) oratory, in the prose diatribe (conversational form of teaching), and in the half-dialogue or epistle, especially when adopted by rhetorically adept popular philosophers. Prior to the widespread use of the parenetic letter, Isocrates and his successors used parenetic discourses, like the *Ad Nicoclem, Ad Demonicum,* and *Nicocles,* to effect their parenetic ends. These "instruction booklets" for rulers and subjects are full not of new but of conventional prescriptive teachings, drawn from a variety of sources, arranged in a locally unstructured but nonetheless not haphazard order, and meant to be perennially valid. Though similar in content to poetic compendia of maxims and precepts, these discourses are couched in epistolary terms and carry a friendly tone proper to letters of exhortation.

The "Kingship Treatises" *(principis speculum)* of Plutarch and Dio Chrysostom make use of another typical parenetic feature, catalogs of virtues and vices, remarkably alike in content despite the different authors and contexts.

The parenetic aims in these "epistolary" discourses surface in the exhortation section of some actual official letter-memoranda prescribing the duties of newly appointed officials. More widespread, however, was the teaching letter, a development from the philosophical dialogue, for moral instruction. Indeed, Guillemin (1929: 32) notes that epistolary parenesis owes it success to the letter's friendly tone and that the parenesis is a concomitant of the teacher's friendly relations with the pupils. The letter's familiar and quietly persuasive conversational tone makes the friend present as he acquits himself of the friend's hortatory task. The correspondent in turn relies on the teacher–friend for guidance. The letter writer's self-presentation, which Ps-Demetrius *Eloc.* 223 considered the essence of a letter, serves as a surrogate for the actual presence and sharing of life circumstances. Seneca regarded this mutuality in the letter to be the most effective method of moral instruction. The letter may even be more effective than actual presence since it can propose an ideal model unequivocally expressive of the parenetic concepts. The practical situation of geographical distance and the theoretical superiority of the letter for parenesis led popular philosophers like Seneca and the Cynics to prefer the letter for their moral instruction and exhortation.

C. Structure, Devices, and Techniques

While parenetic works have been commonly thought to be random collections of hortatory material, structural principles do organize the parenetic texts. In addition to the characteristic commands, prohibitions, advice, warnings, maxims, and precepts, Cancik (1967: 23–24) finds a broad array of auxiliary hortatory devices like declarations, comparisons, examples, explanations, applications, and concluding calls to action. Others (Thyen 1955) add catalogs of virtues, vices, and sufferings, appeals to common knowledge and authority, together with rhetorical techniques like hyperbole, antithesis, paradox,

and irony, which help make the exhortations strike home. Moreover, Cancik's (1967: 8–9, 25–26) study of Seneca's moral letters finds them to be carefully structured so as to build persuasive hortatory arguments either by themselves or mixed with theoretical observations. Before Seneca, Isocrates and his followers related example, a prime hortatory tool (*Evagoras* 73–81), to prescriptions by describing those characteristics in the positive and negative exemplars which correspond to the precepts. When the examples were only roughly sketched out (*Ad Demonicum* 11) the loosely organized prescriptive section which follows filled out their parameters. Similarly, when "Kingship Treatises" used catalogs of virtues and vices from popular philosophical moral teaching, they also delineated exemplary types to be imitated or avoided.

Malherbe sees the call to imitate the prescribed virtues embodied in exemplars and, presumably, in the teachers themselves, as typical. Catalogs of sufferings help establish the authoritative teacher–exemplar whose experiences and progress have shown that the task at hand is possible. The difficult task calls for persistent striving, often expressed in athletic images, and can occasion drastic interventions by the teacher-guides described with medical analogies. The teachers, though sometimes harsh, are really friends who by frankness rather than flattery seek not to harm but to improve their charges.

D. Traditional and Commonplace Material

To Verner (1983: 15–25) the parenetic material can be traditional in three ways: borrowed from other sources, arranged in typical structures, or inserted as self-contained units of generalized exhortation *(topoi).* Its commonplace and general character argue against seeing therein reflections of the author's own outlook or a specific situation. He finds, however, that the more developed the structure of a parenetic section, the more likely does it reflect the author's perspective. Thus Romans 12–15 arguably contains not generalized *topoi* but concrete and personal applications of the gospel exposed theoretically earlier in the letter and even throughout Paul's letters. Similarly, 1 Cor 11:23–34 uses liturgical tradition and parenesis to meet the community's needs.

E. Parenesis in the Undisputed Pauline Letters

Paul, whose letters stand in for his personal presence in support of his parenesis, makes hortatory appeals which combine authoritative demands with diplomatic sensitivity and lead into parenetic sections (Rom 12:1–2; 15:30–32; 16:17; 1 Cor 1:10; 4:16; 16:15–16; 1 Thess 4:1, 10b; 5:12, 14). While these sections ordinarily appear after the body of the letter (Romans), they may precede it (1 Corinthians, actually framing the body) or even constitute the body (1 Thessalonians, prepared for by a long thanksgiving).

Paul's written parenesis echoes the traditional and comprehensive teaching on moral conduct which accompanied the missionary preaching. To Collins (1984: 327–32) this recalls the Jewish Hellenistic missionary sermon which grounds moral responsibilities in the convenantal relationship. The ethical life, a sign of the Holy Spirit, entails an ethic of response and growth. While urgent ("in the Lord Jesus") what Paul writes is not new but is a reminder of what his correspondents already know, so that they might continue along their chosen path. Beyond the specific questions and preparations for the parousia, building a life of virtue engaged Paul's efforts. Consequently, the motivation behind the parenesis is multiform, as in 1 Thessalonians which appeals to final judgment, the Christians' call to holiness, and their response to the gift of the Holy Spirit.

The parenetic character of a letter section explains the function of its diverse elements. Thus, for example, the hymn in Philippians 2 sets the positive example of self-sacrificing humility being urged; the vice and virtue lists in Galatians 5 provide a noncontrovertible reminder of Paul's original message about the Galatians' Spirit-filled existence; the opponents and exemplars (including Paul) in 1 Thessalonians alert the correspondents to well-known figures in and beyond the community whose way of life calls for emulation or avoidance. Paul goes beyond his contemporaries when he calls explicitly for imitation of himself as a prime example of the Christian life, resting this claim not on his own works (unlike some boastful Cynics) but on the gospel.

While some of Paul's material is Christian-specific, like motivation based on the presence of the Holy Spirit or on the eschatological implications of the resurrection, much, like the catalogs of virtues, vices,

and sufferings, the images of father, nurse, pedagogue, and disease, the themes of money- or reputation-seeking teachers, the desire to be with the correspondents, the personal relationship and mutual concern among the correspondents, is common to Greco-Roman parenesis. The same is true for formal features like catalogs, prescriptions, contrasts, threats, reminders, affirmations of prior knowledge, model figures, the call the imitation, and expressions of frankness. In Paul, all of this complements his missionary preaching, setting out parameters of the Christian life-style which pleases God, however similar it is to that of their non-Christian neighbors.

F. Parenesis in the Pastoral and Catholic Epistles

The Pastoral Epistles, with their catalogs of virtues, vices, sufferings, and household duties; with the commonplace teachings on riches and women; and with their prescriptions of what to do and reject, whom to associate with and avoid, in an epistolary handbook for young officials from a teacher-friend-model, are unmistakably parenetic. Their apparently haphazard arrangement actually constitutes a developed hortatory argument, which ultimately rests on the logic of deduction and illustrative examples (Donelson 1986: 66–113). Their claim to Pauline authority and divine sanction for the sound teaching and ethical program finds support in a succession of teachers from Paul to Timothy and Titus to appointed officials in the context of the pseudepigraphical letters themselves. These all illustrate in action the letters' prescriptions and outlines of appropriate behavior, virtues, and qualifications for office, while the vice-laden and quarrelsome false teachers demonstrate the ill effects of heresy. The letters propose a typical, Greco–Roman, "bourgeois" morality, in a Christianized version (Schwarz 1983). Their insistence on propriety seems aimed at both innercommunity unanimity and stability (e.g., Titus 1:5–9) and extracommunity reputation of the increasingly well-established church members (e.g., 1 Tim 3:7).

The use of typical Greco–Roman *Haustafeln* (lists of household duties) in 1 Pet 2:11–3:12; 1 Tim 2:1–15; Titus 2:1–15 (and see Eph 5:21–6:9; Col 3:18–4:1) touches the larger question of the specifically Christian character of the parenesis in the letters. Balch (1981: 81–109) argues that the lists in 1 Peter are not an instance of de-eschatologized Christianity adopting the ethic of its environment, nor an attempt to suppress social unrest among slaves or women insisting on their baptismal equality (Gal 3:28), nor part of the Church's mission to convert by good example. Rather, by maintaining commonplace ethical standards, they seek to quiet the suspicions and ill will of masters and husbands toward their slaves and wives who have abandoned the traditional gods for the new Christian belief. The lists' traditional parenesis, which serves the apologetic purpose of giving assurance that traditional values are still being maintained, is furnished with properly Christian motivation of Christ's patient suffering, God's judgment, and Christ's guardianship.

G. Parenesis and Apocalyptic Literature

The imagery of current or impending crisis in apocalyptic literature, which works as motivation for their parenesis, has led to the search for likely persecution settings, like a Domitian reign of terror for the book of Revelation. Osiek (1986: 113–21), however, finds that the apocalyptic visionary myth in the *Shepherd of Hermas* is addressed not to the historical but to the social reality of the community, where the demands of religious visionaries either are losing their appeal or directly threaten the economically comfortable and upwardly mobile church members. The parenesis function to expand the horizons of the community and move them in the direction of a faith commitment explained and shaped by the apocalyptic myth.

PARMENAS (PERSON) [Gk *Parmenas* (Παρμενας)]. One of seven gifted leaders, "of good repute, full of the Spirit and of wisdom" (Acts 6:3) who were chosen to look after the needs of the Hellenistic Jewish Christian widows who had been neglected in the "daily distribution" (Acts 6:1, 5). The name Parmenas may be a shortened form of Parmenides, which means "steadfast" or "trustworthy." It was a rather uncommon Greek name at the time (Foakes Jackson and Lake 1979: 66). Since all seven had Greek names and only one of them, Nicolaus, is explicitly called a Proselyte, it is probable that the other six, including Parmenas, were either Jews born in the Diaspora or Palestinian Jews with Greek names (as would be the case with Jesus' disciples Andrew and Philip). The work of two of them, Stephen (Acts 6:8–8:2) and Philip (Acts 8:5–40; 21:8) makes it clear that the Seven did not limit themselves to "serving tables" (Acts 6:2) but functioned for the Hellenists in the way that the Twelve did for the Hebrew Christians (See Simon 1958: 7). According to later tradition, Parmenas was one of the seventy appointed by Jesus (cf. Luke 10:1), became bishop of Soli on Cyprus (cf. Acts 11:19, 20) and was martyred at Philippi during the reign of Trajan (Schermann 1907: 302–3, 344).

JON PAULIEN

PARNACH (PERSON) [Heb *parnak* (פַּרְנַךְ)]. The father of Elizapahan, leader of the tribe of Zebulun who was appointed to help distribute the land to the Israelites (Num 34:25). Parnach is taken to be a name derived from either Elamite or Persian. It means either "spendor" or "success." A similar name is found in a Neo-Babylonian text from the Achaemenid era. In the LXX, Parnach was rendered as *par (a)nax*.
RAPHAEL I. PANITZ

PAROSH (PERSON) [Heb *parʿōš* (פַּרְעֹשׁ)*;* Gk *phoros* (φορος)]. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:3 [= Neh 7:8 = 1 Esdr 5:9]) and later under Ezra (Ezra 8:3 [= 1 Esdr 8:30]). Some from this family married foreign wives and later agreed to divorce them in response to Ezra's reform (Ezra 10:25 [= 1 Esdr 9:26]). A member of this family assisted Nehemiah in rebuilding the walls of Jerusalem (Neh 3:25), and the leader of this clan affixed the family name to the covenant document of Nehemiah in Neh 10:15—Eng10:14. For discussion of the list in Ezra 2, see AKKUB.

That the list of builders in Nehemiah 3 is a partial one is evident from the references to "second portions" in 3:11, 19, 20, 30 without previous notations of corresponding first portions (cf. 3:4, 21; 3:5, 27). There is widespread agreement that the list came from independent archives, perhaps in the temple, and was incorporated into the Nehemiah Memoirs by Nehemiah himself or by some other editor. (See Batten *Ezra and Nehemiah* ICC, 206–7; Clines *Ezra, Nehemiah, Esther* NCBC, 149; Williamson *Ezra, Nehemiah* WBC, 199–202.)

Many do not regard the list and covenant of Nehemiah 10 as belonging originally in this context. Williamson (325–30) surveys various views about the origins of this list. He concludes that it was compiled from other lists in Ezra and Nehemiah in order to be attached to the terms of an agreement drawn up by Nehemiah following his reforms of Nehemiah 13. This document was then kept in the temple archives until being inserted into its present position. (See also Clines, 199–200; Myers *Ezra, Nehemiah* AB, 174–75; Jepsen 1954: 87–106.)

CHANEY R. BERGDALL

PAROUSIA. The Greek word *parousia* used in the NT to speak of the arrival (2 Cor 7:6f; Phil 1:26) or presence of someone (2 Cor 10:10). It is also used as a technical term to speak of the arrival or presence of Christ in glory at a particular point in the eschatological process (e.g., Matt 24:3). The belief in the Parousia or presence of Christ in glory is firmly rooted in all strands of the NT, though the expectation can be referred to apart from the word (Rev 19:11ff; 1 Cor 15:23ff; Mark 13:26; 14:62) or by use of other terms (e.g., *apokalypsis* in 1 Cor 1:7; 1 Pet 1:7). Even in those books where the person of Christ does not loom large (like the letter of James), the Parousia of the Lord (God or Christ?) is referred to (Jas 5:7).

A form of the Parousia hope does probably go back to the historical Jesus and represents part of that set of convictions most clearly represented in Matt 19:28 and par. in which Jesus uses eschatological imagery to speak of the future reign with his disciples in the kingdom of God (Kümmel 1966). There was probably no coherent Parousia doctrine in Second Temple Judaism, though the material in the *Similitudes of Enoch* (chaps. 37–71) comes very close to it. This material represents an interpretation of Daniel 7 in a direction parallel to what we find in the future Son of Man sayings in the Synoptic Gospels, though, with the exception of Matt 25:31 there is not much evidence to suggest that the NT was dependent on the *Similitudes* (or vice versa for that matter). There are hints that the expectation of an imminent return of the Messiah may have been deeply rooted in the earliest Aramaic-speaking church if 1 Cor 16:22 (cf. Acts 3:19ff) is anything to go by.

———

A. Revelation and the Jesus Apocalyptic Tradition

In the book of Revelation there is ample evidence of the belief in the imminent coming of Christ, especially in chaps. 1 and 22, and in Rev 19.11ff (Rissi 1972). This follows the Divine Warrior myth which is here applied to the future conquering messiah. There appears to be evidence here of the influence of the Jesus story: the Rider on the White Horse already bears the marks of his death (19:13). In addition, there are explicit links with the vision of the Son of Man in 1:14 which inaugurates John's vision of what is to come.

This section belongs to a much longer symbolic account of the manifestation of the divine righteousness within human history which culminates in the exaltation of the Lamb and its claiming the right to open the sealed scroll. This triumph immediately precedes the establishment of the messianic kingdom on earth, in which those who have been slain for the testimony to Jesus reign with the Messiah for a thousand years (v 4). Revelation 19–22 is not too far removed from the roughly contemporary eschatological accounts in *2 Bar.* 29–30 and *4 Ezra* 6:11ff and 7:32ff. A scheme of woes, messianic kingdom, resurrection, judgment and new age is clearly discerned in all three works. Revelation uses much more vivid imagery as compared to the prosaic prediction found in *4 Ezra* and *2 Baruch.* The role of the redeemer figure is much more obvious in Revelation than it is in the other two apocalypses where the Messiah's role is hardly touched on; indeed, there is little sign of the warrior role found in the *Psalms of Solomon.* A comparison between Revelation and these sections of *2 Baruch* and *4 Ezra* is necessary in order to note the way in which the Parousia passage in Rev 19:11f is part of a much larger complex of hopes for the dissolution of the present order, the overthrow of the hostile powers, and the establishment of a messianic kingdom on earth (Rowland 1982).

B. Pauline Letters

1 Thess 4:15–17 describes the moment of vindication of the elect (Jewett 1986). Paul indicates that it is a word of the Lord (v 15), and it has several points of contact with the account of the coming of the son of man in Matt 24:30–31. It is, of course, a fragmentary eschatology for a limited purpose (the encouragement of the community dealing with the death of some of their number before the coming of the Kingdom). It indicates how closely intertwined the fulfillment of the eschatological hope had become with the person of Christ, a significant development in emerging Christian eschatology.

A case can be made for supposing that Paul's eschatology in 1 Cor 15:22ff follows the general outline of that found in Revelation 19–21 and presupposes a messianic reign on earth, while Christ subjects the enemies of God to himself (cf. Rev 19:11ff), though this has been a matter of considerable debate (Davies 1965; Schweitzer 1931). Also similar to Revelation 19 is the account of the Parousia in 2 Thessalonians 2 (Jewett 1986). Once again this eschatological fragment is to be found in a context dealing with a particular pastoral problem. As such, like 1 Corinthians 15, it offers only a fragment of the eschatological drama, sufficient to deal with the particular issue confronting the writer: the threat of disturbance to the community because of an outburst of eschatological enthusiasm prompted by the belief that the day of the Lord has already arrived (2:2). To counteract such enthusiasm, readers are told that the rebellion must take place first along with the revelation of the man of lawlessness who opposes God and sits in the temple of God and makes himself God. It is clear that this sign of the coming of Christ has not yet taken place, because there is something restraining his appearance (2:5) at his proper time; (whatever that may be: Paul himself; the evangelizing of the gentiles; the Roman Empire, some divine/angelic restraint such as is found in, e.g., Rev 7:1). Meanwhile the mystery of lawlessness is already at work. In other words, the present is in some sense a time of eschatological fulfillment. In this sense it is similar to Revelation where the exaltation of the Lamb provokes the initiation of the whole eschatological drama, in which the seer and other prophetic voices have their part to play (chap. 10). Until the Restrainer is removed there cannot be the manifestation of the antichrist figure. The coming of the man of lawlessness will be accompanied by signs and wonders which will deceive those who are on the way to destruction, just as the activity of the beast and the false prophet deceive the nations of the earth in Rev 13:7 and 12ff. Finally the Lord Jesus will slay the man of lawlessness with the breath of his mouth.

C. Synoptic Eschatological Discourses

When viewed in the light of Rev 19:11f. the synoptic eschatological discourses (Matthew 24–25; Mark 13; Luke 21) show some remarkable omissions (Wenham 1984). It is true that they manifest the same kind of preoccupations with the messianic woes which are so characteristic of several eschatological passages from writings of this period of Judaism. While there may well be some kind of connection between the sort of focus of evil which is outlined so cryptically in Mark 13:14 and the hubris of lawlessness mentioned in 2 Thessalonians, nothing is said about the effects of the coming of the Son of Man on the forces of evil. Indeed, the description of the coming of the Son of Man in all three Synoptic

Gospels is linked explicitly with the vindication of the elect, thus focusing on the final aspect of the messianic drama in the vision of the man from the sea in *4 Ezra* 13. The certainty of vindication is there but the lot of the elect when they have been gathered from the four corners of the earth is not touched on at all in Mark. The element of judgment at the Parousia of the Son of Man is not entirely absent, however, from the Synoptic discourses as the climax of the Matthean version is the account of the final assize with the Son of Man sitting on God's throne separating the sheep from the goats. But here as elsewhere in these discourses the focus of attention is on the present response of the elect. It is the recognition of the heavenly Son of Man in the brethren who are hungry, thirsty, strangers, naked, weak and imprisoned in the present age, who will inherit the kingdom prepared by God from the foundation of the world.

Similarly in Markan discourse, the preoccupation of the bulk of the material is not so much the satisfaction of curiosity about the details of the times and seasons so much as dire warnings of the threat of being led astray, of failing at the last and of the need to be ready and watchful to avoid the worst of the disasters which are to come. In the bleak moments of the last days in Jerusalem there is little attempt to dwell on the privileges of discipleship (though an eschatological promise is made to the disciples a little later in the Lukan version in Luke 22:29f. in the context of the supper discourse). It is not a future without hope but the thoughts of the hearers are made to dwell on responsibilities in the short medium term as the essential prerequisite of achieving millennial bliss. These are sentiments which are very much to the fore in *4 Ezra* where a convincing theodicy and the minutiae of eschatological destiny are relegated to the need to follow the precepts of the Most High in order to achieve eternal life. In comparison with the more extended accounts of the coming of the new age to be found in other material, both Christian and Jewish, the Synoptic Discourses concentrate on the period of strife and tribulation leading up to the coming of the Son of Man, what happens thereafter is not explored. In the Lukan account, however, there is the expectation that the arrival of the Son of Man is but the beginning of the process of liberation, for which the tribulations and destruction had been the prelude. This point is made very clearly in the climax of the discourse in Luke 21:26ff: "When these things come to pass, stand up right and hold your heads high, because your liberation draws near" (v 28). It is only when that which has been described in the series of predictions comes to pass that the kingdom of God begins to draw near. The implication is that the kingdom does not arrive with the coming of the Son of Man; that is only part of the eschatological drama whose climax is still to come, when there will be a reversal of Jerusalem's fortunes (v 24). Indeed, that is exactly what we would suppose if we followed the account in Revelation where the arrival of the Rider on the White Horse is the prelude to the struggle which must precede the establishment of the messianic kingdom.

D. Gospel of John

The Johannine Paraclete offered a compensation for the return of Jesus. Indeed, there are occasions in the farewell discourses (John 14–17) that the coming of Jesus and the coming of the Spirit/Paraclete are closely linked (Johnston 1970). What is not in doubt is that the Paraclete's function is to act as a replacement for the departed Jesus (John 14:15ff cf. John 16:9ff). This would become particularly appropriate at a time when the living exponent of the link with the past (such an important theme in the Johannine writings, e.g., John 1:14; 1 John 1:1 and John 21) had died. The Paraclete comes to the disciples; the world cannot receive him; and it is the Paraclete who enables the disciples to maintain their connection with the basic revelation of God, the Logos who makes the Father known (John 14:17ff; 15:26). The Paraclete thus points back to Jesus, the Word made flesh, and is in some sense at least a successor to Jesus, a compensation by his presence for Jesus' absence with the Father. See also PARACLETE.

The disciples are those to whom Jesus comes. The one who loves Jesus and keeps his commandments will be loved by him and Jesus will manifest himself to that disciple (John 14:21); indeed, to that disciple will both the father and the Son come and make their home (14:23). The dwellings which Jesus goes to prepare for the disciples with the father can be enjoyed by the one who loves Jesus and is devoted to his words (John 14:2; cf. 14:23). Likewise the manifestation of the divine glory is reserved not for the world but for the disciple (John 14:19). Whereas elsewhere in both OT and NT all flesh will see the salvation of

our God (Isa. 52:3ff) and those who pierced the victorious Son of Man will look upon him in glory (Rev 1:9; cf. Mark 14:62), the world cannot see the returning Jesus. The goal of the new age in Revelation is that those who bear the name of God on their foreheads (Rev 22:3f) will see God face to face. In John this is part of the bliss reserved for the disciples in heaven. There they will be with him and see his glory (17:24).

Whatever hope there may be for the future (and there are signs that the Fourth Gospel has not moved entirely to a realized eschatology), the focus is on the first coming as the ultimate moment to which the witness of the community and the Spirit-Paraclete both point. Those who love Jesus and keep his commandments are those to whom the incarnate Son of Man comes and with whom the Father and the Son make their abode (John 14:21, 23). The presence of the eschatological glory among the disciples who love him has about it a "vertical" dimension in which the coming son of man is not primarily a figure who appears as a reproach to the nations. The lack of concern for the future of the world is not because the Johannine community is disappointed because of the nonfulfillment of the Promise but because of the concentration on those who are of the light rather than the children of darkness outside the elect group (Meeks 1972).

E. Delay of the Parousia

A question which always arises when the doctrine of Parousia is discussed is the issue of the problem caused for Christians of the nonfulfillment of the expectation. This theory is one which has been extraordinarily influential within biblical exegesis over the last century or so. The classic theory associated with Schweitzer (1931) and Werner (1957) which ascribes the emergence of orthodox Christian doctrine as part of the response to the problem caused by the delay has been subjected to critical scrutiny over the years (also Grässer 1957). There is little doubt that the explicit evidence for the delay of the Parousia being a problem within primitive Christianity is not as large as is often suggested; 2 Peter 3 is in fact a rather exceptional piece of evidence (Käsemann 1964). Other passages which are often mentioned in Matthew and Luke, for example, have to be set alongside other indications which point in the opposite direction. But while one would want to question the view that the delay of the Parousia must have been a problem, it would be wrong to dismiss some of the issues which this particular theory has highlighted. Early Christianity may have dealt with nonfulfillment of its grandiose hopes by intensifying those hopes such as we find, for example, in the vigorous expectation which is to be found in the pages of Matthew's gospel (Bornkamm 1963). The departure of apostolic figures may have caused a crisis of confidence within nascent Christianity. The apostle Paul's theology and self-understanding cannot be properly understood without reference to his expectation of the partial presence and imminent expectation of a new age. For example, the mission to the gentiles and probably also the collection for the saints in Jerusalem may have been linked with the framework of an eschatological drama in which Paul is a crucial actor. Thus it would be appropriate to consider the effect of Paul's departure on that doctrinal construction in which Paul's role was so important.

The issue can be illuminated by reference to Karl Mannheim's (1960) discussion of the utopian or, to use Mannheim's terms, "chiliastic mentality." One aspect of this type, he argues, is the way in which the present moment becomes the Kairos, the moment to take decisive action. The utopian then takes it upon himself:

> to "enable the absolute to interfere with the world and condition actual events" (p. 192) … the present becomes the breach through which what was previously inward bursts out suddenly, takes hold of the outer world and transforms it (p. 193) … the chiliast is always on his toes awaiting the propitious moment … he is not actually concerned with the millennium to come; what is important for him is that it has happened here and now … the chiliastic mentality has no sense for the process of becoming; it was sensitive only to the abrupt moment, the present pregnant with meaning (p. 195).

That sense of destiny which probably undergirded Paul's self-understanding and his activity actually enabled his thinking to cohere as an expression of the outlook of one who believed himself called to be an agent in the dawn of the new age, the means by which the gentiles became fellow heirs of the commonwealth of Israel. Once that sense of being part of the "propitious moment" disappears, however,

the understanding of present activity as an integral part of that drama and its relationship with the future consummation of the divine purposes gradually disappears also. When that happens it does become more difficult to see that future consummation as anything other than an article of faith rather than a goal in which present activity forms an indispensable part in "interfering with the world and conditioning actual events."

Something similar may be found in the appendix to the gospel of John. One issue which is touched on in the closing verses of the chapter is the problem posed by the death of the Beloved Disciple. John 21:23 indicates that there was an expectation current among the members of the community that this disciple would not die before the return of Jesus. Now that he has, a question mark has been placed about the future coming of Jesus; the sense of being part of a "propitious moment," the "present pregnant with meaning" have been replaced by bewilderment in the face of the departure of a figure who had hitherto been the key to the ongoing story of the community. Indeed, the outlook of the community and its view of its future have been deprived of their eschatological significance. Accordingly, the basis for that view is questioned and the tradition on which it is based is subjected to scrutiny.

Early Christianity had ample resources for dealing with the nonfulfillment of their hopes, particularly from within precisely that vehicle of expression of that hope. The apocalypses are interested in the world above where God's reign is acknowledged by the heavenly host and where the apocalyptic seer can have access to the repository of those purposes of God for the future world (Rowland 1982 and 1985). Thus the apocalyptic seer can glimpse either in the heavenly books about the mysteries of eschatology or be offered a preview of what will happen in human history in the future. In most apocalypses that experience of a disclosure of the heavenly mysteries is reserved for the apocalyptic seer, but it was perfectly possible to extend that privilege to a wider group. It is that which we find in different forms in the *Hōdāyôth* (1QH) and the *Odes of Solomon* both of which offer the elect group a present participation in the lot of heaven and a foretaste of the glory which is to come. The identification of the ecclesia of the elect with Christ in the heavenly places is stressed in the letter to the Ephesians (1:21; cf. 3:5ff), so that the present life of the Church becomes a glimpse, a foretaste of the kingdom of God, just as the Spirit enables the believers to regard the present as a participation "in the powers of the age to come" (Heb 6:5) (Lincoln 1981).

The privilege granted to the apocalyptic seer of glimpsing the glory which is to come can be paralleled also in aspects of Paul's understanding of apostleship. See APOSTLE. The presence of the apostle whether in person, co-worker, or through letter represented the presence of Christ confronting his congregations (Rom 15:14ff; 1 Cor 4:14ff; 1 Cor 5:3ff; Phil 2:12). When he finally reaches Rome he promises that his coming will bring blessing (Rom 15:29). Like the Risen Christ who stands in the midst of his churches, in Rev 1:13ff the apostle of Christ comes as a threat and a promise: a threat to those who have lost their first love or exclude the Messiah and his apostle; a promise of blessing at his coming for those who conquer. The direct commission from God not from other men to be an apostle of Jesus Christ (Gal 1:1) is central to Paul's role. That has set him apart like Jeremiah before him. He is no ordinary mortal sent by the God of Israel but one in whom the presence of the Messiah dwelt, as bearer of the marks of his death (Gal 6.17; 2 Cor 4.10; 2 Cor 10.10; Phil 3.10) (Funk 1967).

F. Conclusions

We saw in examining the Synoptic discourses that there is in fact very little attempt made to sketch the character of the liberation which draws near. The sketch of the ideal society or the ideal world is lacking, a mark of either a lack of any political realism or of a merely utopian fixation. But we should attempt to assess the significance of such an absence, for it would be wrong to suppose that the early Christian writings are devoid of any hope for a better world. Rather they prefer to hint at their conviction that one is coming without being too precise about what it will involve. It is the language of myth and metaphor which is to the fore rather than the offering of any detailed political manifesto. The point is made by the markers in the book of Revelation itself. The reader is reminded at the start of the vision of the Rider on the White Horse that discourse of a very different kind is being used here. The reference to the open heaven is a sign that we have to do with attempts to evoke rather than to describe exhaustively what is to come. It is about what is beyond in the sense that it is both future and different from the patterns of

society currently offered. To speak of it, therefore, demands a language which is both less precise and yet more potent and suggestive, a language which after all is what is appropriate when one sets out to speak of that which is still to come.

The book of Revelation offers a timely reminder in its own form about supposing that its preoccupation with eschatological matters offers an opportunity to avoid the more challenging preoccupations of the present. Thus, the vision of hope inaugurated by the exaltation of the Lamb is set within the framework of the Letters of the Seven Churches. Even if we can discern a preponderance of "religious" issues in these letters (warnings against false teaching, suspicion of false prophecy, loss of an initial religious enthusiasm), we should probably regard the issues being touched on here as typical of a complacent second generation religious movement which is making too many accommodations with the surrounding culture and which needs to be brought back once again to its countercultural affirmation in the light of its witness to the new age. Thus the promise of a part in the New Jerusalem is linked with present behavior. The readers of the Apocalypse are not allowed to dream about millennial bliss without being brought face to face with the obstacles which stand in the way of its fulfillment and the costly part to be played by them in that process: they have to wash their robes and make them white in the blood of the Lamb, and avoid being marked with the mark of The Beast.

Similarly the eschatological discourse in the Synoptic Gospels must not be separated from th narrative of Jesus' proclamation and inauguration of the reign of God. It is that context which is necessary to prevent the discourse about the future becoming the goal of the narrative. Discipleship involves sharing the way of the cross of the Son of Man as he goes up to Jerusalem. What is offered to the disciple is the sharing of the cup of suffering of the Son of Man rather than the promise of sitting at his right hand and his left when he reigns on earth. It is not that this request is repudiated but, as the eschatological discourse makes plain, there can be no escape from the painful reality of the present witness with its need to endure the tribulations which precede the vindication. That is the challenge which faces those who wish to live out the messianic narrative in their own lives; no short cuts to the messianic reign are to be found here.

Within the NT the promise of his coming is found in different forms and functions in various ways. In 1 Thessalonians, that classic proof-text of the rapture of the saints, the concern is reassurance. However numerous may have been the words of the Lord known to Paul relating to this episode the piece chosen by him is intended to reassure the elect that even those who die before the coming of the Messiah will not forfeit the right to share in the privileges of that messianic period. We are told nothing of what will happen after the rapture; but in 1 Thessalonians that is not important, as the point of quoting the word of the Lord is to reassure rather than to provide information about what will happen hereafter. As such this passage, fragmentary as it is, conveys little of the threat to and struggle to be undergone by the disciples of Jesus which we find when we read the parallel passages in the wider contexts of Mark 13 and Matthew 24–25. Despite the similar promise to the elect in Mark 13:26 that they will be gathered by the returning Son of Man that deliverance is on the other side of the period of great tribulation from which they are not exempt and which promises real risks of apostasy (cf. Rom 8:19ff). Similarly in Rev 19:11ff the coming of the Messiah is a threat even to the elect. In Rev 1:13ff the Risen Christ may stand among his churches but frequently finds himself on the outside knocking at the door (Rev 3:21) and reproving those who have lost their first love (2:4f). All the inhabitants of the earth run the risk of falling for the illusion of greatness created by the Beast and its agents and finding that the same apocalyptic light which lights the way to the wedding feast of the elect shines with anger on the wicked (Jacob Boehme quoted by Bloch 1972: 182).

PARSHANDATHA (PERSON) [Heb *paršandātā*ʾ (פַּרְשַׁנְדָּתָא)]. One of the ten sons of Haman (Esth 9:7). On problems surrounding this list of names ADALIA (PERSON). Parshandata (LXX *pharsannestain*) is the same name as Aramaic *pršndt* attested on a (late Achaemenid?) Mesopotamian seal. It perhaps renders Old Iranian **Pṛšanta-dāta-* "born to a multicolored person" (Zadok 1986: 108f).

PARTHIANS [Gk *Parthoi* (Παρθοι)]. An Iranian people who developed an empire (ca. 238 B.C.E.–224 C.E.) second only to Rome, a few of whom were present in Jerusalem at the feast of Pentecost (Acts 2:9). Most Parthians were polytheists but those visiting Jerusalem must have been some of the many Jews or Jewish proselytes who lived within the boundaries of the Parthian Empire (*Ant* 15.2.2 §14). According to Acts, the Parthians and people from many different nations heard their native languages being miraculously spoken by Christians who had just been filled with the Holy Spirit (2:1–13).

While Parthians are not explicitly mentioned anywhere else in the Bible, several of Revelation's apocalyptic scenes were almost certainly inspired by the dreaded Parthian cavalry. Caird suggests that the conquering bowman on the white horse in Rev 6:2 was not Christ, but rather an evil figure resembling a Parthian mounted archer (*Revelation* HNTC, 80). Three features of the terrible cavalry invasion described in 9:13–19 recalled the Parthians as well: (1) their origin near the Euphrates River, (2) the cavalry's bright plate armor (Beasley-Murray *Revelation* NCB, 165), and (3) the horses' ability to wound with their mouths and tails (9:19), suggesting the Parthian's tactics of shooting one volley of arrows as they charged and then shooting another volley over their horses' tails as they withdrew (Caird *Revelation* HNTC, 122). The threat of a Parthian invasion may also lie behind the invasion over the dried up Euphrates by the kings from the East (16:12).

The Parthians first rose to power in the mid-3d century B.C.E. when Arsaces led a successful revolt against the Seleucid Empire in what is now NE Iran. Two great kings, Mithradates I (ca. 171–138 B.C.E.) and Mithradates II (ca. 124–87 B.C.E.) expanded the Parthian Empire westward, not halting until they met Roman forces at the Euphrates River, which became the boundary between the two empires. The Parthians defeated Roman armies under Crassus at Carrhae (Haran) in 53 B.C.E., Mark Antony in 36 B.C.E., and Paetus in 62 C.E. Trajan finally defeated the Parthians and permanently ended their threat to Rome in 114–16 C.E. Their empire disintegrated in the 220's C.E.

The Parthians were influenced by Iranian, Greek, and Semitic cultures. The chief Zoroastrian god Ahura Mazda was widely honored as the most powerful of the deities, but Babylonian, Greek, and Hindu gods were also worshipped and the empire at its peak encompassed large numbers of Buddhists and Jews. See further *CHI* 3.

PARTITION/DIVIDING WALL. See TEMPLE, JERUSALEM.

PARTRIDGE. See ZOOLOGY.

PARUAH (PERSON) [Heb *pārûaḥ* (פָּרוּחַ)]. The father of Jehoshaphat, who was in charge of one of the twelve administrative districts in Solomon's kingdom (1 Kgs 4:17). Jehoshaphat's territory was Issachar, one of the districts identified by its old tribal name. Other districts are designated according to cities or geographical regions. This may have been an attempt to incorporate Canaanite territory conquered by David (*AncIsr,* 135). Each district was responsible for providing food and supplies to Solomon's court one month of the year (1 Kgs 4:7, 27–28).
PHILLIP E. MCMILLION

PARVAIM (PLACE) [Heb *parwāyim* (פַּרְוָיִם)]. Presumably an area from which gold was secured for use in Solomon's construction of the Temple (2 Chr 3:6). This geographical interpretation is reflected in most early manuscripts and in the major English translations. The suggestion of the Syriac Peshitta (cf. the Vulgate) that the word is a descriptive category (i.e., "good," "fine") has not generally been accepted. It appears implausible since such descriptions immediately precede this reference (i.e., v 5 "pure"; v 6 "good").

Early rabbinic interpretation, however, was open to a descriptive use of the term when they sought an etymology for the word. It is associated with *parîm,* "young bulls," whose red blood suggested such a hue for the metal (*Midr. Cant.* 3:10; *Exod. Rab.* 35:1; cf. Milik 1959), and with trees bearing fruit *(pārâ)* of gold (*B. Yoma* 21b, 39b, 45a; *Num. Rab.* 11:3; see Del Medico 1963).

An early geographical understanding is evident in 1QapGen 2:23 where Parvain, a variant of Parvaim, is said to be the home of Enoch (Fitzmyer 1971: 52–53, 94). Here it seems to refer to some far-off, exotic land which might even be understood as mythical (Grelot 1961: 35). It is possibly associated with the apocryphal "Garden of Righteousness" (Enoch 60:23; 106:8; Grelot 1964). The actual location of the geographical source of the gold is not clear. Suggestions have been given linking it to Farwa in Yemen or el-Farwein in NE Arabia (Williamson *Chronicles* NCBC, 207).

DAVID W. BAKER

PAS-DAMMIM (PLACE) [Heb *pas dammim* (פַּס דַּמִּים)]. The scene of one of David's military victories over the Philistines (1 Chr 11:12–14). The name is a variant form of EPHES-DAMMIM.

PASACH (PERSON) [Heb *pāsak* (פָּסַךְ)]. A son of Japhlet listed in the genealogy of Asher in 1 Chr 7:33. While his grandfather Heber is mentioned in the parallel genealogies of Asher in Genesis 46 and Numbers 26, Pasach remains an obscure figure. He neither appears elsewhere in the Hebrew Bible nor is attributed with any descendants. While some scholars consider such unique names as fabrications of the Chronicler, Johnson and others suggest that this genealogy derives from military census lists, themselves arranged in genealogical form (Johnson 1969: 64–66).

Bibliography

Johnson, M. D. 1969. *The Purpose of The Biblical Genealogies.* Cambridge.
JULIA M. O'BRIEN

PASEAH (PERSON) [Heb *pāsēaḥ* (פָּסֵחַ)]. 1. The father of Joiada, one of those who repaired the wall of Jerusalem following the return from Babylonian exile (Neh 3:6). The LXX has *phasek.* The name means "lame" (Clines *Ezra, Nehemiah, Esther* NCBC, 57).

2. The forebear of the temple servants who came out of Babylon (Ezra 2:49). The LXX has *phasē;* the parallel listing in 1 Esdras 5:31 has *phinoe.* Clines (152) points out that Joiada could be a descendant of the temple servant Paseah. On the other hand, it is possible that we are dealing with two different persons named Paseah. Brockington (*Ezra, Nehemiah and Esther* Century Bible, 136) maintains that the Joiada of Neh 3:6 was probably not one of the temple servants because they are said to repair the wall at another place (Neh 3:26). In that case, the Paseah of Ezra 2:49 would be a different person than Joiada's father. It is not necessary to conclude, however, that all of the temple servants would have worked together.

3. A descendant of Judah (1 Chr 4:12). The LXX has *phissēe.*

MICHAEL L. RUFFIN

PASHHUR (PERSON) [Heb *pašḥûr* (פַּשְׁחוּר)]. Name of five individuals in the Hebrew Bible and the Apocrypha. The name is derived from Egyptian and means probably either "Son of Horus" or "Portion of Horus" (Fowler *TPNAH,* 64–65).

1. Son of Malchiah (Jer 21:1; 38:2). In Jeremiah 21, Pashhur the son of Malchiah along with Zephaniah the priest—the latter subsequently executed by Nebuchadnezzar (Jer 52:24–27)—are sent by King Zedekiah to the prophet Jeremiah. The two are to inquire of the prophet if there is any hope that Yahweh will deliver Judea from the invading Babylonians (Jer 21:2). While this text does not indicate Pashhur's title or official position, he is presented as a person who has close connections with King Zedekiah. The focus of Jeremiah 21 is upon the message of Jeremiah that Judea must surrender to Babylon; the lives of those who surrender will be spared (Jer 21:9).

In Jeremiah 38, Pashhur, son of Malchiah, is among a group of officials who upon hearing the prophet Jeremiah's urging to surrender to Babylon (Jer 38:2; cf. Jer 21:9), appeal to King Zedekiah to be allowed to kill Jeremiah. Zedekiah turned Jeremiah over to these princes who lower the prophet into a cistern of the king's son, Malchiah. This account suggests that Pashhur would have been a royal prince, a grandson of Zedekiah. This would explain both the close connection to Zedekiah in Jeremiah, chaps. 21 and 38, as well as his association with those who regarded Jeremiah's plea to surrender to Babylon as treasonous.

In 1 Chr 9:12 and Neh 11:12, a Pashhur, son of Malchiah, is identified as the grandfather of Adaiah, one of the priests in Jerusalem after the exile. However, it is not clear if this is the same Pashhur found in Jeremiah, chaps. 21 and 38. In Jeremiah 21, only Zephaniah—not Pashhur—is designated as a priest. However, Chronicles and Nehemiah designate Pashhur as part of the priestly line.

2. Opponent of the prophet Jeremiah (Jer 20:1–6). Hearing Jeremiah's prophesy of doom against Jerusalem in Judea (Jer 19:14–15), the narrative indicates that Pashhur beat Jeremiah and placed him in stocks in the upper gate of the temple (Jer 20:2). When released, Jeremiah pronounces judgment upon Pashhur. This judgment includes a play upon Pashhur's name so he is no longer to be known as Pashhur but as *māgôr missābîb* ("Terror on Every Side"). The judgment also included a threat of death and exile to Pashhur and his family.

3. Father of Gedeliah, one of the supporters of Zedekiah and opponents of Jeremiah (Jer 38:1). It is not clear how, if at all, this Pashhur is related either to Pashhur, son of Immer, the priest in Jer 20:1–6, or Pashhur, son of Malchiah, of Jeremiah, chaps. 21 and 38.

4. One of the ancestors of the priests who return from the exile (Ezra 2:38; Neh 7:41; 1 Esdr 5:25). These descendants of Pashhur are among those who leave their foreign wives (Ezra 10:22; 1 Esdr 9:22).

5. One among those who participate in the sealing of the covenant with Nehemiah (Neh 10:3). It is not clear if there is a relationship between this priest and the "sons of Pashhur" whose return from exile is mentioned elsewhere in Nehemiah (see #4 above).

JOHN M. BRACKE

PASSION NARRATIVES. This term usually designates the sections of the canonical gospels that recount the suffering and death of Jesus of Nazareth: Matt 26–27; Mark 14–15; Luke 22:23; John 12–19.

Critical scrutiny of these sections as self-contained narratives originated from source-critical considerations. Schmidt (1919: 303–9), Dibelius (1935: 178–217), and Bultmann (1963: 262–84) saw in

Mark 14–15 a continuity that their atomizing analyis did not find elsewhere in Mark, and they posited variously a pre-Markan passion narrative which had come to Mark in elaborated form. Subsequent form criticism focused on the tradition history of individual units (see esp. Linnemann 1970). The origin of narrative details was often ascribed to a process of primitive Christian scriptural exegesis.

The approach here will be literary and generic. The narratives have a literary shape and serve a function within the context of the gospels as wholes. Their literary shape originated in an identifiable genre of Jewish stories, and the narratives developed from pre-canonical sources into the texts of the four canonical gospels and the non-canonical *Gospel of Peter*.

———

A. Jewish Stories of Persecution and Vindication

The generic model for the passion narratives occurs in Jewish stories about the persecution and vindication of a wise or righteous protagonist: Genesis 37, 39–41; Esther (Mordecai); Daniel 3 and 6; Susanna; and, with modifications, 2 Maccabees 7; and Wisdom 2, 4 and 5 (Nickelsburg 1980). These stories originate as court tales (see also *Ahiqar*) about a wise man who, as the object of a conspiracy, is persecuted, consigned to death, rescued, vindicated, and exalted in the royal court. In Daniel 3 and 6 the courtier is a faithful Jew whose obedience to the Torah and trust in God lead to his condemnation. In Susanna the court setting is dropped and the protagonist is a god-fearing woman. In Wisdom 2, 4 and 5 the unnamed hero, a *type* of the wise and righteous spokesman of the Lord, is identified with the Servant of Second Isaiah and the story is recounted in language heavily influenced by Isa 52:13–53:12 (Nickelsburg 1980: 156, n. 15).

The plot of these stories is embodied in a series of common narrative elements that depict the actions and attitudes of the characters. The stories differ from one another in their specific settings and characters and the particular issues that give the stories their continuity (e.g., Joseph's ability to interpret dreams, Susanna's chastity, the righteous man's status as God's son). In 2 Maccabees 7 and Wisdom 2, 4, and 5 the vindication does not prevent death, but takes place in spite of it.

Three factors distinguish the gospel narratives from their Jewish prototypes. The protagonist is a historical figure of the recent past. Unique status is ascribed to him, as Messiah, Son of Man, Son of God. His divinity gives the narratives a special nuance: a genre that originally described the suffering of a righteous man now recounts the death of a divine being.

B. Mark 11–15

The literary genre of the Markan passion narrative is evident in the many narrative elements typical of the Jewish stories. These elements, of which there are more than in any single Jewish story of this genre, carry two major themes: Jesus' relationship to the temple and Jesus' messianic status.

The temple theme enters the gospel in chap. 11. In a provocation typical of the genre, Jesus "cleanses" the temple, explaining his actions by quoting two prophetic passages, one anticipated a new, eschatological temple (11:15–17). This action triggers a conspiracy by the temple authorities (11:18; cf. 11:22–33; 12:1–12). An oracle predicting the destruction of the temple is explicit in Jesus' private teaching in 13:1–2. The conspiracy reemerges in 14:1–2, usually designated as the beginning of the Markan passion narrative. Jesus' alleged claim that he would destroy the temple and build a new one appears in the accusation before the Sanhedrin (14:57–58). Although the charge is not substantiated, it is presumed at the crucifixion, where mocking bystanders challenge the validity of his alleged claim (15:29–30). The rending of the temple veil anticipates the vindication of Jesus' prediction (15:38).

The set of generic elements that bear the theme of Jesus' messiahship make use variously, and usually with irony, of the titles "Christ," "King of the Jews/Israel," "Son of God/the Blessed": Conspiracy (14:3–11, though the title does not appear, note the anointing); Accusation and Condemnation (14:61–64; 15:1–20); Acclamation (15:26); Ordeal (15:31–32); Vindication and Acclamation (15:39). Different from the temple theme, Jesus' identity as a divine being called "Son of God" and his status as Messiah are present from the beginning of the gospel. Both God and the evil denizens of the supernatural realm identify Jesus as God's Son and holy one (1:11, 24; 5:7; 9:7). His status as Messiah is suggested in the allusion to Psalm 2 in 1:11 and becomes focal in 8:29. In the latter context, however, Jesus interprets Messiah in terms of the "Son of Man" who must die (8:31–33). This crucial modification of any idea of a triumphant Messiah-King, is repeated three more times (9:9–13; 9:31; 10:32–45) in predictions that point the reader toward a denouement in which Jesus' status as Son and Messiah will be validated in his passion and death. Roman irony about "the King of the Jews," ridiculously condemned to die, shadows the truth of his messiahship. The crucifixion constitutes an ordeal; Jesus renounces the temptation that he prove his messiahship by miraculously saving himself (15:31–32), and, by losing his life, he affirms his vocation as Messiah (cf. 8:34–35). In the end, in another unwitting shadowing of the truth, the pagan centurion, seeing the proof of "this man's" mortality, becomes the only human being in the gospel to acclaim Jesus' divine identity as God's Son. Thus, in the context of the gospel, the passion narrative is the key that unlocks the significance of Jesus of Nazareth, revealing kingship in death and divinity in the determination to accept human mortality.

The passion narrative is inextricably connected to the story of the empty tomb. The Jewish stories saw vindication in a rescue from death. The pair, persecution/vindication, recurs in Mark's repeated passion predictions, in language beholden to the Deutero-Isaianic texts that inform Wisdom 2; 4–5. See SON OF MAN. The function of the Sanhedrin's "seeing" the enthroned Son of Man will be to vindicate Jesus' admission of messiahship and divine status, which was the immediate cause of his condemnation (Mark 14:62–64). Although the story climaxes christologically in the centurion's confession—however defective—the narrative pattern requires Jesus' resurrection and exaltation, though neither is described in narrative form.

While, from the point of view of genre, the pattern of persecution and vindication reflects the Jewish stories mentioned above, Mark's passion narrative also sounds this double motif through allusions to canonical psalms about the suffering and exaltation of the righteous one. Noteworthy are: 14:18 (Ps 41:9); 14:34 (Ps 42:5, 11; 43:5); 15:24, 29, 34 (Ps 22:18, 7, 1); 15:23, 36 (Ps 69:21). Although scripture is not cited in any of these cases (contrast, e.g., 14:27), the wording of the psalms is narrativized in a way that was typical of Jewish stories. Through this use of Israel's religious traditions, Mark and his source(s) cast the narrative of Jesus' suffering and death in a familiar mold that others had used to describe the suffering and vindication of the wise and righteous.

Mark's use of a traditional genre and pattern is governed and nuanced by his view of Jesus' unique status as the Messiah and God's Son. Jesus' unjust death served a unique divine purpose. Probably relying on ideas drawn from Isaiah 52–53, understood and nuanced in new ways, Mark's Jesus claims that his death initiates a covenant that will effect "a ransom for many." The idea is asserted in the climactic announcement that prepares for and interprets the passion narrative (10:45) and in the account of the Last Supper which was familiar to Mark's readers from the liturgical context in which they remembered and celebrated Jesus' death (14:22–25).

Although Jewish stories of persecution and vindication provide a model for most of the cast of characters, the plot, and many of the narrative elements of Mark's passion narrative, the prominence of Jesus' disciples and of episodes about them are worthy of special note, particularly because of their negative characterization. This Markan motif is introduced in chapter one and unfolded in the gospel's plot. The disciples' apostasy, recounted in the passion narrative, is an extension of the ignorance and misunderstanding described in chaps. 3–10. The historical setting and literary and theological function of this portrait of the disciples continues to be debated. Three facts are noteworthy. (1) In the pericopes about Gethsemane and the Sanhedrin trial, in episodes not typical of the genre, the disciples' apostasy is

carefully contrasted with the faithfulness and obedience of Jesus, the righteous sufferer. (2) This faithless shrinking from appropriate and necessary suffering is linked to Mark's understanding of messiahship and to the disciples' calling to imitate Jesus' suffering service for others (cf. 8:31–38; 9:31–35; 10:32–45; 13:9–13). (3) Mark's allusions to his own time in chap. 13 suggest a polemic against false teachers who proclaim a Messiah much like the one wrongly expected by the Twelve. They also predict that the disciples must suffer like Jesus and they contain warnings against the kind of careless conduct attributed to the disciples in Gethsemane (cf. 13:32–37 with 14:32–42). Thus Mark's christology, which culminates in the narrative about Jesus' unique and saving death, does not exclude a paradigmatic aspect in the faithful and obedient suffering depicted in that narrative.

Mark's characterization of the antagonists is of special importance. In keeping with the temple motif, Jesus' enemies are the members of the Jerusalem establishment—the chief priests, scribes, and elders. Although the historical fact of the crucifixion presupposes condemnation by the Roman governor, Mark's narrative reflects a double tendency to exculpate Pilate and blame the Jewish authorities. In terms of the genre, Pilate plays the role of the friendly helper figure who attempts to deliver the protagonist, and the centurion's acclamation does not come from the lips of one who has been portrayed as Jesus' enemy. In contrast to these more or less well-disposed characters, the Jewish authorities pursue Jesus' destruction. These tendencies, which the other evangelists will underscore, are noteworthy because, with the exception of 1 Thess 2:14–16 and the book of Acts, they are otherwise absent in the NT. Their presence in the gospels and Acts reflects 1st century Jewish-Christian controversy and Christian apologetic vis-à-vis the Romans. Therefore, historical conclusions about Jewish participation in the arrest, trial, and death of Jesus must be drawn with much more caution and tentativeness than has been traditional.

With respect to their genre, contents, and necessary placement in the plot, the passion narratives of the other canonical gospels evidence many similarities to Mark's account. At the same time, in keeping with their purposes, the respective evangelists both emphasize and deemphasize aspects of Mark's account and add traditional and newly constructed material.

C. Matthew 21–27

From start to finish, Matthew repeatedly emphasizes that the Jews and their leaders have rejected their Messiah and that salvation now belongs predominantly to the gentiles. In keeping with this view, Matthew's major changes in the passion narrative expand on Mark's tendency to exculpate Pilate and blame the Jews. The malevolence of the Jewish leaders is evident in a number of Matthean editorial changes. The chief priests and the Sanhedrin seek *false* testimony against Jesus (26:59; cf. Mark 14:55). Different from Jesus' open claim to divine status in Mark 14:62, Matthew's Jesus responds ambiguously, "you say so" (26:64). Nonetheless, he is condemned for blasphemy. Matthew repeatedly contrasts the Jewish leaders' malevolence with the protests of Jesus' innocence expressed by other characters. The chief priests and elders pursue their death plot, cynically rejecting Judas' confession of sin and attestation of Jesus' innocence (27:3–10). In the trial before Pilate, the governor raises the issue of amnesty as a device to rescue Jesus (27:15–18; contrast the crowd's initiative in Mark 15:6–10). Following this and Pilate's wife's divinely prompted attestation of Jesus' innocence, the leaders incite the crowd to ask for Barabbas (27:19–20), and the curse is invoked in response to Pilate's public handwashing (27:24–25). The scene echoes the Judas story (vv 3–10). Contrast is again implied when only the centurion and the soldiers respond to the visible phenomena that vindicate Jesus' status as God's Son (27:51–54). The story of the guard at the tomb (27:62–66; 28:2–4, 11–15) emphasizes the Jewish leaders' hardheartedness. They attempt to prevent the disciples from stealing Jesus' body and claiming that he is risen. When the resurrection takes place, it is they who perpetrate a fraud.

Matthew moves significantly beyond Mark by ascribing responsibility for Jesus' death to the people as a whole, and he makes the consequences explicit. The elders are "the elders of the people" (26:3, 47; 27:1; cf. Mark 14:1, 43; 15:1). In 27:24–25, Mark's "crowd"—here identified as "all the people" (*laos*, the technical term for the nation)—invokes a curse on themselves and their descendants, which will be fulfilled in the destruction of Jerusalem, and the Jews' disenfranchisement as God's people. Matthew makes this point in 21:28–22:10, where he interpolates into his Markan source two parables that

complement the parable of the vineyard (Mark 12:1–12) and identify Jesus' controversies in Jerusalem as confrontations inextricably related to the story of the passion and its consequences.

Matthew exploits the possibilities of the genre in order to underscore aspects of the christology implicit in Mark's narrative. He enhances the theme of Jesus' status as God's Son. This title is linked to that of "Christ" in the Sanhedrin trial (26:63; cf. Mark 14:61) and in Matthew's addition in 16:16 (cf. Mark 8:29). He keeps it in prominence in the crucifixion scene through a pair of additions to the narrative element of the ordeal (27:40, 43), which reflect the ordeal element in Wis 2:17–18 and its combination of "son of God" language with an allusion to Ps 22:8. Thus, as in Wis 5:5, the protagonist's vindication as God's Son (Matt 27:54) is a response to the cynical taunt that he prove his sonship by escaping death. Moreover, Matt 27:40 parallels Matt 4:6 and makes explicit that the taunt is a satanic temptation to obstruct God's purpose that Jesus must die (cf. Matt 16:21–23, par. Mark 8:31–33).

Matthew elaborates on Jesus' death as a saving event, retaining Mark 10:45 at 20:28 and Mark 14:24 at 26:28. In 26:28 he inserts the motif of "forgiveness of sins," deleted from his account of John's baptism (contrast Matt 3:1–2 with Mark 1:4). The eschatological aspects of soteriology appear in Matthew's crucifixion account. Cosmic signs, expected on the Day of the Lord, accompany Jesus' death, and the resurrection of the saints anticipates and is dependent on Jesus' resurrection (27:51–53).

Following Mark, and in keeping with his own interest in the fulfillment of scripture, Matthew ties the passion events to scripture and its traditional interpretation. At 26:24, 54 he follows or modifies Mark. At 27:9–10 he uses a typical citation formula. He retains the Markan allusions to the Psalms and adds the language of Psalm 22 and Wisdom of Solomon mentioned above.

D. Luke 19–23

Although the Lukan passion narrative retains the genre, the general order, and the contents of Mark's narrative, its omissions, additions, and transpositions have led some scholars to conclude that Luke used a traditional passion narrative in addition to Mark's (Taylor 1972). While Luke's narrative may well retain unique traditional material, most of the differences from Mark are understandable as expressions of Luke's literary and theological interests, and an independent passion narrative seems an unnecessary hypothesis.

Jesus' negative relationship to the temple is recast in Luke's narrative. The motif is present primarily in chaps. 19–21, where the temple is the setting for a major confrontation between Jesus and the Jewish authorities. Similar confrontations, also between Jesus' followers and the authorities, are a typical feature of Luke-Acts (Petersen 1978). In the passion narrative, however, the motif has disappeared from crucial elements of the genre. The conspiracy is tied to Jesus' teaching in general and not to his "cleansing" of the temple (19:47; cf. Mark 11:18). The accusation that he threatened to destroy the temple is deleted from the Sanhedrin trial (22:66–71) and the taunts at the crucifixion (23:35; cf. Mark 15:29–30). Only the rending of the veil remains, as one of several phenomena that *precede* his death. Most of the deleted material reappears in Acts in the confrontation stories about Stephen and Paul (see below).

Luke's view of Jewish responsibility for Jesus' death is ambivalent. The leaders' malevolence is emphasized. Their plot is a function of wholesale opposition to his teaching (19:47; cf. 4:25–30). The second mention of the conspiracy is juxtaposed to the statement that Judas acts at the prompting of Satan (22:1–3), whose "hour" and "authority" are present when the authorities and their soldiers arrive at Gethsemane (22:52–53). Although at the Sanhedrin trial Jesus twice avoids the Messianic claim explicit in Mark 14:61–62 (cf. 22:67–70), the authorities hear what they wish (v 71). Before Pilate they perpetrate a double lie: he claims to be Christ, a king; he forbids paying tax (23:2, anticipated in 20:20–26). The contrast between Pilate's estimation of Jesus and the leaders' accusations is also developed by Luke. Pilate becomes Jesus' advocate, and his threefold formal statement of Jesus' innocence is underscored by Herod's judgment (23:4, 14–15, 22). The condemnation is a capitulation "to their will" (23:25). By moving the soldiers' mockery to the crucifixion, Luke identifies as Jews rather than Romans the "they" who lead Jesus to Golgotha and crucify him (contrast 23:25ff with Mark 15:16ff).

Luke's ambivalence about Jewish responsibility appears in his statements about the "people" and the "crowd(s)." The "people" react in horror to the parable of the vineyard, while the leaders plot his demise

(20:9–19). The death plot in 22:2 is a reaction to Jesus' popular support, not in spite of it (cf. Mark 14:2). On the way to Golgotha, Jesus is followed by a crowd of "the people" and lamenting women. At the cross, in contrast to the leaders, who mock Jesus, "the people" watch, and at the end these "crowds" beat their breasts in repentance (23:35, 48). Only in 23:4, 13 are "the crowds" and "the people" mentioned explicitly in a negative way. In Acts, Luke frequently reasserts the leaders' responsibility for Jesus' death and attributes Stephen's death to them, but he describes mass conversions of the people—though other "Jews" in Asia Minor and Europe persecute Paul.

The christology in Luke's passion narrative has its own nuances. Although for Luke, Jesus is God's Son, the title is lacking at 23:47, where the centurion sees in Jesus' death the evidence of his innocence or righteousness, not his divine status. More central—the leaders' lies notwithstanding—is Jesus' status as the Chosen One, the Christ, who must suffer to enter his glory (23:35, 42; 24:26, 46; cf. Acts 2:36).

Luke deemphasizes the idea of Jesus' death for others. At 18:34 he omits Mark 10:45 and replaces it at 19:10 with a logion that ties the Son of Man's saving work not to his death but to his reclaiming the likes of Zacchaeus. Other parts of Mark 10:35ff appear at the Last Supper, where the exemplary aspects of Jesus' death are stressed (22:24–30) in the context of the institution of the Eucharist—if the long reading is accepted. In spite of this interpretation of Jesus' death "for you", no statement of its vicarious function occurs in the "kerygmatic" formulae in Luke 24 and Acts, though his death is according to God's plan, and forgiveness and salvation are tied to his name. Central is the pattern of persecution and vindication/exaltation typical of the Jewish stories.

Luke's passion narrative portrays Jesus as a model of patient and selfless suffering. At the Last Supper he thinks of his disciples (22:15). In Gethsemane, he heals the high priest's servant (22:51). At the crucifixion the "cry of desperation" (Mark 15:34) is replaced with a prayer for forgiveness, comfort for a fellow sufferer (typically of Luke, an outcast to be saved), and the confident committal of his spirit to the Father (23:34, 42:43, 46). The paradigmatic quality of Jesus' passion is evident in Acts. In chaps. 6–7, Stephen's trial and death are cast in the genre of the passion narrative. The conspiracy results from his claim that Jesus threatened the temple (and Torah) (6:8–14). His vision of the glorified Son of Man (6:15; 7:54–56) parallels the Sanhedrin trial (22:69; Mark 14:62). His final words (7:59–60) parallel Jesus' words at Luke 23:46, 34. His death and the attack on the Christians is a persecution of Christ (9:4–5), and Saul's confession at 9:20 takes up the Markan centurion's acclamation dropped in Luke's passion narrative. Moreover, Saul will have to "suffer" for Jesus (9:16), and his journey to Jerusalem (20:22ff) parallels Jesus' journey in the gospels.

This relationship of the fate of master and disciples is enhanced by Luke's systematic expunging of most of the negative aspects of Mark's portrait of the disciples. They endure with him in his temptation (22:28). Their careless behavior in Gethsemane is minimized, and their sleep is attributed to grief (22:45). They do not apostasize (Mark 14:27–28, 50–52 are omitted), and they are present at the cross (23:49).

E. John 11–19

The Johannine passion narrative contains the major episodes common to the Synoptics: conspiracy (11:47–53); anointing (12:1–8); royal entrance (12:12–19); Last Supper and announcement of betrayal and denial (13:1–30, 36–38); Gethsemane (18:1–12); Jewish trial and Peter's denial (18:13–27); trial before Pilate (18:28–19:16); crucifixion with a final scene focusing on a Roman soldier's action which interprets Jesus' death (19:17–37); burial (19:38–42). The major formal difference from the Synoptics is the presence of the typical Johannine discourses, which function as testamentary instruction on the nature of Jesus' death and on the disciples' life afterwards (esp. chaps. 13–17).

Although John's passion narrative bears many resemblances to the Synoptic accounts, its episodes do not function as interrelated elements of a consistent and complete story of the genre described above. No single issue is the cause of a conspiracy, the substance of an accusation, the subject of an ordeal, and the object of a vindicative acclamation. The temple cleansing (John 2:13–22) has no plot as its consequence. In 11:45–53, the conspiracy, which results from the raising of Lazarus, alludes to the relationship between Jesus' death and the temple's destruction, but the issue is never again mentioned. Although Jesus' status as Christ and Son of God are at issue in the Roman trial (18:28–19:16), they have not been mentioned in

the hearing before the high priest, and in the crucifixion account the messianic motif appears only in the superscription. Jesus' status as Son and Messiah is not vindicated at Golgotha.

These differences from the Synoptic Gospels are consonant with the context of the gospel. First, the charge that Jesus claims to be God's Son (19:7) reflects hints and open claims throughout the gospel (contrast Mark's secrecy motif) and follows through on two episodes in which these claims trigger charges of blasphemy and attempts to stone Jesus (8:31–58; 10:22–39). The climactic acclamation of Jesus' divinity occurs in Thomas' post-resurrection confession and the Evangelist's conclusion (John 20:28–31), which links messiahship and divine sonship (cf. also 11:27).

Secondly, different from the Synoptics, Jesus' death is integral and necessary to the plot of the whole gospel. John describes repeated attempts to capture or kill Jesus (5:16–18; 7:10–19, 25, 32; 8:37, 59; 10:22–39). These incidents reflect, in turn, the narrative pattern of John's christology. Jesus, the eternal Son of the heavenly Father, the Logos who became flesh to reveal God's will, is rejected by his own, and this rejection climaxes in the crucifixion. The passion narrative describes the death which is also the Son's departure to the realm from which he came, and the discourses in the narrative interpret this death as glorification and exaltation, employing a paradigm reminiscent of the Wisdom of Solomon. See RESURRECTION.

Through this structurally essential theme of rejection, John raises the anti-Jewish element to high relief. Different from the Synoptics (except Matt 21:45; 27:62), the Pharisees play a major role in the death plot (7:32, 45–52; 11:46–47, 57; 18:3). More important, John identifies "the Jews" as the antagonists who seek Jesus' death (passim). As in Matthew, responsibility for Jesus' death has been generalized from the leaders to the people. Moreover, these Jews are the historical agents of the primordial mythical darkness that opposes the heavenly light and salvation.

Although John's primary soteriological pattern depicts the descent of the Revealer who gives life to those who accept him, and although Jesus' death is the treacherous rejection of the Revealer, John sees positive value in Jesus' death. This paradox is presented at the introduction to the passion narrative, where unwittingly the high priest rightly interprets the death he is plotting (11:49–52). In passages that correspond to Mark 10:45; 14:24, Jesus describes himself as the Shepherd, or loving Friend, who lays down his life for the sheep, or friends (10:11–18; 15:12–15). The motif also occurs, though cryptically, in passages that allude to Jesus as the Passover lamb (19:14, 36; cf. 1:29).

Scholars debate the extent to which John understood Jesus to be a real human being. However one resolves the question, John's passion narrative lacks the features that stress Jesus' humanity and suffering in the other gospels (Käsemann 1968), although aspects of Luke's narrative approximate John's view. Especially noteworthy is John's Gethsemane story, where epiphany replaces agony (18:1–12; cf. 12:27–28, which takes up the synoptic Gethsemane logion and dismisses it). The crucifixion scene depicts a Jesus in control. It lacks the desolation suggested by the quotation of Ps 22:1, and it cites Ps 22:18 and Ps 69:21 not to attest the righteous one's suffering, but to prove how events took place to fulfill scripture and how Jesus orchestrated them to this end. It is in the citation of these Psalms and other scripture that John's passion narrative approximates the motif of vindication. What Jesus does and what happens to him define him as God's agent, but within a cosmic context. John describes not the vindication of the righteous one's conduct, but the fulfillment of a grand divine purpose.

The relationship between the Synoptics and John's gospel is debated. Recent discussion favors independence. This position must explain the following parallels with peculiarly Lukan details: John 13:2, Luke 22:3 (Satan and Judas); John 13:4–20, Luke 22:24–27 (servant motif at the supper); John 18:23, Luke 22:67–68 (double conditional sentence); John 18:38, 19:4, 6; Luke 23:4, 14, 22 (Pilate's triple response); John 19:12, Luke 23:2 (kingship and Caesar); John 19:25–26, Luke 23:40–43 (Jesus' concern for others); John 19:30, Luke 23:46 (he commits his spirit). Collectively, these similarities suggest John's dependence either on Luke or on a substantial parallel narrative.

F. The Gospel of Peter

This work exists in one fragmentary copy. It begins at the conclusion of the trial before Pilate and continues with the mockery, crucifixion, burial, and setting of the guard at the tomb. After a description of

the resurrection and the discovery of the empty tomb, the story breaks off with Peter, Andrew, and Levi setting off for the Sea of Galilee (cf. John 21). The common opinion that the gospel contained an account of only the passion and resurrection can be neither proven nor disproven. Evidently it included an account of a trial before Jewish leaders, where the issues may have been a threat against the temple (see *Gos. Peter* 26), and Jesus' status as Son of God (see *Gos. Peter* 6–9, 45–46).

Most scholars believe that the gospel is dependent on the canonical gospels. Especially noteworthy are the parallels with material unique to Matthew, Luke, and John: the handwashing and the guard at the tomb (Matthew); the presence of Herod, the repentant thief, the lament about Jerusalem (found in a minor Lukan ms tradition), the people's repentance, the acclamation of Jesus as "righteous" (Luke); the breaking of the bones, and the fear of the Jews (John). Crossan (1988) ascribes many of these elements to a pre-Markan narrative that was supplemented by other material from the canonical texts. Although this analysis ascribes too much to primitive tradition, there seem to be some early elements in the *Gospel of Peter*, e.g., the story of the guard at the tomb.

Whatever its relationship to the other gospels, the *Gospel of Peter* attests the tendency to exculpate Pilate and blame the Jewish leaders. The author heaps up and reinforces anti-Jewish material spread through the other gospels and reshapes other pericopes to this end. Details in the Matthean handwashing scene appear twice (1, 46). The act of condemnation is attributed not to Pilate but to the Jewish king. Actions elsewhere ascribed to Roman soldiers are attributed to the Jews, the people, or their leaders. The request for Jesus' body and the necessity to bury him is mentioned three times in connection with a concern to obey the Law. The Jewish leaders are ready to commit the "great sin" of denying the resurrection, lest their admission of wrong lead to their execution by the people. The element of the miraculous, introduced through the signs at Jesus' death and the description of the resurrection, underscores the wickedness of the leaders, who refuse to repent with the people or to make a confession as Pilate does.

Although the document's fragmentary state obscures the author's christology, some tentative conclusions are possible. The name "Jesus" never occurs in the extant text. The author's titles for him, "the Lord" and "Son of God," emphasize Jesus' divinity, as does the description of the gigantic stature of the risen one. That such a gospel would have been a favorite among docetists (according to Serapion, ca. 200 C.E.) is not surprising, but it is not clear that only gnostics or other docetists could have written it.

G. Precanonical Passion Narratives

Many questions about the shape of pre-Markan passion traditions remain unresolved. The earliest textual evidence is in Paul. The eucharistic text in 1 Cor 11:23–26, which mentions the night, the betrayal, the words over the bread and cup, and an eschatological hope, may reflect a fuller account similar to the long text of Luke 22:17–22. The tradition in 1 Cor 15:1–5 may indicate knowledge of an account of the burial and, perhaps, the discovery of the empty tomb on the third day. Heb 5:7–10, a later nongospel text, knows either the Gethsemane story, or an account of the crucifixion. Form-critical analysis has shown that some of Mark's pericopes have developed from older traditions. The generic shape of Mark's narrative supports the earlier critical opinion about its unity. The presence of doubled narrative elements carrying two motifs may indicate that the material about the temple derives from an earlier running account (Nickelsburg 1980). The strange placement of the story of the resurrection of the holy ones in Matt 27:51–54 suggests that the pericope is traditional. Along with the *Gospel of Peter*'s post-Resurrection acclamation of Jesus, it may reflect an earlier narrative with a high christology tied to Jesus' miraculous vindication. The passion narratives in John and the *Gospel of Peter* deserve close scrutiny. The literary form in John resembles Mark's (even if the elements do not function as they do in its generic prototype), and its parallels to Luke are striking. If it is independent of these gospels, it attests an extensive early narrative of known generic shape. Even if the *Gospel of Peter* is not completely independent of the canonical gospels, it seems to contain pre-Markan material.

PATARA (PLACE) [Gk *Patara* (Παταρα)]. A prominent seaport city of Lycia, a region of SW Asia Minor (modern Turkey). Patara, which served as the port for the city of Xanthus (Xanthus = 36°22´N; 29°20´E), is located just 7 miles E of the mouth of the Xanthus River. The importance of Patara is indicated by its inclusion in the Lycian League of which it was the 6th largest member. The ruins of the city are situated near the modern village of Gelemish.

Paul sailed to this city from Rhodes on his last missionary journey (Acts 21:1–2). Most manuscripts record that once at the city he transferred to another ship which was sailing directly to Tyre. The prevailing winds of the area made the direct sailing route from Asia Minor to Phoenicia possible. The Codex Bezae and a few other manuscripts add "and Myra" to the phrase "to Patara" which indicates that Paul switched ships at the nearby Lycian city of Myra (Acts 27:5). The former reading, however, is thought by many scholars to be more reliable than the latter because of the preponderance of textual evidence and the preference for the Alexandrian over the Western text.

Patara was colonized at an early date by Dorians from Crete. It was highly regarded by the Greeks because Homer lists it as an ally during the Trojan War (*Il.* 2.876ff). The inhabitants of Patara, however, were not Greek, but spoke the Lycian language until Ptolemaic times. The name of the city is linked with Patarus the son of Apollo and like Delphi, the city was famous for its oracle of Apollo (Hdt. 1.182). The oracle was only active during the winter months because Apollo preferred to spend his winter months here instead of his normal home on the island of Delos.

The city issued its own coinage as early as the 4th century B.C. Alexander the Great captured the city during the winter of 334–333 B.C. The city was renamed briefly Asinoe after the wife of Ptolemy II after he appropriated the city in 275 B.C. Antiochus III seized the city in 197 B.C., but his control was short-lived because the region came under the control of Rhodes after the Peace of Apameia.

The Lycians were allowed by the Romans to form an autonomous league of cities in 167 B.C. This league developed a unique style of representative government called republican federalism. Twenty-three cities of the league had either one, two, or three seats in the assembly according to the size (Strabo *Geog.* 14.3.2–3); Patara controlled three seats. Pliny records that there were 32 member cities in his day (*HN* 5.101). Except for the brief control of Brutus in 42 B.C., the region enjoyed relative freedom until A.D. 43, during the reign of Claudius, when Lycia was joined with Pamphilia to form a new Roman province.

The legendary Saint Nicholas is thought to have been born at Patara, but he became the Bishop of nearby Myra where he is thought to be buried.

Patara was rediscovered in 1811 by the British survey team led by Francis Beaufort, but little archaeological work has been carried out at the site. The protected harbor of Patara which was well equipped with a lighthouse is now filled with alluvial deposits. Several travelers of the 19th century

recorded the ruins visible to them. The remains are substantial including: portions of the city wall, a large theater dated to the reign of Tiberius and rebuilt in A.D. 147 during the administration of Antoninus Pius, and a granary erected by Hadrian.

Other information about the site has been gained through the discovery of numerous inscriptions. One inscription notes that Vespasian built a bath for the city. Other inscriptions record the gifts of renowned citizens of the city who had gained power and wealth through their involvement in Roman politics.

PATHOLOGY. See PALEOPATHOLOGY.

PATHROS (PLACE) [Heb *patrôs* (פַּתְרוֹס)]. PATHRUSIM. According to the Table of Nations (Gen 10:14) and the parallel genealogy in 1 Chr 1:12, the Pathrusim were among the descendants of Mizraim (Egypt), the son of Ham, the son of Noah. The name of this population group only occurs here in the Bible, but the name of the geographical area Pathros also occurs in the prophets. In each occurrence, Pathros is linked to Egypt, just like it was in the genealogies. As part of the messianic kingdom, God will not only restore exiles found in Assyria and Elam, to the E of Israel, but also from the SW, from "Mizraim, Pathros and Cush (Ethiopia)" (Isa 11:11). In Jer 44:1, 15, God addresses people living in Egypt, including more specifically those living in Pathros, but they do not pay attention. Exiles from Egypt will be restored to Pathros (Ezek 29:14), and judgment upon Egypt and Noph will effect Pathros, among others (30:14). All of these references indicate that Pathros is a subsection of Egypt. The progression of the three Egyptian elements in Isa 11:11 could indicate a location of Mizraim (Egypt) in Lower (i.e., N) Egypt, Pathros in Upper (i.e., S) Egypt, and Cush (Ethiopia) furthest up the Nile. The same progression is exhibited in an Assyrian inscription of Esarhaddon (*ANET,* 290; *NBD,* 883), where Pathros is referred to as Petorisi. This location of Pathros between Memphis/Cairo and Aswan is supported by the Egyptian name for the area, *p*ꜣ*-t*ꜣ*-rs (y)* "the south land" (*NBD,* 883).

DAVID W. BAKER

Upper Egypt had often formed an administrative unit distinct from Memphis and the Delta in early periods of Egyptian history; but the final severance of any direct connection between Thebes and the royal house at the close of the New Kingdom (11th century B.C.) tended to increase the isolation of the valley. By the 7th century B.C., the term "House of Amun," i.e., the great estate of the Theban god who had been chief of the pantheon, was often used synonymously with "Upper Egypt." By the time of Esarhaddon's campaign against Egypt (671 B.C.), *Musru* ("Egypt," i.e., the Delta), *Paturisi* (= the Southland, Upper Egypt), and *Kusu* (Kush) together signified the totality of the Egyptian king Taharqa's holdings, from the Mediterranean to the Sudan.

The Saite kings of the 26th Dynasty (664–525 B.C.) separated off the Southland and treated it as an administrative unit once again. It was assigned a governor and a master of commercial shipping, mainly for purposes of taxation; while for purposes of cultic continuity, a princess of the royal line was installed at Thebes as "Divine Worshipper of Amun." A foreign garrison, including a paramilitary (?) unit from Judah, was installed at Elephantine on the S border. The Persians continued the Saite practice of assigning a single governor to the Southland and maintained the garrison, but did away with the role of the Divine Worshipper. "The Southland" survived in Coptic as *Mares,* the "Southern Country," the precursor of the modern Arabic *Sa'id,* "the South."

PATMOS (PLACE) [Gk *Patmos* (Πατμος)]. One of the Sporades Islands in the Aegean Sea located off the coast of Asia Minor, 37 miles SW of the city of Miletus and 28 miles SSW of the island of Samos

(37°20′N, 26°34′E). The desolate volcanic island is 25 miles in circumference, about 10 miles long N to S and 6 miles wide at its broadest point (the N half). Mt. Elias, the highest point on the island, rises more than 800 feet. On the isthmus at the center of the island a Greek settlement has been excavated.

Patmos is mentioned by both Thucydides (3:33) and Strabo (10:5). However, the island is especially important for its relationship to the history of the early church. Patmos is the traditional location of John's visionary experiences recorded in the book of Revelation. John begins the Apocalypse by stating that he was banished to the island of Patmos (Rev 1:9). A cave on a hill in the S part of the island, below the monastery of St. John the Divine, is the traditional site of John's visions.

Roman prisoners and dissidents were often banished to islands, and three islands, in particular, in the Sporades were used for exiles (Pliny *HN* 4:69–70; Tacitus *Ann.* 4:30). John was exiled to Patmos, according to early church tradition, in the 14th year (95 C.E.) of the emperor Domitian (Eusebius *Hist. Eccl.* 3:18–20; see also Irenaeus *haer.* 5.30.3; Jerome *vir. ill.* 9). Legends about John's deeds on Patmos are preserved in the *Acts of John (by Prochorus)*, a 5th-century text pseudepigraphically attributed to the apostle's scribe. John was probably released during the reign of Nerva (Cassius Dio 68.1) and lived into the reign of Trajan (Irenaeus *haer.* 2.22.5), serving as pastor of the church at Ephesus.

The monastery of St. John the Divine was built over John's grotto in 1088 by St. Christodoulos. The monastery library, which still contains a large collection of biblical and patristic mss, is one of the major collections of Byzantine texts.

SCOTT T. CARROLL

PATRIARCHATE. The office of head of the Jewish community of Roman Palestine. The incumbent is called *patriarchēs* in Gk sources (occasionally *ethnarchēs*) and *nāśî'* in Heb ones. The office is fairly well documented in legal, literary, and epigraphic materials from the 2d century C.E. till its demise, for reasons not specified by the sources, between 415 and 429 (*Cod. Theod.* XVI, 8:22; 8:29). The incumbent of the patriarchal office, at its peak, wielded considerable power over the Jews of the eastern Roman Empire and was granted high honors by the Roman imperial authorities. Around 240 Origen noted that as a result of the great powers granted him by Caesar, the ethnarch differed in no way from a king. Origen illustrated these powers by reference to the ethnarch's *de facto* competence to try capital cases according to Jewish law (Or. *ep.* 1, 14). And laws preserved in the Theodosian Code show that the patriarchs of the late 4th and early 5th centuries were granted such honorifics as *clarissimus, illustris,* and *spectabilis,* titles used for the holders of the highest offices in the empire (*Cod. Theod.* XVI, 8:8; 8:11; 8:13; 8:15). It is not clear whether all the patriarchs enjoyed the same degree of power and recognition. Still, for most of its history the patriarchal office does approximate the position of a (client) king. The patriarch served as chief magistrate of the Jews, maintained a court and lived in splendor from the income on extensive landholdings and taxes paid by Jews, and the office was hereditary within one family. Let us examine each of these features in turn.

The patriarchs had the authority to appoint, supervise, and depose officials of the local Jewish communities—first in Roman Palestine and by the 4th century elsewhere in the empire as well. These communities enjoyed considerable autonomy in matters of personal status, civil litigation, and even minor criminal affairs. The patriarchs also judged cases themselves, heard appeals, and issued legal rulings. The editing and publishing of a compendium of traditional Jewish law, the Mishnah, by the patriarch Judah I early in the 3d century C.E. also relates to the role of the patriarch as chief magistrate. Since Jewish law did not distinguish between "religious" and "civil" matters, the patriarchs seem to exercise both types of authority. An example of a "religious" function is the authority of the patriarchs to regulate the Jewish calendar.

The patriarchs lived a style befitting a provincial magnate. In carrying out their judicial activities they were assisted by a *consilium* of advisors some of whom seem to have attended on the patriarch at all times. Fourth century sources mention *apostoloi,* delegates, who were sent abroad to carry out the patriarch's orders and supervise affairs in the local communities in his name (Epiph. *Adv. Haeres.* 30.4–12). They also collected a tax from the local communities for the maintenance of the patriarchate (*Cod.*

Theod. XVI, 8:14; 8:29). Jewish sources describe the levees conducted by the patriarchs at which clients paid their respects daily in the manner of the Roman *salutatio* (y. Sabb. 12:3, 13c; *Ta‹an.* 4:2, 68a; *Hor.* 3:9, 48c). They also refer to a police force, apparently composed of Gothic troops, which served the patriarchs (*y. Sanh.* 2:1, 19d; *Hor.* 3:1, 47a).

The patriarchate was hereditary within one family, the descendants of Gamaliel of Yavneh (Jamnia) who flourished around the end of the 1st century. Gamaliel appears to have been the scion of an aristocratic Jerusalemite family affiliated with the Pharisaic party and active in Judean politics. While the exact status of Gamaliel of Yavneh and of his son Simeon is debated, all agree on the preeminence of his grandson Judah I, referred to in Jewish sources simply as Judah the Patriarch *(yĕhûdâ hannāśî›).* It was in Judah's time that the family of Gamaliel began to claim descent from the ancient Judean royal house of David. The claim of Davidic descent provided a Jewish legitimation for the kingly prerogatives of the Gamalielan patriarchate.

Bibliography

The best survey of the patriarchate, broader in scope than its title suggests, is Levine 1979. He includes a bibliography of the important literature till 1977. Following are items published since then. See Linder 1987 for the Roman legal materials, Stern 1980 for the (possible) correspondence of Julian and Libanius with the patriarchs, Rubin 1982 on the account of the patriarchal court in Epiphanius, Dothan 1983 on an important epigraphic reference to the patriarch, and Goodblatt 1978 and 1983 on the origins of the patriarchal office and 1984 on the title *nāsî›*.

DAVID GOODBLATT

PATRIARCHS, TESTAMENTS OF THE THREE. Around the figures of the three first patriarchs of the Israelites—Abraham, Isaac, and Jacob—there grew a small body of apocryphal stories now called "testaments." This title, which was given to them at some time in the history of their transmission, is not very suitable, since drawing up wills and offering advice to future generations are not central. These stories, rather, emphasize the inexorableness of death, depict the fate of souls after death, and urge the keeping of basic moral laws.

All three works were preserved by Christians, and the *Testaments of Isaac* and *Jacob* may be originally Christian. Although the existing texts of the *Testament of Abraham* contain Christian elements, it was probably originally a Jewish work. The other two works are dependent on it, and the *Testament of Jacob* is also dependent on the *Testament of Isaac* (Stinespring, *OTP* 1: 903–4). Thus they were composed in the chronological order of the patriarchs themselves: Abraham, Isaac, and Jacob.

A. The Testament of Abraham

There are two principal recensions, a longer one (A), and a shorter (B). Both are preserved in Gk mss. The Gk recension A is supported on the whole by a Romanian version, while B is supported by another Romanian version, and also by Slavonic, Coptic, Arabic, and Ethiopic versions. There are wide variations at each stage; not only are there two different recensions, there are also fairly substantial differences from version to version and from manuscript to manuscript. The stories were very freely handled, and it is not possible to establish "the original text." Despite this, there is a good deal of common material, and there are even striking agreements between A and B in the Gk mss. There seems to have been a core story, best

preserved in recension A, which was modified in various ways as it was copied and translated. B is probably an abbreviation of the longer story now found in A. *T. Ab.* B 9:8, for example, refers to "evenly balanced" deeds, but only A has a description of the weighing of deeds; B here has a reminiscence of the judgment scene of A (so Nickelsburg 1972; for the opposite view see Schmidt 1972).

The provenance, date, and original language of *Testament of Abraham* are uncertain. The Gk of recension B has a Semitic cast, which once led some to argue that it was earlier than A and that it was written in Hebrew. On examination, however, the Semitisms turn out to be biblical, and they are probably the result of imitation of the Bible in its Gk translation. Most scholars now think that the story was first composed in Greek (Turner 1955; Delcor 1973: 32–34; Janssen 1975: 198–99; discussion in Sanders, *OTP* 1: 873–74 and n. 14).

The basic story is earlier than the immediate ancestors of the surviving recensions. Although A has an earlier form of the story than B, it also contains more late words and shows clearer signs of Christian scribal work. As it now stands, the slightly Christianized version of A could be as late as the 6th century C.E. This only confirms, however, that scribes handled the text freely. The core story, which depicts a judgment in which Christ plays no role, was not composed by Christians. Yet it also lacks emphasis on aspects of the Jewish law which set Jews apart from Gentiles. The judgment falls on all equally, on the basis of the observance of extremely general moral laws, and there is no reference to specifically Jewish commandments (e.g., circumcision, sabbath, and food laws). This seems to require a time and place of relative peace between gentiles and Jews, when Jews were not being forced by pagan harassment to defend those parts of the law which distinguished them from gentiles.

The second clue to the date and provenance of the basic story is reference to the weighing of souls in *T. Ab.* A 12:13. Although the idea of weighing or balancing deeds is widespread, the weighing of souls is distinctive of Egyptian religion (Delcor 1973: 67–68, following James 1892). Thirdly, the closest parallels to recension A are found in *Testament of Job, 3 Baruch, 2 Enoch,* and *Apocalypse of Moses.* Of these, *Testament of Job* is probably, and *3 Baruch* and *2 Enoch* are possibly, from Egypt. It is thus not unreasonable to assign *T. Ab.* to Egypt, before the worst period of antagonism between Jews and Gentiles, that is, at the latest before 115 C.E. (there were troubles between Jews and others in Alexandria in 41, 66, 72, and 115–117 C.E.: see Smallwood 1981: 364–68; 393–96; 403–9; Tcherikover 1959: 356 and n. 65). It should, however, be borne in mind that ideas "floated" around the Mediterranean, and *T. Ab.* could have been written anywhere that Jewish, Greek, and Egyptian ideas came together.

Some scholars have attempted to attribute the work to one of the Jewish "sects" known from Josephus and the NT. What is truly distinctive about it, however, is not sectarian bias of some sort, but its completely commonplace view of God's mercy, the importance of avoiding heinous sins (such as murder and robbery), and the punishment of those who commit them (*OTP* 1: 877–78).

The setting of the narrative is the time just before Abraham's death. The story of recension A is this: The archangel Michael is sent by God to tell Abraham that his time has come and that he should prepare a will. (This is the "testamentary" element in the story.) He resists and refuses to go with the archangel. Michael then returns to God, who instructs him to show Abraham the inhabited world. Michael conducts him on a tour, during which the patriarch sees people engaged in various sins and calls down death upon them. God orders the tour stopped, since he, unlike Abraham, is merciful and wishes to give sinners time to repent. Michael then takes Abraham to the place of judgment, where he sees souls being tried. They are tried in three ways—by fire, by written record, and by the weighing of deeds. There are also three judgments—by Abel, by the twelve tribes of Israel, and finally by God himself. Abraham sees one soul that is judged to be neither righteous nor wicked, and he intercedes on its behalf. He then repents of his former harshness and pleads on behalf of the sinners whose death he had caused. God saves the soul whose fate was in doubt and restores the dead sinners to life. Michael then returns Abraham to his home. The patriarch, however, still refuses to die. God sends Death, who terrifies Abraham, so that he becomes faint. Death tricks Abraham into kissing his hand. The patriarch's soul cleaves to the hand of Death, and it is escorted to heaven by angels.

The shorter version, B, differs from A in two principal ways: (1) Abraham's view of the judgment of souls comes before his tour of the world rather than after; (2) the judgment itself is much less fully described.

The story is clearly Jewish: its hero is Abraham; the angel Michael is well known in Jewish literature; the first judgment is by Abel, who was one of the sons of Adam according to Genesis; the twelve tribes of Israel also figure in the judgment; the God of the story is clearly the God of Israel. Yet apart from these points, Jewishness plays no role. The sinners of Abraham's tour are robbers, murderers, adulterers, and thieves (*T. Ab.* A 10; B 12). The first judge, Abel, judges "the entire creation" on the same basis, since "every person has sprung from the first-formed," that is, Adam (A 13). The soteriology of the document is that one should avoid heinous sins, those regarded as such in all cultures, and repent in the case of disobedience. Being Jewish or not seems to be a matter of indifference.

The Christian elements in *T. Ab.* as it now stands are these: a concluding prayer refers to the Father and the Son and the Holy Spirit; this is obviously a scribal addition. At two points the wording of the NT has been influential: 11:2–10 reflects Matt 7:13–14 (the theme of two gates or ways is common and need not have been derived from Matthew, but there are a few striking verbatim agreements); 13:13 reflects 1 Cor 3:13–15 (testing by fire is also common enough, but again there are striking verbatim agreements). The work as a whole has not been revised by Christian hands. Its emphasis on common religious views—God's mercy, avoidance of wickedness, certainty of judgment, and efficacy of repentance—did not require Christianizing.

B. The Testaments of Isaac and Jacob

These are possibly Christian compositions (so Denis 1970: 34), written to commemorate Isaac and Jacob on the days set for honoring them in the calendar of the Coptic church. There are more reminiscences of the NT than there are in *T. Ab.* (e.g., the body is the temple of the Holy Spirit, *T. Isaac* 4:15, cf. 1 Cor 6:19; the unrighteous will not inherit the kingdom, nor will homosexuals, gluttons, or idolaters, *T. Jacob* 7:19f.; cf. 1 Cor 6:9–10). It is possible, however, that earlier Jewish stories have simply been taken over for use in the Coptic church (so Stinespring *OTP* 1: 904). These two Testaments exist only in Arabic, Coptic, and Ethiopic versions. They are usually dated to the 2d or 3d centuries C.E. although *T. Isaac* 7:12, which states that the Arabs have designated the three patriarchs as "the holy fathers," reflects the influence of Islam.

Whether these Testaments were originally Jewish or Christian, they add only a few themes to those of *T. Ab.* Neither contains elements which distinguish Jew from gentile. They have in common with *T. Ab.* emphasis on universally accepted standards of behavior, the need to repent before death, and God's mercy and forgiveness. The stories are built around the themes of *T. Ab.:* the time of death and a tour of heaven and hell. In addition, both condemn homosexuality (*T. Isaac* 5:27; *T. Jacob* 5:8). The *Testament of Isaac* champions asceticism—fasting, praying in the middle of the night, abstaining entirely from meat and wine, and not sleeping in the comfort of a bed (4:1–6)—as well as the virtue of charity towards the poor (6:11–13). Enmity towards one's neighbor is especially condemned (*T. Isaac* 5:17–20). The *Testament of Jacob* recommends prayer, fasting, reading the Torah of Moses, giving alms, and avoiding immorality. Generosity to strangers and charity to the poor are urged (*T. Jac.* 7:11, 21–25), especially clothing the poor (7:21; cf. Matt 25:36).

D. Jewish or Christian?
E. Ethical Teaching
F. Expectations about the Future

———

A. Content and Structure

In the *Testaments of the Twelve Patriarchs (T. 12 P.)* the emphasis is on exhortation: the sons should give heed to what their fathers command them and transmit their instructions to their descendants. Each testament deals with one or more virtues or vices, illustrated by the patriarch's own experiences or by references to the behavior of Joseph, the ideal son of Jacob (the exceptions here are *T. Levi*, which has very little exhortation, and *T. Asher* which has practically nothing about the patriarch's life). The illustrative material is taken from the chapters in Genesis which speak about the sons of Jacob (29:30–31:24; 34; 35:16–26; 37–50) and from related Jewish traditions. The sons should follow the good example of their father (and of Joseph) or avoid his sins. Taken together, the exhortatory passages in *T. 12 P.* give a colorful spectrum of virtues and vices within the framework of the general admonitions to obey the law of God and the commandments of the patriarch.

In all testaments the exhortatory section is connected with a prediction concerning the future of the tribe of the patriarch. It will forget the Lord's commandments and will be punished with exile, or it will rebel against Levi and Judah (the exception here is *T. Joseph*). The final note, however, is always one of peace and salvation. The sons and their descendants are warned beforehand and called to repentance. Only if they obey God's will as expressed by the patriarchs will there be a future for them. These passages about the future actually speak about events that have already taken place in the time of the author(s) as well as of events that are still unfolding.

The closing passages record the patriarch's wish to be buried in Hebron, and his death. The sons are said to have done what their father commanded them: they laid him in a coffin and brought him to Hebron.

The *T. 12 P.* are clearly pseudepigraphical. Their opening and closing passages are influenced by Gen 49:1–2, 29–33; 50:24–26, and their opening passages by that of 4Q‹Amram (see below). This writing constitutes a fine example of the (in itself very variegated) genre "testament." Testaments of the form found in *T. 12 P.* are basically farewell discourses that receive special weight because they give the last words uttered by a great man of the past. The spiritual legacy of the fathers consists of closely connected exhortations and predictions, remaining authoritative to the end of times.

B. Textual Witnesses

Fourteen mss of *T. 12 P.* are known; one of these, and the marginal notes in one other, give only extracts, while a second gives only two fragments. The oldest Greek witness (Cambridge Univ. Libr., Ff I.24, ff. 203^{r}–261^{v}) dates from the late 10th century. The most important ancient version is the Armenian, over 50 mss of which are known; the oldest are from the 13th century. The date of the version is disputed, but it certainly existed in the 10th century. Of less importance are the Slavonic, Serbian, and New Greek versions. The Latin version known in many mss has served as a basis for a number of translations into European languages. It has no independent text-critical value since it was translated from the Cambridge ms.

The extant witnesses form two families, one consisting of only two mss: the Cambridge ms plus the "extracts-ms," the latter consisting of all the other witnesses. Here two subfamilies besides some independent witnesses can be distinguished. Reconstruction of the oldest attainable text is often rather difficult, due to the complexity of family II and, in a number of cases, the impossibility of making a clear choice between the readings of family I and family II.

In principle, the whole surviving ms tradition could derive from a single 9th- or 10th-century minuscule codex. In some instances, however, divergencies between family I and family II can be traced to different interpretations of uncial characters. This implies that the last common source was a manuscript in uncial script that was earlier than the 9th century, how much earlier we do not know. The few very short references to *T. 12 P.* in Origen (*Hom. in Joshua* 15.6) and in Jerome (*Tractatus de Psalmo 15*) prove that these authors knew the writing, but they do not enable us to determine the text these two authors had before them.

On the basis of this evidence we may conclude that *T. 12 P.* existed in the beginning of the 2d century A.D.; what happened between A.D. 200 and the archetype of the present manuscript tradition is unknown. How long before A.D. 200 the document was written, and whether it underwent any substantial changes before it reached Origen (or earlier Christian readers) will have to be determined otherwise (see below).

There is no reason to assume that *T. 12 P.* in their present form (or nearly their present form) were translated from Aramaic or Hebrew into Greek. Especially in the ethical passages, so many particularly Hellenistic words and phrases are found that it is practically impossible that they could have been written in any other language but Greek. It cannot be excluded, however, that parts of the material incorporated in *T. 12 P.* existed, at one time, in some Aramaic or Hebrew form.

C. Related Hebrew and Aramaic Material

Since the beginning of this century a number of fragments of an Aramaic Levi-text from the Cairo-Genizah have been known. They partly correspond with the second major addition found in one Greek ms (Athos, Koutloumous 39, ff. 198^{r}–229^{r}) of the 11th century, which is inserted after *T. Levi* 18:2. In 1955 a fragment consisting of part of one leaf, found in the fourth cave at Qumran, was published; it corresponds to the (fuller) Greek text found in the Greek ms, as an insertion in the middle of *T. Levi* 2:3. The Aramaic fragment belongs to a scroll now called *4Q213* TestLevi^{a}; additional (mostly very small) fragments of this scroll and of another document (*4Q214* TestLevi^{b}) have been published or announced. Also in the first cave a number of fragments were found, most of them extremely small (*1Q21,* 1–60). There is also a small Syriac fragment.

A full and comprehensive survey of all the Genizah and Qumran material is urgently needed. Of course, the Greek additions to ms Koutl. 39 also have to be taken into account. Unfortunately, we do not know how this material reached the scribe of this ms (or the scribe of an earlier ms copied by him), nor do we know whether he had at his disposal more than he copied. Finally, it is completely uncertain at what time the Greek material was translated from Aramaic or Hebrew.

We are able to say, however, that the Greek additions and the Aramaic material of different provenance ultimately go back to a common ancestor. As far as we are able to reconstruct it, it must have contained a prayer and vision of Levi (cf. *T. Levi* 2–5), a report on the expedition against Shechem (cf. *T. Levi* 6, perhaps also 7), a vision like the one in *T. Levi* 8, the instructions of Isaac to Levi in a very extended form (*T. Levi* 9) and parallels to *T. Levi* 11–13. We know nothing about the end of the document; only a fragment of an invective against the Levitical priesthood corresponding to *T. Levi* 14:3–4 has been preserved. As far as we can make out it was not a testament like those found in *T. 12 P.* There are some links with 4Q‹Amram- and 4QQahat-fragments found at Qumran. Perhaps these three complete documents constituted a series of priestly (final) exhortations and visions of importance for the Qumran community.

T. Levi differs in many respects from the other eleven testaments, and this is clearly due to the fact that its author followed a "Vorlage" very similar to the hypothetical ancestor of the known Levi-material. Whether he consulted it in Aramaic (or Hebrew), or had it already before him in Greek, we do not know. Comparison in detail between the present *T. Levi* and Levi-material known to us makes it likely that the

author of *T. 12 P.* abbreviated the text in many places (sometimes very drastically) and that he redacted it thoroughly.

A number of tiny fragments from the third and fourth cave at Qumran have been connected with *T. Judah* and *T. Joseph,* but this connection remains hypothetical. There is, however, a genealogy of Bilhah comparable to the one found in *T. Naph.* 1:6–12, of which 4QTestNapht. 1 II 4–5 (corresponding to *T. Naph.* 1:12) has been published. It has no connection with the medieval Heb *Testament of Naphtali.* However, this testament has two visions that are clearly related to those found in *T. Naph.* 5–7. Although the Hebrew text is much later, it helps us to get some idea of the fuller and more consistent account which must have formed the "Vorlage" of the present heavily redacted text of the visions in the present *T. Naphtali.*

Midr. Wayissaʿu (found in later collections) gives an account of a war against the Amorites like that described in *T. Jud.* 3–7 (cf. also *Jub.* 34:1–9), followed by a description of the war against Esau and his sons, like that found in *T. Jud.* 9 (and *Jub.* 37:1–38:14). Again, this late midrash does not provide us with the document used by the author of the present *T. Judah,* but it shows that he could consult a more elaborate account of the wars, selecting and redacting material in order to illustrate Judah's heroic deeds.

The author of *T. 12 P.* had much more material at his disposal—e.g., traditions about Judah, his wife, his children, and Tamar in *T. Jud.* 8, 10–12 (etc.), showing points of contacts with *Jubilees,* and numerous haggadic details scattered all over the Testaments. We can also mention a list of seven spirits inserted in *T. Reu.* 2:3–3:1 (reflecting Stoic conceptions), and a list of parts of the human body and its functions in *T. Naph.* 2:8 (parallel to Heb *T. Naph.* 10:6).

There is a great diversity in the biographical material. The *T. 12 P.* are clearly a literary composition for which the author used traditions about the sons of Jacob from various sources. He incorporated whatever he could use, adapting the general pattern followed in each testament wherever this was necessary.

D. Jewish or Christian?

The *T. 12 P.* belong to the Jewish pseudepigrapha of the OT, and have found a place in all collections of OT pseudepigrapha published in the past hundred years. They contain a number of Christian passages, particularly in the sections dealing with the future, but these have usually been explained as the result of interpolation or of a more thoroughgoing Christian redaction. The remaining document is regarded by many scholars as Jewish. Even without the Christian passages it does not form a unity. Scholars differ, however, with regard to the earlier stages of redaction.

At the beginning of the 20th century, R. H. Charles distinguished between a 2d-century B.C. pro-Hasmonean original to which extensive anti-Hasmonean passages (advocating a Messiah from Judah) were added in the 1st century B.C. In 1970 J. Becker assumed a Hellenistic-Jewish "Grundschrift," stemming from Wisdom circles dated around 200–175 B.C. This formed the nucleus of the present writing that took shape in the subsequent centuries by the addition of Hellenistic-Jewish homilies, apocalyptic visions, midrashic expositions, etc. In 1977 A. Hultgård, in an analysis of the apocalyptic passages, found first an anti-Hasmonean stage with the expectation of an ideal Levi and an ideal Judah; later, in the beginning of the 1st century B.C., the emphasis was on intervention by God himself, on the expectation of a Davidic messiah and on the hope of the resurrection and the last judgment. In the 1st century A.D. there was a new redaction, introducing a central eschatological figure called the "priest-savior," the result of the merger of different traditions.

A different approach has also been advocated (de Jonge 1953). There is no doubt that *T. 12 P.* are Christian in their present form and must have received that form sometime in the second half of the 2d century A.D. One first has to establish the meaning of the present *T. 12 P.* (allowing, of course, for possible alterations in the period between their origin and the origin of the archetype of our manuscript tradition) for a Christian audience around A.D. 200. Because the Christian passages cannot be removed without damaging the fabric of large sections of the work, we must assume at least a thoroughgoing Christian redaction. It is very difficult, if not impossible, to establish the exact contents of this "original" (pre-Christian) Jewish document, let alone to detect different stages in the redaction of that document. It

is, in fact, uncertain whether one should speak of a Christian redaction of an existing Jewish *T. 12 P.* or of a Christian composition.

It should be kept in mind that early Christians (with some exceptions) regarded the Jewish Bible as Holy Scripture and the great figures of the OT as their spiritual ancestors. They were interested in obtaining more information on those they read about in the OT, and took their exhortations and predictions seriously. Moreover, Hellenistic Judaism and early Christianity shared a great number of ethical notions derived from Hellenistic popular philosophy. Much of the exhortatory and biographical material contained in *T. 12 P.* could serve the purpose of Jews as well as of Christians; it is the overall context in which it functions that determines its present meaning.

E. Ethical Teaching

The exhortatory sections form the kernel of each testament. *T. Benj.* 10:4–5, at the end of *T. 12 P.*,characterizes the many ethical instructions in this and other testaments:

> "For I teach you these things instead of any inheritance
> And do you, also, therefore, give them to your children for an everlasting possession;
> for so did Abraham and Isaac and Jacob.
> They gave us all these things for an inheritance, saying:
> Keep the commandments of God,
> until the Lord will reveal his salvation to all the nations."

A description of all that will happen at God's final intervention follows, in agreement with the general pattern in *T. 12 P.;* in this case Israel's negative reaction to Jesus Christ is emphasized (vv 8–10). Yet the chapter ends in v 11 with the words:

> "But you, if you walk in holiness before the face of the Lord,
> you will again dwell safely with me;
> and all Israel will be gathered together unto the Lord."

The various testaments deal with a great number of vices and virtues. Of the vices we may mention the ignorance of youth and sexual impurity *(T. Reu.),* envy *(T. Sim.),* arrogance *(T. Levi),* love of money and impurity *(T. Jud.),* anger and lying *(T. Dan.),* and hatred *(T. Jud.).* Among the virtues are simplicity *(T. Iss.),* compassion and mercy *(T. Zeb.),* natural goodness *(T. Naph.),* chastity and endurance *(T. Jos.),* and a pure mind *(T. Benj.). T. Asher* deals with the two faces of vice and virtue, and warns against "doubleness" (the opposite of simplicity). The warnings against vices are more prominent than the disquisitions on virtues. In many cases biographical examples are used by way of illustration. There is no regular pattern in the treatment of biography and exhortation; the author was not really interested in following a certain order as long as he made his exhortatory point, told the available stories about the patriarch, and linked the former with the latter.

The exhortations are also clearly connected with warnings against evil spirits. Beliar (Satan, the devil) and his evil spirits stand over against God and his angels. *T. 12 P.* have no systematic angelology and demonology; in general they think along dualistic lines; also in *T. Asher* where all sorts of "intermediate" cases are discussed, the emphasis is on a serving God with a single mind. Dualism and demonology serve to accentuate the ethical advices and warnings. Often (personified) vices and the spirits of those vices are mentioned together and are virtually interchangeable. The emphasis lies clearly on the struggle of individuals (in their own personal circumstances) with evil influences coming from outside but at work within their minds and bodies.

The exhortations are concerned with ethical matters. With regard to Jewish customs it is significant that *T. 12 P.* nowhere demand the observance of the sabbath, or of circumcision, or of the dietary laws. They assume that the patriarchs—before the revelation at Sinai—nevertheless observed a number of regulations in the Law of Moses; *T. Levi* 9:7–14, for instance, records instructions to Levi by Isaac concerning the priesthood, though in a very summary form (we happen to have here very detailed regulations in the passage in the Greek addition after *T. Levi* 18:2 in ms Koutl. 39). The situation is different with regard to the direct exhortations to the sons of the patriarchs. So marriage with gentile women is forbidden to Levi (*T. Levi* 9:10) and predicted among the sins of Levi's sons (14:6; cf. *T. Dan.* 5:5). Judah mentions his

troubles when he married the Canaanite Bath-shua (*T. Jud.* 8:10–12), but in the exhortatory sections the warnings are against women in general, not against gentile women in particular. Joseph, the man who remains faithful to God in the midst of temptation and oppression, marries the daughter of his masters (*T. Jos.* 18:3); no specific conditions with regard to her are mentioned. The author of *T. 12 P.* obviously concentrates on what he regards as the essentials of the law. In *T. Levi* 16:3 Jesus is introduced as the "man who renews the law in the power of the Most High" (cf. *T. Levi* 14:4; *T. Dan.* 6:9). As the new priest predicted in *T. Levi* 18 he will spread the true knowledge of God over the entire world (see vv 3, 5, 9).

A very important virtue is *haplotēs,* i.e., simplicity, integrity, wholehearted obedience to God's commandments (against "doubleness" characterized and condemned in *T. Asher*). *Haplotēs* is the central virtue in *T. Issachar,* and there it is directly connected with the two great commandments, see 5:1–2:

> "Keep, therefore, the law of God, my children
> and acquire simplicity and walk in guilelessness,
> not meddling with the commandments of the Lord
> But love the Lord and your neighbor,
> show mercy to the poor and the weak."

These two commandments are also found together in *T. Iss.* 7:6–7; *T. Dan.* 5:2–3 (cf. *T. Gad.* 4:1–2; *T. Jos.* 11:1), and especially in *T. Benj.* 3:1–5. They also occur separately: for "to love (to fear) the Lord" see *T. Levi* 13:1; *T. Zeb.* 10:5; *T. Dan.* 6:1 (cf. *T. Gad.* 3:2; 5:2, 4–5; *T. Benj.* 10:10), and for "to love one's neighbor" see *T. Reu.* 6:9; *T. Sim.* 4:7; *T. Zeb.* 8:5; *T. Gad.* 6:1, 3; 7:7; *T. Jos.* 17:2.

An analysis of the ethics of *T. 12 P.* shows beyond doubt that this writing originated in a community wanting to make clear to anyone interested how one should obey the God of Israel and of the Gentiles. The author is well acquainted with distinctions and forms used in the Wisdom books of the LXX and with ideas propagated in Hellenistic popular philosophy. Occasionally there are notions that have only parallels in Christian sources. In general, the ethics of *T. 12 P.* may be characterized as Hellenistic-Jewish. If it were not for certain Christian elements, *T. 12 P.* could be regarded as a Hellenistic-Jewish document—and in fact many scholars have regarded them as such, removing Christian "additions." It should be remarked, however, that exhortatory passages in many writings of the early Church are in line with Hellenistic-Jewish and Hellenistic ethics; there is very little specifically Christian in them, either.

In this connection it is important to note that Justin Martyr in his *Dialogue with Trypho* distinguishes three periods in the history of humanity. First, before Moses, people were righteous and pleased God without obeying the specific commandments of the law—among these were Abel, Enoch, Noah, Abraham, Isaac, and Jacob (*Dial.* 19:3–4; 46:3). Then, at the time of Moses, the law was given and became a temporary legislation for the Jews. However now, after the coming of Jesus Christ, this law is no longer necessary: "… as an eternal and final law was Christ given to us" (*Dial.* 11:2). This law is not only eternal but also universal. Similar ideas are found in Irenaeus (*haer.* 4:13–16) and Tertullian (*Adv. Iud.* 2 and 3).

We may add that Justin, Irenaeus and Tertullian use the word "patriarchs" to denote the "saints" of the pre-Mosaic era, and that Justin includes the righteous Israelites in the final salvation: "The righteous Gentiles will be saved, with all the patriarchs, prophets, and the righteous men of Jacob" (*Dial.* 26:1; 45:2–4; 80:1–2; 130:2). *T. 12 P.* concentrate on the essential commandments and put them into the mouths of the twelve sons of Jacob belonging to the pre-Mosaic era. These commandments have to be obeyed by non-Jews *and* Jews alike in the period inaugurated by Jesus Christ, who is the savior of non-Jews *and* Jews alike. If the sons of Israel obey their patriarchs and give heed to their predictions, including those concerning Jesus Christ, they will share in God's final salvation together with the believing gentiles (cf. *T. Benj.* 10).

F. Expectations about the Future

Much attention has been devoted to the analysis of the eschatological passages in *T. 12 P.* It is here that the great majority of the explicitly Christian elements are found; many different attempts have been made to determine the extent of the Christian interpolations (or redactions) and to reconstruct the underlying

Jewish passages. They have also been studied in view of the type(s) of eschatology reflected, and have been assigned to different redactions in different periods in Jewish history (see especially the studies of R. H. Charles and A. Hultgård).

In all testaments except *T. Reuben*, *T. Simeon*, and *T. Joseph* we find passages announcing the future sins of the sons of the patriarch, followed by exile, (repentance) and return. They represent an eschatological variant of the Deuteronomistic view of the history of Israel. It is eminently suited to describe the entire period from the patriarchs to the present time. It also brings out clearly the intrinsic connection between the exhortations and the predictions of the future. The Sin-Exile-Return pattern allows for repetition. In *T. Levi* 10; 14–15; 16, where the sins are those of Israel's priestly leaders against Jesus, the repetition serves to stress the hostility of Levi's sons. Yet there is salvation for them, too (16:5 "he will … in pity receive you through faith and water"). In 17:8–11 we find a description of a (final) seventh jubilee-period, according to a scheme of Sin-Exile-Return + (new) Sin, and in chap. 18 there follows a (Christian) description of a new priest as savior. In *T. Zeb.* 9:5–9 we find two Sin-Exile-Return passages with a short (Christian) savior passage in between. The second passage ends with a reference to the time of consummation, according to *T. Zeb.* 10 the time of the resurrection of the patriarch and (the faithful of) his tribe. Also, in *T. Naph.* 4 and *T. Asher* 7 history repeats itself. In the first instance Jesus Christ appears at the end (v 5); in the second at the end of the first sequence (v 3). We may add that *T. Jud.* 24, portraying a king as savior, follows after the Sin-Exile-Return sequence in *T. Jud.* (18:1); 23:1–5, and is, in turn, followed by a resurrection passage in chap. 25.

In the return element of the Sin-Exile-Return passage—as well as in the savior passages (to be supplemented with *T. Dan.* 5:10b–13 attached to the announcement of the salvation from Judah and Levi) and the resurrection passages (also in *T. Sim.* 6:7, and in *T. Benj.* 10:6–10 mentioned in the previous section)—there is no doubt that in the end the descendants of the patriarchs (i.e. Israel) will share in God's salvation for Jews and Gentiles. We should note that in *T. Sim.* 7:2; *T. Naph.* 4:5; *T. Jos.* 19:6 and *T. Benj.* 3:8b the gentiles are mentioned before Israel.

Levi-Judah passages are found in all testaments except *T. Zeb., T. Ash.* and *T. Benj.* In *T. Reu.* 6:5–7 and *T. Sim.* 5:4–6, (in testaments without Sin-Exile-Return passages) we find predictions of rebellion against these two tribes (cf. *T. Dan.* 5:4; *T. Gad.* 8:2). Here and elsewhere, we find injunctions to obey these two tribes, because Levi will be priest and Judah will be king; in *T. Jud.* 21:1–5 the sons of Judah are told that the priesthood (concerned with heavenly things) is superior to the kingship (an earthly matter). A few times Levi is said to act as a ruler and as a warrior (*T. Reu.* 6:7 (11); *T. Sim.* 5:5, cf. *T. Levi* 5–6).

This idea of a juxtaposition of priesthood and kingship, and the supremacy of the priesthood over the kingship, is a familiar one, and scholars have tried to establish links with similar ideas in the Qumran Scrolls. See MESSIAH. One should note, however, that in *T. Levi* 4:4; 5:2 (cf. *T. Reu.* 6:8) the period of priestly activity of Levi and his sons is limited. The new eschatological priest in chap. 18 is not said to be a Levite. And in the many Levi-Judah passages that announce that salvation or a savior will come out of these tribes (or out of Judah alone), clearly Jesus is meant (*T. Sim.* 7:1–2; *T. Naph.* 8:2; *T. Gad.* 8:1; *T. Jos.* 19:6; cf. *T. Levi* 2:11; *T. Jud.* 22:2; *T. Dan.* 5:10).

T. 12 P. are clearly concerned with the final destiny of Israel. The descendants of the sons of Jacob should realize that the savior of the world has come, they should realize "that the Lord will judge Israel first for the unrighteousness done to him, because they did not believe that God appeared in the flesh as deliverer" (*T. Benj.* 10:8). At the same time they may be convinced that, if it lives in holiness and believes in Jesus Christ, "all Israel will be gathered unto the Lord" (*T. Benj.* 10:11). The Christian group that was responsible for the present *T. 12 P.* was clearly concerned with the salvation of the Jews; in their thinking about and their contacts with their Jewish brethren they were certainly guided by the ideas expressed in this writing.

MARINUS DE JONGE

PATRIMONY. See FAMILY.

PATROBAS (PERSON) [Gk *Patrobas* (Πατροβας)]. A Roman Christian who received greetings from Paul in Rom 16:14. He was probably a gentile Christian. See NEREUS. A member of a Roman house-church (Lampe *StadtrChr,* 301) Asyncritus, Phlegon, Hermes, and Hermas were quoted by name, while the other participants were mentioned only generally as "the brethren who are with them." The five persons therefore may have played leading roles in the house-church. Patrobas' name is a short form of "Patrobios." According to the epigraphical and literary sources from the city of Rome, both names occur only very rarely ("Patrobios" eight times, "Patrobas" never except for one fictitious imperial freedman in Martial 2.32); Patrobas therefore may have been an immigrant in the capital (Lampe *StadtrChr,* 139–41, 148).

PETER LAMPE

PATROCLUS (PERSON ([Gk *Patroklos* (Πατροκλος)]. The father of Nicanor, who in 2 Macc 8:9 is appointed by Ptolemy to lead a large force of Seleucid troops "to wipe out the whole race of Judea." Nothing else is known of Patroclus except that he was named after the figure from Greek mythology. See NICANOR concerning whether his son is also the villain of the latter portion of 2 Maccabees (14:12ff.).

JOHN KAMPEN

PAU (PLACE) [Heb *pāʿû* (פָּעוּ)]. Var. PAI. The residence of the Edomite king Hadar (= Hadad II?) who was married to Mehetabel daughter of Matred, daughter of Mezahab (Gen 36: 39; cf. 1 Chr 1:50). Hadad (II) is mentioned as the last of the Edomite kings in the Edomite king list (Gen 36:31–39), whose dating is very questionable, and in the parallel text 1 Chr 1:43–50. The place name could be traced back to the Arabic personal or clan name *faġw.* The LXX transmits it as *Phogō (r),* the Peshitta as *Peʿō* or *Paʿʿō,* the Samaritanus as *Fū* and the Vg as *Phau.* The site is localized in the Gebalene or in Edom by Eusebius, *Onomast.* 168.7; 170.13 *(Phogōr, Phogō)* and by Hieronymus, *Onomast.* 169.7; 171.10 *(Fogo).* It is not possible to locate it more precisely.

ULRICH HÜBNER

PAUL (PERSON) [Gk *Paulos* (Παυλος)]. An early Christian apostle who was perhaps the most important and creative figure in the history of the early Church, whose formulations of Christian faith as expressed in his epistles to fledgling churches have become part of the foundation for orthodox Christian theology.

A. Sources

The primary sources for the study of the Apostle Paul are his authentic letters (1 Thessalonians, Galatians, Philippians, Philemon, 1 and 2 Corinthians, and Romans). Historical information can also be gleaned from the book of Acts (see D.1 below), the deutero-Pauline epistles (Colossians, Ephesians, 2 Thessalonians, 1 and 2 Timothy, and Titus), other NT writings (James, 2 Peter), and later apocryphal literature (apocryphal Acts [McDonald 1983], introductory information in NT manuscripts and canon lists, Pseudo-Clementine literature, Mani Biography [Betz 1986b]). These different groups of documents do not have clear-cut boundaries, though, since scholars still dispute whether or not some of the deutero-Pauline epistles are authentic, and whether the authentic letters contain later interpolations (see the articles on the various Pauline letters). Whether the apocryphal material provides reliable historical evidence independent of the NT presents a further problem, which must be decided on a case by case basis (*NTApocr* 2: 71–74; Schneemelcher 1987–1989; Betz 1986b: 215–34).

Secondary literature about Paul and his writings is vast; no exhaustive bibliography exists. For informative surveys see Schweitzer 1912; Bultmann 1929–36; Metzger 1960; Rigaux 1968; Merk 1988; *ANRW*, pt. 2, vol. 25/4: 2649–2840).

B. Life

1. Name. Paul is commonly known by his Greco–Roman *cognomen, Paulos,* but we know from Acts that he bore the Jewish name Saul as well (Acts 7:58; 8:1, 3; 9:1, 4, etc.). He himself never mentions his Jewish name in his letters, but always identifies himself as Paul (e.g., 1 Thess 1:1; 2:18; Rom 1:1; 1 Cor 1:1, 12–13; etc.).

2. Ancestry. While his Jewish name corresponds to his being a Benjaminite (Phil 3:5; Rom 11:1; cf. Acts 13:21), his Greco–Roman name may have been given to him in connection with his citizenship in Tarsus, a city in Cilicia where he was born and raised (Acts 9:11; 21:39; 22:3; cf. 9:30; 11:25). While there is some doubt with regard to his Roman citizenship, he certainly was not anti-Roman in his politics (Rom 13:1–7). His Roman citizenship plays an important role in Acts (16:37–38; 22:25–29; 23:27; 25:8–12, 21; 26:32; 27:24; 28:19), but there are questions prompted by the flogging (Acts 22:25; cf. 2 Cor 11:25; see Bauer 1988, *s.v. mastizō*) and the appeal to Caesar (Acts 25:8–12, 21; 26:32; 27:24; 28:19; see Conzelmann, *Acts* Hermeneia, 189–90, 203–4). If the author of Acts did have reliable information about Paul being a Roman citizen by birth (22:28), he certainly made the most of it in explaining how Paul got out of Jerusalem to Rome. At any rate, the family considered itself religiously "orthodox" (Phil 3:5; 2 Cor 11:22; Rom 11:1).

3. Education. What kind of education Paul may have received growing up in Tarsus (Acts 21:39; 22:3) is entirely a matter of speculation, although as Acts 22:3 presents it, he had an ideal Jewish education: "I am a Jew, born at Tarsus in Cilicia, brought up in this city [Jerusalem or Tarsus?], educated at the feet of Gamaliel, according to the strict manner of the law of our fathers." This claim suggests that Paul's family moved from Tarsus to Jerusalem, where he received his secondary education (26:4). But this claim must be weighed carefully because it corresponds with the tendencies in Acts to emphasize the apostle's regard for his Jewish heritage (13:14ff.; 14:1; 15:23–29; 16:1–3, 4, 13; etc.) and to link him with Jerusalem

(7:58–8:1a; 8:1b–3; 9:1–2, 26–29; etc.). This latter tendency, together with Luke's attendant assumption of Paul's familiarity with Jerusalem, clashes with Paul's own testimony about his visits to the city (Gal 1:22). Luke's picture of Gamaliel is unclear as well (Acts 5:34; see *Acts* Hermeneia, 186). See also GAMALIEL. A further obstacle to reconstructing Paul's education arises from our ignorance of the specific content of Jewish education at that time, whether in Tarsus or in Jerusalem, whether elementary or secondary (see Safrai 1976; *HJP²* 2: 332–34, 415–22; Saldarini 1988: 137–39).

The fact that Paul acted as an international envoy, first on behalf of Jewish authorities (Acts 8:3; 9:1–2, 21; 22:4–5, 19; 26:10–11; Gal 1:13, 23; 1 Cor 15:9; Phil 3:6), then as a Christian missionary, means that he must have received a good Hellenistic education. He gave speeches, taught, wrote long letters, and was involved in highly specialized theological debates. His abilities as a founder of churches, working with many collaborators on an international level, make it impossible to conceive of him as an uneducated and culture-bound Jew from the East. Comparative figures of the time, especially Josephus and Philo show that being well-educated and Jewish did not exclude one other.

Objections to Paul's education as having been Hellenistic include recourse to his confession of being a layman in rhetoric (2 Cor 11:6; cf. 1 Cor 2:1–5) and his use of a secretary (Tertius, Rom 16:22). Such arguments, however, miss the fact that 2 Cor 11:6 is itself a rhetorical *topos* (see Betz 1972: 47–69; 1986a) and fail to explain how his letters became literary masterpieces. These letters—with their skillful rhetoric, careful composition, and elaborate theological argumentation—reflect an author who was in every way uniquely equipped to become the "apostle of the gentiles" (Rom 11:13; cf. Gal 2:8, 9; Rom 1:5). This much is clear also from a comparison with his sometime mentor and associate Barnabas, whose abilities fell short of what was needed. Similarly, Luke regards Paul as well-equipped to defend himself in court, while the Jewish priests must have a professional orator (Acts 24:1).

4. Pre-Christian Career. Before his conversion Paul actively preserved and protected the religious traditions of his forefathers. Considering himself an "orthodox" Jew, he was zealously committed to eradicating apostasy. Going further than his peers, he became a member of the Pharisaic sect (see Saldarini 1988: 134–43) and took it upon himself to persecute the Christian church (Gal 1:13, 23; Phil 3:6; 1 Cor 15:9). Exactly why he singled out the Christians for persecution is not clear, though a clue may be found in his particular dislike for the Christians in Damascus (Gal 1:17, 22–23; 2 Cor 11:32; Acts 9:2–25; 22:5–6, 10–11; 26:12, 20) and relative disinterest in those of Jerusalem and Judea (cf. Acts 8:3). The reason for persecuting the Christians of Damascus seems to have been that, though Jews, they had discontinued Torah observance, doing so as a matter of principle rather than casual neglect. But neither Paul nor Acts provides any detailed information.

5. Conversion. While Paul was approaching Damascus he suddenly experienced a vision of Christ. This experience had dramatic consequences, changing his entire life, self-understanding, theological views, and goals. Whether this vision occurred in his mind (Gal 1:12, 16) or externally (Acts 9:3–8; 22:6–11; 26:12–19) remains unclear, but it turned him from a persecutor to a propagator of Christianity. Christ himself commissioned him to proclaim the gospel among the gentiles (see also 1 Cor 9:1; 15:8, 9–11; Rom 1:5). Although we customarily label this experience Paul's "conversion," this can be done only in retrospect, for at that time Judaism and Christianity were not yet separate religions. In reality, then, Paul changed brands of Judaism, switching from Pharisaic to Christian Judaism.

6. Apostolic Career. a. The Autobiographical Résumé in Galatians. As Paul reports in Gal 1:17–24, the first part of his autobiographical résumé (see Betz, *Galatians* Hermeneia, 72–81; also GALATIANS, EPISTLE TO THE), after seeing Christ he left Damascus at once and went to Arabia, that is, the Kingdom of Nabataea, called *"Provincia Arabia."* See NABATEANS. This mission in Arabia, given the nature of Christ's commission to him, must have been among gentiles, not Jews. We may also infer that Paul did not initiate this mission but joined a venture already begun by the Damascus church, an inference confirmed by the fact that Paul afterward returned to Damascus. How successful his mission to Arabia was we do not know (see also Gal 4:25; Acts 2:11; *1 Clem.* 25:1, 3; cf. Rom 15:19).

Paul emphasizes that after Christ's appearance and commission he chose not to consult with the other apostles in Jerusalem. Why did he avoid this contact with the Christian authorities in Jerusalem? The

reason seems to be connected with the Arabian mission. If Paul had persecuted the Damascus Christians because of their disregard for the Torah, and if those Christians had begun the mission in Arabia among the gentiles which Paul joined, then the Arabian converts in turn must not have submitted to Torah and circumcision. The Jerusalem church, however, must have looked at this enterprise with uncertainty or even disapproval, thus rendering plausible Paul's avoidance of Jerusalem.

Three years after his conversion Paul finally went to Jerusalem, a visit that he describes in Gal 1:18–24. Analysis of this trip to Jerusalem has been complicated since the writing of Acts, whose author assumed that Paul had come to Jerusalem, preached there, and moved freely in and out of the city (9:26–30). If we pay strict attention to Galatians, we realize that Paul had much less visibility during his stay there. What Paul tells us is that at that time he saw Peter for 15 days, an interview which presupposes Peter's sympathy with Paul's activity. The church as a whole, however, seems to have been divided, so that when Paul says, "I saw none of the other apostles, but only James the brother of the Lord" (Gal 1:19), he implies that he avoided them because they did not care for him. James, perhaps because he was not a (missionary) apostle, was agreeable to a visit. Did the churches of Jerusalem and Judea, when they praised God for Paul without ever having met him (Gal 1:22–24), know that he preached the Gospel without subjecting the converts to Torah and circumcision? At least we can say that no clear decision had been made and that tensions must have existed with regard to this question. We may conclude from this report that the tensions between Paul and the other apostles issued from their competing policies on foreign missions. Following his visit, Paul set out for another mission campaign in his home territory, Syria and Cilicia (Gal 1:21). It is not clear whether Peter and James approved of this campaign.

When Paul came to Jerusalem the second time "after fourteen years" (Gal 2:1), the mission to Syria and Cilicia had been carried out successfully. Paul names as his main collaborator Barnabas, a Jewish Christian like himself. According to Acts, Barnabas was Paul's Christian mentor (Acts 4:36–37; 9:27). The Jerusalem church had sent him to Antioch where he became the leading figure among the Jewish Christians from Phoenicia, Cyprus, and Syria/Cilicia. He went to Tarsus looking for Saul (Paul) to bring him to Antioch (Acts 11:25–26), where the mission to the Greeks was born (Acts 11:20) and where the name "Christian" *(Christianoi)* first came into use (11:26). From here Barnabas and Saul/Paul were sent out together on a missionary campaign (13:1–3) which first took them to Cyprus (13:4–12), then to Pamphylia and Pisidia (13:13–14:28). That this campaign is the same as the one mentioned in Gal 1:21 (Syria and Cilicia) is probable, but not provable.

The mission campaigns also brought to the fore a problem which could no longer be left undecided: Must the new gentile converts be circumcised or not? Is the church part of Judaism or a separate Christian religion? After considerable disagreements (Acts 15:1–2) and even a revelation (Gal 2:2), Paul and Barnabas went up to Jerusalem, taking along Titus, an uncircumcised gentile convert, as a test case. The Jerusalem conference (Gal 2:1–10; Acts 15:2–29; see Betz *Galatians*, 81–103) saw three parties, two of which had opposite answers to the main problem, while a third group stayed in the middle. After heated debates, Paul and his party (Barnabas and Titus) prevailed, gaining recognition of Titus as a Christian without circumcision; however, compromises had to be made. The Christian mission was divided into two thrusts, one to the Jews (under the apostolate of Peter), and the other under the leadership of Paul and Barnabas, without official titles (Gal 2:8–9). The acknowledged link between the two thrusts was the shared belief in the one God (2:8; Rom 3:30; 10:12). The agreement, which also included the pledge to collect money for the poor in Jerusalem (2:10), was approved by the three "pillars" (James, Cephas, and John), and the delegation from Antioch (Paul and Barnabas), but not by an intransigent third group, called by Paul "false brothers" (2:4). This conference had far-reaching consequences not only for the church, but in particular for Paul's future course of life.

One question which had been left undecided was whether the gentile *"Christianoi"* constituted a new religion, or whether Jewish and gentile Christians were together still part of Judaism. This indecision laid the seed for future conflict (see, e.g., the case of Timothy, Acts 16:1–4, and in general Cohen 1986; Bryan 1988), seed which came to fruition at Antioch (Gal 2:11–14). Confrontation arose there after Peter came to Antioch and dined with the gentile Christians, signifying their equal participation in salvation through

Christ. This was subsequently contradicted by a delegation of "men from James" when they arrived from Jerusalem. After heated debates, Peter and the other Jewish Christians caved in to their visitors' censure and cut off table fellowship with the gentile Christians. Thus they reestablished the borders between clean and unclean foods *(koinophagia)*, leaving gentile Christianity outside. Paul, however, did not go along with his fellow Jewish Christians but remained with the gentile Christians. Confronting Peter in an open debate, he accused him of inconsistency ("hypocrisy") in theology and religious practice. The result was a complete break between Paul and the other Jewish–Christian missionaries, including his former mentor Barnabas (see also Acts 15:36–39). Henceforth Paul and the gentile churches founded by him were on their own, though plagued by contrary Jewish–Christian missionaries. To the end, however, Paul never lost hope that a reconciliation with the Jerusalem church might be accomplished, pinning this hope to the collection for the poor (1 Cor 16:1–4; 2 Corinthians 8 and 9; see Betz, *2 Corinthians 8–9* Hermeneia); and intercession by the church of Rome (Rom 15:30–32).

b. Further Data Concerning the Mission to Galatia. The biographical résumé in Gal 1:12–2:14 ends with the Antioch episode, but further data can be concluded from the letter. Although details are missing, the letter presupposes the founding of the Galatian churches. Later, anti-Pauline agitators appear, the result of which is the letter. If the founding visit can be correlated with Acts 16:6, it can also be coordinated with Gal 4:13, and Paul's second visit would be the one mentioned in Acts 18:23. It is, however, not clear whether Acts is at all informed about Galatian churches. Paul's itinerary in Acts appears to be based on good information only in some parts, while on the whole it is the creation of the author of Acts who attempted to fit pieces of tradition into what he envisioned to be a consistent narrative. There may have been journeys that Paul undertook but Acts did not include, just as there are reports about those that seem unlikely to us. The Galatian letter at any rate mentions a foundation visit (Gal 1:9; 4:13). A second visit that would match up with Acts 18:23 would depend on a special interpretation of *to proteron* (Gal 4:13). Following the founding of these churches, rival Jewish–Christian missionaries found a hearing among them, and in order to prevent their drifting away Paul wrote his letter. The founding of the Galatian churches must have preceded 1 Corinthians, since he mentions the Galatian churches and the collection for Jerusalem in 1 Cor 16:1–4.

c. The Mission to Macedonia and Greece. For information regarding the mission to Macedonia and Greece we must rely on Paul's letters to the Thessalonians and Corinthians, and on Acts. According to Acts 16:6–10, Paul went through Phrygia, Galatia, and, passing by Mysia, to Troas. From there he decided to go to Macedonia, responding to a vision of a Macedonian asking him to come. Timothy accompanied him on this trip (Acts 16:1–4), as did Silas (Acts 15:40; 16:19, 25, 29; 17:4, 10, 14, 15; 18:5; however, according to 15:33 he had already left for Jerusalem). Together, these three men (whose affiliation is verified by Paul's letters, 1 Thess 1:1 [2 Thess 1:1]; cf. also 1 Thess 3:2, 6; 2 Cor 1:19) sailed from Troas via Samothrace to Neapolis, the harbor of Philippi. They met their first success in Philippi, where they founded the first church in Macedonia (16:11–40). From Philippi they went to Thessalonica, establishing a church there as well (17:1–9). The next stations were Beroea (17:10–15), Athens (17:16–34; 1 Thess 3:1–2), and Corinth (18:1–17; 1 Cor 1:1–2, 14, 16; 3:5–15; 16:15, 17); in all these cities, churches were established. According to Acts, this concluded the second missionary journey. The third journey began with Paul sailing to Ephesus in the company of Priscilla and Aquila (18:18–21). Rather confusing is a strange trip Paul is said to have made from Ephesus "down" to Caesarea, then "down" to Antioch, and through Galatia and Phrygia back to Ephesus (18:22; 19:1).

d. The Journey to Jerusalem. Another revelation caused Paul to plan a second journey to Macedonia and Achaia, and then to Jerusalem and Rome (Acts 19:21–22). Sending Timothy and Erastus ahead, Paul followed after the riots in Ephesus stirred up by Demetrius had subsided (20:1). He went through Macedonia to Greece, that is Corinth (20:2). These scarce notes, which are based on some sources known to Luke, can be correlated only roughly with what we know from Paul's letters, esp. 1 Cor 16:1–11; 2 Cor 1:8–11, 15–18; 2:12–13; 7:5–7, 13–16; Rom 15:22–31. The main differences are (1) that the situation was much more complicated than Acts leads us to believe; (2) that Paul had to change his travel plans several

times; and (3) that he almost lost his Corinthian church because of internal strife and opposition. See CORINTHIANS, SECOND EPISTLE TO THE.

Although Acts 20:1–6 also assumes that Paul changed his travel plans, these changes concern the final trip to Jerusalem, not the second visit in Corinth. While Rom 15:22–31 testifies that Paul was then in Corinth and would soon depart for Jerusalem, Acts 20:1–6 tells us that Jewish opponents prevented his going from Corinth to Syria directly. Instead he was forced to return to Macedonia and Troas. The delegation mentioned in 20:4 eventually assembled in Troas and left from Assos, sailing S along the coast to Mitylene, Chios, Samos, and Miletus, where Paul said farewell to the Ephesian elders who met him there (20:13–38). The voyage to Palestine is described in detail (21:1–7).

Upon arriving in Palestine, the party stayed in Caesarea and planned to continue to Jerusalem, although people warned Paul that calamity would be awaiting him there (21:8–15, cf. 20:22–24; Rom 15:30–31). At Jerusalem, Paul and his delegation were first greeted in a friendly manner (21:17), but when he visited James (21:18), he was informed about Jewish animosities. Paul's reports about the success of the mission among the gentiles (21:19–20a) were held against the fact that large numbers of Christian Jews in the Jewish heartland had remained faithful to the Torah and regarded Paul's mission among the gentiles as apostasy because he would not subject the new converts to the Torah of Moses, to circumcision and the Jewish way of life (21:20b–21). Yet, the elders of the church, including James, had a clever proposal ready for Paul, advising him to become one of four men who would take it upon themselves to complete a Nazirite vow, shave their heads, make the necessary offerings, and thus publicly demonstrate their adherence to the Jewish religion (21:22–26). The ploy almost worked, but failed at the last minute when Jews from Asia Minor recognized Paul in the Temple and incited the crowd to seize him (21:27–30). The Roman military intervened, rescuing him from being assassinated by the mob, but holding him under arrest (21:31–36).

e. The Trials in Jerusalem. As the narrative in Acts proceeds, the descriptions become increasingly dramatic and detailed with a good number of speeches and debates. To what extent these reports are based on reliable information is unknown. There appears to be some basic information worked in, but the total picture is certainly the result of Luke's imaginative history-telling techniques. From the data available to him, he tried to present a plausible picture of how Paul got himself arrested, extricated from the Jewish authorities and the lynch mobs, transferred to Roman protective custody, and eventually transported to Rome. The total result turns out to be a mixture of local politics, bizarre and fanatical maneuverings by dangerous mobs, and above all Paul's own strategies to escape certain death. Tragically, his final trump card, the appeal to Caesar, while saving him from death in Jerusalem, made his transfer to Rome inevitable. Thus, in the end, Paul must go before Caesar because his own appeal to Roman law, and the will of God, require it (19:21; 21:14; 25:12; 26:31–32; 28:19).

The chain of events begins with Paul's defense (in Hebrew) to the Jewish crowds (21:40–22:21), which, however, led to renewed rioting, necessitating Paul's removal to the Roman barracks for protective custody (22:22–24a). Fearing that he would be flogged, he revealed that he was a Roman citizen, whereupon the Roman officer unfettered Paul and prohibited the soldiers from flogging him (22:24b–29). The next defense occurred before the Jewish high priests and the fully assembled Synhedrium/Sanhedrin, but this attempt also failed and the soldiers had to rescue Paul from another rioting mob (22:30–23:11). Next, Jewish fanatics conspired to murder Paul, but were foiled when his nephew told him of their plan and then informed the tribune as well (23:12–22). Almost 500 soldiers were needed to escort Paul safely from Jerusalem to Caesarea, where he was kept under guard in Herod's praetorium (23:23–35).

Paul's trial before the procurator Felix is narrated in dramatic detail (24:1–27). When the next procurator, Festus, wanted to move the trial to Jerusalem, Paul sensed the danger and appealed to Caesar (25:1–12). This appeal created a dilemma for the procurator because there were no charges against Paul that could stand up in a Roman court of law. When King Agrippa and Queen Berenice came to town, Festus brought Paul before them hoping that the king might help him dispose of the case (25:13–26:32). Indeed, Paul's defense before them is so convincing that Agrippa was ready to set him free, were it not for the appeal to Caesar which he could not overrule (26:32).

f. The Journey to Rome. Thus Paul, together with other prisoners, was dispatched to Rome. Under the protection of Julius, a friendly centurion of the Augustan Cohort, they sailed in a ship from Adramyttium via Sidon along the coast of Asia Minor to Myra in Lycia (27:1–5). From Myra they took a ship to Italy (27:6–8). This trip almost ended in disaster when they encountered a violent seastorm, suffer shipwreck, and barely made it ashore in Malta (27:9–44), not realizing where they were (28:1). Paul stayed for three months and was remembered in Malta for his extraordinary miracles (28:2–10). As the winter season drew to a close and the travel lanes reopened, Paul, still accompanied by the officer Julius, now his friend, took another ship to Syracuse in Sicily, continuing to Rhegium and Puteoli in Italy (28:11–14). Thus he arrived in Rome, where Roman Christians met him well outside the city (28:15–16). An attempt by Paul to explain himself before the Jewish leaders in Rome failed (28:17–28). The book of Acts then concludes by saying that Paul lived in Rome for two years at his own expense, "preaching the kingdom of God and teaching about the Lord Jesus Christ quite openly and unhindered" (28:30–31).

g. Death. Strangely, Acts has nothing to say about what happened when the two years were over. Coming to Rome fulfilled Paul's plan (and God's will) that he should go to Rome, although the way in which it came to pass differed from what he had imagined (19:21; 23:11; 27:24). Probably Luke, the author of Acts, knew that Paul was executed as a martyr in Rome (cf. 20:22–24; 21:11, 13). The reason Luke chose to end the book in this way (if this is the original end) is unknown, but there are various theories that try to explain it (see *Acts* Hermeneia, 227–28; Schneider 1980–82, 2:411–13).

Paul's letters confirm this foregoing narrative only in broad outlines. His plan to lead the delegation going to Jerusalem is affirmed by Rom 15:25–28, but Paul's earlier hesitation (1 Cor 16:3–4) is not known to Acts, nor does Acts seem to know why the delegation went to Jerusalem in the first place. The entire matter of the collection made by the Pauline churches seems to be unknown to Luke. Even when he found bits of information in his sources, he did not know what to do with them and therefore misplaced and misinterpreted the data (11:27–30; 21:24, 26; 24:17–18). Paul's self-understanding as the apostle of Christ, so preeminent in the letters, is alluded to only in Acts 14:4, 14. Paul's mission to Illyricum (Rom 15:19) and his plan to go to Spain (Rom 15:24, 28) were unknown to Luke as well (but cf. the Muratorian Canon, for which see *Acts* Hermeneia, xxxii). There can hardly be any doubt that Luke did not know Paul's letters. For him Paul was not a letter-writer but a powerful speaker, the opposite of what his opponents had concluded (cf. 2 Cor 10:10; 11:6). The accounts of Acts do not give any hint that Paul's major struggles were with opponents from Christian Judaism, not simply from Jews. Above all, there is a wide gap between what Acts reports about Paul's theology and what we learn at this point from Paul's own letters (see Vielhauer 1966).

C. Paul's Image in Later Sources

Paul's death as a martyr is also known to other NT authors, such as the followers of the apostles who wrote the epistles to the Colossians (see esp., 1:24), Ephesians (see esp., 3:13), and the Pastoral Epistles (see, esp., 2 Tim 4:6–8; and Wolter 1988). Still later testimonies are *1 Clem.* 5:5–7 and Ignatius of Antioch (Eph 12:2; Rom 4:3), and the apocryphal *Acts of Paul* (see esp., 11:1–7; and *NTApocr* 2: 73, 383–87). For further references see Schneider 1980–82, 2: 413; Lüdemann 1988. The historical information contained in these sources is extremely limited and does not significantly increase the data that can be obtained from the NT. Almost nothing is known about Paul's theology outside the Pauline and deutero-Pauline letters.

D. Chronology

1. Problems. Establishing a chronology for Paul's life and letters is beset by abundant difficulties. Four basic problems should be distinguished: (1) establishing the most probable sequence of Paul's letters and letter fragments, and the events to which they allude; (2) evaluating the sequence of events narrated in the book of Acts; (3) connecting the events reported in Acts with those mentioned in the letters; and (4) assigning actual dates to specific events. Two attendant circumstances further complicate matters. First, whereas Acts never refers to Paul's letters, some events reported in Acts can be correlated with events mentioned in the letters, although a further problem then arises since correlations can be made in several ways. Second, while scholars agree that priority of credibility should be given to Paul's own letters,

without Acts no extended sequence of events can be determined. But all information yielded by Acts rests on the assumption that its author had access to historically reliable sources and that he used them in an historically responsible fashion, an assumption that is open to criticism. As a result, all attempts to determine a chronology for Paul's life and letters are hypothetical or even "experimental" (Jewett 1979: 95–104), even though several such hypotheses have been advanced in recent years.

Among these, notice should be given to the fact that Jewett (1979) and Lüdemann (1984; building on Knox 1950) have agreed that Paul made only three trips to Jerusalem after his conversion. The significance of this point lies in its deviation from the framework of Acts, which presents five such trips. Jewett and Lüdemann have therefore agreed to a major paradigmatic shift. Still, even this resembles other recent hypotheses in that all are based on older investigations and offer little in the way of new evidence (see *RGG* 1: 1693–94, and for surveys and bibliographies Rigaux 1968; Vielhauer 1975: 70–81; Suhl 1975; Dockx 1976; Jewett 1979; Lüdemann 1984).

2. Datable Events. The Gallio inscription enables us to date the reign of Iunius Gallio's proconsulship in Achaea to the years 51/52 or 52/53. These dates agree with Paul's 18-month visit in Corinth and the reference to Gallio in Acts 18:11–17. This visit would then have occurred in A.D. 51–53.

The conference of church leaders in Jerusalem, the so-called Apostolic Council described in Gal 2:1–10, presupposes that Peter was still in Jerusalem (his departure is reported in Acts 12:17), and that James and John, the sons of Zebedee, were still alive (their martyrdom is mentioned without dating in Mark 10:39). The John who attended the conference (Gal 2:9) was most likely one of the sons of Zebedee. If James, the brother of John in that text, was assassinated by Herod Agrippa I (Acts 12:2), and if this was also true of his brother John, then the Jerusalem conference must have occurred before that king's death in A.D. 44 (see *HJP²* 1: 442–54); the Jerusalem conference can thus be dated in ca. 43/44, a sequence roughly agreeing with Acts 11:27–12:1. If there is then the question about whether the events reported in Acts 12–17 are sufficient to fill the period from 43 to 51, it should not be assumed that Acts reports everything that happened. If the date of 43/44 for the Jerusalem conference is allowed to stand, Paul's conversion would have occurred ca. 15 years earlier (Gal 1:18; 2:1, counting 14+3 years, with the two beginning years included), that is, ca. 27–29. If so, Jesus would have been crucified some time earlier under Pilate's office as procurator (A.D. 26–36), that is, perhaps A.D. 27. Paul's conversion could then be dated in A.D. 28 (Vielhauer 1975: 78). These dates are all approximations.

Other synchronizations are even less certain. When Paul says he was driven out from Damascus three years after his conversion mission in Arabia and return to Damascus (Gal 1:17–18; 2 Cor 11:32–33), a precise dating within the reign of Aretas IV (ca. 9 B.C.–A.D.40) seems impossible (see *HJP²* 1: 581–83; 2: 129–30; perhaps under Caligula [37–41]?). The edict of Claudius mentioned in Acts 18:1–2 is attested also by Suetonius, but the exact date cannot be ascertained. The date of A.D. 49 given by Orosius (5th century) would fit with the meeting of Aquila and Priscilla with Paul in Corinth (see *HJP²* 3: 77–78). Paul's two-year (Acts 24:27) imprisonment in Caesarea (Acts 23:23–26:32) occurred during the governorship of Felix, whose office lasted from ca. 52–60 (?) (see *HJP²* 1: 460–66). The replacement of Felix by Festus (60–62 [?]), mentioned in Acts 24:27 (see *HJP²* 1: 467–68), may have taken place in the year 60, or two years earlier (see *HJP²* 1: 465). According to Acts, Paul was brought before Felix (Acts 23:33–24:26) and then Festus (Acts 25:6–26:32), events which may be dated so as to fall into the years 59/60 (*HJP²* 1: 467). If we knew precisely how long Paul stayed in Palestine and how long it took to travel from Ephesus to Palestine, his two and one-half years of residence in Ephesus (Acts 20:31) could be dated, but the time spans are a matter of guesswork. It may not be far off to put Paul's Ephesian residence sometime around A.D. 55. Also uncertain is the year of Paul's death. If he traveled to Rome in the year 60, stayed there for two years (Acts 28:30), and was martyred immediately afterwards, his death would fall into the years 63 or 64, a date coinciding with the persecution of Christians by Nero after the great fire (A.D. 64).

3. Dating of the Letters. The dating of Paul's authentic letters is a separate and related problem. While there is some agreement about the sequence of the letters, further complications arise if some of the letters

(e.g., 2 Corinthians, Philippians) are actually collections of letter fragments. At a number of points, however, connections can be made between the letters and datable events in Acts.

Scholars agree that 1 Thessalonians is Paul's oldest extant letter. This letter appears to have been written not long after the founding of the church, which according to Acts 17:1–9 took place during the second missionary journey, perhaps in A.D. 49, when Paul came to Thessalonica from Philippi (1 Thess 2:2). Given that Silvanus and Timothy were with Paul (1 Thess 1:1; cf. Acts 18:5), the letter may have been sent from Corinth ca. 50/51 (Vielhauer 1975: 88–89).

The dating of Galatians is quite uncertain because Acts does not report the founding of any churches in Galatia; nevertheless, the itineraries recorded in Acts do leave open the possibility that Paul founded these churches during his second missionary journey (16:6–8) and visited them again during the third (18:23). It is unclear whether this return visit occurred before or after the Galatian crisis, which goes unnoticed in Acts. At any rate, the letter was written in response to the growing threat by anti-Pauline forces in these churches, perhaps during Paul's residence in Ephesus (Acts 20:31), ca. 52–54/55.

1 Corinthians may have been written at the same time that Galatians was, which would explain the reference to Galatia in 1 Cor 16:1. The Corinthian letters have a history in themselves, made up of a complex series of letters. If the Corinthian church was founded during the second missionary journey (Acts 18:1–18), ca. 50/51, the possible dates for the letters cover the period between Paul's first departure from Corinth and his final return to that city. 1 Corinthians was written from Ephesus (1 Cor 16:8) near the end of his residence there (ca. 54/55). See CORINTHIANS, FIRST EPISTLE TO THE.

The letter fragments in 2 Corinthians were written after 1 Corinthians and before Paul's third and final visit to Corinth, perhaps written from Ephesus and various places in Asia and Macedonia, ca. 55–56. See CORINTHIANS, SECOND EPISTLE TO THE.

The Philippian correspondence seems to have been sent some time after the foundation of that church (Acts 16:12–40), after Jewish Christian opponents had appeared and threatened Paul's work (Phil 3:2, 17–19), and at a time when Paul was in prison (in Ephesus? [see Vielhauer 1975: 170]). Whether Philemon, also a prison letter (Phlm 9), comes from the same time and place cannot be determined. The Epistle to the Romans was sent from Corinth shortly before Paul's departure for Palestine, probably A.D. 56.

4. Summary. Although efforts to pin precise dates on events in Paul's life usually fail to convince, the same cannot be said in regard to the general parameters of Paul's ministry. Here we find general agreement in assigning the apostolic conference to the 40s and the extant letters to the early and mid-50s. All of these rest within the period of Paul's Christian ministry, which at most extends from about A.D. 28 to A.D. 64.

E. Theology

As NT scholars have refined their methods, describing Paul's theology has become more exacting and complex. The following can provide no more than a sketch.

1. Methodological Problems. a. Sources. By common agreement, the primary source for Paul's theology should be his recognized authentic letters; the deutero-Pauline and, to a lesser degree, the Pastoral Epistles may receive limited consideration, inasmuch as they reflect Pauline tradition after his death. However, the speeches attributed to him in the book of Acts express the theology of the author of Luke-Acts, not Paul, and should not be used (see Vielhauer 1966).

Having identified the sources, one must decide *how* to use Paul's letters to arrive at his theology. Clearly, gathering a mosaic of quotations from the letters and putting them together under doctrinal headings will not add up to a theology of Paul, for it fails to account for the origin of Paul's ideas and the dialogical nature of his statements through successive letters. On the whole, Paul sets forth his theology not in doxographical abstractions but in contextual letters reflecting ongoing debates.

Paul's letters provide access to his theology on two levels: that of doctrinal presuppositions and that of applications to specific problems within his churches. These occur in the course of extended arguments in which Paul moves from his theological premises to the resolution of specific issues, both practical and theoretical. In arguments where Paul actually cites his presuppositions, they often have the form of abbreviated principles or formulae, sometimes lifted from another context (e.g., hymns or creeds). Such

references occur as they are needed from case to case, so that in one sense none of the letters provides a complete description of his theological "system" (if he ever had a "system"); in another sense, every argument is itself a complete theological statement.

Not only does Paul's theology lie embedded within extended arguments, but his arguments lie within an epistolary context. This first requires that due consideration be given to the argument of an epistle as a whole. Second, this requires that attention be given to the place of the letter within the entire discussion of which it is a part, for Paul's arguments take place within an ongoing dialogue. Whatever Paul argues for and against in any given letter represents no more than one "picture" in an entire sequence, which includes a previous history, other discussion partners who often hold differing viewpoints, envoys and couriers who provide further commentary, and a subsequent history of exchanges, until the point when the dialogue breaks off. As in any exchange of letters or dialogue, the same or similar issues may be brought up repeatedly, and Paul may respond differently in each case. Depending on the circumstances, Paul can change his argumentation, present a revised version of it, or even change his position.

b. Character of His Thought. Although differing circumstances effected change and revision within Paul's thinking, some balance should be maintained in analyzing these variations. It would be as wrong to overlook the differences between Paul's letters as it would be to treat these differences as substantive self-contradictions, as opportunistic accommodations to what is deemed desirable, or as evidence of emotional instability. Räisänen (1987) certainly advanced criticism when he pointed out contradictions between Paul's letters; unfortunately, he largely ignored the structure and epistolary nature of Paul's arguments. Such oversight allows surface-level contradictions to obscure consistency of thought at a deeper, presuppositional level (see Boers 1988; Beker 1988). Admittedly, though, if Paul did pursue a consistent theological position throughout his letters, despite the differences between them, this consistency remains to be demonstrated.

This situation raises further questions with regard to Paul's thought. Did he work with a fixed theological "system" in the back of his mind? Or did he develop his arguments *ad hoc*, based only on a limited set of assumptions? Did Paul have a consistent theology throughout his apostolic career, or did his theology gradually evolve in the context of mission and controversy in which he was constantly involved? If he worked from a fixed theological system, was that system pre-Christian (Pharisaic, rabbinic, or apocalyptic) with his Christian convictions simply overlaid or appended? Or was his theology something altogether new that grew out of his vision of Christ and his commission to take the gospel to the gentiles? In short, how creative and dynamic a theologian was the apostle Paul? Such questions form the substance of the present debate in NT scholarship.

c. Understanding His Thought. Paul's theology is as difficult to grasp as that of any creative thinker. It is more than the sum of his extant letters and letter fragments, and more than a string of surface-level quotations. Rather, it involves analysis of Paul's arguments as part of an ongoing debate, so as to reveal the methods Paul uses to move from certain principles to the positions he adopts. This approach places us more in step with the apostle himself, because, while he no doubt does hold some non-negotiable assumptions, his theology is primarily the result of *processes of thought.*

Paul's thinking also contains development. As a result, positions taken in his last letter, Romans, are considerably more advanced that those in his first (extant) letter, 1 Thessalonians. This does not mean, however, that he would repudiate his earlier letters, for each letter is designed to respond to particular readers and a specific set of theological problems. Each letter must therefore be judged sufficient in itself theologically, though insufficient to the extent that it calls for future follow-up.

Paul's theology as a whole can be conceived of in different ways. If conceived of as the totality of all his thinking, involving all the letters he ever wrote and all the speeches and activities he ever undertook, this theology is inaccessible to us. As readers of his letters, however, we have access to his theology in another way: these letters allow us to enter into the apostle's thought processes. By analyzing Paul's arguments concerning specific issues and the positions he took throughout an ongoing debate, we as readers can learn to think like Paul and in this way gain entrance into the world of Paul's theological thinking. If this theology always remains incomplete, credit it to the fact that Paul's thinking was always

open-ended. Even Paul's final and theologically most complete letter, Romans, points beyond itself. Such open-endedness encourages the reader to take Paul's theology beyond Paul, which is precisely what happens in the deutero-Pauline letters (2 Thessalonians, Colossians, Ephesians, the Pastorals).

2. Major Phases in the Development of Paul's Theology. If analyzed according to their chronological sequence, Paul's letters evidence major phases of his theological development. Such developments and their implications for the understanding of the apostle's thought are the subject of current scholarly discussions (see *ANRW*, pt. 2, vol. 25/4; 2653–54). Traces of development include direct references by Paul himself to views held in the past but now overcome, citations of pre-Pauline traditions taken over by him, or shifts in his thinking observable by critical investigation.

a. Pre-Christian Pharisaism. Although reliable sources here are extremely scarce, some conclusions can be drawn from Paul's own references to his pre-Christian past and the theology he affirmed at that time (see Gal 1:13–14; 1 Cor 15:9; 2 Cor 11:22; Phil 3:5–6; perhaps also Gal 5:11; see also *ANRW*, pt. 2, vol. 25/4: 2658–67; Saldarini 1988: 134–43, with bibliography). According to his own witness, Paul was an Israelite from the tribe of Benjamin, a "Hebrew from Hebrews" circumcised on the eighth day of his life (2 Cor 11:22; Phil 3:5). He was a member of the Pharisaic sect (Phil 3:5; Acts 23:6; 26:5) and devoted to upholding "the traditions of the forefathers" (Gal 1:14).

If this is assumed, he must have been a well-versed member of the Pharisaic party. This much can be said, although a paucity of sources leaves us unable to say anything specific about the education of diaspora Pharisees in Asia Minor (see Saldarini 1988: 137–41). The affirmation that he was "a son of Pharisees" (Acts 23:6) at the least assures us that his Pharisaism was genuine. That he was authorized to persecute Christians means that his aims received official recognition. Although our sources regarding early Pharisaism are scarce, there is reason to assume that these Pharisees had educational standards and theological consciousness, even if their criteria may have been quite different than later rabbinic orthodoxy. One should not assume that Pharisaic theological education of a serious nature could be obtained only at Jerusalem (against Oepke 1933: 444; see *ANRW*, pt. 2, vol. 25/4: 2660).

The information given in Acts that Paul came from Tarsus to Jerusalem to study with Rabbi Gamaliel I (22:3; cf. 26:4; see GAMALIEL) flatly contradicts Gal 1:22, a discrepancy which raises questions about the historical reliability of Acts 22:3. Those who nevertheless trust Acts (Oepke 1933: 440–46; van Unnik 1973: 259–320) draw further conclusions from it, mostly by consulting later rabbinic sources. If Paul, as Oepke suggested (1933: 412), was an ordained rabbi and educated in Jerusalem, serious problems arise. Is it conceivable that a pupil of Gamaliel displays no evident knowledge of Hebrew scripture, instead always citing the? Jeremias (1969) even postulated that Paul was a Hillelite because he shared doctrines and exegetical methods attributed to Rabbi Hillel. Haacker (1972) advanced the opposite hypothesis, labeling Paul a Shammaite. But the historical evidence concerning the teachings of Hillel and Shammai is as shaky as the alleged connections between their teachings and Paul's theology (see Davies 1955: 1–16). One should, in fact, ask why it is almost impossible to establish any connections between Paul and the rabbinic sources. Whatever the answer may be, the accuracy of the information about Gamaliel (Acts 5:34; 22:3) is dubious. Furthermore, one cannot ignore how perfectly Acts' information about Gamaliel fits Luke's ideas (Strecker 1976: 482 n. 10). Still, if what Acts says is accurate, Gamaliel's theology was remarkably Hellenistic-Jewish and very different from the later rabbinic standards, a possibility not to be dismissed offhand.

At any rate, Paul's testimony leaves no doubt that his primary concern as a Pharisee was Torah and righteousness. A conscientious Jew, with respect to the Torah Paul stood "blameless" (Phil 3:6; cf. Gal 1:13, 14; Acts 22:4; 26:5). Paul describes in Gal 5:3 what he thought about the law, not without polemic poignancy: "I testify again to every man who has become circumcised, that he is obliged to do the whole Law." The concept of "the whole Law" is presupposed also in Gal 3:10 (LXX Deut 27:26), where "everything that is written in the book of the Law" defines quantitatively what is meant by "the whole Law"; anything less amounts to being "under the curse." This view does have an affinity to the rabbinic concept of the Torah as consisting of 613 prescriptions and prohibitions, as well as to the rigoristic position attributed to Shammai (*b. Sabb.* 31a; see Betz *Galatians*, 260; *ANRW*, pt. 2, vol. 25/4: 2665).

If Paul claims to have been "blameless" in terms of the Torah, he went further in his zeal by persecuting the Jewish Christians of Damascus, whom he, in agreement with the authorities at Jerusalem, regarded as "apostates" (Gal 1:13; 1 Cor 15:9; Phil 3:6; Acts 8:3; 9:1–2, 21; 22:4, 19; 26:10–11). The main reason for this persecution seems to have been that these Jewish Christians did not subject gentile proselytes to Torah and circumcision, discontinuing "the traditions of the forefathers" which Paul so zealously enforced (cf. perhaps Gal 5:11). At any rate, it seems to be clear that already the pre-Christian Paul had focused his theological concerns on the Torah, circumcision, and other ancestral traditions. He was, of course, not alone in this, as demonstrated by his later opponents in Jerusalem, Galatia, and elsewhere, who (even as Christian Jews) continued to hold the same views Paul once held and then rejected. See GALATIANS, EPISTLE TO THE.

It is not inconceivable that some of Paul's earlier concerns emerge in a later Christian context. Paul's sharp critique of Jewish claims in Rom 2:1–29 includes a discussion of Jewish prerogatives: the possession of the Jewish Torah (2:12–16), the honorific name "Jew" (2:17–24), and the ritual of circumcision (2:25–29). Essentially, the passage involves painful Jewish self-criticism, no doubt informed by Paul's intimate knowledge of Jewish theology. Does his critique of false Torah observance (2:12), pretentiousness (2:18–20), hypocrisy (2:21–22), and mere external ritual (2:25–29) reflect concerns he had felt already as a Pharisee? (This critique has close parallels in the Sermon on the Mount.) See SERMON ON THE MOUNT/PLAIN. Romans 9–11, a discussion of Judaism's eschatological destiny, may also draw on material coming from an earlier period of Paul's life. These possibilities, however, raise two fundamental questions which non-existent sources keep us from answering: Did Paul really believe that his personal "blamelessness" assured his salvation (cf. Sanders 1977: 442–43)? Or did he harbor some doubts, like the would-be disciple of Jesus in Mark 10:20 who, having done all of the Torah from his youth on, was still unsure of the way to eternal life? And did Paul share the view that his individual salvation was all he had to be concerned about, or the other view that his individual salvation was conditional upon the salvation of "all Israel" (Rom 11:25–26)? If these questions could be answered positively, we would begin to understand why he was impressed, first negatively, then positively, by the Christian gospel.

b. Conversion to Jesus Christ. According to his own testimony (Gal 1:1, 11–12, 15–16; 1 Cor 9:1; 15:8; Phil 3:5–6), the greatest change in Paul's thinking was brought about as a consequence of his vision of Christ on the road to Damascus. Appearing to him in this vision, Christ commissioned him to "preach the gospel to the gentiles." Paul at once dedicated himself to this task. At this point, the accounts in Acts (9:1–19a; 22:1–16; 26:9–18) differ in that Ananias mediated Paul's commission to him (9:15–16; 22:10, 14–15; cf. 26:16–18). What were the consequences of this event for Paul's theology? Four things immediately present themselves.

(1) Paul's commitment to Pharisaism came to an abrupt end, as he switched from Pharisaic to Christian Judaism.

(2) Paul's assignment to preach the Gospel to gentiles first meant that he joined the missionary enterprises of the Damascus church, from which he must also have received his first instruction in Christian theology. Unfortunately, our knowledge of this old church is extremely limited, so that we do not precisely know what kind of instruction and tradition Paul received at that time (see also Betz *Galatians,* 64–66). What did the Christians of Damascus have in mind when they converted non-Jews? How did they, as Jews, justify it? Clearly, the reason for Paul's persecuting them was that they failed to subject the new converts to circumcision and Torah. What was their theological reason for making converts outside of the Torah covenant? Was it in fact done outside of the Torah covenant? At any rate, they must have had theological reasons, but we do not know what they were. Nor do we know what the Jewish-Christian church in Jerusalem thought about this: Did they approve or disapprove? Or were they already divided over the question, as they obviously were later on?

(3) The next immediate question to be raised is whether and in what way the new converts from paganism were to become partakers of the (Sinai?) covenant. See COVENANT. If they were not circumcised and did not observe the Mosaic Torah, how could these converts hope to be partakers of

salvation? Perhaps some conclusions can be drawn from Acts, provided of course it reflects the actual practices of the Damascus church. Since after his conversion Paul was baptized (Acts 9:18; 22:16), the ritual of baptism must have served as an initiation to the Christian faith. In connection with the gift of the spirit (9:17), the effect of baptism was purification and remission of sins (Acts 22:16: "Rise and be baptized, and wash away your sins, calling on his name."). To be sure, this theology agrees with Luke/Acts (see also Acts 1:5; 2:38; 5:31; 7:60; 10:43; 13:38; 26:18), but it may also reflect views held much earlier in the Damascus church. If this ritual of baptism was indeed administered to gentile converts in Damascus as well, taking the place of circumcision, then the new gentile Christians would have thereby joined the community of the sanctified. Christological and soteriological beliefs would have justified this status (cf. 1 Cor 1:13–17; 6:11; 10:2; 12:13), just as Christian ethics amounted to a preservation of sanctity until the Last Judgment (1 Thess 5:23; 1 Cor 1:8; 2 Cor 11:2). If, broadly speaking, this theology was affirmed by the Damascus church, it came close to Paul's theology in 1 Thessalonians [see below, E.2.c. (1)]. In fact, some of the pre-Pauline formulae cited in Paul's letters may go back to traditions taught in Damascus.

(4) One must keep in mind that when Paul spells out the changes in his life and thought, he does so retrospectively, yet this does not necessarily mean that these recollections were completely beside the point. As he affirms, the changes brought about by his conversion involved his entire life and thinking, not only certain aspects. Four of the most important changes are highlighted by Paul himself.

(a) The most immediate change was Paul's recognition and confession of Jesus Christ as "lord," *kyrios,* and "son of God," *hyios tou theou* (Gal 1:16; 1 Cor 9:1; Phil 3:8; cf. Acts 9:5, 10; 22:8, 10; 26:15). In contrast, the title "messiah," *christos,* does not seem to play an important role in Paul's conversion (cf. 1 Cor 15:3; see Bauer 1988: 1768–69). To be sure, it is remembered in his christology, but it was not the fulcrum of his conversion (differently Acts 9:22; 17:3; 18:5, 28; see Bauer 1988; *s.v. Christos*). This role was played by *kyrios.* This revelation of Jesus as *kyrios,* "lord," certainly received reinforcement by the confessions made in the first Christian worship service Paul attended (cf. e.g., Rom 10:9–10; Phil 2:11; 1 Cor 8:6; 12:3; 2 Cor 4:5). From this point, adopting already-existing christological and soteriological formulae and hymns was a small step, although when Paul cites such material in his letters it may not come only from Damascus (see especially, Gal 1:4; 4:4–6; Phil 2:6–11; 3:7–11; Rom 1:3–4; 1 Cor 15:3–5; Phil 3:7–9).

(b) An immediate consequence of Paul's invocation of Christ was the reevaluation of the fundamental concept of "righteousness," *dikaiosynē* (see *BTNT* 1: 270–85; Conzelmann 1969: 214–20; *Galatians,* 116–119; *2 Corinthians* 8–9, 114–116; *ANRW,* pt. 2, vol. 25/4: 2694–2709, 2721–29; with further bibliography). In retrospect, Paul described the changes in two texts. The first was Gal 2:15–16: "We who are Jews by birth and not sinners know from [the] gentiles that a person is not justified by works of [the] Law but [only] through faith in Christ Jesus. So we also have come to believe in Christ Jesus, in order that we might be justified by faith in Christ and not by works of the Law, since it is not by works of [the] Law that all flesh will be justified." Paul's new Christian view is that Jesus Christ, by virtue of his death and resurrection, has acquired righteousness and that those who believe in him "in obedience of faith" (Rom 1:5; 6:12, 16, 17; etc.) are already now and will be at the Last Judgment beneficiaries of that righteousness (Gal 5:5–6; see *BTNT* 1: 274–79). The opposite, as it now appears to his Christian understanding, is a "righteousness based on the works of the Torah" (Gal 2:16; see Betz *Galatians,* 116, n. 35).

The second text in which Paul described his reevaluation of the concept of righteousness was Phil 3:7–9: "But whatever gain I had, I counted as loss because of the surpassing worth of knowing Christ Jesus my Lord. For his sake I have suffered the loss of all things, and count them as refuse, in order that I may gain Christ and be found in him, not having a righteousness of my own, based on [the] Law, but that which is through faith in Christ, the righteousness from God that depends on faith …" (RSV). This newly found "righteousness" is "in Christ" (Gal 1:22; 2:4, 16, 17; etc. See Conzelmann 1969: 208–12; Betz *Galatians,* 119, n. 60); indeed, Christ is that righteousness (1 Cor 1:30), which is "the righteousness of God" (Rom 1:17), a gift of grace to those who believe in Christ (Gal 5:5–6; 2 Cor 5:17; Rom 1:16–17;

3:21–22; etc.). The opposite is described as "my own righteousness" (Phil 3:9), i.e., basing one's hope for eternal salvation entirely on the individual's sufficient Torah observance. Paul claims that his reevaluation of the notion of righteousness is more than a second track to accommodate the admission of gentile Christians into the church and in salvation. Gal 2:16 states that Paul belongs to those Jews who have become Christians because they have come to recognize the insufficiency of their pre-Christian notions concerning eschatological righteousness. Up to this point there seems to have been broad agreement in Jewish Christianity. Disagreement arose, however, about the consequences.

(c) The most difficult question to solve was, What impact does the Christian Gospel have on the concept and observance of the Law (Torah)? This question is still disputed today. The basic problem is that Paul seems to be vacillating between two concepts of law, a Jewish concept and his own Christian concept. How are the two related to one other? (For discussion and bibliography, see *BTNT* 1: 259–69; Conzelmann 1969: 220–28; Räisänen 1987; Sanders 1977; 1983; Wilckens 1982; Hübner 1984; *ANRW*, pt. 2, vol. 25/4: 2668–94; *TRE* 13: 64–72; Westerholm 1986: 229–37; 1988.) For Paul, reevaluating his position on the Torah meant the rejection of his former Pharisaic concept, which he described in Gal 5:3: "I testify again to every man who has become circumcised, that he is obliged to do the whole law." As he now sees it, this Torah has come to an end with the coming of Christ (Gal 3:22–25; Rom 10:4). His judgment is therefore rather negative: "What then is the Law?—Because of the transgressions it was given in addition, till the offspring should come to whom the promise had been made, ordained through angels, through a mediator" (Gal 3:19). All Paul is willing to concede at this point is the inferior role the Torah has played in the history of salvation (3:23): "Before the faith came we were kept in custody under [the] Law, confined until the coming faith was to be revealed." This Torah did not have the capacity to "make alive" and generate "righteousness" (3:21).

This does not mean, however, that Paul was an antinomian who rejected the law in any form, or even the Torah. There could be no question that the demands of the Torah had to be fulfilled, if righteousness as the prerequisite for entering into the kingdom of God was to be obtained. Furthermore, there were not two different Torahs, an older one to be rejected and a new one to be approved. Rather, there were competing definitions of what the Torah was.

According to Paul, the Pharisaic Torah was deficient because it summarized the Torah in the wrong way. In this Pharisaic view, God revealed his will in the form of many laws, all of which must be obeyed. For the Pharisees, then, fulfilling "the whole law" meant keeping the quantitative sum total of all laws (Gal 5:3). This notion is, however, not the only possible one.

Paul called his new concept "the law of Christ" (6:2; cf. 1 Cor 7:19; 9:21). This law summarized the many prescriptions and prohibitions of Scripture in another way by regarding the love command Lev 19:18 as the common denominator *(kelal):* "For the whole Law is fulfilled in one word: 'you shall love your neighbor as yourself' " (Gal 5:14; cf. Rom 13:8–10). This concept of Torah as a single principle was apparently taken over from Jewish Christianity (see Matt 5:43; 19:19; 22:39; Mark 12:31, 33; Luke 10:27; Jas 2:8), coming probably from the historical Jesus himself, although it was also attributed to R. Hillel (see Betz *Galatians,* 274–76). The important difference is that this concept of the Torah does not require the specifically Jewish Torah observance, but it can in principle be fulfilled by every human being. If the love command is "fulfilled," the "whole Torah" is fulfilled, and thus righteousness is assured. This concept, therefore, permits gentiles to access salvation without their having to pass through the religion of Judaism. How Christians, whether Jews or gentiles, might then fulfill this Torah is the next question.

(d) Since gentiles by definition do not partake of the Mosaic covenant, extending salvation to them required a special act of God in order to extricate them "from the present evil aeon" (Gal 1:4). Even before Paul, early Christianity interpreted Jesus' death on the cross as his voluntary self-sacrifice "for our sins" (Gal 1:4; 1 Cor 15:3; cf. 1 Thess 5:10). His death was in accordance with God's will, so that it was a manifestation not only of Christ's love (Gal 2:20) but also of God's (Rom 8:3–4, 32, 39). As a righteous man "without sin" (2 Cor 5:21), Christ took the curse (Gal 3:13) and the accumulated burden of human sinfulness on himself (2 Cor 5:21). His absolute obedience to his Father, manifest in his willingness to be crucified, though innocent, was meritorious enough (Phil 2:6–11; Rom 1:3–4; 5:19) to provide a ransom

from eternal condemnation for those who believe in him (1 Thess 1:10; Gal 3:13; 4:5; 1 Cor 6:20; 7:23). Thus achieving "reconciliation" with God on behalf of sinful humanity (2 Cor 5:18–21; Rom 5:10–11), Christ cleared the way (Rom 5:1) for gentile Christians to become partakers, not of the Mosaic covenant, but of the prior promise God had made to Abraham. As believers in Christ they have become "sons of Abraham" (Gal 3:6–18, 29; cf. Rom 4:1–25).

Several christological and soteriological formulae, most probably going back to pre-Pauline Jewish Christianity and still somewhat controversial as to their exact meaning, describe the two acts initiated by God, through Christ, to integrate gentile Christians into the salvation process. (1) The formulae interpret Christ's death as a voluntary self-sacrifice and atonement (Gal 1:4; 2:20; 3:13; 4:4–6; Phil 2:6–11; 1 Cor 1:23, 24, 30; 15:3–8; 2 Cor 5:17–21; Rom 3:24–26; 4:25; 5:6–11; 8:3, 32). Its meritoriousness means the remission of the sins that have accumulated beforehand (Rom 3:25; 4:25). (2) In formulaic language Paul also wrote about the work of the divine spirit which enables the believer to "fulfill the demands of the Law" (Rom 8:4). The formula in Gal 4:4–6 contains a summary of these doctrines: "When, however, the fullness of time had come, God sent his son, born by [a] woman, put under [the] Law, in order that he might redeem those who are under [the] Law, in order that we might receive the adoption as sons. And, since you are sons, God sent the spirit of his son into our hearts, crying out 'Abba! Father!' " (for interpretation, Betz *Galatians*, 205–11).

c. Earlier Phases of Paul's Theology. (1) The letter of 1 Thessalonians reflects Paul's theology during his early mission to the Greeks, a phase prior to the great confrontations with his Jewish-Christian opponents. In this epistle, Paul looks back at the turbulence surrounding that church's foundation (1:5–6; 2:1–2; cf. Acts 17:1–9), turbulence which for the time being (cf. 3:2–5) appears to have subsided, giving way to "peace" (cf. 1:1; 5:3, 13, 23). Paul recalls how the Thessalonians accepted the "gospel" (1:5–6; 2:2, 4, 8, 9; 3:2) and cites a summary of it as a reminder (1:9–10; cf. 4:5). This summary reflects the mission *kerygma* (i.e., preaching), which includes the turning away from idols to the worship of the living and true God, and the awaiting of the *parousia* of Christ (cf. 2:19; 3:13; 4:15; 5:23). The *kerygma* is based on the christology of the death and resurrection of Jesus Christ (1:10; 2:15; 4:14), the "son of God" (1:10) and "Lord" (1:1, 3, 6, 8; 2:15, 19; 3:8, 11, 12, 13; 4:1, 2, 6, 15, 16, 17; 5:2, 9, 12, 23).

The church (1:1; 2:14) consists of those who have been called to the kingdom of God (2:12; 4:7; 5:24). They have been given the holy spirit (1:5, 6; 4:8; 5:19), and have thus been purified (2:3; 4:7). As believers in the gospel (1:7; 2:10, 13; 4:14) they have thereby obtained the status of "holiness" (3:13; 4:3–7; 5:23) without recourse to the Torah. They are addressed as "the holy ones" (3:13; 5:27) and as "the sons of [the] light and the sons of [the] day" (5:5). Preserving this state of holiness "unblemished" until the *parousia* (3:13; 5:23), when they will greet the coming Christ in mid-air (4:13–18), is the purpose of Christian ethics. Paul described the desired ethics only in general terms as "how you must conduct your lives and please God" (4:1; cf. 2:12, 15; 4:12, 5:12–22), and cited the temptations of the devil as the primary cause for concern (3:5; cf. 4:3–8). However, the faith of the Thessalonians was still young and insecure; deficiencies exist (3:10) and strengthening was needed. For this reason Paul sent the letter, and in keeping with this purpose he included comfort for the unsettling death of some members (4:13–18; 1:10).

(2) While 1 Thessalonians barely mentions "sin" and "righteousness" (2:10, 16), the conspicuous role in Galatians of justification by faith in Jesus Christ and related concepts indicates that Paul wrote this letter in a very different situation. Basically, however, Paul's theology in this letter is the same as in 1 Thessalonians, and the Galatian letter lends confirmation to it, rather than changing it. See also GALATIANS, EPISTLE TO THE.

Accordingly, Christian salvation is based on the death and resurrection of Jesus Christ (1:1, 4; 2:19–20; 3:1, 13; 4:4–6; 5:11, 24; 6:12–14), the gift of the spirit (3:2–5, 14; 4:6; 5:5, 16, 17, 18, 22, 25; 6:1, 8), the "putting on" of Christ in baptism (3:26-28), and living the new, Christian life as "new creation" (6:15), filled with "the fruit of the spirit" (5:22–23a; cf. 5:16–18, 25). The Christian is "in Christ," i.e., a member of the "church of God" (1:2, 13, 22; 2:4, 17; 3:26–28; 6:15–16). This church moves forward under the guidance of the spirit and awaits the eschaton (5:5, 10, 21; 6:7–9).

This basic conception has been radically challenged by the Jewish–Christian opponents of Paul who invaded the Galatian churches. See GALATIANS, EPISTLE TO THE.

As Paul presents the matter, these opponents have almost persuaded the Galatians to circumcise themselves and to accept the Jewish Torah (1:6–7; 5:1–12, 13, 15–16). This could only mean the abandonment of the Pauline Gospel and its substitution by another version of the Gospel that included observance of the Torah (1:6–9; cf. 1:11; 2:2, 5, 7, 14). Such a move would reverse Paul's own "conversion" from Pharisaic Torah observance to the Christian Gospel without the Torah. Speculation about the reasons for the Galatians' impending switch is difficult, but they must have had serious reasons. The problem they seemed to have had to face was the occurrence of serious moral failure (6:1). With only Gospel and spirit, they probably felt they lacked adequate protection against the temptations by the "flesh" (3:3; 4:13, 14, 23, 29; 5:13–24; 6:1, 8, 12–13). Under the tutelage of the Mosaic Torah, they would be given clear directives about what to do and from what to abstain.

Against his adversaries' doctrines the apostle spells out his doctrine of justification by faith in Jesus Christ (2:15–21; 3:2–5, 6–18, 19–25, 26–28, 29; 5:5–6; 6:7–10, 14–16). This doctrine originated in Jewish Christianity itself and had in fact legitimated the early mission to the non-Jews (2:1–10, 15–16; see Betz *Galatians*, 115–19). But Paul presses the revolutionary contrast between justification by faith in Jesus Christ and by "works of the Law" (2:16–21; 3:2–5, 10–13, 18, 19–25; 5:4; 6:13) only when his Jewish-Christian competition threatened his entire mission. In his Galatian letter we see how for the first time this doctrine became the main subject of a theological argument.

The doctrine of justification by faith basically affirms the sufficiency of salvation through Christ, without the Torah, for gentile Christians. In fact, Paul's strongest counterargument against his opponents contrasts the sufficiency of Christ with the insufficiency of the Jewish Torah. This insufficiency became manifest in Christ's death (2:21; 4:4–5), in the Jewish-Christians' belief in Christ (2:15–16), and in the previous history of the church. As a result of these unmistakable factors the Galatian churches had been founded without subjection to the Torah (1:16–2:14; 3:1–5; 5:1–4, 18), nor need it ever be, for, as Paul points out, the Torah was no longer the agent of salvation (2:19; 3:11–13, 19–25; 4:4–6; 5:18). Once this was recognized, those who had been born Jews were free to continue their Jewish life. It is, however, a completely different matter for Gentiles like the Galatians to feel they must accept circumcision and Torah, because they thereby concede that faith in Christ alone is not sufficient for salvation. Such a concession, to be sure, means cutting themselves off from the benefits of Christ (1:6–7, 8–9; 2:21; 3:1–5; 5:2, 4, 6; 6:12–16). Ceasing to be partakers in Christ's salvation, they would in effect become converts to Judaism.

Therefore, when Paul reaffirms his original message to them (1:8–9; 6:14–16), he advises the Galatians to rely on the spirit, as they have done before (3:1–5; 5:5, 16–18, 25; 6:1, 7–9). Such reliance on the spirit is sufficient as a weapon to deal with the temptations of the "flesh." On the other hand, abandoning the preciously won "freedom in Christ" (2:4–5; 3:26–28; 4:21–31; 5:1, 13) and taking up the yoke of the Torah (5:2) can only mean voluntarily entering into the confinement and slavery under law, sin, and flesh (2:4–5; 3:22–24; 4:4–5, 21–31; 5:1–12), that is, the "elements of this world" (4:3–11). Therefore, Paul's letter ends by affirming a "rule": "Neither circumcision nor uncircumcision is [worth] anything but [a] new creation [is worth everything]" (6:15; cf. 5:6; 1 Cor 7:19). This reflects the sufficiency of the spirit which he summarizes earlier in the letter: "If the spirit is the source of our life, let the spirit also direct our course" (5:25).

(3) Although written after Galatians, Paul's Philippian correspondence contains a theology in many ways similar to that of Galatians. One feature unique to Philippians—Paul's rumination on his possible, impending death—comes as little surprise given that he writes this letter while imprisoned, most probably in Ephesus (Phil 1:7, 12–26; cf. 1 Cor 15:32; 2 Cor 1:8–11; Acts 19:32–40). In the short run this reflection on the proper attitude to take when confronted with the threat of one's own death would prove premature (2 Cor 1:8–11; 11:23); nevertheless, in the long run it was quite realistic (cf. Rom 15:30–32). Although not entirely new (cf. 1 Thess 1:6; 2:14; Gal 6:14, 17), another prominent theme in the Philippian letter fragments (see Koester 1961; 1982, 2: 132–34) is Paul's participation in Christ's suffering, death,

and resurrection. This partnership provides the logic for the conspicuous role in Philippians that Christ's and Paul's examples play in the apostle's exhortation. Paul bases such imitation chiefly on the Christ hymn cited in 2:6–11 (see Betz 1967). This hymn also anchors Paul's main parenetical concern in Philippians, the unity of the church (esp. 1:5–11, 27–30; 2:1–4, 17–18; 4:1, 2, 7). A completely different tone appears in the fragment 3:2–4:3, where Paul sharply attacks his Jewish–Christian adversaries. On the whole, though, Paul's theology in Philippians again includes the doctrine of justification by faith in Jesus Christ (Phil 1:11; 3:5–11) and reliance on the spirit (1:19, 27; 2:1; 3:3).

The letter to Philemon may also have been written during the Ephesian imprisonment. Regardless, its basic theology again resembles the previous letters, although the major subject matter is of course different.

d. The Crisis at Corinth. The great crisis in the church of Corinth (for details, see CORINTHIANS, FIRST EPISTLE TO THE and CORINTHIANS, SECOND EPISTLE TO THE) confronted Paul with new, rapidly changing situations and challenges. Although the causes that gave rise to the crisis are to some extent confusing, it appears that, as far as theology is concerned, the problem stemmed neither from disagreement with what Paul taught, nor, in the first stages, from outside interference. Apparently, some of the Corinthians themselves had developed Paul's own theology in directions unpalatable to the apostle. As a result, charismatic experiences and ecstatic prophecy, though not unfamiliar to Paul (see 1 Thess 1:5; 5:20; Gal 3:5; Phil 3:10; 1 Cor 14:18), played too large a role in this church: the overwhelming abundance of and superior status attributed to their enthusiastic displays went beyond anything Paul had seen. Based on these experiences, members of the church apparently created their own theologies and modes of behavior without taking into account that this new Corinthian diversity posed a threat to the very existence of the church. Feeding into the crisis were other factors of social and religious origin, complicated by outside interference (Apollos? Cephas? [see 1 Cor 1:12; 3:4–6, 22; 4:6; 9:5; 16:12; Acts 18:24–19:1]). Interacting with each other, these factors gave the crisis a life of its own that at times drove Paul to the brink of his own demise.

The theological issues Paul confronted are stated succinctly in the prooemium of 1 Corinthians, the thanksgiving prayer (1:4–9). Since much of the language in the passage appears to conform to the Corinthians' self-understanding, Paul expected the Corinthians to agree when he saw "God's grace *(charis)* given in Christ Jesus" being manifest among them: "in everything you have been made rich through him [sc. Christ], in every form of speech and in every form of knowledge" (1:5; see Betz 1986a). The Corinthian church experienced this spiritual wealth in its abundance of spiritual gifts, *charismata*, which had become a source of pride (1:7; 7:7; 12:4–31). Being Greeks, they especially cherished, "eloquence and knowledge" (1:5; cf. 2 Cor 8:7). These cherished gifts were all derived from the divine spirit which revealed them through prophecy (see, esp. 1 Cor 12:8; 14:1–40). These experiences also satisfied the Greek cultural expectation that they possess "wisdom" (*sophia* [1:22]). But Paul considered the Corinthians' pride to be compromised severely by the fact that they seemed unable to cope with cosmopolitan diversity and sophistication in the church and that their pride created strife and factionalism (see 1:10–17; 3:3–4; 11:18–19; 12:25). These deteriorating developments created an intolerable discrepancy between claim and reality. As Paul put it, the Corinthians' wealth of *charismata* was still deficient: they lacked mature love among each other and consequently congregational harmony (1:7–9, 10, 13a; 3:1–2; 8:1; 13:1–13; 16:14). This discrepancy not only disrupted their congregational life in a threatening way, but also raised the question whether this church would be able to appear at the Last Judgment, as it would be required to do, "blameless" (1:8; cf. 15:58).

Paul's theology in 1 and 2 Corinthians differs markedly from his earlier letters because the crisis in Corinth solicited a new response with a new, special kind of theology. Since the Corinthians' ideas were not simply imported from the outside but were mostly based on assumptions in Paul's own theology, he could not simply repudiate their ideas, but had to take them up and develop them in a different direction. Thus, Paul agreed with the Corinthians that a wealth of eloquence and knowledge is certainly a laudable blessing; he added, however, that it ought to add up to "wisdom of God" and not "wisdom of this world"

(1 Cor 1:18–3:23). This new theology of wisdom is designed to affirm the Corinthian claims on the one hand, but correct them on the other by bringing them in line with Paul's own theology of the cross.

In order to meet the challenge, Paul proceeded from his established positions on theology and christology (see, esp. 1:1–3, 4–9, 18–24; 8:6; 12:3; 15:3–5). Dealing not with Jewish but Greek claims (1:22), he applied the principles of his theology of justification by faith in Jesus Christ not to "works of the law" (as in Galatians), but to the claim to possess wisdom (1:18–31). The common denominator was the principle of proper and improper "boasting" (1:29–31; 3:21; 4:8; 5:6; 9:15–16; 15:31). In the first part of 1 Corinthians (1:18–3:23) Paul demonstrated what in his eyes really constituted Christian wisdom by critically analyzing the concept. In the second part he brought these clarifications to bear on his own role as church leader (chap. 4) and on the concrete problems which disturbed the church (chaps. 5–15). Since 1 Corinthians evidently did not achieve its goals, the fragments assembled in 2 Corinthians provide further insights into Paul's monumental struggle to get the church to understand and accept his theological viewpoint. Thus, the entire Corinthians correspondence, at least to the extent we possess it, amounts to an education in the apostle's theological thinking. Within the parameters of the struggle, he worked out positions on a broad range of issues, from legal and ethical issues to those of religion and worship, including even self-evaluation of his own role and conduct. See CORINTHIANS, FIRST EPISTLE TO THE; CORINTHIANS, SECOND EPISTLE TO THE.

On the whole, the Corinthian crisis subjected Paul's theology to the test of fire (1 Cor 3:13–15). Apparently, he had no time for critical reevaluation of his theological premises, in particular his doctrines of the spirit, sin, and the law. It is, however not surprising that after the struggle was over, Paul took the time to revise his thinking in rather substantial ways, resulting in his *magnum opus*, Romans.

e. The Later Paul. When Paul wrote his letter to the Romans, he took the occasion to summarize his theology in a more systematic fashion than in his previous letters. This letter does not, however, present a complete and final statement, but rather a résumé of a more mature stage in his theological development. Paul felt the need for this summary for a number of reasons. First, since he did not found the Roman church yet intended to visit it, the letter served as an appropriate way to introduce himself. Second, the apostle also realized that he had to counteract the hostile rumors circulated by his opponents and the caricatured versions of his teaching with which they slandered him (Rom 3:5–8; 6:1). Third, because he knew that dangers awaited him in Jerusalem (15:30–32), Paul sent this letter to Rome, and possibly a copy to Ephesus, as something like a theological "testament" (see Bornkamm 1971a: 88–96; 1971b).

Although presented as a defense argument, the main thesis of which is stated in 1:16–17, Paul's letter contains more than merely an apology for views he has always held. In comparison with his earlier letters, Paul in Romans writes with much greater circumspection and complexity. This letter includes elaborate discussions of theological topics previously argued, or at least mentioned, topics that are entirely new, and, most importantly, revisions of earlier positions on significant theological doctrines. It is incorrect to think, therefore, that in Romans Paul merely presents a fuller version of what he more briefly sets forth in other letters.

The point of Paul's argument as a whole is to explain the reasons why he still refuses to be ashamed of the gospel as he has been preaching it, and why his gospel is indeed God's power achieving salvation for every believer, Jew or Greek (1:16–17). If he can successfully demonstrate this, he can hope the Romans will not be embarrassed by his visit and will support his plans for a mission in Spain (15:22–24).

As the opening thesis (1:16–17) indicates, Paul bases his entire argument on the doctrine of justification by faith in Jesus Christ. This doctrine had, of course, been argued before in Galatians and Philemon, and with special application in the Corinthian letters, but its full development in terms of a history of salvation reaching from Adam (5:12) to the *parousia* (2:5, 16; 8:31–39; 13:11–14) occurs only in Romans. The application of this pivotal doctrine to history has abbreviated parallels in 1 Cor 15:21–22, 45–49 and Gal 3:6–29, but the thoroughness and comprehensiveness of the approach in Romans is a new achievement.

As Paul begins citing his proofs, he first offers a radical critique of paganism (1:18–32) and Judaism (2:1–3:8); this approach is new as well, although elements have occurred in earlier letters (cf. Gal 3:19–25; 4:8–10; Phil 3:2–9; 1 Cor 8–10; 2 Cor 10:1–13:10). While all ancient religions are, according to the

apostle, corrupt to the core, divine restitution began with Abraham and reaches all the way to Christ (Rom 4:1–25; cf. Gal 3:6–25). Abraham and Christ, therefore, are the two main pillars on whom the doctrine of justification by faith rests (3:9–31). Unlike Galatians, in Romans Paul does not repudiate the Torah (see 7:12, 16, 21–23; 8:2–8), but instead argues in favor of being a "genuine" Jew and against being a Jew by pretense (2:1–29). The prototype of the genuine Jew is Abraham, who was declared righteous by God even though neither Torah nor circumcision existed at that time. His righteousness was his unconditional faith in God, on account of which he received God's promise. This promise finds fulfilment in Jesus Christ, and is subsequently applied to all who believe in him (4:1–25); therefore, Christ, not Abraham, provides access to God's grace for all believers (5:1–12). Jesus Christ, and Jesus Christ alone, the new and second Adam, has overcome the human corruption endemic in the race since Adam and now makes possible for humanity a means of deliverance from the domination by sin and death that resulted from Adam's fall (5:12–21; cf. 1 Cor 15:21–22, 45–49).

Chapters 6–8 set forth the benefits of Christ's salvation. Initially Paul refers to the doctrine of baptism into the death and resurrection of Christ (6:1–11), writing that through baptism the Christian is sacramentally initiated into and made a partaker of Christ's death and resurrection as a salvation event (see *BTNT* 1: 292–314; Conzelmann 1969: 199–212; Wedderburn 1987). Though Paul has mentioned the basic components of this teaching in Gal 3:26–28 (cf. 1 Cor 1:13–17), the comprehensiveness of what he says here goes beyond anything he previously wrote about baptism. He has spelled it out here because baptism links the Christian to Christ's salvation and thereby provides the basis for the Christian's participation in the benefits of Christ's salvation about to be discussed. The first of Christ's benefits which Paul presents is liberation from the enslaving power of sin (6:12–23), a doctrine which seems to be older and already presupposed in the earlier letters (1 Thessalonians, however, does not mention it). The second benefit, liberation from the law (7:1–25a), expands what Paul had previously said only when referring to his own paradigmatic experience (Gal 2:19–20; Phil 3:7–8). The third benefit is liberation from death (Rom 8:1–30), an idea with antecedents in 1 Thess 4:13–17 and Gal 2:19–20 (also Phil 1:12–26; 1 Cor 15:50–57; 2 Cor 1:3–11; 2:14–17; 4:7–5:15; 13:3–4), but not before stated as a part of an overarching salvation doctrine. These benefits reach their climax with the fourth, viz. the eschatological union with God (Rom 8:31–39; cf. 1 Cor 15:20–28).

The final section on the history of salvation concerns the relationship between Jews and Christians in future history (Romans 9–11), a dimension which Paul had never before addressed. Recognition of this as an issue presupposes Paul's concession that the *parousia* will not be imminent (cf. 13:11–14) and that there will be two religions, Judaism and Christianity, existing side by side for some time to come. Paul still argues on the premises of his doctrine of justification by faith in Jesus Christ that Jews and Christians will have to coexist, stimulating and checking one another by peaceful competition (11:13–24). The final "mystery" will be disclosed when "the fullness of the gentiles enter into" the kingdom of God, and "all Israel will be saved" (11:25–26).

This entire history of salvation is regarded as a succession of God's merciful deeds (12:1), beginning with Abraham and ending when no accuser remains for the Last Judgment (8:31–39; 11:33–36). This grandiose historical and eschatological panoply is yet another new development in Paul's theology.

A further significant shift in Paul's thinking takes place in his ethics, for which the apostle finds a new foundation (Betz 1988). Instead of grounding Christian ethics simply in the spirit, as he does in his earlier letters, Paul develops a new concept in Rom 12:1–15:13. Paul now conceives of ethics as the human response to God's merciful deeds in the history of salvation (chaps. 4–11). This response is a matter of obligation and involves the self-dedication, and, indeed, the self-sacrifice of the whole human person, body and mind (12:1).

Paul has also integrated the notion of spirit into the benefits of Christ (5:5; 7:6; 8:2–27). Thereby Paul has prevented the (Corinthian) misunderstanding of spirit in terms of individualistic spirit possession. The spirit cannot be divorced from the body because self-sacrifice includes the whole person. This person also belongs to the corporate body of the church (12:3–8; see also 1 Cor 12:12–27; Gal 3:26–28) and does not exist in isolation. Moreover, Christian existence is inconceivable without the norms set by the notion of

love (*agapē* [12:9–21]). Concretely, Christian ethics is a matter of obligations toward society at large: the state (Rom 13:1–7), the law (13:8–14), and the weaker members of the Church (14:1–15:18).

3. Summary. The extant letters and letter fragments show an author constantly involved in debates and conflicts, trying to explain, defend, and recommend what he sees to be the implications of Christian life and thought. The urgency to engage in this dialogue grew out of Paul's awareness that he and his assistants were taking part in momentous historical developments. This urgency pressed even harder when doom threatened Paul's gentile mission, requiring that he provide theological warrant for it. Thus, through the course of his ministry Paul increasingly found that his task was not only to bring the Gospel to the gentiles, but to bring theological clarification to the Gospel.

As Paul attempted to make sense of Christian theology, the Damascus event provided an unexpected answer to an old Jewish question: "Is God the God of Jews only? Is he not the God of gentiles also?" Because Christ ordered Paul to preach the gospel to the gentiles, Paul could now answer boldly: "Yes, of Gentiles also" (Rom 3:29). Thus the universality of the gospel commission confirmed the unity of God. The Damascus event also demonstrated that the Damascus Christians were correct, righteousness was available apart from Torah. Combining this realization with the unity of God, Paul concluded that the Gospel must provide a single, inclusive means of justification: "Since God is one, he will justify the circumcised on the ground of their faith and the uncircumcised through their faith" (Rom 3:30). Thus, the doctrine of justification by faith was implicit in the Gospel message itself as Paul experienced it: coming to grips with it and making it explicit in ever greater clarity and detail is the thread that runs through Paul's life and letters.

To raise a basic question yet again, does any continuity and consistency of thought underlie the shifts and changes, the theological reformulations and revisions evident in Paul's letters? From the foregoing, we can say that despite changes of position, such as his realization that the *parousia* would be delayed and that the historical coexistence of Christian and non-Christian Judaism would persist for some time, Paul steadily held on to justification by faith. Moreover, if there was anything that established the theological identity and legitimacy of Christianity as a new religion, it was Paul's discovery and exposition of the God who "in Christ" justifies a sinful and godless humanity.

PAUL AND SENECA, EPISTLES OF. A series of 14 Latin letters that comprise an apocryphal correspondence between Paul and the Roman philosopher Seneca. They were most likely written in the 3d or 4th century to commend Seneca to Christians or to recommend Paul's letters to members of Roman society. The correspondence is attested in numerous corrupt manuscripts, most of which date from the 13th, 14th, and 15th centuries, although a few are as early as the 9th. The letters were known to Jerome and Augustine, but scholars disagree over whether they regarded them as authentic. Some scholars suggest that the letters we now possess are not the ones known to Jerome and Augustine (Lightfoot 1953: 330–31). The correspondence remained popular throughout the Middle Ages. It is noted by Peter of Cluny in *Tractatus adversus Petrobrusianos* (*PL* 189.737C); by Peter Abelard in *Introductio ad Theologiam* 1.24 and in *Expositio in epistolam Pauli ad Romanos* 1.1; and in the *editio princeps* of Erasmus (Kurfess *NTApocr* 2:135). English translations are provided by James and Kurfess.

The correspondence alternates, with letters 1, 3, 5, 7, 9, 11, 12, and 13 purportedly written by Seneca, and letters 2, 4, 6, 8, 10, and 14 supposedly written by Paul. In letter six Paul greets Lucilius along with Seneca; letter seven is addressed to Paul and Theophilus. The letters contain an exchange of compliments between the two writers.

Seneca begins the series by praising the "wonderful exhortations for the moral life" contained in Paul's letters (Kurfess *NTApocr* 2:135). Paul responds, in letter two, by thanking Seneca for his high praise. Letter three tells of Seneca's desire to read some scrolls to the emperor. Letter four expresses Paul's desire to meet with Seneca. In letter five Seneca is distressed that Paul has not come to see him, and wonders if it is because he is afraid that the empress is displeased over his giving up the beliefs of Judaism. Seneca says that a visit might enable Paul to explain why he has given up these beliefs and practices. The sixth letter provides an opportunity for Paul to encourage Seneca and Lucilius to treat all people with respect.

In letter seven Seneca reports that he agrees with what Paul says in his letters to the Galatians, Corinthians, and Achaians (= 2 Corinthians; see 2 Cor 1:1), and that Paul's thoughts have made a positive impression on the emperor. Paul uses the eighth letter to tell Seneca that, while showing love and respect for him, he must take care not to offend the empress. In letter nine Seneca expresses his new understanding of Paul's concerns and his desire that they begin to work afresh. Letter ten concerns Paul's acknowledgement that his name should have been placed last on a letter he previously sent to Seneca. Seneca sends the eleventh letter to indicate his distress and grief over the persecution experienced by Paul and other Christians. Letter twelve is Seneca's response to the issue, raised in letter ten, of the placement of Paul's name. He indicates that he is not at all offended by the placement and suggests that they are equals. In letter fourteen, Seneca encourages Paul to write with refinement. Finally, in letter 14 Paul

pushes Seneca to write in such a manner as to "make yourself a new herald of Jesus Christ" (Kurfess *NTApocr* 2:141).

DANA ANDREW THOMASON

PAUL'S NEPHEW. The report about an unnamed nephew in Acts 23:16–22 is the only reference we have to Paul's family connections. Naturally, there is the temptation to view the incident as a Lukan creation. However, since Paul as a Roman citizen would in any case have been brought to Caesarea as the first stage in any judgment process, Luke would have had no motive for creating the incident (Williams *Acts* BHNTC, 251). The account must go back to an eyewitness (Hengel 1983: 175); at least, Paul's sister and nephew appear to be historical (Lüdemann 1987: 254–55). Moreover, Paul's sister's family or the nephew himself must have had connections in Jewish circles for him to have heard of the ambush. This story may belong to a tradition about Paul's family moving from Tarsus to Jerusalem and about his education there under Gamaliel (cf. Acts 22:3).

Not unreasonably, scholars infer from Phil 3:8, "For his (Christ's) sake I have suffered the loss of all things," that Paul was disinherited for his acceptance and proclamation of Jesus. Such a situation would explain how his sister's family might still have Jewish connections (Bruce *Acts* NICNT, 457–58). Also, visits to persons in prison were possible (e.g., Luke 7:18; Matt 11:2; 25:36; Acts 24:23; 28:30; Phil 2:25–30). Nonetheless, because there is a minimum of verifiable evidence, much that is said is conjectural.

The text reports that Paul's nephew learned of the ambush planned against him and told him about it. Paul then appears almost to order the centurion to lead his nephew to the tribune since he has something to tell him. The centurion does this. The tribune takes Paul's nephew aside and inquires what he has to say. Paul's nephew tells him about the Jewish ambush, that they will ask him to bring Paul down to the Sanhedrin the next day, and that more than 40 individuals have bound themselves by oath to kill Paul at that time. Paul's nephew urges the tribune not to agree to their request. The tribune tells him to tell no one that he has informed him of the plot, and then dismisses him.

In the story, Paul does the reasonable thing, and the centurion does his duty. Both Paul's nephew and the tribune demonstrate moral character. The nephew cares enough about Paul to risk informing the Romans, and the tribune is well disposed and attentive, yet cautious. The story of Paul's nephew belongs to Luke's theme that the Roman officials are well disposed toward the Christians (O'Toole 1984: 160–66).

ROBERT F. O'TOOLE

PAUL, ACTS OF. A 2d-century Christian writing recounting the missionary career and death of the apostle Paul and classed among the NT Apocrypha. In this work Paul is pictured traveling from city to city, converting gentiles and proclaiming the need for a life of sexual abstinence and other encratite practices. Though ancient evidence suggests that the *Acts of Paul* was a relatively lengthy work (3600 lines according to the *Stichometry* of Nicephorus), only about two-thirds of that amount still survives. Individual sections were transmitted separately by the medieval manuscript tradition (Lipsius 1891), most importantly the *Acts of Paul and Thekla* and the *Martyrdom of Paul*, both extant in the original Greek and several ancient translations. Manuscript discoveries in the last century have added considerable additional

material. The most important of these include a Greek papyrus of the late 3d century, now at Hamburg (10 pages), a Coptic papyrus of the 4th or 5th century, now at Heidelberg (about 80 pages), and a Greek papyrus of correspondence between Paul and the Corinthians (*3 Corinthians* = Testuz 1959), now at Geneva. These finds have confirmed that the Thekla cycle and story of Paul's martyrdom were originally part of the larger *Acts of Paul* (details in Bovon 1981 or *NTApocr.*). See also PAUL, MARTYRDOM OF; THEKLA, ACTS OF.

The papyrus discoveries have suggested that the story of the *Acts of Paul* was organized according to an itinerary of missionary visits to the leading cities of the Roman East (Schmidt 1905), including at least Antioch of Syria, Iconium, Antioch of Pisidia, Seleucia, Myra, Sidon, Tyre, Ephesus, Philippi, Corinth, then on to Italy, and finally martyrdom at Rome. In each city Paul encounters believers, sometimes already known to him; whether he has sent fellow workers ahead or is now visiting previously established communities is not always clear. A constant theme is the opposition engendered by Paul's preaching of conversion to a Christianity marked especially by renunciation of ordinary life and values. Because the work is incomplete and its original sequence of events not entirely recoverable, however, arguments from silence about its contents or interests must remain more than usually tentative (Schmidt 1905 and 1936; Schneemelcher *NTApocr.*, and 1974; Bovon 1981).

There are many coincidences of names and places with the account in the NT Acts of the Apostles, but very little actual agreement in detail for any particular event or place. There is some diversity in the manner of Paul's preaching from city to city, but consistency in his message: the need for conversion to a life of celibacy in Christ. In Iconium, for example, we see Paul pronouncing beatitudes that stress the value of a life of renunciation: "Blessed are those who have kept the flesh pure … Blessed are the continent … Blessed are those who have renounced this world … Blessed are those who have wives as though not having them … Blessed are the bodies of the virgins …" (*Acts of Paul and Thekla* 5–6). This stress on encratism, that is, a life of ascetic renunciation and physical denial, represents an important current within earliest Christianity (Tisserot in Bovon 1981; Brown 1988).

In several places, following a theme familiar in the Apocryphal Acts in general, social and legal conflict arises because of Paul's success in summoning pagans (especially women) to the celibate or virginal life. The best-known surviving section was transmitted separately in late antiquity and the Middle Ages as the *Acts of Paul and Thekla* due to St. Thekla's importance as a figure of cult in Christian Asia Minor (for the extensive hagiographical tradition see Dagron 1978). This story portrays a young woman, about to be married to a leading city figure, who upon hearing Paul instead adopts the celibate Christian life and attempts to journey with the apostle and then herself become a missionary. Paul is not very encouraging until Thekla proves her mettle (and her vocation?). Thekla's stubborn celibacy twice provokes anger, first in her native Iconium from her rejected fiancé, whereupon she is arresed, condemned to death in a public beast-fight, but ultimately rescued by divine intervention. In the second case, in Seleucia, Thekla is condemned to the beasts by another rejected man, and then baptizes herself when in imminent danger; after her second miraculous rescue, she adopts an apostolic life and finally receives Paul's blessing and approval for her work.

The motifs of travel, frustrated love, and other entertaining elements are reminiscent of many aspects of the ancient popular genre of romance novels (Söder 1932; Pervo 1987), with the important difference that in these ascetic acts the tone is less erotic than anti-erotic. There is very little theological argument or speculation, but instead the narrative describes the dangers and successes of those steadfast in their renunciatory behavior. The early Christian communities are portrayed as joyfully united in prayer and simple communion, looking for the soon and sudden end of the world, portrayed in the traditional apocalyptic imagery.

The themes, locales, and external evidence all point to a composition date sometime in the mid-2d century, somewhere in Asia Minor. Tertullian claimed to know that the work was the product of an Asian presbyter who however was quickly exposed as a fraud (*De baptismo* 17). Tertullian's objection to the work is the leading role, self-baptism, and attitude assigned to Thekla, and his response is a good indication of both the appeal and the threat embodied in the work. Some modern scholars suggest that the

authors of at least the Thekla cycle, perhaps in an earlier oral form, were women seeking affirmation of their celibate way of life and leadership role in Asian Christianity (see esp. Davies 1980 and Burrus 1987). Certainly the stories in the *Acts of Paul* reflect the more radically renunciatory side of 1st and 2d century Pauline Christianity and uphold the tradition of sexual equality over the subordination of women (cf. e.g., 1 Corinthians 7 vs. 1 Timothy 2), but specific claims about the gender of the writer(s) go beyond the evidence available (see MacDonald 1983 and 1986).

The nature of the relationship between the *Acts of Paul* and the NT Acts is disputed, though traditionally, as with most "apocryphal" literature, scholars suggest that these stories are intended to supplement the canon (Söder 1932; Schneemelcher 1964 and 1974). But some have argued more recently that while the author(s) of the *Acts of Paul* may well have known the NT Acts, that work was not in any way decisive for his (or her!—see above) own understanding of Paul's story (esp. Pervo 1987). For example, the dominant motif of Jewish hostility to Paul's mission in the NT Acts, along with at least passive acceptance from Roman authorities, is entirely missing. In the *Acts of Paul* the Jews and their synagogues are offstage; the apostle preaches to the gentiles and encounters opposition from the social and governmental elite and indeed finishes by being executed at Rome at Nero's command. Only in this last episode it is not Paul's preaching of celibacy that puts him in danger—instead Nero perceives a social, political, and perhaps even a military threat from "Christ's army" as led by Paul. If the NT Acts are known, in sum, they are not used as a source either of reliable information or of authoritative interpretation about Paul's life and theological orientation.

PHILIP SELLEW

PAUL, APOCALYPSE OF. The name of two different apocryphal works, both inspired by the tradition of Paul's "rapture" into the heavens (2 Cor 12:2–4). One, an extensive tour of paradise and hell, composed sometime in the 4th or 5th century C.E. is preserved in a long Latin version; a Greek abridgment, and in Armenian, Old Russian, Syriac, and Coptic versions. It also appears to have been an important source for later Christian works which described the geography of the fiery punishments in hell (see A below). The other, a Christian gnostic work from the 2d or 3d century C.E. (NHC V,*2*), emphasizes Paul's ascent with the twelve apostles through the eight heavens of Jewish and Christian traditions into the "tenth," the resting place of the elect (see B below). It survives in a single reasonably well-preserved Coptic version found among the gnostic writings at Nag Hammadi. There are some parallels between its vision of the souls being punished in the fourth and fifth heavens and the punishments reported in the

Testament of Abraham 10. Epiphanius alludes to an *Ascension of Paul* used in some gnostic groups (*Pan.* 38.2). Since that work had only three heavens, it may indicate that yet a third apocalypse of the heavenly journey type circulated in early Christian circles.

A. Latin Version

Although *Apoc. Paul* was originally composed in Greek, the long Latin version represents the best text for this early Christian work. It is first clearly attested in Augustine (*In Joh. Tract.* 98.8; *Enchir.* 112–13). An ancient introduction to the work claims that is was composed in the late 4th century C.E. Many modern scholars think that the body of the apocalypse may have been written in the early 3d century, since Origen refers to an *Apoc. Paul* as accepted by the church and also gives a description of the fate of the soul similar to that beginning in chap. 13 *(Hom. in Pss. 5).* The author praises asceticism (chaps. 9, 24, 26, 39–40) and condemns persons who only appear to renounce the world by wearing the garb of the ascetic (chap. 40). But unlike later texts it does not refer to the extensive development of monastic asceticism.

The so-called "Tarsus introduction" (chaps. 1–2) claims that the manuscript was found in 388 C.E. by a person living in a house once owned by Paul. Following instructions given by an angel in a dress, the finder discovered in the foundations a marble box containing the revelation. Chaps. 3–10 detail creations complaint against the sinfulness of humanity. God's forebearance is demonstrated in the delay of judgment. Nevertheless all the deeds of humans are reported by angels every morning and evening. Paul's journey to the third heaven enables him to see how the wicked and righteous souls depart from the body at death (chaps. 11–18). Journeys in the heavenly regions allow Paul to see Enoch and Elijah in paradise, the land where the righteous dwell during the millennium and the city of Christ. The righteous ones of the Hebrew Bible and the altar where David sings are found in that city (chaps. 19–30). Then Paul is taken to see the extensive punishments suffered by sinners. At the end of the journey he and the archangel Michael plead for mercy for sinners. Christ responds by rebuking the sinners but granting them rest from punishment on Sunday (chaps. 31–44). The journey ends in paradise where Paul is met by the righteous including the Virgin Mary, the patriarchs, Moses and Adam (chaps. 45–51). Adam blesses Paul for the many persons he has brought to faith. On the Latin version, see James 1893; Duesning 1965; Himmelfarb 1983.

B. Coptic (Gnostic) Version

The first of four gnostic apocalypses, in the Achmimic dialect, from Codex V at Nag Hammadi, this work bears the title *Apocalypse of Paul* at the beginning and end of the writing (NHC V,*2*). It is not related to the *Apoc. Paul* preserved in the Latin, though Paul does witness the judgment of various souls in his ascent through the fourth and fifth heavens. Reincarnation is presented as the punishment extracted by the demonic guardians of the heavens from those souls which have not obtained true knowledge (21, 18–22).

The book opens with Paul meeting a small child, his guiding angel, also identified with the Holy Spirit on "the mountain in Jericho." The divine figure will lead the apostle in his ascent to Jerusalem. Gnostic revelations frequently picture the risen Christ as a polymorphic figure who appears like a child. Thus the opening appears to recall Paul's resurrection vision and his going up to Jerusalem to visit the apostles (Gal 1:11–17; 2:1–2). Here he is taken into the heavenly Jerusalem where he will meet his "fellow apostles," the Twelve. As they begin the ascent, Paul is shown his body and those of the Twelve on the earth below. In the shining light of the sixth heaven, Paul must utter a formula, "open to me and the [Holy] Spirit, who is before me," in order to pass by the toll collector (22, 21–23). Passing into the seventh heaven, he encounters an old man on a throne who acknowledges Paul's election in terms drawn from Gal 1:15. An extended dialogue in which Paul speaks the gnostic formulas about returning to the "place from which he came" and leading others from the captivity of the lower world shows that the old man is the Jewish creator god. Paul goes beyond that god's heaven and authority when he gives the "sign" that makes it possible for him to enter the next heaven, the Ogdoad. There the Twelve greet Paul, and they continue in the company of the elect to the tenth heaven.

This *Apoc. Paul* has clearly used the genre of heavenly journey to embody the gnostic formulas for the post mortem ascent of the soul. This theme along with the formulaic dialogues necessary for the soul to

gain its freedom appears in a number of gnostic writings (*Gos. Mary, 1 Apoc. Jas., Gos. Thom.* Log. 50). On the Coptic version, see Murdock and MacRae 1979; Fallon 1979; Kasser 1965; Krause 1983; Orbe 1983.

PHEME PERKINS

PAUL, MARTYRDOM OF. A document describing Paul's encounter with the emperor Nero in Rome and his subsequent trial, execution, and miraculous appearance after death. Originally the *Martyrdom of Paul* was the concluding section of the 2d century apocryphon the *Acts of Paul,* but it was separated very early and transmitted independently in medieval Christianity in connection with the cult of the holy apostle and martyr. The story tells how Paul runs afoul of Nero by resurrecting and converting Patroclus, the imperial cupbearer. A search leads to Paul's arrest and that of many other Christians, all of whom are condemned to death when Nero hears Paul's threats of apocalyptic judgment with fire. Paul predicts that the emperor will see him after his death; after his execution by beheading, when milk miraculously spurts from his neck rather than blood, the apostle does appear, causing Nero to free the remaining Christians. While in jail awaiting execution, Paul had begun to convert the Roman centurion Cestus and the prefect Longus, who at his instructions visit his tomb at dawn and receive baptism from Titus and Luke. The historical value of the story is minimal, as is suggested by its borrowing of many motifs from similar accounts of the deaths of holy people, and its literary merits are few; but the *Martyrdom of Paul* nonetheless achieved great popularity. See also PAUL, ACTS OF.

PHILIP SELLEW

PAUL, PASSION OF. See PETER AND PAUL, PASSION OF; PAUL, MARTYRDOM OF.

PAUL, PRAYER OF THE APOSTLE (NHC I,*1*). Inscribed in the front flyleaf of Codex I of the Nag Hammadi collection is a brief (2 page) work followed by a title and colophon. Apart from a few lines missing at the top of the first page, the work is well preserved. Although it survives in Sahidic Coptic, the *Prayer of the Apostle Paul* (NHC I,*1*), like most of the other works in the Nag Hammadi collection, was probably composed in Greek, the language of the colophon and title. The date of composition is uncertain, although it was clearly written before the final copying of the collection in the mid-4th century, and probably after the mid-2d century, when the Valentinian Gnosticism evidenced in the text emerged.

In form, the text resembles prayers and hymns in other gnostic, Hermetic, and magical sources. The extant portion begins with a series of invocations of the redeemer, "Jesus Christ, the Lord of Lords." He is asked to bestow on the supplicant his blessings, including bodily healing and eternal salvation.

The major motifs of the prayer are gnostic commonplaces. Thus, the invocations identify the redeemer as the "source," "mind," "fullness," and "repose" of the supplicant, who asks for the redemption of "my eternal light-soul and my spirit." Yet the text also owes some of its motifs to the Psalms and to the Pauline epistles. A clear example of dependence on Paul, and at the same time another indication of gnostic orientation, is the request to be granted "what no angel-eye has seen and no archon-ear has heard and what has not entered into the human heart" (cf. 1 Cor 2:9). The Gnosticism involved is probably Valentinianism, which is represented in several other works contained in the codex, including the *Gospel of Truth* (NHC I,*3*), *The Treatise on Resurrection* (NHC I,*4*), and *The Tripartite Tractate* (NHC I,*5*). The invocations of the redeemer would be at home in Valentinianism, as are the designations of the redeemer

as "First-born" and "First begotten." The disparaging reference to the creation of the human heart "after the image of the psychic God" evokes the common gnostic reading of Genesis and the Valentinian tripartite schema which consigns the creator God of the OT and all his works to the "psychic" realm.

HAROLD W. ATTRIDGE

PAULUS, SERGIUS (PERSON) [Gk *Sergios Paulos* (Σεργιος Παυλος)]. The proconsul of Cyprus converted by Paul when he and Barnabas visited that island on their first missionary journey (Acts 13:7).

The Roman cognomen "Paulus" is found in two inscriptions which have been thought to identify the proconsul mentioned in Acts 13 (*IGRR* III.930 and *CIL* VI.31545). The "Paulus" mentioned in the first inscription is too late be connected with Paul. The second inscription mentions an L. Sergius Paulus who was curator of the Tiber, but does not connect him with Cyprus. He could be the Paulus mentioned in Acts if it is assumed that he was later appointed to Cyprus in the right time frame. A third inscription (*IGRR* III.935) has been restored to read "Q. Sergius Paulus." The identification of this person with the proconsul of Acts is more probable than the other two inscriptions but conclusive proof is lacking (Van Elderen 1970: 155f). If a definite inscriptional identification of Sergius Paulus could be made it would be important for establishing the chronology of the Pauline missionary journeys in Acts.

Because Luke fails to mention the baptism of the proconsul some have thought that he was not actually converted. The Lukan emphasis on repentance and baptism as a sign of conversion found in the early chapters of Acts is less prominent in the Pauline sections of Acts. But Luke's use of *pistis* (faith) and *pisteuō* (believe) in connection with Paul is an effort to mimic Pauline language and connotes conversion. In Luke's eyes, Sergius Paulus is a convert. Ramsay (1920: 150–72) attempted to use inscriptional evidence mentioning other members of the family to substantiate Luke's claim as historically accurate. His results are intriguing but inconclusive.

The portrayal of Sergius Paulus as a convert may be important to the theology of Acts in two ways. First, it has been thought to reflect a pro-Roman apologetic. Luke is said to be seeking Roman acceptance of Christianity by stating that a Roman of the Senatorial Order had found it acceptable. But since there are other aspects of Acts which make a Roman apologetic problematic a second explanation may be suggested. From a sociological perspective the story about Sergius Paulus functions to provide social legitimacy for the Christians who were reading Acts. Rather than indicating that Luke's community actually had such upper-class members, this story of an aristocratic Roman convert would help Christians from marginalized groups or others experiencing status inconsistency to see themselves as on a par with other religions groups in the Greco-Roman world. See ELYMAS.

PEACE. This entry consists of two articles. The first one deals with peace in the OT, and the second one covers peace in the NT.

OLD TESTAMENT

The principal word used to express the idea of peace in the Hebrew Bible is *šālôm.* The root of the word is found in many Semitic languages. The Akkadian *salāmū* comes closest to the core meaning of the root, "to be hale, whole, complete." In one form or another the notions of wholeness, health, and completeness inform all the variants of the word. Peace is not, then, simply a negative, the absence of war. Peace is a positive notion, a notion with its own content.

Šālôm is the daily greeting in Israel; *šālôm ʿălêkem* "peace upon you (pl.)" is a common expression we could translate as "good day." But it really is closer to "may you be well." To be well is, of course, to be "whole, to be complete," to have physical and spiritual resources sufficient to one's needs.

Wholeness or completeness can be ascribed to things as well. Thus Solomon in 1 Kgs 9:25 offers peace offerings *(šelāmîm)* in the temple he completed *(šillam).* A debt is made good *(šallēm)* through payment of money. Vows are completed *(šallēm)* through sacrificial offerings.

Peace is contrasted with war. Qoheleth notes that "there is a time for peace and a time for war" (Qoh 3:8). In numerous passages peace is negotiated to end or preclude hostilities (Deut 20:10–12; Jos 9:15; 10:1; 10:4; 11:29). R. de Vaux (*AncIsr,* 254) notes that "peace in a political sense is not only the absence of war in a purely negative sense, but it includes the idea of friendly relations between two peoples" (see Judg 4:17; Isa 7:14; 1 Kgs 5:4, 26; 22:45). Peace is also synonymous with victory (Judg 8:9; 2 Sam 19:25, 31; 1 Kgs 22:27–28; Jer 43:12). Peace and prosperity are paired (Mic 3:5; Zech 8:12; Mal 2:5). In this pairing it would seem that peace is seen as a sort of economic freedom.

Then there is the idea of dying peaceably. "You shall go to your fathers in peace" (Gen 15:15) is a promise to Abraham; this peace is contrasted to disquiet. The peace of the blessed rest overcomes the natural anxiety about death and the afterlife. These usages of *šālôm* are "secular" or "profane," in contrast to the theological understanding of *šālôm.*

G. von Rad (*ROTT,* 1:130) observed that "the relationship guaranteed by a covenant is commonly designated by the word *šlm*" (see Gen 26:30ff; 1 Kgs 5:26; Isa 44:10; Job 5:23). The Hebrew Bible speaks of the *bĕrît šālôm* "covenant of peace" (Num 25:12; Ezek 34:25; 37:26). This notion of a covenant of peace is particularly useful in developing our understanding of *šālôm.* The covenant initiates a relationship which is based in some sense on mutually assured obligations. Though God cannot be said literally to be "obliged," there is an implicit contract that attaches transcendent values to ordinary or customary human actions.

It is this association of *šālôm* with *bĕrît* "covenant" and also with *mišpat* "judgment, justice" that ties together the nuance of wholeness with the notion of peace as an action. In Ps 34:14 the psalmist charges hearers, "Do good, seek peace, pursue it." Here peace is not something that simply happens; it is a content-laden thing that one can lay hold of. And, further, peace is not seen as a mere product but as an end in itself.

In Zech 8:16–19 the notion of peace is joined with *mišpat;* where the root *šlm* again is used in its meaning of true or complete justice. And *šālôm* is joined with *ʾemet* "truth." Peace, truth, and justice are parallel terms. Their association in this passage implies that peace has a content like justice and truth. Peace encompasses a relationship that is ordered, a relationship of equity. So in Ps 85:10 "righteousness and peace shall kiss"; the two join together as partners in the blessed life. And in Isa 32:17 the prophet avers that "peace is the effect of righteousness," which in the Vulgate becomes *"opus justitiae pax"* or "peace is the work of justice." In this we see a profound theological sense to peace which is far beyond the simple idea of the cessation of war or the absence of conflict. Indeed, peace is not seen as tranquility and order, but rather as the deep commitment to the work of justice.

Peace also points to the future, because it reconnects an ideal of justice that is remembered and expected. That the figure of the herald of glad tidings (Nah 1:15), whose task it is to announce a victory, did so to inaugurate peace is very important. The herald contrasts with the false prophet who announces "peace, peace, but there is no peace" (Jer 6:6; 8:11; 8:15). Jeremiah's contrast is, like that in Isaiah, between justice and injustice, righteousness and unrighteousness. Peace is clearly associated with justice and often synonymous with justice.

The figure, then, of the *śar šālôm* "Prince of Peace" (Isa 9:5—Eng9:6) is to be seen as the bringer of justice, as the vindicator. He is "in purpose wonderful, in battle God-like, Father of all time, Prince of peace" and his kingdom shall be established and sustained with justice and righteousness. The same confluence of the peace-bringer with the renewal of justice and righteousness is found in Isaiah 40.

Isa 9:5 should be seen also in the light of Isa 11:1–5, where the figure is described who shall inaugurate the peaceable kingdom in which lion and lamb shall dwell together, while "they shall not hunt or destroy

in all my holy mountain" (Isa 11:9). This image of peace as an eschatological event manifests the sense of completion inherent in the idea of peace. Von Rad writes that the anointed one in Isaiah will establish a "paradisal peace … to bring order over into the world of nature and to resolve its conflicts" (*ROTT,* 2:170). Peace is, in fact, the order of creation (ibid., 147).

The theological implications are clear enough. Creation is depicted as an act of divine completion. "On the sixth day God completed all the work he had been doing" (Gen 2:2). "And God saw all that he had made and it was very good" (Gen 1:31). The order of the cosmos created harmony and peace. Justice, righteousness, and peace are all present in this "original state." The parable of Adam and Eve is one in which sin is unknown and even "good and evil" are unknown. The depiction of the dissolution of paradise in J's narrative leads from the serpent's wiles to the murder of Abel, the Flood, and the division of the peoples of the earth. In brief, creation, once completed, is now fractured and scattered, disunited and without peace.

The apocalyptic eschatology of the late kingdoms and early exile envisioned the restoration of the created order. Deutero- and Trito-Isaiah refer repeatedly to this glorious new creation. "I will make your government peace, and righteousness rule over you" (Isa 60:17). "I will send peace flowing over her like a river" (Isa 66:12). This peace is the mark of the new heavens and the new earth which the Lord will make (Isa 66:22). So peace, *šālôm,* embraces the notion of the restoration of creation to justice, truth, and righteousness. Peace is a blessing and a sign of the blessed life of the new creation just as it was the hallmark of the first creation. Peace is "from the Lord" (1 Kgs 2:23) and is "the Lord's own work" (Isa 52:7). Peace is both a restoration of the divine plan of creation and the harbinger of the completion of life to come. And to the ears of a weary planet it brings the good news that strife shall cease and that the peoples of the earth "shall beat their swords into plowshares and their spears into pruning hooks."

JOSEPH P. HEALEY

NEW TESTAMENT

The word *eirene* (peace) appears in almost every writing of the NT. It describes an international calm and a relationship of goodwill between God and humans. Most frequently it describes a social reality, a state of reconciliation and wholeness among a group of people.

A. Classical Words
B. Judaism and Peace
C. Early Christian Views of Peace
    1. Jesus
    2. Paul
    3. Other Early Christian Writings

A. Classical Words

In classical Greek three words can be translated "peace": (i) *galēnē:* the calm of nature, specifically at sea; of the mind or spirit and even of the conscience (Arist.*Ep.*5); (ii) *homonoia:* concord, or the quality of community life which emerges when people think alike or agree; and (iii) *eirēnē;* the most frequently used and the most inclusive of the terms. Plato speaks of the "profound peace" which comes to older persons when they no longer need to be concerned about their passions (*Resp.*329c).

The Greek view of peace has often been portrayed as consisting primarily in the absence of war: the normal human state (Fuchs 1965). More precisely, two contrasting ideals exist alongside each other: the Homeric, or heroic ideal, which presupposes that war will be the arena in which the truly human virtues can be displayed. The other, the unheroic ideal, presupposes that human beings achieve their true potential in work which produces peace and justice (Hesiod). The dominant note in the iambic poets is not

exaltation of heroes but using all the resources of art to hold up to ridicule the faults and weaknesses of human nature. Competition in the arts is encouraged (Klassen 1984).

The Homeric ideal is praised in classical literature (tragedy, historical writing, political propaganda) and even dominates the political agenda of the polis. Peace is seen as a positive value, even as the highest value, and war is seen as a necessary stage and the means by which peace is attained. *Si vis pacem, para bellum* ("if you wish peace, prepare for war") went the ancient, widely quoted slogan (Haase 1977).

One exception is comedy, especially the comedy of Aristophanes whose anti-war position merits further exploration. The power of Euripides' protest against war in his plays, *The Women of Troy* and *Medea* is felt even to this day.

Prior to Socrates, the adage, "Do good to your friends and harm your enemies" seems to have held the day. With his fundamental dictum that "it is never right to repay anyone evil for evil" (Apol. 30D) a new approach to the resolution of conflict emerged (Dihle 1962). Both Cynics and Stoics built upon Socrates' insight but forged different concepts of peace. The Cynics praised world citizenship and used illustrations from animal life to deprecate human wars (Malherbe 1977). The Stoics opted for a concept of peace as internal control or inner tranquility *(ataraxia)* which ran the risk of becoming insensitive to one's own feelings as well as to the attacks of others. The Stoics however have deeply influenced the later prevailing view of peace through Varro (ca. 40 B.C.E.) whom Augustine copied, and Epictetus (1st century C.E.), whose manual was for centuries the handbook of the soldier (Klassen 1977).

The Latin words *concordia* and *pax* correspond to the Greek *homonoia* and *eirēnē* respectively. A significant shift has taken place, however, in that *pax* commonly refers to an enforced pacification program.

B. Judaism and Peace

The Jewish concept of *šālôm* undergirds the Christian view of peace. For the early Hebrews Yahweh could be designated *Shalom* (Judg 6:24) and the word designates the state of being well. Whereas the Greeks were clearly comfortable applying peace to the inner nature of humans, the Hebrews tended to use the term primarily for interpersonal or social relations where it comes very close to meaning "justice." When justice is done it is seen as God's gift to the people, and the prosperity *(šālôm)* comes to the people when they live faithfully under God's covenant (Ravitsky 1987).

The concept of peace undergoes many changes in the Jewish literature preceding and contemporaneous to the early Christian period. Already in the LXX we perceive the tendency to interiorize peace as the term *eirēnē* begins to be used in connection with the "soul" (Lam 3:17). Most illuminating for our time period, however, may be an intriguing shift in the tradition as reflected in the Talmud about the altar made of unhewn stones. As J. Neusner (1970) has observed, the Ishmaelite version, commenting on Deut 27:6 that no iron tools are to be used on the stones of the altar led R. Simon Eleazer to say that the altar was meant to prolong life, iron however shortens it. "It is not right for that which shortens life to be lifted up against that which prolongs life."

R. Yohanan b. Zakkai (16–80 C.E.) spells it out specifically for peace: "The whole stones are to establish peace, although they do not see, hear nor speak, yet they serve to establish peace between Israel and their Father in heaven … How much the more then should the child of peace who establishes peace between people, between husband and wife, between city and city, between nation and nation, between family and family, between government and government, be protected from harm."

One generation later, Rabbi Aqiba commenting on the same text left out all references to peace. The "children of peace" became the children of Torah. For the Aqiban party during the war of Bar Kokhba, which they endorsed, the exegesis of Yohanan ben Zakkai was rejected (so Neusner). For Yohanan the atoning function of the altar and the life-enhancing role of the altar was displaced by human beings: children of peace. In this respect Yohanan stood very close to his fellow rabbi, Jesus of Nazareth.

C. Early Christian Views of Peace

The NT uses *galene* once to refer to the calmness of the Sea of Galilee (Mark 4:39 and parallels). The second, *homonoia,* meaning concord or harmony among people, is never used in the canonical NT although it is frequent among the Apostolic Fathers. By far the largest number of occurrences are of the

word *eirēnē,* which appears in every NT author except 1 John and in its various forms about 100 times in total.

In Christian ethical thought, *eirēnē* is deeply influenced by the function *šālôm* had in Jewish literature. Thus it is used most often as a greeting of encounter (John 20:19, 21, 26) or as a departing salutation (Mark 5:34). In the NT epistles it has clearly become formulaic; joined with the word "grace" (Rom 1:7; 1 Cor 1:3; 2 Cor 1:2; Phil 1:2; Col 1:2; 1 Thess 1:1; 2 Thess 1:2; Titus 1:4; Phlm 3; 1 Pet 1:2; 2 Pet 1:2; Rev 1:4); and with the word "mercy" as well (1 Tim 1:2; 2 Tim 1:2; 2 John 3; Jude 2) at the beginning of the letters, sometimes at the end (3 John 15; 1 Pet 5:14), and occasionally at both (Eph 1:2; 6:23; Gal 1:3; 6:16).

1. Jesus. Behind the emphasis placed by NT writers on peace lies the teaching and practice of Jesus. With the words: "Go in peace" he dismissed both the woman healed of her hemorrhaging (Mark 5:34; Luke 8:48) and the sinful woman who came to see him while he was at a meal (Luke 7:50). In the Fourth Gospel in particular peace appears both as a parting gift (14:27) and as a greeting by the risen Christ to his disciples (20:19, 21, 26).

According to Mark the gift of peace is not only to be granted to people as they leave but is also an action which can be commanded. He transmits a word that urges the early disciples to share the salt of friendship, i.e., to eat together and by doing so to keep the fellowship or community intact: Mark 9:50c: "Have salt among yourselves and keep peace with each other" (Lattke 1984). Although we cannot be certain Jesus spoke these words, there are no inherent grounds to deny their genuineness. It is reasonable to assume that Jesus wanted the relationships among his disciples to have integrity. What is noteworthy is the imperative verb which is repeated in later Christian texts. If peace can be commanded it clearly takes effort and not just receptivity to divine gifts.

There is of course the disclaimer: "Do not think that I have come to cast peace upon the earth, I have not come to cast peace but a sword" (Matt 10:34 = Luke 12:51). To take this to mean that Jesus literally promoted the sword or violence contradicts all the other evidence found in the Gospels. When a disciple used a sword, Jesus firmly rebuked him and the damage was undone (Luke 22:51). The saying signifies, rather that Jesus will bring division into the lives of people by his claim to their loyalty and allegiance. The most sacred of all obligations, that of the family, will be attenuated by his call. Jesus declares that not all that the world terms peace is truly that. Jesus has not come to bring a false peace in which outer quietness rules while storms rage within but rather to cut clean as a sword the division between truth and falsehood, between idolatry and true service of God.

Closer to the central element in Jesus' work and that of his disciples is the term of self-designation he suggests for his disciples: "child of peace" (Luke 10:6). The Jewish custom of the time was to designate persons in accordance with their behavior (sons of light, sons of darkness, sons of Beliar, sons of righteousness). Given the central place peace holds in Judaism one would expect 1st-century Jews to designate peace-loving people as "children of peace." One group which could have been called that was the "peace party" during the war of 66–74 C.E. But Jesus is the only 1st-century Jew to whom this phrase is attributed; Hillel, his contemporary, preferred to invite: "Be of the disciples of Aaron, loving peace and pursuing peace" (*Pirke Aboth* 1:12). Little is said about Aaron and his peacemaking in Jewish sources. One can only conclude that when the figure of Aaron is cited Stoic virtues were invoked and that sons of Aaron are those who quietly stand by (Rabinowitz 1967; Klassen 1981).

The phrase "child of peace" which appears only here, is most likely a genuine coinage of Jesus. After him, only Luke and Tertullian used it. It did not emerge as a term for post-Easter Christians, perhaps because of the presence of the "peace party" in the revolt against Rome in 66–70 C.E. The more assertive term: "Peacemaker" (Matt 5:9: noun; Col 1:20 as an aorist participle and Jas 3:18 [noun] combined with the verb "to make") upstaged it.

The formula "to make peace" is found in the OT (Isa 27:5); generally God is the subject of the verb. It appears in such a context in the LXX (Josh 9:15) but it also is used of military leaders, as those who pacify the countryside. 1 Maccabees prefers its usage for a state of real peace without battle (11:51; 13:37;

14:11) but also once uses it for a military action (6:49). In a later Jewish text the term is used for the male organ that makes peace between husband and wife (*Midr. R. Lev.* 18:1).

In the NT, the term goes back first of all to Jesus and the beatitude which promises the high calling of being a child of God to those who are peacemakers (Matt 5:9). The promise of being called a child of God is well known in Jewish circles (Sir 4:10) and is generally associated with keeping the covenant (*Pss. Sol.* 13:8; 17:30; *Deut. Rab.* 7:9), observing the law and, in general, remaining faithful to God.

Among the beatitudes of Jesus the term "peacemaker" is the most assertive. All the rest designate a state or an attitude while this one describes a concrete act (Windisch 1925). Some of the other occurrences enforce this point: Jesus is described as "having made peace" (Eph 2:15) through the blood of his cross (Col 1:20). By interposing himself between the warring parties, Jesus atoned for their sin and made peace by reconciliation.

More problematic is the usage in Jas 3:18. Various diverse renderings of this sentence have been proposed. One acceptable translation is: "For the (fruit or) harvest of justice has been sown in peace by those who make peace." A reading of Isaiah 32–33 in the LXX makes it clear that a connection exists between justice and peace and even the image of sowing is introduced here (Isa 32:20).

James utilizes the theme of sowing and reaping and those two terms describe very well the relationship between peace and justice. It is an organic relationship—that of seed and fruit but it is also clear that their sequence can be reversed. In order to receive the gift of God's peace one can do justice, when Yahweh is heeded then peace will flow down like a river (Isa 48:18; 66:12). If one makes peace then justice will grow like a flower (Isa 32:16–19). Paul too sees peace and justice as integrally bound to each other (Rom 14:17).

In Mark both the verb "be at peace" (9:50) and the noun (5:34) appear only once. In Luke's gospel the noun appears 13 times and in the Acts another seven times. Luke speaks explicitly of peace more often than Mark, Matthew, and John combined. He obviously has a particular interest in the topic of peace (Swartley 1983; Donahue 1982). He reads the Christ event through the eyes of his contemporaries who have heard much of the peace of Augustus. They have identified the Jews as those who disrupted that peace in the war of 66–74 and with whom the Christians could be all too easily identified.

The forerunner of the Messiah in Luke signals that "in the tender compassion of our God … the morning sun will rise upon us to shine on those who live in darkness, under the cloud of death, and to guide our feet into the path of peace" (Luke 1:79). The allusions are to Isa 59:9–10 and its vivid description of how hard it is to find one's way when there is neither justice nor peace.

In the infancy narratives "peace is virtually identified with that salvation which will characterize the new age" (Donahue). Luke also has the angelic hymn promising peace on earth to those responding to that event (2:14). The inverted doublet appears in 19:38 where Luke follows Job 25:2 in affirming that God has established "peace" in heaven; both have "glory to God in highest heaven." Job's assumption is that peace must be brought to heaven before it can be brought to earth, although the LXX translators cannot bring themselves to affirm that *eirēnē* is needed in heaven. They change the meaning to "he made the universe" (Gk *sympasam*), from "he established order or peace in the heavens."

Luke, however, can also use the term, *eirēnē,* to describe the more secular or mundane security involved in peace: from theft (11:21), averting war (14:32; Acts 12:20), release from persecution (Acts 9:31), reconciliation after an altercation between two people (Acts 7:26), or the end of a disagreement within the Church (Acts 15:33).

An early lament over Jerusalem (Luke 13:34) bemoans Jerusalem's treatment of the prophets. Luke, and only he, depicts most poignantly Jesus' last lament over Jerusalem: "Seeing the city he wept over her saying: 'If only you had known on this day that which brings peace; but now it is hidden from your eyes' " (Luke 19:42). In no other place is it so movingly stated that Israel's national tragedy is a result of her refusal to live according to the covenant with God. Even the desire to make Jesus a good Stoic who would not weep yields here to the historical reality. Similar statements are found in Josephus twenty years after the event.

Finally, the formula: "he gave the good news of peace through Jesus Christ, who is Lord of All," (Acts 10:36) indicates that the author of Luke-Acts saw the word "peace" as a capsule for that which the good news about Christ contains. It is incorrect to restrict the meaning to peace between God and humans (Haenchen *Apostelgeschichte* MeyerK, 304; Zahn *Apostelgeschichte* HKNT, 355–56). Especially in this context of the gentile mission—where the universality of God's love and acceptance is being proclaimed—it is not irrelevant that one of the greatest human divisions of ancient society, that between Jew and gentile, is described as overcome. The similarities between this and Ephesians are worthy of note.

The Fourth Gospel affirms that peace is intimately related to Jesus himself. It is a gift related to the commission to forgive sins (20:19, 21, 26) and go forth in the power of the Holy Spirit, but also before his death he promises them: "Peace I leave to you, my peace I give to you, the kind of peace the world cannot give" (14:27). The difference between the world's peace and that of Jesus is not explained, but it has to do with John's notion of the world *(kosmos).* "In the world you will have trouble. But courage! The victory is mine; I have conquered the world" (16:33). In Christ peace is available to them. The difference must not be drawn along Stoic lines, as if the peace of Christ "has nothing to do with the absence of warfare nor … with an end to psychological tension, nor with a sentimental feeling of well-being" (Brown *John xiii–xxi* AB, 653). Caesar's peace enforced by violence is not the same as the peace of Christ which derives from his victory over evil through the absorption of suffering. The two are dramatically different ways of bringing peace. In general, the Johannine community has little interest in the topic of peace. The word appears only six times in the Fourth Gospel and is christologically determined.

2. Paul. The matter stands very differently with Paul. His roots in Judaism are firmly established and yet he lives in the Roman Empire as a Roman citizen. From many angles he would clearly appreciate the *pax Romana.* At the same time he is captivated by the *pax Christi.* Paul begins with God and not with Christ.

We find here the surprising fact that the formula, "the God of Peace" if not a Pauline construct, was so attractive to him that he avails himself of it more frequently than any other ancient writer. It is known to appear in only one other ancient writer prior to Paul.

The *T. Dan* boldly pronounces: "Speak the truth each one to their neighbor and you will not fall into anger and confusion, but will remain in peace and have the God of peace and no war will conquer you" (5:2). The author promises that if Israel repents they will find mercy and be given peace, even as the Lord wages war against Beliar. Those who call upon the Lord will have "eternal peace" (5:9–10). The author is convinced that if Israel repents the kingdom of Beliar will come to an end and the "angel of Peace himself will strengthen Israel, so that it will not fall into deepest evil" (6:5).

The "angel of peace" appears also in the *T. Asher* where the soul at peace going forth with joy will learn to know the angel of peace who will lead him into eternal life (*T. Asher* 6:6). The *T. Benj.* even says that "if you have a good attitude, then even evil people with be at peace with you" (5:1). Here the role of the angel of peace is to lead the soul of the good man (*T. Benj.* 6:1), "who loves those who wrong him as he loves his own life" (4:3). He believed firmly that good will conquer evil and that the pious man when attacked will through his mercy bring the wanton man to repent because he showed mercy and maintains silence. And a righteous man because he prays, even though for a brief time he may be humbled, later he will appear far more illustrious, … for the angel of peace guides his life" (5:4–6:1).

The angel of peace appears also in Ethiopic Enoch as a guide to follow and interpreter. These writers instead of speaking of the God of Peace envision an angel of peace as an intermediary.

Paul used the formula, "the God of Peace" a total of six times. The earliest reference is 1 Thess 5:23 and the latest is Phil 4:9. Most often (five times) it appears as a benediction or prayer but also to enforce an ethical admonition: "God is not of chaos but of peace" (1 Cor 14:33). Once it is combined with the "God of Love" (2 Cor 13:11) and once changed to "the Lord of Peace," (2 Thess 3:16). Here he prays that peace will be given to his readers always and in every way. In another text the God of peace will "sanctify" them completely (1 Thess 5:23).

In a strikingly unique reference Paul predicts that "the God of Peace will soon crush Satan under your feet" (Rom 16:20). In this sole reference to Satan in Romans, Paul used traditional apocalyptic language for the defeat of evil (Malherbe 1983) and only here is it perhaps possible to describe "peace as essentially an eschatological concept and not a social-political one" (Furnish 1984), a set of alternatives ordinarily foreign to his thinking. Obviously Paul while eschewing the term, "the God of War" (Exod 15:3) does not leave behind conflict terminology when he develops a new term to describe the God he has learned to know through Jesus Christ (Delling 1975). The morality he has described in Romans (esp. 16:17–19) will be the instrument by which Satan is crushed under *your* feet (Malherbe 1983).

Paul speaks, moreover, not only of the God of Peace but also of the peace of God (Phil 4:7); and of the peace of Christ (Col 3:15). In the first instance he stresses that the peace of God transcends human reason and comprehension. Nevertheless, it is his prayer that it may protect his readers' hearts and minds from wrongful intrusion. Although it may transcend human comprehension, its major domain of operation is still the human mind as well as the heart.

Similarly, the author of Colossians prays that the peace of Christ may serve as an arbitrator or referee in the hearts of those who hear him read (3:15). The author sees peace as the purpose of their calling, just as in 1 Cor 7:15 Paul states that being called to a relationship of peace is more important than maintaining a marriage between a believer and unbeliever.

In rabbinic sources it was affirmed that God had lied to retain peace between Sarah and Abraham and that peace was more important than truth (*Yebam.* 65b, *Midr. Rab. Gen.* 48, *Der. Er. Zuṭ.* 9). Paul affirms a similar position: Peace between husband and wife is a major objective, it is their calling (1 Cor 7:15). Peace stands third in the fruit of the spirit (Gal 5:22) and in Rom 14:17 the kingdom of God is defined as consisting of justice, joy, and peace in the Holy Spirit. Paul also prays that the God of Hope will fill the Romans with all joy and peace, so that they, while they believe, may abound in hope in the power of the Holy Spirit (15:13).

The imperative "be at peace among yourselves" occurs three times in the Pauline letters: once in Romans urging his readers to make peace with all people (12:18) and twice urging unanimity among the believers (1 Thess 5:13; 2 Cor 13:11). These imperatives, without parallel in Greek and Roman literature, have the same impact as the imperatives to "pursue the things that pertain to peace" (Rom 14:19); "send him (Timothy) on ahead in peace" (1 Cor 16:11) and "Take heed to keep the unity of the spirit in the bond of peace" (Eph 4:3). The impact is strengthened when the verb "pursue" is used as in 2 Tim 2:22; Rom 14:19; Heb 12:14 (with all people) and 1 Pet 3:11: "Seek peace and pursue it"; (quoting from Ps. 34:14). In total there are eleven imperatives "to seek" or "pursue peace" and several specify to live at peace with all people. The cumulative impression of these texts is that for the early Christian community peace had a very high priority. Could this stress on the value of harmonious life within community and beyond have come from Jesus himself?

The richest source for understanding peace in the NT is found in the letter to the Ephesians. In part this is true because of the affirmation: "Christ is himself our peace" (2:14). Further the term "proclaim good news" of peace is used twice, once in a noun phrase ("the gospel of peace" 6:15), and once in a verbal phrase (2:17). This author is working in a situation where he is not only eager to show that Jew and Greek are no longer separated by cultural or religious differences but he seems also to be dealing with a Caesar-cult which elevates the contribution Caesar has made to peace.

Against the credit bestowed on Caesar for peace, this author credits Jesus for having broken down the wall of partition, with "having made peace." He seeks to strengthen the Ephesians' devotion to Jesus, who is described not only as peacemaker but as peace himself. Later Christianity could have avoided individualism, anti-semitism, and blind obedience to Caesar if it would have taken this view of peace more seriously. For the focus is on communities, reconciled in one person.

Paul's contemporaries excelled in attempts to glorify and even deify peace or the emperor who had been effective in restoring order to the empire. In an allusion to the coinage of the empire, Paul warned about the people who promised "peace and security" (1 Thess 5:3). Important as these may be, if they are obtained only through repression they have to be discarded as alien to the manner of peacemaking

associated with Jesus (Wengst 1987). In a highly militant passage, the author of Ephesians, borrowing freely from other precedents (Isaiah 59; Wis 11:20ff) prescribes as part of the armor: "let the boots you wear be the gospel of Peace" (6:15). The trampling boot of the soldier has been transformed into good news that peace has arrived. It is not an accident that in Cynic circles as well one of the profoundest statements in the 1st century about war and peace is found in a letter attributed to Heraclitus, directed at Ephesus (Malherbe 1977). In any case that letter was a brilliant rejection of war rather than a statement on how peace could be achieved.

There is only one reference in Paul to peace between God and humans (Rom 5:1). It forms part of his argument in the first part of Romans that a profound alienation has crept into God's relationship with humankind, an alienation from which no one is exempt and from which no one can be humanly extricated. Only God's act of sheer mercy makes peace with God a possibility. Once that peace is achieved then a new relationship with life is available. It is a new life, "those who live on the level of the spirit have a spiritual outlook and that is life and peace" (Rom 8:6).

3. Other Early Christian Writings. The letter to the Hebrews also, used the designation "God of peace" in the finest prayer found in the NT (13:20). Melchizedek is called "a king of peace" and a parallel is drawn between him and Jesus, both of whom were kings of justice and peace (7:2). In the hortatory section (12:7–15) sonship, peace, justice, and holiness, are joined.

There is finally one reference in the NT to peace in which eschatology plays a major role. The author of 2 Peter foresees the time when the world will go up in flames and, as if it is inevitable, urges "since the whole universe will break up in this way, think about what sort of people you ought to be, what devout and sanctified lives you should live!" (3:11–12). Christians look forward to a new heaven and a new earth, "the home of justice."

The final advice remains: "With this to look forward to, do your utmost to be found in a good relationship *(eirēnē)* with him, unblemished and above reproach in his sight" (14–15). This, like Romans 5, stresses "peace" as a relationship with God, without however ignoring the human dimension. It shares with other texts concern with justice (v 13) and holiness (v 11). It could emerge from a community influenced by Stoicism which had resigned itself to the inevitable. Convinced that the course of history cannot be changed the Stoics stress a holy life which is tied to peace with God. The issue of justice is not muted and the combination: "Pursue peace with all and holiness without which no one will see the Lord" (Heb 12:14) is clearly also evident here.

Ever since the days of Augustine, when he dipped into pre-Christian Stoic thought (Varro) for his definition of Christian peace (Fuchs 1965), peace as an inner feeling has had a pervasive influence. This text, however, while it takes eschatology seriously, brings no support for escape from the present world. The next world can be brought not by quietism but by repentance (3:9). The prophet's conviction that repentance influences history overrides the apocalyptic tendency to determinism.

The sharpest challenge to the Christian concept of peace came with the ascendance of the Caesar cult and the attendant persecution. The response was an immersion in the apocalypse, not as a diversion from history but rather as a use of the imagination which allows one to take the enemy seriously and to project the battle against a mightier screen. Much of the ancient apocalyptic literature was subversive, and apocalyptic imagery could be used for communication among the persecuted minority without unduly endangering the group. So books like the *T. Moses* affirm that Divine sovereignty will be maintained, but they also affirm that the role of the faithful is to endure suffering without retaliation. For the Christian community represented by the Revelation, one secure anchor is the assurance that the blood of the martyrs will be vindicated. God will rule in history because history's greatest show of power came in the Lamb that was slain. History is the unfolding of the rule of the Lamb. It will end when the throne of the Lamb becomes also the throne of God (21:22; 22:2, 3).

Thus the plot of the book is the realization in history of that which is perceived as proleptically accomplished in chaps. 4 and 5. The main purpose of the book is to encourage those who follow the Lamb to remain faithful to his manner of dealing with evil and with power; especially they must endure suffering patiently and remain true to the Lamb (Lampe 1981). By concentrating on the glory and power

of the Lamb and ascribing all honor and power and glory to him, their loyalty to the emperor is of course lessened and they resist the temptation of worshipping the beast. At the same time the Lamb overcomes his enemies through the Word that proceeds out of his mouth, and although that is described as a "sword," what comes out of the mouth can heal as well as hurt (19:15). The difference between the two is decided by the receiver.

The apocalyptic persuasion, sometimes seen as hostile to peace in history, "for you shall hear of wars and rumours of wars, do not be alarmed" (Mark 13:7 = Matt 24:6 = Luke 21:9), makes no claims about the inevitability or necessity of war. It simply affirms that as long as there are people who grasp for power and promote violence, war is predictable. Clearly the Lamb does not initiate war, for the beast and the dragon (those committed to war with the Lamb) use that method (17:14). The Lamb will overcome, and in that terminology the Apocalypse of John uses conflict terminology in a highly symbolic way. Accordingly peace does not become internalized, and the struggle is public, but it also safeguards early Christianity from joining in the revolution against Rome from 66–74 C.E. and in subsequent revolts. At least for the first 200 years the early Christian movement followed the understanding of the relation of peace to war left them by their Teacher. This was true even when the basic usage of words for peace changed (in *1 Clement*, Beyschlag 1972; van Unnik 1970) and when they adopted Roman ways of thinking about peace.

Early Christian views on peace were anchored in theology and Christology, what members believed about God and what they believed about Jesus. This had profound implications for their self-understanding as a community and for their convictions about how people could live together. Within the community, openness or freedom of speech was practiced. It was believed, following the proverb that "a frank rebuke leads to peace" (Prov 10:10). It was also united with joy (Rom 14:17), just as the Proverb already predicts that those who seek peace will find joy (Prov 12:20). So peace had inner dimensions, but was not confined to inner attitudes, just as it had theological roots but profound implications for community living. Beyond the inner-personal and the interpersonal community aspects, the NT views on peace also included a concern for the outsider. They followed Judaism in prescribing the pursuit of peace with all people and in every way as one of the highest priorities of Christian conduct (1 Pet 3:11; Heb 12:14; Rom 12:18; 14:19).

PEACEMAKING, PEACEMAKERS. Making peace *(eirēnopoieō)* and peacemakers *(eirēnopoios)* occur each once in the NT (Col 1:20; Matt 5:9). Until now there has been no consensus among scholars as to who is the subject of "peacemaking" in Col 1:20. For some it is God or the "fullness" of v 19, for others it is Christ. Most recent commentators and authors of monographs distinguish two layers in Col 1:15–20: an early Christian (or even pre-Christian) hymn and a comment on it. Burger (1975: 3–79) distinguishes three layers. The oldest was an original (Christian) hymn that spoke of Christ as "beginning, first-born from the dead, in whom all the fullness dwelt … whether on earth or in heaven" (vv 18b–20). A subsequent editor made God the subject of the whole strophe vv 18b–20 (i.e., of the work of atonement and peace among the heavenly and the earthly beings through Christ by virtue of his resurrection). The final author of Colossians then reinterpreted this work of God by reference to the redeeming death of Christ. The double "through him" in v 20c still shows the insertion. On this level, the "peacemaking" refers probably to the reconciliation of heaven and earth with God. (For the word, cf. Prov 10:10; for the idea Rom 5:1, 10; 2 Cor 5:20.)

There is an echo of Col 1:20 in Eph 2:15, where "making peace" *(poiōn eirēnēn)* is said of Christ. The author of Ephesians seems to have used, in addition to Colossians 1, a hymnic fragment apparent in Eph 2:14–17. This fragment speaks in cosmic language of Christ as unifying two divided areas (heaven and earth). It ends with a reference to Isa 57:19 combined with 52:7: the announcement of peace to those distant and near (v 17). Whereas the hymn speaks of the reconciliation of heaven and earth and their atonement with God, the author of Ephesians seems to have understood the "atonement" mainly as

reconciliation between Jews and gentiles. He took the concept of "peace" from the quotation of Isaiah, made it the main theme of the whole strophe (v 14), and referred the peace in v 14b–15 to the unity of Jews and gentiles, and in vv 16–17 to their common atonement with God (cf. Burger 1975: 117–39.)

To those who "make peace" (same expression), Jas 3:18 announces a "fruit of righteousness sown in peace" (dat. *commodi* rather than *auctoris: BDF* 188, 1; it is sown probably by God in the sense of a passivum divinum). "Making peace" refers here to a peaceful attitude in the community as a sign of divine wisdom, as the preceding vv 13–17 show.

The beatitude of the "peacemakers" in Matt 5:9 is one of a group of passages common to Matthew and Luke (Matt 5:34; 6:11–12 par.) going back either to a pre-Matthean expansion of Q, to tradition, or to the redactional activity of Matthew. The opinion of McEleney that it goes back to tradition, together with vv 7 and 8, is well founded. In the present context "peacemaking" may refer to both one's own enemies or to those of the community (vv 10–12, 21–26, 38–47: cf. Schnackenburg).

PEARLS. See DRESS AND ORNAMENTATION.

PEDAHEL (PERSON) [Heb *pĕdah›ēl* (פְּדַהְאֵל)]. The son of Ammihud, the leader of the tribe of Naphtali who was appointed to help distribute the land to the Israelites (Num 34:28). Pedahel is a theophoric name, consisting of the element *pdh,* "ransom," "redeem" and the common term for the divine, *›el.* Thus, Pedahel may be translated as either "the divine has ransomed" or "the divine has redeemed." The name has been found, outside of Scripture, in a Phoenician seal from Damascus dated to the 8th century B.C.E., and an Assyrian cognate, Padu-ilu, occurs in a text from Nineveh (*APNM,* 256; *IPN,* 180).

RAPHAEL I. PANITZ

PEDAHZUR (PERSON) [Heb *pĕdāhṣûr* (פְּדָהְצוּר)]. The father of the chief (*nāśî›,* Num 2:20) Gamaliel of the tribe of Manasseh. Each of the five times that Pedahzur is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Gamaliel. Under the leadership of Pedahzur's son Gamaliel, the tribe of Manasseh participated in the census of Israelite fighting men carried out by Moses (Num 1:10, 34–35), presented its offerings on the eighth day of the twelve-day celebration of the dedication of the altar (Num 7:54, 59), took its proper place on the west side of the tabernacle in the Israelite camp (Num 2:20), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:23). The name Pedahzur means "the Rock has rescued," where "the Rock" is an appellative rather than a proper name and serves as a metaphor for the Lord (cf. Ps 18:3). Noth (*IPN,* 181) speculates that a child would be named Pedahzur because the mother was delivered from danger at the time of childbirth.

DALE F. LAUNDERVILLE

PEDAIAH (PERSON) [Heb *pĕdāyâ* (פְּדָיָה)]. The name Pedaiah was held by seven people in the Hebrew Bible. The name is attested more frequently in the postexilic period and may have been more popular then. The meaning is "Yahweh has ransomed" with the shortned forms "Yah" or "Yahu."

1. The maternal grandfather of king Jehoiakim of Judah (608–598 B.C.E.). His daughter's name is given in the MT as either Zebiddah (Kethib) or Zebuddah (Qere) (2 Kgs 23:36). The latter might mean approximately "gifted." Pedaiah came from the town of Rumah which was in the N near Rimmon. The name occurs in extrabiblical sources in the Ophal seal (6th century B.C.E.) and in the Elephantine papyri, AP, 43 (Myers *1 Chronicles* AB, 21).

2. The third son of Jeconiah/Jehoiakin and, contrary to most other traditions, the father of Zerubbabel (1 Chr 3:16–24). Compare Ezra 3:2, 8; 5:2; Neh 12:1; Hag 1:1, 12, 14; 2:2, 23; and in the New Testament Matt 1:12 and Luke 3:27. Williamson has suggested that since the genealogical list in 1 Chronicles is later than the other materials and puts Zerubbabel in a less exalted position it is likely to rest on an accurate tradition (Williamson *Chronicles* NCBC, 57). But it is just as possible that this list reflects Zerubbabel's mysterious loss of importance in the postexilic community after the completion of the temple. Note that the LXX substitutes the name Shealtiel in our text for Pedaiah.

3. The father of Joel from the half tribe of Manasseh W of the Jordan River (1 Chr 27:20). The list in 1 Chr 27:16–22 purports to give the rulers of each tribe under David. The list is, in the opinion of some scholars, integral to vv 23–24 which follow and have as their main purpose to exonerate David from blame for the census. The list may then give the names of the tribal rulers who were responsible in this matter (Williamson *Chronicles* NCBC, 175–176).

4. The son of Parosh in Neh 3:25 (LXX 2 Esdr 13:25). He helped to rebuild the walls of Jerusalem under Nehemiah.

5. The man who stood on the left of Ezra when he read the Book of the Law to the people in Jerusalem. This was probably a place of honor, but we do not know anything more about him or his position (Neh 8:4 = 1 Esdr 9:44).

6. The father of Joed and the son of Kolaiah of the tribe of Benjamin (Neh 11:7 = 2 Esdr 21:7). They are listed in chap. 11 along with the other leaders of the people dwelling in Jerusalem and in the provinces during the time of Nehemiah.

7. The Levite who was appointed by Nehemiah to supervise the distribution of the portions of the Levites from the temple storehouses (Neh 13:13). The appointment of officers to oversee the distribution of the portions was the last action in a series which Nehemiah took apparently following the reading of the "Book of Moses" which is mentioned in v 1. The room which he caused to be cleansed and used for this purpose was the same one that Tobias the Ammonite had been given the use of by the high priest. In reinstituting the distribution of the levitical portions Nehemiah not only solved the problem of supporting the Levites, the skilled help of the Second Temple, but also got rid of an antagonist who, being an Ammonite, was supposed to be barred from the Temple anyway.

RUSSELL FULLER

PEDESTAL [Heb *kēn* (כֵּן)]. The Hebrew word is probably a variant of *mĕkōnā* (cf. 1 Kgs 7:27; Exod 30:18), and is a technical designation for part of the base of each of the bronze stands of the temple courtyard (1 Kgs 7:31).

CAROL MEYERS

PEDIMENT [Heb *marṣepet* (מַרְצֶפֶת)]. A word found in conjunction with the way in which King Ahaz partly dismantled the bronze Sea of the temple courtyard (2 Kgs 16:17). He removed the bronze oxen that held the Sea, which he then set upon a stone "pediment." Since this word is related to a more common word meaning "pavement," the elevated connotations of "pediment" may make that word a less appropriate translation.

CAROL MEYERS

PEGAI. See FEJJA.

PEKAH (PERSON) [Heb *peqaḥ* (פֶּקַח)]. A king of N Israel ca. 735–732 B.C., Pekah was the son of Remaliah. He succeeded to the throne after his assassination of King Pekahiah who had united Israel for two years (2 Kgs 15:23).

The name Pekah is closely related to Pekahiah, the name of the king whom the Bible reports Pekah succeeded. Pekahiah in Hebrew means "Yahweh opened [the eyes]" (*TPNAH,* 94) or "Yahweh is open-eyed or alert" (*IPN,* 186). Pekah is a shortened form of the name derived from the same Hebrew verbal

root *pqḥ*. This verbal root occurs in the Hebrew Bible in a name only in connection with the names of these two kings. The similarity of the two names and the distinctiveness of the verbal root have raised the possibility that the two kings were actually one and the same person. However, this is unlikely. The two kings have two different fathers: Remaliah is the father of Pekah (2 Kgs 15:27), Menahem of Pekahiah (2 Kgs 15:23). It is quite possible that Pekah originally had another name. When he murdered King Pekahiah and usurped the throne, he may have taken the closely related name Pekah for himself as a means of identifying himself as a legitimate successor. Isaiah 7 provides some evidence that the name Pekah may have been perceived as a usurped and illegitimate name for the new king. The prophet Isaiah mentions the name of Rezin king of Syria, but the prophet simply refers to the king of Israel as "the son of Remaliah" with no mention of his name (Isa 7:4–5, 9; 8:6). Isaiah may thereby signal a refusal to acknowledge the legitimacy of Pekah's reign by avoiding the name stolen from the previous king Pekahiah. In any case, it seems clear that Pekah and Pekahiah are two distinct royal figures.

The second and most troublesome issue connected with Pekah is the question of the precise number of years which he reigned as king of Israel. 2 Kgs 15:27 reports that Pekah "reigned twenty years." The difficulty is that contemporary Assyrian records contradict such a lengthy reign. The extrabiblical evidence indicates that Menahem reigned as king of Israel at least until 738 B.C. and probably a year or two thereafter. Menahem is reported to have paid tribute to the Assyrian conqueror Tiglath-pileser in 738 B.C. Pekahiah was Menahem's son and reigned after him for two years (2 Kgs 15:23) which places his reign somewhere in the years 737–736 B.C. Thus, Pekah's rule did not probably begin until 735 B.C.

Moreover, Assyrian records indicate that in 732 B.C. Tiglath-pileser conquered N Israel and soon replaced Pekah with another king, Hoshea. This puts the end of Pekah's reign during either 732 or 731 B.C. Therefore, Pekah could not have ruled N Israel for more than five years and more probably for only four years (735–732 B.C.). But what then is the origin of the tradition of a twenty-year reign for Pekah?

Three major solutions have been proposed. Thiele (1951: 113–14) has argued that Pekah was already a member of the inner court during the reigns of King Menahem and his son King Pekahiah. In support of this assumption, Thiele pointed to 2 Kgs 15:25, where Pekah is called a "captain" (Heb *šālîš*), which Thiele understood to be a very high officer in the royal court. Thus, when Pekah actually took over the kingship from Pekahiah, Pekah figured the years of his reign to include the years he had served in the court under Menahem and Pekahiah as well as the years he actually held the kingship in N Israel.

A second solution has been proposed by H. J. Cook (1964: 126–27), who argued that the term "captain" *(šālîš)* does not necessarily imply a high rank but may at times designate a class of warriors of lesser rank. Thus, Pekah may not have been a part of the inner court of Menahem and Pekahiah. Rather, Cook argued that the kingdom of N Israel in this period was torn apart into two rival kingdoms. Menahem and Pekahiah ruled only a portion of the N kingdom of Israel, the district of Samaria. Gilead and some of the N parts of Israel were ruled by the "captain" Pekah, who moved these areas toward independence from Samaria during the reign of Menahem (cf. the reference to Gileadites in 2 Kgs 15:25). Thus, Pekah ruled over a part of N Israel, according to Cook, for twelve years and over all of the N kingdom for eight more years, which calculates to a total of 20 years. Cook's assignment of eight full years for Pekah's rule over all Israel may be questioned in light of the Assyrian records mentioned above which place Menahem as still ruling in 738 B.C. Cook's attempt to dissociate Pekah's function as "captain" from a role within Pekahiah's inner court strains the biblical text, which explicitly calls Pekah "his [i.e., Pekahiah's] captain" and thus suggests an internal court revolt.

A third proposal advanced by Na›aman (1986: 74–82) maintains that Pekah's only tenure as king was his rule over N Israel for five years (736–731 B.C.). Pekah perceived himself as the only legitimate ruler since the dynasty of Jehu which had continued until its interruption by Menahem and Pekahiah. These latter two kings had been pro-Assyrian and had thus forfeited the consistently anti-Assyrian tradition of the preceding Jehu dynasty. Pekah may have seen himself as resuming this anti-Assyrian tradition. Thus, Pekah rejected the legitimacy of the reigns of Menahem and Pekahiah and counted their years of kingship as his own. An early Israelite historian recorded Pekah's reign as twenty years long, including in the total Pekah's actual reign and the reigns of Menahem and Pekahiah. This tradition was written into the royal

records and was part of the tradition which was later faithfully recorded but not fully understood by the writer of Kings.

Another issue associated with Pekah is N Israel's relationship with the empire of Assyria in this period. The previous kings, Menahem and Pekahiah, had been pro-Assyrian and paid tribute to them; this was apparently supported in the district of Samaria. The Gilead faction in the N led by Pekah apparently did not support such overtures to Assyria and desired independence. When Pekah became king of all N Israel, he joined King Rezin of Syria in an anti-Assyrian coalition. Pekah and Rezin joined together in a military expedition to Jerusalem to force Ahaz, the S king of Judah, to collaborate with them against Assyria. Ahaz quickly summoned the aid of Assyria whose army under Tiglath-pileser came and conquered the rebellious forces of Pekah and Rezin. The Assyrians took the Syrian capital of Damascus and killed the Syrian king Rezin (2 Kgs 15:37; 16:1–9; cf. Isaiah 6–12).

Finally, two traditions differ about the details of Pekah's eventual demise as king of N Israel. In Assyrian records, Tiglath-pileser himself takes credit for setting up Hoshea as successor after the overthrow of Pekah: "they (the Ephraimites) overthrew their king Pekah and I placed Hoshea as king over them" (*ANET,* 284). In contrast, the biblical tradition indicates that Hoshea overthrew Pekah and set himself up as king, with no mention of Tiglath-pileser's support. 2 Kgs 15:30 reports that Hoshea organized a conspiracy against Pekah and killed him and usurped his throne. The two versions of the same event, one Assyrian and one biblical, simply represent two different perspectives. Hoshea was probably designated by the Assyrians as their choice to succeed the rebellious Pekan. But it was Hoshea who had to obtain the support and means by which to overthrow Pekah, thus providing the basis for the biblical tradition (Hayes and Hooker 1988: 64–65).

DENNIS T. OLSON

PEKAHIAH (PERSON) [Heb *pĕqaḥyâ* (פְּקַחְיָה)]. A king of N Israel ca. 737–736 B.C. Pekahiah was the son of Menahem, who had reigned over N Israel for ten years before his son. The name "Pekahiah" in Hebrew means "Yahweh opened [the eyes]" or "Yahweh is open-eyed or alert." See PEKAH (PERSON). The biblical account of Pekahiah's reign is brief and couched in the Deuteronomistic introductory and closing formulas regularly used for the kings of Israel (2 Kgs 15:23–26). The report of the conspiracy concerning the overthrow of Pekahiah introduces the most important dimension of Pekahiah's reign.

Pekahiah's kingship was overthrown by a man named Pekah who was a son of Remaliah; Pekah may have usurped not only Pekahiah's throne but also his name (2 Kgs 15:25). In this verse, Pekah is called "his [i.e., Pekahiah's] captain" (Heb *šālîš*), which suggests that Pekahiah was the victim of an internal court revolt led by one of the king's own officers. However, the biblical account also notes that the rebel Pekah was abided by "fifty men of the Gileadites." It seems likely that Pekah was indeed a court officer who also had his origins and an independent base of support in the province of Gilead, whence he drew the core of his fighting force. Thus, Pekahiah's downfall was the product both of internal court intrigue as well as resistance from at least certain areas within the N kingdom of Israel.

What were the reasons for this resistance and revolt? Pekahiah and his father Menahem stand out among the kings of N Israel as allies of the Assyrian empire (2 Kgs 15:19–20). A long line of Israelite kings before them since King Jehu had been vigorously anti-Assyrian, struggling to maintain the independence of Israel. Many Israelites likely perceived the capitulation to Assyria by Menahem and Pekahiah as a threat to Israel's integrity. While Menahem seems to have been an able ruler with a relatively lengthy tenure of ten years, Pekahiah's reign was short-lived, indicating some weakness as a ruler.

Another possible reason for Pekahiah's fall may have been a popular resistance in the N kingdom of Israel to any notion of a hereditary dynasty. The S kingdom of Judah had a political tradition and a theological foundation for the hereditary succession of kingship from father to son in the promise to David of an eternal dynasty in 2 Samuel 7. The N kingdom of Israel did not have such a tradition or theological rationale, and the practice of hereditary succession of kingship seemed to be resisted among at least some groups within Israel. This resistance may account for the fact that Menahem's kingship was not overturned, even though it may not have been popular among all segments of the population. However, when Pekahiah became king and aroused hostility for both his pro-Assyrian stance and his role as part of an hereditary dynasty, popular outcry may have provided the base of support necessary for his assassination and the usurpation of his throne by Pekah.

One final issue relates to the translation of 2 Kgs 15:25. The RSV notes the place where Pekahiah was killed as "in the citadel of the king's house." The Hebrew of the MT adds the phrase, "Argob and Arieh," which is problematic in meaning. Some scholars have suggested emending the Hebrew to render the translation, "and his four hundred warriors," indicating the small army who had supported Pekah's revolt. Another scholar has suggested translating the Hebrew terms as meaning "near the eagle and near the lion," suggesting that Pekahiah was murdered between two palace statues of an eagle and a lion which were intended ironically to represent the guardians of the palace (Geller 1976: 374–77). Perhaps the most likely suggestion is that "Argob and Arieh" were displaced by a scribal error from the list of place names conquered by Tiglath-pileser in 2 Kgs 15:29. Both verses contain a reference to Gilead so that a scribe's eye may have jumped from one to the other as the text was copied. See also ARGOB AND ARIEH (PERSONS).

DENNIS T. OLSON

PEKOD (PLACE) [Heb *peqōd* (פְּקֹד)]. An E Aramean tribe resident in the territory E of the Tigris, centered between the Sealand in the S and the Diyala River to the N (Jer 50:21; Ezek 23:23). In the migration of the Arameans in the Fertile Crescent during the 2d millennium B.C. the Puqudu appear to have arrived in their settlement several centuries before the reign of Tiglath-pileser III, King of Assyria (744–727) and King of Babylon (728–727 synchronously). During the Assyrian and Neo-Babylonian empires the Puqudu were generally subject to the regnant powers, but repeatedly expressed their rebellious spirit, as the Assyrian royal correspondence indicates (cf. Waterman 1936 s.v.) even in the days of Tiglath-pileser and his successors. A similar pattern of refractoriness continued into the Babylonian regime, though it appears that they were politically subservient to this dominant power (Cooke *Ezekiel* ICC, 253). The Puqudu were a formidable Aramean tribe, capable of military might, and enjoyed considerable prosperity as an agrarian society.

The Peqod (Puqudu) are referred to twice in the OT. First, in an extensive taunt song (Jeremiah 50:1–51:58), its composer mingles imprecations presaging the demise of the great Babylonian power, yet here and there are mingled promises of hope for the depressed people of Judah. The date for the composition may be generally set ca. 545 B.C. For this intermingling of woe to the foe but redemption for Judah one may witness such in the passionate enunciation of woes, incisive mockeries, and vehement taunts hurled upon Babylon in vv 2–3, 9–10, 11–16, 21–33; and, on the other hand, passages of promise for the enslaved Judeans in 50:4–5, 6–7, 17–21.

Now in the midst of this martial excitation the poet bids the rising military avenger to invade the land of Merathaim and move against the inhabitants of Peqod, to slay, destroy utterly, and perform all the command of Yahweh (v 21). That the poet should single out the far flung SE border states of the empire indicates the depth of the enemies' penetration and suggests the total fragmentation of the glory that once was Babylon.

The two tribal areas of MERATHAIM and Pekod are in parallelism and have been considered paronomasia. Merathaim is cognate with the Hebrew *m-r, m-r-r,* "bitter, to be bitter" and/or the derivative

m-r-h, "to rebel." On the other hand, it would appear that the name Merathaim was derived when the Aramaic tribe settled on the banks of the lagoon of the S Tigris, the *mar marratu* or "bitter river." That this possesses greater verisimilitude than the notion of rebellion is more easily argued from the unlikelihood than any nation would call itself "Rebellion," but the term Merathaim is dual so it has been interpreted to mean "Double Rebellion." But this is the paronomasia that the poet uses to indicate the massive breakup of the Aramean settlements.

The term in parallelism to Merathaim is Pekod which has as it root meaning "visit," "visitation," or "to visit." The term is basically a neutral word: visits may be benign (Gen 50:24) or punitive (Exod 32:34; cf. *HALAT* s.v. *pāqad*). No tribe would call itself "punishment," but the poet seizes upon this derivative nuance and selects Pekod as a pun, suggesting that the incursion will be a punishment to the Aramean tribe of Pekod. That the Hebrew writers often used paronomasia in regard to geographical terms may be gathered from Mic 1:10–16. Accordingly, two remote areas of the Babylonian Empire will spell out in the day of the coming invasion "Double Rebellion" and "Punishment" for the power of Babylon.

The second occurrence of Pekod appears in Ezek 23:23, a verse in a lengthy censorious allegory depicting the sheer wickedness of Judah under the guise of a loose and sensuous maiden. The vivid portrayal of the Judean aristocracy as steeped in religious and moral harlotry climaxes with the thundering woes that the Lord Yahweh will make Judah abhorrent in the eyes of her erstwhile friends (lit. "lovers"), the great Babylonian Empire, and will gather together such a military force of Babylonian power even summoning tribal regiments from the extremities of her borders: the Chaldeans, Pekod, Shoa, Koa, and the defecting (?) Assyrians; and with these Judah will feel the judgment of God for her multiplied infidelities. This prophecy may be dated shortly before the fall of Jerusalem to the Babylonians.

EDWARD R. DALGLISH

PELAIAH (PERSON) [Heb *pĕlā (ʿ)yâ* (פְּלָעְיָה)]. The name Pelaiah occurs three times in the Hebrew Bible, all three times referring to persons in the postexilic Judean community. The name may mean "Yahweh is wonderful" or "Yahweh has done a wonder."

1. Pelaiah is listed as the third son of Elioenai in the genealogy of postexilic Davidic descendants in 1 Chr 3:16–24. Not much is known of these individuals. The Chronicler may have intended to end on a positive note by listing the seven sons of Elioenai.

2. In Neh 8:7; 10:10 (cf. 1 Esdr 9:44) Pelaiah is given as the name of one of the Levites who attended the reading of the Law by Ezra and helped the people to understand (Heb *mebînîm ʾet hāʿām*). In addition in Neh 10:10 he is listed as one of the Levites who affixed his seal (Heb *ḥātûm*) to the covenant which the community made. The passage in Nehemiah 8 shows the Levites acting in a teaching capacity which became one of their functions in the postexilic period.

RUSSELL FULLER

PELALIAH (PERSON) [Heb *pĕlalyâ* (פְּלַלְיָה)]. A person listed in the genealogy of Adaiah, one of the priests who settled in Jerusalem upon returning to Judah during the days of Ezra (Neh 11:12). Pelaliah was the grandfather of Adaiah, the third member of a linear genealogy extending seven deep (Adaiah < Jeroham < Pelaliah < Amzi < Zechariah < Pashhur < Malchiah). A parallel genealogy for Adaiah is presented in 1 Chr 9:12, with the difference that its depth is reduced from seven to four members. As a result, the middle three members of the longer genealogy, including Pelaliah, have dropped out, and 1 Chronicles gives the genealogy as Adaiah < Jeroham < Pashhur < Malchiah. The LXX reading of Neh 11:12 also abridges the genealogy to four members, but effects the reduction by deleting not the three central members but rather the first three members (i.e., Adaiah, Jeroham, Pelaliah), thereby beginning with Amzi. Such genealogical variability is not surprising given the nature and function of genealogies. Because the social function of linear genealogies is to legitimate the status of present institutions by

linking them to primary ancestors, it is commonly the middle members of such genealogies which would cease to function and therefore be dropped. This principle accounts for the shorter form of the genealogy presented in 1 Chr 9:12. However, it cannot explain the reading of the LXX, beginning as it does with Amzi rather than Adaiah.

The function of this genealogy relates to the postexilic need to link the priestly family of Adaiah with the eponymous figure Malchiah to whom, according to 1 Chr 24:9, David granted the fifth priestly course. That Pelaliah drops out in the version presented in 1 Chr 9:12 simply illustrates the primary social function of such genealogies.

ROD R. HUTTON

PELATIAH (PERSON) [Heb *pelāṭyâ* (פְּלָטְיָה)]. The name Pelatiah is held by four persons in the Hebrew Bible. With one exception the name, which may mean "Yahweh delivers," is attested only during the Persian period. Pelatiah also occurs in the Elephantine papyri (Myers *1 Chronicles* AB, 21).

1. The first son of Hananiah in the list of David's postexilic descendants in 1 Chr 3:16–24 (1 Chr 3:21). This would make Pelatiah the grandson of Zerubbabel although some see no connection between this list and the descendants of Zerubbabel due to textual problems in v 21.

2. One of the sons of Ishi of the tribe of Simeon. In 1 Chr 4:42 Pelatiah is one of the captains of a group of five hundred Simeonites who destroyed a settlement of Amalekites on Mt. Seir during the reign of Hezekiah king of Judah (727–698 B.C.E.). This fragment of tribal history seems to preserve the justification for the Simeonites presence on Mt. Seir.

3. The son of a certain Benaiah (Ezek 11:1, 13). He was one of two Judean princes mentioned by the prophet in his judgment oracle against the leaders of Jerusalem, they are termed officers of the people (Heb *śarê hāʿām*) an expression which occurs elsewhere only in postexilic materials (Zimmerli *Ezekiel* Hermeneia, 257). At the end of Ezekiel's vision Pelatiah falls dead. This may represent the fulfillment of the prophet's word in the context of the judgment oracle.

4. One of the chiefs of the people (Heb *roʾšê hāʿām*) who affix their seals to the covenant which the postexilic community entered into under Nehemiah.

RUSSELL FULLER

PELEG (PERSON) [Heb *peleg* (פֶּלֶג)]. Son of Eber when he was 34, brother of Joktan, and at 30 the father of Reu, in the line from Noah to Abraham (Gen 10:25; 11:16–19). Peleg lived 239 years. During his life "the earth was divided" (10:25); the meaning of this expression and the meaning of Peleg's name are two disputed issues.

As to the name, there are three related sources. First, Peleg is composed of the Hebrew root, *plg*, "to divide; division," which appears only in the *Piʿel* and *Nipʿal.* Here it may function as an appellative (Malamat 1968: 166). Second, the Akkadian *palgu*, "canal," appears as early as the Old Akkadian period (Gelb 1957: 214) and throughout the later periods. The only known personal name related to this root is found in a 7th century B.C. Akkadian text from Ur, *pal-gu.* Whether it is to be understood as Akkadian or as Aramaic is uncertain (Zadok 1977: 334). Third, the origin of Peleg has been associated with a geographic name, known in Hellenistic times as Phalga, which may lie where the Upper Euphrates and the Balikh divide (Thompson 1974: 306; *HALAT,* 878). In fact, the only clear example of the geographic name *phalga,* is quoted in a Byzantine source as located in Seleucia and Mesopotamia (PW 19: 1668). In addition, Old Babylonian *pulukkum* (Hallo 1964: 69; Groneberg 1980: 186), New Babylonian *pallukkatu* (Zadok 1985: 245–46), and proposed Arabian place names (Thompson 1974: 306) appear as possible locations for Peleg, but these are no closer phonologically and farther removed from N Mesopotamia, which appears to be the origin of a number of the place names associated with figures mentioned in Genesis 11. See also NAHOR (PERSON); HARAN (PERSON).

As to the meaning of the "division of the earth" during the life of Peleg, this may be related to any of the proposed explanations of the name. If Peleg is meant to reflect the W Semitic root, "to divide," then the division may simply refer to that between the descendants of Peleg and those of his brother Joktan. See JOKTAN. If Peleg is suggestive of the Akkadian word for "canal," the division may refer to that between civilized canal builders and nomadic peoples. If Peleg is a geographic name in N Mesopotamia, then the division may suggest the events of Gen 11:1–9.

RICHARD S. HESS

PELET (PERSON) [Heb *peleṭ* (פֶּלֶט)]. **1.** A Calebite, one of the sons of Jahdai (1 Chr 2:47). The genealogy of the descendants of Caleb in 2:42–55 balances the earlier list in 2:18–24. 1 Chr 2:46–47 report Caleb's descendants through his concubine Ephah.

2. One of the ambidextrous warriors from the tribe of Benjamin who joined David during the period of his fleeing from Saul (1 Chr 12:3). He was a brother of Jeziel and son of Azmaveth; Azmaveth should perhaps be identified with David's warrior in 11:33. The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond what was contained in the parallel narrative (2 Sam 23:8–39 = 1 Chr 11:10–41a). The source for these additional lists can only be a matter of conjecture, though Williamson has provided a convincing argument for the structure of 1 Chronicles 11–12. The long list reflects the Chronicler's concern to show "all Israel" united in support for David, a characteristic theme of his history. Within the immediate context (1 Chr 12:1–8—Eng12:1–7) the Chronicler is concerned to show the support David enjoyed among Saul's kinsmen before Saul's death; the twenty-three Benjaminite warriors named here joined David while he was at Ziklag, the Philistine city given to David by Achish, King of Gath (1 Chr 12:1; 1 Sam 27:6). Ambidexterity or left-handedness among Benjaminites is also noted in Judg 3:15; 20:16.

RAYMOND B. DILLARD

PELETH (PERSON) [Heb *pelet* (פֶּלֶת)]. 1. The father of On, one of the conspirators who, alongside Korah, Dathan, and Abiram, challenged the authority of Moses and Aaron in the wilderness (Num 16:1). The MT reading, "… and On the son of Peleth, sons of Reuben (i.e., Reubenites)," is difficult for at least three reasons. First, unlike Korah, Dathan, and Abiram, On has no further role in the narrative, and the name here seems out of place. Second, the use of Heb *benê reʾûbēn* to mean "generic Reubenites" is unusual, given the use of *benê ʾelîʾāb* in the preceding phrase to refer to children of a specific person. Third, the text does not correspond to the given genealogies of the descendants of Reuben. Such confusion has led to different emendations. Some would delete the entire reference to "On the son of Peleth" (Budd *Numbers* WBC, 179). Others reconstruct the genealogy based upon the information given in Gen 46:9 and Num 26:5, 8. There the genealogy is given as follows: Reuben > Pallu > Eliab > Nemuel/Dathan/Abiram. Accordingly, Peleth is equated with the Pallu ben Reuben mentioned in those texts. By deleting "On" (or emending to read "and he" as in *BHS*) and by changing Peleth to Pallu, the

text is commonly emended to read "… and he [i.e., Eliab] was the son of Pallu the son of Reuben" (so *BHS*).

2. One of the descendants of Jerahmeel and Judah (1 Chr 2:33). The genealogies of 1 Chronicles 1–9 function at a general level to establish the continuity of "all Israel" through the disruptive period of exile. By beginning with the genealogy of Judah, however, there is also a claim being made for the priority of this specific tribe, resulting from the importance of David in the Chronicler's perspective (Braun *1 Chronicles* WBC, 3). The first genealogy to be developed, therefore, is that of Ram, leading as it does to David (2:9–17), even though Jerahmeel has genealogical priority. Peleth appears alongside Zaza as the final member of the genealogy of Jerahmeel. To this base genealogy has been added a longer linear genealogy of Sheshan (vv 34–41), which likely functioned to establish the authority of the family of Elishama in the postexilic community. Peleth, therefore, represents the end point of a truncated early base genealogy which was later reworked for new purposes in the postexilic period.

ROD R. HUTTON

PELETHITES [Heb *pĕlētî* (פְּלֵתִי)]. A group of mercenaries in David's employ, always mentioned in conjunction with the Cherethites; as a military force distinct from the regular army, they were under the command of Benaiah (2 Sam 8:18; 20:23; 1 Chr 18:17). Their allegiance to David was evidenced by their support of him at the time of his flight from Absalom (2 Sam 15:18), by their pursuit of Sheba during his revolt against David (2 Sam 20:7), and by their actions in support of the coronation of Solomon as David's successor in which they were following the political policy of their leader Benaiah (1 Kgs 1:38, 44). Although the Cherethites appear in clear ethnic contexts (1 Sam 30:14; Ezek 25:16; Zeph 2:5) from which their settlement in S Philistia and their Aegean origin can be deduced (see CHERETHITES), similar claims cannot be made with any certainty for the Pelethites. The most common assumption regarding the identity of the Pelethites is that they were Philistines. According to this view, the Heb *pĕlētî* "Pelethite" is derived from *pĕlīštî* "Philistine" (Montgomery *Kings* ICC, 86). Evidence for the otherwise unattested assimilation of *šin* and *taw* is sought in the Gk *pheleththei,* with its doubled *theta* reflecting the supposed original form of the name. The change from *pĕlīštî* to *pĕlētî* would have been occasioned by analogy from *kĕrētî.* Thus in this view the Heb *hakkĕrētî wĕhappĕlētî* should be translated as "Cretans and Philistines." On the basis of an alleged parallel with the Gk *peltē* "light shield," Albright (*CAH*^{3} 2/2: 512) surmised that the biblical expression is a hendiadys referring to "light-armed Cretan" mercenaries. Delcor (1978: 421) hinted at a possible connection between the Pelethites and Peleth son of Jonathan from the Jerahmeelite genealogy (1 Chr 2:33). A possible parallel to the biblical Pelethite has been identified in a Punic inscription, in which a certain Hannibal son of Baalhanun is referred to as *hplty,* which term presumably indicated his place of origin (Schult 1965: 74–79). Be that as it may, the evidence is insufficient to allow us to determine with any measure of certainty a clear identification of the Pelethites.

CARL S. EHRLICH

PELLA (M.R. 207206) An ancient city situated in the foothills of the Transjordanian plateau, a little less than 5 km E of the Jordan river and 32 km S of the Sea of Galilee.

A. The Site.

The central occupational area of Pella is today a flattened ovoid mound some 300 m long that rises 30 m above a small valley immediately to the S known as the Wadi Jirm. Mild winters and abundant water from a spring which flows into the Wadi Jirm from the base of the mound made Pella one of the most habitable locations in the Jordan valley. Although summer temperatures often exceed 100° F, the vicinity has considerably less summer heat than localities in the S part of the Jordan valley. Unlike some sites in the N Jordan valley, Pella remains free of frost in the winter. In most years, winter rains are sufficient to

permit abundant spring crops. The rolling hills that surround the site were once forested, but ancient lumbering and continued grazing by sheep and goats have left the hillsides largely denuded of trees except where reforestation has been carried out in recent years.

Immediately W of the mound is a narrow tableland (Ar *ṭabaqah*, which appears in the present name of the site, Ṭabaqat Faḥl), extending about 800 m toward the Jordan valley. N of the mound, across a small valley, is a low outcropping of the marly limestone which underlies the entire site. On the E rises a large hill known as Jebel Abu el Khas. S of the mound, across the Wadi Jirm, lies a dome-shaped natural hill called Tell el Ḥuṣn. All of these locations show evidence of occupation at various times.

Pella is mentioned briefly in more than one hundred ancient texts. *Faḥl* is a corruption of an earlier Arabic place name *Fiḥl*, the phonetic equivalent of the Semitic name *Piḥil (um)* by which the city was known at least as early as the 19th century B.C. The language that was spoken was a dialect of NW Semitic related to Ammonite and Moabite. The Hellenization of the name to Pella honored the Macedonian birthplace of Alexander the Great, who conquered of the region in 332 B.C.

B. Excavations

Major archaeological research at the site was begun in the spring of 1967, the results of which have been published in the first volume of the excavation report series (Smith 1973). Field operations at the site were disrupted by the 1967 war, but were resumed in 1979. Preliminary reports on the individual seasons have been published in the *ADAJ* and the *BASOR*, commencing in 1980. An interim report on the 1979–81 seasons was published in 1982 (McNicoll, Smith, and Hennessy 1982). In 1989, a second volume of the final excavation reports was published (Smith and Day), and other volumes were in preparation.

C. History

Excavations and surface surveys have revealed a very long occupation at Pella and in its vicinity. A broad slope half a mile NE of the mound is littered with Paleolithic chert implements, some of which date from one-half to one million years ago. A short distance beyond are Kebaran and Natufian sites dating from 20,000–8,000 B.C. Pre-Pottery Neolithic and Pottery Neolithic artifacts of the 8th–5th millennia B.C. have been found on the mound itself and at a number of places near Pella.

Chalcolithic occupation in the 4th millennium B.C. is attested on the mound, and a small site of the same period was excavated on a slope to the SE of Tell el Ḥuṣn. The EB city has not yet been found, but potsherds excavated on the mound attest to a flourishing occupation in EB I, and occasional sherds of EB II–III suggest that a settlement continued to exist through much of the 3d millennium B.C. Toward the end of the EB Age occupation may have dwindled.

During the 2d millennium B.C., when the name of the city appears in Egyptian lists of foreign conquests, Pella stood firmly within the Canaanite cultural milieu. The MB period, ca. 1950–1550 B.C., was a time of prosperity. Numerous tombs found on Tell el Ḥuṣn reveal the urbanity of the inhabitants in the latter part of this period. During much of the LB Age there seems to have been a decrease in the city's prosperity, but a revival is attested around 1200 B.C.

Several centuries during the Iron I and early Iron II periods (ca. 1200–600 B.C.) are not well attested at Pella. It is possible that around 1100–800 B.C. the city underwent a decline in population. The relative lack of archaeological evidence for these centuries may explain, in part, why Pella is not mentioned in the OT; there may, however, have been other factors that figured in this silence, since Pella remained outside the sphere of Hebrew cultural influence, clinging to old Canaanite ways.

Thick deposits of debris dating from the end of the Iron II period show that Pella enjoyed a resurgence around the 7th century B.C. The occupational area of the town may, however, have extended across only the E portion of the mound. Although pottery from this time is abundant, there is little to suggest that the city was highly prosperous or trade-oriented; the culture appears to have been largely local, with relatively little trade between Pella and other regions.

Archaeological evidence for Pella during the Persian period, from the mid-6th century until the late 4th century B.C., is slight. Persian suzerainty may not have been conducive to Pella's prosperity, but the specific occasion for the near-abandonment of the site in the 6th century may have been the Neo-Babylonian conquest of the region early in the 6th century.

In 332 B.C. Alexander the Great marched near Pella in his conquest of the East, and was later credited by some ancient writers with the refounding of the city. There is at present, however, little evidence of the Early Hellenistic period at Pella. Whether or not it was ever actually refounded, the city began a gradual revival by the end of the 3d century B.C. It greatly increased in vigor in the 2d century, when its population grew rapidly and the city expanded from the central mound to adjoining areas, including the Wadi Jirm and Tell el Ḥuṣn. Participating in international trade, the inhabitants grew sufficiently prosperous that they could eat on dishes manufactured in Asia Minor, drink wine bottled in Syria or Rhodes, use fish sauce prepared in Egypt, and decorate their homes with figurines that may have been manufactured on the coast of the Levant. Greek came into increasing use as the language of both trade and culture.

This comfortable existence was abruptly terminated in the year 83/82 B.C., when Alexander Jannaeus, the Hasmonean ruler of Israel, ordered his troops to cross the Jordan and destroy Pella because the inhabitants refused to practice circumcision and other Jewish customs. Excavation has brought to light a thick stratum reflecting that destruction, but unfortunately most of the remains were churned up during the rebuilding of the city in the Roman Period.

When the Roman general Pompey marched through Syria and Palestine in 64/63 B.C. and claimed the entire region for Rome, Pella lay in ruins. Pompey freed a number of cities in N Transjordan from Hasmonean domination, thereby gaining a measure of gratitude from the citizens. At this time, if not before, Pella became part of the DECAPOLIS, a loose federation of ten commerce-oriented cities in N Transjordan. Its location also placed the city on the N border of Peraea, E of the Jordan river.

Pompey's actions did not have an immediate impact on Pella, but the city began to revive toward the end of the 1st century B.C. or early in the following century. Under the aegis of Rome, new patterns of trade were established. As Pella regained prosperity, new streets were laid out on the mound and more dwellings and commercial buildings began to be constructed. By the time that civic leaders decided to embellish the city with some public buildings in Roman style, the mound had apparently become well-filled with houses and shops; consequently the builders were obliged to construct the larger structures in a new civic area located at the SE base of the mound. It is likely that these public buildings were clustered around a forum that was constructed in the Wadi Jirm. Most of this burst of construction probably took place in the later 1st century or the 2d century A.D. The civic pride of the Pellaeans is reflected in the fact that in A.D. 82, the city issued its first coinage, consisting of four different bronze types. Among the civic buildings constructed during the Early Roman Period were a large temple (shown on a coin of Pella, but not yet found at the site), an odeum (excavated in 1979–81), and public baths (partly excavated in 1981–83). Little of these buildings survived into the 20th century; earthquakes, to which the Jordan valley is prone, may have damaged some of them, but in any case their building stones were extensively robbed for use in later structures.

Pella is not mentioned by name in the NT, but Jesus certainly would have known of the city, and could have visited it on his travels in the region of the Decapolis and Peraea (Mk 5:1–20; 7:31–37; 10:1–16 and par.). A few decades later Pella played a distinctive part in the history of the nascent church. Around A.D. 67, when the Roman army began to threaten Jewish insurgents in Jerusalem during the First Jewish Revolt, the Christians of that city are reported to have fled to Pella in obedience to an oracle delivered by a prophet active in the church. It is possible that the apocalyptic passage in Mark 13:3–37 and parallels, which includes Jesus' instruction that when Jerusalem is desecrated his followers in Judea should "flee to the hills" (v 14), is related to the oracle which prompted Jerusalem Christians to seek refuge at Pella. That Pella would have been considered an appropriate refuge is plausible if one considers that the Christians who fled to Pella may have been primarily Hellenists, of which there were many in the Jerusalem church from the earliest days (cf. Acts 6:1). Precisely because Pella was known as a non-Jewish city, it could be presumed to be safe from Roman aggression during the Jewish Revolt.

The length of time that these early Christians stayed at Pella is not recorded. Perhaps some of the refugees chose never to return to Jerusalem; in any case, Christianity had gained a foothold in the city. It would hardly be surprising if no evidences of earliest Christianity were found at Pella, since Christians

during the first two centuries used no religious symbols, built no churches, and otherwise left no material remains that would readily distinguish them from others in the population; nevertheless, a late 1st- or early 2d-century sarcophagus found beneath the floor of the West Church in 1967 may possibly be a relic of the Jerusalem Christian community at Pella (Smith 1973: 143–49). By the mid-2d century, Christianity was firmly enough established at Pella that the city was home to the early Christian apologist Aristo.

The Late Roman period and earliest phase of the Byzantine period, from the middle of the 2d century through the end of the 4th century, is not adequately known at Pella. It appears to have been a time in which the population again declined. Family tombs which had been cut in the Early Roman period continued to be utilized, however, a fact which suggests that there was continuity of population and local practices. There was little or no new public construction, unless the widely-known baths of the city (which are mentioned in a 4th-century text) were possibly remodeled and enlarged.

During the Byzantine period, paganism rapidly disappeared at Pella, as it did elsewhere in the empire, although it continued to survive in indirect ways as pre-Christian elements found their way into the local Christianity. Excavated artifacts show that a former mother goddess was assimilated to the Virgin Mary, and pagan elements were incorporated into amulets that were intended to protect the wearer from evil. Although possibly attracted by some E heresies, the Christians of the city continued to affirm orthodox beliefs. The city's major architecture during this period consisted of ecclesiastical structures such as the West Church, the East Church and the Civic Complex Church (which was probably the Cathedral), all of which have been partly or entirely excavated.

The 6th century saw Pella's population and prosperity reach their maximal extent. Many new houses, ranging from villas to hovels, were built, often with the lower parts of walls constructed of hewn stones and the upper parts of mudbricks. Space was at such a premium that houses were built on some of Tell el Ḥuṣn's steep slopes. The city's merchants carried on extensive trade with Syria, Egypt, the coast of Palestine, and other places in the Byzantine world, and the households of the city were well stocked with imported goods. But the secure roads and far-flung markets of the empire were already beginning to deteriorate, and the 7th century must have been as grim for the inhabitants of the city as the 6th century had been pleasant. The climate may have turned slightly drier, bringing drought to many parts of Transjordan. Large cisterns constructed during this century indicate that the water supply from the spring had dwindled until it no longer sufficed for a large population.

Capitulation to Islamic forces in A.D. 635 brought further changes in the city's pattern of life. Byzantine social and economic institutions weakened or disappeared entirely, while caravan trade with regions to the E, made newly accessible because of Muslim conquests, brought fresh commercial contacts to the city. These developments were not sufficient, however, to prevent further decline of the city's fortunes during the next hundred years. Severely damaged by an earthquake in the year 717, Pella virtually ceased to exist in 747, when a massive earthquake destroyed most of its surviving buildings. Excavations have provided vivid pictures of the devastation which brought the city's existence to an end.

ROBERT HOUSTON SMITH

PELONITE [Heb *pĕlōnî* (פְּלֹנִי)]. A descriptive adjective of Helez, one of David's champions, a select class of warriors directly attached to the king for special assignments, named in the list of 1 Chr 11:10–47 (v 47), a list which, up to v 41a, parallels that of 2 Sam 23:8–39. No such place as "Pelon" or group of people as "Pelonites," have been identified. In the parallel text (2 Sam 23:26) Helez is called a Paltite, a designation which has been identified as either a member of the clan of Calebites who descended from Pelet (1 Chr 2:47) or an inhabitant of Beth-pelet, a town in S Judah (Josh 15:27) which might have been

associated with the Calebite clan (McCarter *2 Samuel* AB, 497). Therefore, it has been suggested that "Pelonite" is a corruption of the original "Paltite" (Rudolph *Chronikbücher* HAT, 102). However, the same Helez appears to be mentioned in a list of commanders found in 1 Chr 27:1–15 (v 10). Here Helez the Pelonite is also said to be "of the sons of Ephraim," a designation which would conflict with the interpretation that Helez of 2 Sam 23:26 is from Beth-pelet in Judah.

"Pelonite" also occurs as a descriptive adjective for Ahijah (1 Chr 11:36); however, this construction, "Ahijah the Pelonite," seems to have arisen through a corruption of the text. The parallel text (2 Sam 23:34b) reads, "Eliam, son of Ahithophel of Gilo" (*ʾly ʿm bn-ʾḥytpl hglny*), who is also encountered at 2 Sam 15:12 and 31. It is possible that in one or more stages of translation the eyes of the transmitter skipped from the first to the second *ʾalep,* omitting "Eliam, son of," then jumped from the first to the second *l,* resulting in *ʾḥytplny,* and finally "corrected" the *t* to *h,* to read in accord with v 27b, *ʾḥy (h) hplny,* "Ahijah the Pelonite" (Rudolph *Chronikbücher* HAT 102).

RODNEY K. DUKE

PELUSIUM (PLACE) [Heb *sin* (סִין)]. A city in the 14th Lower Egyptian nome, 30–40 km E of the Suez Canal, just S of the coast and E of the Pelusiac mouth and Lake Manzala (31°02´N; 32°32´E), mentioned in Ezekiel's oracle against Egypt (30:15–16). For general information and additional references, see Thissen 1982. In both commerce and warfare it has been a point of entry into Egypt at the NE frontier; it served as a "customs-house" for trade in the Hellenistic period (Kees 1961: 210), and it is mentioned in the Roman *Itinerarium Antonini* as the starting point of roads across the Egyptian Delta (Kees 1961: 183). Herodotus (2.141) ascribes the Assyrian retreat from Pelusium under Sennacherib to an onslaught of mice (Gardiner 1961: 345); he also notes a garrison at "Daphnae of Pelusium" (2.30) in the Saite period (Gardiner 1961: 357). Pelusium was taken by the Persians to usher in both the "first" and "second" Persian dominations of Egypt, in 525 and 343 B.C.E. respectively (Gardiner 1961: 364, 343); was ordered by the Persian satrap to open its gates to Alexander in 332 B.C.E. (Bevan 1927: 2f.); was taken by Octavian in 30 B.C.E. (Bevan 1927: 380); and fell to the Arabs after a month of fighting in 640 C.E. (Lane-Poole 1925: 2).

The name Pelusium is first used by Herodotus, and the corresponding Demotic form is first attested in Ptolemaic times (Cheshire 1985: 20, 23 n. 21). According to Classical authors, the town was founded by the eponymous Peleus, father of Achilles (Amm. Marc. 22.16.3) or by Isis in memory of her foster-son Pelusios (Plutarch *De Is. et Os.* 17), or is named for the region's characteristic mud (*pēlós*—Strabo 17.1.21). This last statement has led most Egyptologists to identify it with the toponym *Swn,* attested since the Old Kingdom, which resembles the word *s'in* "mud," a position supported by the rendering of *Swn* as *Ṣinu* in cuneiform, *sîn* in the Hebrew Bible (Ezek 30:15), *Sain* in *LXX,* and *Pelusium* in the Vulgate (Cheshire 1985: 20; Kitchen 1973: 393 n. 877). Doubt is cast on this identification by a demotic onomasticon, P. Cairo 31169, which contains a geographical list giving *P€ -ʾi-ʾir-ʾImn* followed immediately by *T€ -ʿmy* "The mud," and, much later in the text, *Swn* (Cheshire 1985).

Amun was the preeminent deity of Pelusium (as reflected in the demotic form of the name), Isis and Harpokrates were venerated there, and a temple of Zeus Kasios was founded under Hadrian. The veneration (or, sometimes, abomination) of the onion is ridiculed by Classical and patristic writers as *Religio Pelusiaca* (thus Jerome, Commentary on Isaiah, 13, 46; cf. Juvenal 15, 9; Thissen 1982; Griffiths 1984). In the mid-19th century, Lepsius suggested that Per-Rameses (biblical "Raamses") was located in the vicinity of Pelusium, a view first upheld and then abandoned by Gardiner (Rowley 1950: 27–28). Per-Rameses is now agreed to be located in the Khatana-Qantir region (Van Seters 1966: 127–51; Bietak 1979). Pelusium was renowned as a source of fine wine (Kees 1961: 81–82). There was another town named Pelusium in the Fayum (Cheshire 1985: 22 n. 6).

PENDANTS. See JEWELRY, ANCIENT ISRAELITE.

PENINNAH (PERSON) [Heb *pĕninnâ* (פְּנִנָּה)]. The second wife (1 Sam 1:2, 4) of Elkanah, the father of Samuel. Elkanah may have married her because his first wife, Hannah, was barren. The mother of several children, Peninnah became Hannah's rival and taunted her at every opportunity (1:6–7). In time the Lord honored the prayers of the pious Hannah, who herself eventually became the mother of four sons and two daughters (1:21; 2:21). In her song of thanksgiving and praise, Hannah apparently made several references to her tormentor Peninnah, though not by name (2:1, 3, 5–8).

Unique to 1 Samuel 1, the name Peninnah is sometimes compared to Ar *faynānā,* "woman with luxuriant hair," or *fanan,* "tree branch" (in reference to her fecundity). It is perhaps better, however, to assume that *pĕninnâ* is the feminine singular form of the plural *pĕnînîm,* the meaning of which is uncertain ("coral," "pearls," and "rubies" all have their advocates) but which denotes a reddish substance (Lam 4:7).

With the possible exception of Prov 20:15, all the other attestations of *pĕnînîm* in the OT (Job 28:18; Prov 3:15; 8:11; 31:10; Lam 4:7) and Apocrypha (Sir 7:19; 30:15) describe someone, or something, as being better than *pĕnînîm.* Especially instructive is Sir 7:19:

> Do not divorce a prudent wife,
> for her charm/grace (*ḥn*) is worth more than rubies (*pnynym*).

Perhaps Ben Sira was alluding to 1 Sam 1:4–5, where it is implied that Hannah (*ḥnh,* "Grace")—at least in Elkanah's eyes—was better than Peninnah (*pnnh,* "Ruby").
RONALD YOUNGBLOOD

PENTATEUCH. See TORAH; also SAMARITAN PENTATEUCH.

PENTECOST [Gk *pentēkostē* (πεντηκοστη)]. The Greek name for the Jewish Feast of Weeks, deriving from its occurrence 50 days after Passover (Acts 20:16; 1 Cor 16:8). Because the early Christians received the baptism of the Holy Spirit on this day, the term is now more commonly used to refer to that event recounted in Acts 2:1–13.

The Feast of Weeks was the second of the three great Jewish feasts. Its name signified that it concluded the period of seven weeks which began with the presentation of the first sheaf of the barley harvest during the Passover celebration (Lev 23:15–16; Deut 16:9). Thus it was originally an agricultural feast marking the end of the grain harvest and was celebrated during the month of Sivan (May/June). Both Josephus (*Ant* 3.10.6 §252; *JW* 1.13.3 §253) and Jewish intertestamental writings (Tob 2:1; 2 Macc 12:31–32) refer to the feast as Pentecost.

According to Acts, the apostles remained in Jerusalem after the Resurrection appearances. On the day of Pentecost they were gathered in one house when the Holy Spirit came upon them, sounding like a mighty wind and appearing like tongues of fire upon each of them. Then the apostles began miraculously to speak in foreign languages, attracting the attention of foreign Jews who were amazed to hear their native languages spoken by Galileans. This set the stage for Peter's sermon which resulted in the conversion and baptism of about 3000 people (Acts 2:1–47).

Scholarly reaction to Luke's account has ranged from Marshall's defense of the basic historicity of the entire narrative (1977: 347–69) to Haenchen's conclusion that it is essentially Luke's theological attempt to explain the coming of the Spirit, not an historical account of actual events (1971: 172–75). Objections

to the Pentecost narrative center on the miraculous elements as well as John's very different retelling of the giving of the Spirit (20:19–23). Dunn defends the miraculous elements, noting that the believers expected nothing similar to what occurred (1975: 148). He also defends Luke's dating of the gift of the Spirit at Pentecost against John's placing it at Jesus' first Resurrection appearance to the disciples (1975: 139–41).

Various passages in OT and Jewish writings have been suggested as providing the background against which the Pentecost events might be best understood: Philo *Dec* 33, God created a sound on Sinai and changed it into fire; Exod 19:18, the Lord descended in fire; and Gen 11:1–9, the confusion of languages at Babel. More important from Luke's perspective are the prophecies by Joel (2:28–32, cited in Peter's speech in Acts 2:17–21), John the Baptist (Luke 3:16) and Jesus (Acts 1:5) regarding the pouring out or baptism of the Spirit. Luke also closely associates the baptism of the Spirit at Pentecost with the mission and expansion of the church to people of every nation.

MARK J. OLSON

PENUEL (PERSON) [Heb *pĕnû᾽ēl* (פְּנוּאֵל)]. Two individuals mentioned in the OT bear this name.

1. The son of Hur and grandson of Judah, and listed as the father of Gedor (1 Chr 4:4). If Gedor is identified with Jedur, a town in the hill country near Jerusalem, then Penuel was a co-founder with Jered (1 Chr 4:18).

2. The son of Shashak of the tribe of Benjamin (1 Chr 8:25). The RSV renders the name according to the *Qere*; however the *Ketib* is *pny᾽l,* perhaps reflecting a variation similar to Gen 32:31–32 (Eng 32:30–31) where both spellings Penuel and Peniel are used for the same location. See PENUEL (PLACE); *GKC* § 90 k.

DAVID CHANNING SMITH

PENUEL (PLACE) [Heb *pĕnû᾽ēl* (פְּנוּאֵל)]. A city in E Palestine on the Jabbok river where Jacob wrestled with the angel (Gen 32:32). The place is located E of the Jordan river and E of Succoth. According to the Genesis story (Gen 32:24–32), as Jacob was returning home from Paddan-aram, he spent the night at the ford of the Jabbok. That night he wrestled with a man (Hos 12:4 calls this "man" an angel) who ultimately blessed him and renamed him Israel, "Prince of God." So moved by this experience, Jacob names the place Penuel, "the face of God."

Jacob's name for the ford eventually became the name for a town built on that site, for the name is mentioned again in the period of the Judges. When Gideon was pursuing the Midianite kings, Zebah and Zalmunna, he asked for provisions for his army from the towns of Succoth and Penuel. Fearing reprisals from the Midianites, the two towns refused Gideon's request and insulted him. After Gideon had defeated the Midianites, he returned to Penuel and destroyed the tower of the city and every man in it (Judg 8:8–9, 17). Later Jeroboam rebuilt the town fortifying the site to ward off attacks on the E frontier (1 Kgs 12:25).

The site of Penuel is identified with Tell edh-Dhahab esh-Sherqiyeh, "the Hill of Gold" (M.R. 215177), on the brook Jabbok, Nahr ez-Zerqa. Some suggest that Pernoual, number 53 in Pharaoh Shishak's list of conquered cities, is the same as Penuel. Later Assyrian documents call the city Panili.

PEOPLE OF THE LAND. See AM HA›AREZ.

PEOR (PLACE) [Heb *pĕ‹ôr* (פְּעוֹר)]. **1.** A mountain in Moab to which Balak took Balaam in hopes of securing a curse against Israel (Num 23:28). After his two previous attempts resulted in blessings rather than curses (Num 23:7–10, 18–24), Balak led Balaam to the top of Peor for a third and final pronouncement. Once again, a blessing followed. According to Num 24:2, the view from Peor enabled Balaam to see the Israelite camp in the plains of Moab below. As such, it must have been located somewhere in the vicinity of Mt. Nebo. See NEBO, MOUNT. Although Eusebius situated the mountain just over 6 miles W of Heshbon, a precise identification has not been made.

In addition to the incident involving Balak and Balaam, Peor appears in connection with Israelite apostasy. Associated with the site are intermarriages with foreigners as well as the idolatrous worship of BAAL-PEOR, the god of this particular mountain (Num 25:3, 5, 18; 31:16; Deut 4:3; Ps 106:28). Such apostasy later served as a comparison to the apparently disloyal act of the Reubenites, Gadites, and the half tribe of Manasseh, who built an altar E of the Jordan (Josh 22:17).

2. A town in the hill country of Judah, referred to only in an expanded list appearing in the LXX (Josh 15:59). Peor has been identified with Kh. Faghur (M.R. 164119), located some 5 miles SW of Bethlehem.
TERRY L. BRENSINGER

PERAZIM, MOUNT [Heb *pĕrāṣîm* (פְּרָצִים)]. See BAAL-PERAZIM (PLACE).

PEREA (PLACE) [Gk *Peraia* (Περαια)]. A territory E of the Jordan river, described by Josephus as extending "in length from Machaerus to Pella, in breadth from Philadelphia to the Jordan" (*JW* 3.3.3 §44).

A. Identity

The name Perea is found in variant readings of Luke 6:17 (Codex Sinaiticus, Freer Gospel; Sinaitic Syriac). Elsewhere the Gospels refer to the region as "beyond the Jordan" (Matt 4:15; 4:25 [= Mark 3:8]; 19:1 [= Mark 10:1]; John 1:28; 3:26; 10:40). Alternate readings of Mark 10:1 indicate some confusion over the identity of the district. The difficulty involves a description of the region as an extension of Judea. The Alexandrian text reads, (he) "went to Judea and beyond the Jordan," while the Western, Caesarean, and Antiochian texts have, (he) "went to Judea beyond the Jordan." There is great diversity of support for the Alexandrian text, but this may reflect an attempt to harmonize Mark 10:1 with the parallel in Matt 19:1 (Metzger 1971: 103). A third variant, mainly attested in later witnesses, reads in translation, "he came into the territories of Judea via Transjordan." This rendering appears to be an attempt at clarification by copyists who were troubled by the geographical difficulties involved in the two readings.

B. Boundaries

The W boundary of Perea was fixed by the Jordan river and the Dead Sea. In the S the region was bounded by the land of Moab (*JW* 3.3.3 §47). n. Glueck's survey of the Transjordan put the S frontier running E from the Dead Sea on a line with the fortress of Machaerus (el-Mukawer M.R. 209108) to the "top of the western edge of the Moabite plateau" (1939: 140). Avi-Yonah extended the border S to the Arnon and its confluent Aidonas (Sel Heidān), so as to include the land around Machaerus (1966: 170–80). To the E Perea was bounded by Philadelphia, Gerasa, Arabia, and Heshbonitis (*JW* 3.3.3 §47). Glueck's survey marked the E boundary of Perea by a N–S line to the W of Gerasa, Philadelphia, Heshbonitis, and Medeba. Gerasa (Jerash M.R. 234187) was a city of the Decapolis and therefore probably not part of Perea. A bloody boundary dispute between the Pereans and the inhabitants of the village of Zia (Kh. Zey M.R. 217166), fifteen Roman miles W of Philadelphia (*Ant* 20.1.1 §1–3), would seem to confirm the frontier was W of Philadelphia (Rabbath-ammon M.R. 238151). Josephus included Heshbonitis (Heshbon, Esbus, Hesban M.R. 226134), twelve miles E of the N end of the Dead Sea, among the cities of Moab in *Ant* 13.15.4 §497, while in *Ant* 15.8.5 §294 he placed Heshbon in Perea. It may be that Heshbon, which was part of Jewish territory during the reigns of Alexander Jannaeus and Herod the Great, fell into the hands of the Arabians after the death of Herod. At the beginning of the

Jewish War 66–70 C.E., Heshbonitis was not part of Jewish hegemony (*JW* 2.18.1 §458). Eusebius claimed that Perea bordered on Heshbon (*Onomast.* 136, 7, 13; 18, 3). Medeba (Madeba M.R. 225124) was not considered Perean territory. In the N, according to Josephus, the frontier reached to Pella (*JW* 3.3.3 §47). According to Eusebius, the N border was actually located six miles from Jabesh (Tell el-Maqlub M.R. 214201) on the road leading to Gerasa (*Onomast.* 32, 5–7; 33, 5–7). Gersa was to the S of the Wadi Jabis and Pella (M.R. 207206) was N. At the outbreak of the Jewish War, Jews attacked Pella, an unlikely strike if the city were within Jewish territory since the Jewish attacks were directed against Syrian villages and the non-Perea cities of Philadelphia, Heshbon, Gerasa, Sythopolis, Gadara, Hippos, and Gaulanitis (*JW* 2.18.1 §458–59). It is probable that the N boundary ran along the Wadi Jabis including the city of Amathus (Tell Amtah M.R. 208182) 18 to 20 miles S of Pella and NE of the Jabbok (Avi-Yonah 1969: 179–80).

C. History

In the OT, the Transjordan territory from the Jabbok to the Arnon was known as Gilead (Josh 12:2). Moses gave this land to the tribes of Reuben and Gad and the half tribe of Manesseh (Josh 12:6; 22:9). During the monarchies of Saul and David, the land was occupied by the Israelites and the prophetic literature refers to the balsam (Jer 8:22) and pasturage for which the district was known. The Syrians controlled the land from 900 to 780 B.C.E. when Jeroboam II retook the territory. He held it only briefly. In 733 B.C.E., the Assyrians conquered the area. They carried out a deportation of the local population (2 Kgs 15:29). There is no further mention of a Jewish presence in the Transjordan until the Maccabean era.

During the conquests of Alexander the Great, Greeks immigrated into Perea. By the time of the Maccabees the area was inhabited mainly by gentiles (Hoehner 1972: 54–55) who threatened the Jewish minority (1 Macc 5:1; 45–54). Schürer suggested that the opposition of the local population to the Jews living beyond the Jordan indicates a decline in Jewish inhabitants and the existence of a dispersion among the gentiles (*HJP*[1] 1/1: 192). John Hyrcanus (135–104 B.C.E.) and his successors concentrated on Judaizing the region. Early in the years of his reign the Hasmonean monarch Alexander Jannaeus (104–78 B.C.E.) besieged Gadara and Amathus, the most important fortresses beyond the Jordan (*JW* 1.4.2 §86). Jannaeus succeeded in subduing the greater part of Perea reaching from the vicinity of the N city of Pella S to the fortress of Machaerus on the E shore of the Dead Sea (*JW* 7.6.2 §171). Despite the conquest of Perea ca. 88 B.C.E., Jannaeus was apparently unable to secure the territory. Around 57 B.C.E., Gabinius, a former legate of Pompey, made Amathus (Tell Amtah M.R. 208182) one of five administrative districts in Palestine. Each of these regions was governed by a sanhedrin under his general direction. The duration of the administrative districts was probably limited to the rule of Gabinius, although the sanhedrin continued to function after his time (Smallwood 1976: 31).

During the Roman period, Perea was considered a Jewish territory. Its capital was Gadara (Gedor, Tell Jedur, Gedora M.R. 220160) eighteen miles N–NW of the N tip of the Dead Sea near es-Salt. This Gadara should not be confused with Gadara (Umm Qeis M.R. 214229) in the Decapolis. Herod the Great (37–4 B.C.E.) built additional fortresses in the Transjordan and established military colonies there (*Ant* 15.8.5 §294). Near the end of his life, Herod unsuccessfully sought relief in the baths of Callirrhoe (Zereth-shahar, ez-Zarat M.R. 203111) on the E shore of the Dead Sea (*Ant* 17.5.1 §171–72). In 20 B.C.E. with the permission of Augustus, Herod appointed his brother Pheroras to the post of tetrarch of Perea with control of its revenues (*Ant* 15.10.3 §362). After Herod's death, Perea was assigned with Galilee to Herod Antipas' tetrarchy. In Perea, Antipas (4 B.C.E.–39 C.E.) fortified a city which he named Julias (Livias, Betharamphtha, Tell er-Rame M.R. 211137) in honor of the empress Julia. It may be, as Schürer (*HJP*[1] 2: 214–15) and others have suggested, that the city was originally named Livias in honor of Livia, Augustus' wife, and later (14 C.E.) renamed Julias when Livia was adopted into the *gens Julia.* The name reverted to Livias after the 1st century. The boundary dispute between the Jews of Perea and the Philadelphians over the frontier of Zia climaxed ca. 44 C.E. Fadus the procurator arrived in Judea and discovered that the Pereans had taken arms without the consent of their rulers. He arrested three of the revolt leaders, condemning one to death and two to exile (*Ant* 20.1.1 §2–4).

From this period on, Galilee and Perea were included in the provincial designation of Judea, together with districts formerly identified as Judea, Samaria, and Idumea (Smallwood 1976: 1). In 54 C.E., when Nero acceded to the throne he granted Agrippa II (28–100 C.E.) two-thirds of Perea, specifically the toparchies of Abila (Abel, Tell Abil M.R. 231231) and Julias. Agrippa's ambition was to reign over a territory equal to that of his father and grandfather, but his dream was brought to an end by the outbreak of the Jewish War in 66 C.E. During Vespasians's campaign in Perea in 68 C.E., many Jews fled to Jericho. The Roman general captured Gadara, described as a "city of some strength" (*JW* 4.7.3 §413), and subsequently subdued the whole of Perea as far as Machaerus, which he did not take. After Agrippa's death in 100 C.E., Perea became part of the Roman province of Syria.

D. NT and Rabbinic Sources

In the NT, Perea is the land "beyond the Jordan" (Mark 3:8). Galilean Jews making the trip to Jerusalem traveled via Perea in order to avoid contact with the Samaritans. Those making the journey by crossing the Jordan thought they never left Jewish territory, reinforcement for the Jewish character of the population in the 1st century (Hoehner 1972: 56). John the Baptist was active in the district. According to the gospel of John, the Baptist responded to priests and Levites who had come from Jerusalem questioning his baptisms (John 1:28). Later John's disciples asked him about Jesus "who was with you beyond the Jordan" (John 3:26)—an indication that John's main activity was in the Transjordan. Around the time of the Battle of Actium, Antipas imprisoned and executed John in the fortress of Machaerus (*Ant* 18.5.2 §116–19). Josephus does not record the details of John's arrest as described in the Gospels (Matt 14:6–12 [= Mark 6:22–28]; Luke 9:9), but attributes the execution to Antipas' fear that John might incite a revolt. Jesus also ministered in Perea. He answered the Pharisees concerning divorce (Matt 19:1–9), blessed children (Matt 19:13–15), taught the disciples concerning marriage (Matt 19:10–12), withdrew from the Jews (John 10:40) and attracted crowds who had heard of his reputation as a healer (Mark 3:8 = Matt 4:25).

Jewish literature assumes that Perea was a land inhabited by Jews (*Seb.* 9.2; *Ketub.* 13.10; *B. Bat.* 3.2; *Menaḥ.* 8.3). In the Talmudic period, Perea did not have as favorable a reputation as Judea and Galilee. According to the Aboth of Rabbi Nathan, Judea represented the grain, Galilee the straw and "ha-Yarden" (Perea) the chaff (Neubauer 1868: 241–51).

DIANE I. TREACY-COLE

PERESH (PERSON) [Heb *pereš* (פֶּרֶשׁ)]. The Manassite son of Machir and his wife Maacah (1 Chr 7:16). According to the genealogy of Manasseh in 1 Chr 7:14–19, his brothers included Sheresh and Gilead, and perhaps Huppim and Shuppim, too. Peresh is omitted, however, from other Manassite genealogies and biblical texts.

There are several difficulties in 1 Chr 7:14–19 that have bearing on the identity of Peresh. First, Maacah, the mother of Peresh, is called the wife of Machir (v 16), as well as his sister (v 15). In addition, Gilead appears to be the brother of Peresh (v 14), but in v 17, he is included among the "sons of Gilead." There have been several attempts to resolve these difficulties, but none is completely satisfying. Curtis and Madsen (*Chronicles* ICC, 151–52) emended "Machir" in v 16 to "Gilead." Therefore, Maacah was Machir's sister but Gilead's wife (as well as his aunt), and Gilead, rather than Machir, was the father of Peresh. In addition, the names of Shuppim and Huppim (v 15) should be deleted, since they are glosses from v 12 (the genealogy of Naphtali) and so cannot have been the brothers of Peresh. Rudolf (*Chronikbücher* HAT, 68–71), however, reconstructs 1 Chr 7:14–19 extensively on the basis of Num

26:29–34. In his arrangement, Maacah becomes the daughter of Gilead and the mother of Peresh, but the name of her husband is missing from the text.
M. PATRICK GRAHAM

PEREZ (PERSON) [Heb *pereṣ* (פֶּרֶץ)]. Var. PHARES. PEREZITES. The son of Judah and Judah's daughter-in-law Tamar (Gen 38:28; 1 Chr 2:4; 4:1). He was the brother of Zerah (Gen 38:29) and the father of Hezron and Hamul (Gen 46:12; Num 26:21; 1 Chr 2:5).

The story of his birth provides a popular etymology for his name. When the time came for Tamar to give birth there were twins in her womb. One of them stretched out his hand and the midwife placed a scarlet thread on it to indicate that he was the first born. After the hand was withdrawn, the other brother came bursting forth. At this the midwife exclaimed: "What a breach you have made for yourself." For this reason he was named Perez, a name which means "breach" (Gen 38:27–29). The story of Perez's birth is an attempt to explain the preeminence of the younger clan Perez over the older clans of Judah. In the second census list of the tribes of Israel mentioned in the book of Numbers, Perez is listed as the eponymous ancestor of the Perezites (Num 26:20). In addition, two other Judean clans come from Perez, the Hezronites and the Hamulites (Num 26:21). The superiority of Perez and his clan is due to the fact that David descended from Perez through Boaz and Ruth (Ruth 4:18–22).

The reference to Perez in the blessing which the leaders of Bethlehem bestowed upon Boaz, "May your house be like the house of Perez, whom Tamar bore to Judah," (Ruth 4:12) reflects the belief that Perez enjoyed numerous progeny. Because of Perez's prominence among the clans of Judah, the Perezites occupied important positions in Judean society. One of his descendants was the commander of the first division of David's army (1 Chr 27:2–3). Some of the Perezites lived in Jerusalem after the return of the exiles from Babylon (1 Chr 9:4), among them there were 468 who were "valiant men" (Neh 11:4–6). Zerubbabel, the son of Shealtiel, who returned to Jerusalem from Babylon, and who was exhorted by Haggai and Zechariah to rebuild the temple, was from the clan of Perez (RSV and Gk *Phares*; 1 Esdr 5:5). In the NT, the ancestral line of Jesus is traced through Perez (Matt 1:13; Luke 3:33).

CLAUDE F. MARIOTTINI

PEREZ-UZZAH (PLACE) [Heb *pereṣ ʿuzzâ/ʿuzzā* (פֶּרֶץ עֻזָּה/עֻזָּא)]. Appears twice in the Bible (2 Sam 6:8 = 1 Chr 13:11). A place of uncertain location between Jerusalem and Baalah-Judah (Kiriath-jearim; cf. Josh 15:10), 14 miles to the NW. Here, as the ark of God was being brought from Baalah to the City of David, Uzzah, son of Abinadab, took hold of the ark to steady it and died. The name reflects that tragedy. The text explains that "Yahweh broke forth against Uzzah" (*pāraṣ yhwh pereṣ bĕʿuzzâ*), translating *pĕrōṣ b-* as in Exod 19:22, 24 and 1 Chr 15:13. If the place name carries that understanding, as the LXX, Vg, Tg and most modern English versions hold, it means "the breaking forth upon Uzzah" (e.g., Hertzberg *1 and 2 Samuel* OTL, 276). McCarter takes *pereṣ* to mean "an interruption in … family line," as in Judg 21:15. He translates the etiology "Yahweh made a breach in Uzza," and the place name "Uzza's Breach." The name may originally have referred to a breach in the wall of Jerusalem where the incident occurred, with later theological reflection prompted by the various meanings of *pereṣ* (McCarter *2 Samuel* AB, 161, 170).
DAVID L. THOMPSON

PERFUMES AND SPICES. A variety of perfumes and spices are named in the Bible. Perfumes and spices were important items of trade in the ancient world.

A. Perfumes

Although the human sense of smell has atrophied over the millennia as hunting and being hunted became less of a pastime, our delight over pleasing smells—especially those which function as an aphrodisiac—has grown. Like many products desired and manufactured by early cultures, individual

perfumes were identified by chance or experimentation. Most are derivatives of plants, although a few are extracted from animals. Some probably were discovered as medicinal potions were concocted, but in many cases their origin is found in the natural smells of the forest and desert, which attracted humans just as the scent of flowers drew insects.

1. Biblical Terms. Specific Hebrew terms for perfume or those associated with the perfume industry in the Bible are *rôqēaḥ* (Exod 30:25, 35; 37:29; Eccl 10:1), *raqqāḥ* (1 Sam 8:13; Neh 3:8), *mirqaḥaṯ* (2 Chr 16:14), *riqqûaḥ* (Isa 57:9), *rîaḥ* (Exod 30:38), *nûp̱* (Prov 7:17), *qeṭōreṯ* (Prov 27:9), *mequṭṭereṯ* (Cant 3:6), *bātê hannepeš* (Isa 3:20), *bōśem* (Isa 3:24).

2. Sources. Since most of the substances (with the exception of stacte and gum) used as perfumes in the Bible are not native to Canaan, they had to be acquired through trade. Caravans carried these precious commodities from the Arabian desert or from ports along the Red Sea and the Mediterranean coast where Egyptian, Phoenician, and later Roman ships (Miller 1969: 120) had deposited them. The places of origin for the plant-based perfumes mentioned in the biblical narrative include Arabia (bdellium, frankincense, myrrh—Isa 60:6; Jer 6:20), India (aloes, calamus, saffron), Nepal (nard), Sri Lanka (cassia, cinnamon), Iran (galbanum), Somaliland (frankincense, myrrh). The one perfume derived from animals, Onycha, was extracted from the muscle of a Red Sea mollusk.

The trade in perfumes and spices created an elaborate network of land and sea routes from the sources to the markets (Van Beek 1960: 106). One such route used by the Ishmaelite traders, who were carrying "gum, balm, and myrrh" from Gilead to Egypt, brought them in contact with Joseph's brothers as they pastured their flocks near Dothan (Gen 37:25). The biblical narrative describes how in the monarchical period, Solomon participated in a joint venture with the Phoenicians. According to this account a fleet of "Tarshish" ships was constructed which plied the waters of the Red Sea and the Arabian and East African coasts for three years at a time (1 Kgs 10:22–26; 2 Chr 9:21). The cargoes included luxury items such as "gold, silver, ivory, apes, and peacocks" as well as myrrh and spices (Stieglitz 1984: 141).

In order to gain a fuller understanding of the extent of trade in the ancient world, two accounts are instructive: Ezekiel's "lamentation over Tyre" (chap. 27) and the "lamentation over Babylon (= Rome)" in Revelation 18. A vast array of products are listed from metals to jewels to slaves. Among the perfumes and spices listed are balm from Judah (Ezek 27:17), cassia and calamus from Uzal (27:19), and "the best of all kinds of spices" (27:22) from Sheba and Ra'amah (all in SW Arabia). The Roman merchants are said to have trafficked, among other things, in "cinnamon, spice, incense, myrrh, and frankincense" (Rev 18:13). Eastern trade routes stretched along the coast of Africa down Somaliland and Madagascar, across the Indian Ocean to Indonesia, and all along the Persian Gulf and the W coast of India (Miller 1969: 145–47; Van Beek 1960: 109).

3. Manufacture. Raw materials for the manufacture of perfumes in ancient times can be divided into two categories. The first consists of plant materials, including "essential oils" (which are obtained through distillation or expression), flower oils, and gums, resins, and exudations. The second category is made up of a variety of animal secretions (Balsam 1972: 600).

Collection of these materials depended upon the form that they took in nature. In some cases, bark was stripped from trees (cinnamon), roots dug from the ground (mandrake, nard) or gathered from flowers (saffron). Another method consisted of tapping trees (frankincense and myrrh) and collecting the "tears" of resin once they had had time to dry (Van Beek 1960: 101; *IDB* 3: 731). Packaging for storage could be as simple as a cloth bag or as elaborate as a finely shaped alabaster jar (Matt 26:7) or perfume box (Isa 3:20). A large number of these perfume jars have been uncovered in excavations throughout the Near East, some still containing minute amounts of their contents.

Some fragrances, like frankincense and myrrh, did not require refining. They were simply transported to buyers and then burnt as incense (Exod 30:34; Cant 3:6). However, myrrh at least was also pulverized into a fine powder and placed in a sachet worn between a woman's breasts (Cant 1:13). Recipes also exist for the blending of fragrances to create sweet smelling incense and perfume. For instance, Exod 30:23–25 contains a list of ingredients (myrrh, cinnamon, aromatic cane, cassia, olive oil) and their proportions for use in the creation of "anointing oil" to be used in the tabernacle. The profession of perfumer is first

ascribed to Bezalel in Exod 37:29. The industry was restricted in part to the priestly community (Exod 30:37–38; 1 Chr 9:30), but there was obviously a large secular market. For instance Samuel mentions that women will be drafted to work for the palace as perfumers (1 Sam 8:13).

The utensils and methods for blending, however, are missing in these texts. Clues to that process can be found in Middle Assyrian texts dating to the 13th century B.C.E. (Ebeling 1948: 132–43). They, along with Egyptian tomb paintings from the time of Tuthmosis IV (1397–1384), contain evidence of an elaborate series of steps which included steeping and boiling the ingredients while oil and other items were added until they were properly mixed (Shelmerdine 1985: 16). Recent excavations at Ein Gedi have also revealed the tools and furnaces used for the commercial production of balm in ancient Judah (Zohary 1982: 198).

4. Uses. Some of the substances mentioned above have few uses in antiquity. Frankincense, for example, was primarily burnt as incense in religious ceremonies (Exod 30:34; Lev 2:2), although it occasionally is mentioned as a perfume or fumigant (Cant 3:6). Myrrh, however, was used in many ways—for example, as incense (Exod 30:23), as a perfume to freshen garments (Ps 45:9), and as a cosmetic treatment (Esth 2:13). In Mark 15:23 myrrh mixed with wine was offered as a painkiller to Jesus on the cross, and in John 19:39, a hundredweight of myrrh and aloes was used to embalm Jesus' corpse and line his linen shroud.

Of course, perfumes functioned as a cosmetic, providing pleasing fragrance as well as needed protection for the skin in the hot and dry climate of the ANE (Cant 1:3, 5:5). The more costly fragrances made them the rivals of gold (Matt 2:11) for the attention of the wealthy and a remarkable gift. The reaction of the disciples over the use of an alabaster jar of nard to anoint Jesus' feet (Mark 14:3–5) is thus quite understandable. It was made even more expensive (300 denarii = worker's pay for half a year) by its costly container and the distance from which it had come (Nepal).

B. Spices

In biblical usage, spices [Heb *bōśem*] are associated with aromatic oils, perfumes, incense, and embalming substances. There are no references to their use with food except in a cultic context—the placing of frankincense on the Bread of the Sanctuary (Lev 24:7), which was later consumed by Aaron and his sons (Van Beek 1960: 113). However, cuneiform texts from Mesopotamia contain recipes which include lists of spices used to flavor food (Bottero 1985: 38), and there is mention of spiced wine in Cant 8:2.

Spices, generally in pulverized form and mixed in combination with each other and oil had many uses. These included anointing oil (Exod 30:23–25—for use on the tent of meeting and the ark; Cant 1:3, 12 and Esth 2:12—as a fragrance or cosmetic), sweet smelling incense for the exclusive use of the priests (Exod 30:34–38; 2 Chr 2:4), and a freshener, providing an enticing fragrance to a home (Cant 7:13) or a lover's bed (Prov 7:17–18). They were also widely used in connection with funerals. In the latter case spices could be applied to the corpse (Luke 23:56; 24:1; John 12:3–7) or used to mask the odors of a funeral pyre (2 Chr 16:14).

Since most spices had to be obtained from merchants who had traveled great distances, they were prized and displayed as part of a king's treasury (2 Kgs 20:13). Only the kings and the very wealthy could afford to use them lavishly (Solomon's perfumed litter in Cant 3:6–7; the king's robes "fragrant with myrrh and aloes and cassia" in Ps 45:7–8) or expect them to be burnt at their funerals (Jer 34:5). They also served as appropriate presents when trying to make a good impression or a peace offering, as Jacob does in his gift to Pharaoh in Gen 43:11.

While the medicinal qualities of spices are rarely mentioned in the biblical text because Yahweh was considered the source of healing (Zohary 1982: 183; 2 Chr 16:12–13), some were undoubtedly cultivated or obtained for their pharmaceutical value. For instance, mandrake is mentioned twice in connection with its aphrodisiac qualities (Gen 30:14–15; Cant 7:13). In Jer 8:22, the "balm of Gilead" (Heb *ṣŏrî*) is described in medicinal terms. It is obtained by "wounding" the storax-gum tree and does contain a significant amount of balsamic acid (Zohary 1982: 192).

PERGA (PLACE) [Gk *Pergē* (Περγη)]. An important Greek city in Pamphylia, visited by Paul at the beginning and end of his first missionary excursion into the interior of Asia Minor ca. A.D. 47–48 (Acts 13:13; 14:25).

According to the book of Acts, Paul and his associates, Barnabas and John (Mark), sailed for the mainland following their evangelistic excursion across Cyprus (13:13). They arrived in Perga, a river port on the S coast of Asia Minor (36°59′N; 30°46′E), some 7 miles up the river Cestrus (modern Aksu). Strabo (*Geog.* 14.42) says that it could be reached directly from the sea, as suggested by the narrative of Acts; but this would have demanded a scala on the river at the nearest point approaching the city (Bean 1979: 25). John Mark left the company of Paul and Barnabas here and returned to Jerusalem. We are not told by the narrator why he left, though many commentators have offered their creative speculations to remedy our historical ignorance (e.g., hesitancy with the way Paul was moving in regard to Jewish-Gentile relations; afraid of the rugged journey across the mountains and into Galatia; homesick for his mother and friends in Jerusalem, etc.). We are told, however, that his departure was not regarded in a favorable light by Paul and was the source of the break of the cooperative missionary venture of Paul and Barnabas (Acts 15:36–40).

Perga was founded by a mixed multitude of Greek immigrants after the Trojan War. Recent excavations have turned up a number of statue bases of "founders" of the city—some of them the legendary leaders of the original migration (such as Calchas and Mopsus), but others who are known to have been prominent historical personages (such as M. Plancius Varus and his son, C. Plancius Varus, fl. second half of 1st century A.D., who were originally Italians) who were designated "founders" as a result of their personal philanthropy on behalf of the community (Bean 1979: 31–32).

The Plancius family had great wealth and influence in various parts of Asia Minor and were the leading family in Perga during the first two centuries A.D. M. Plancius Varus had a political career in Rome under Nero and managed to survive the intrigues of A.D. 69 to become proconsul of Bithynia under Vespasian. He had served as a Roman senator, and his son was later to achieve the double distinction of being a successful athlete and also consul during the reign of Hadrian (A.D. 117–38). A descendant of the family was to become a celebrated philosopher (Varus). But it was his daughter, Plancia Magna, who exercised the greatest influence in her day. Dozens of texts have been found with her name on them, more than in the case of any other civic personage. She was responsible for the erection of a magnificent array of statues of the Roman imperial family just inside the S gate, many of which are now in the fine museum in Antalya. Plancia herself was priestess of Artemis and held the highest civic office of state (*demiurgus*). Several striking statues of her have also been uncovered.

The city of Perga was a very wealthy and beautifully decorated city from Hellenistic times. Its remains today are second only to Ephesus among the cities associated with the apostle Paul. At least three aqueducts supplied water to the city. The towers of the 3d century B.C. gate are still standing and are among the most impressive of any city of the period. One of the best preserved stadiums in Asia Minor is found just outside the wall of Perga, as is a moderately well preserved Greek theater that was later converted to the Roman style and which would have been operative when Paul visited the city in ca. A.D. 47–48. Perga's theater could accommodate up to 14,000 spectators (Bean 1979: 29). There were numerous elaborate Roman baths in the city and also a very large gymnasium with a *palaestra* (lit. wrestling place) adorned with statues and dedicated to the emperor Claudius (A.D. 41–54). At the foot of

the acropolis was a handsome *nymphaeum* (fountain) adorned with a reclining statue of Kestros [Cestrus] (god personifying the local river). Although there was a famous temple to Artemis in Perga that appears on the coinage of the city from the 2d century onward and served as an "inviolable" sanctuary of refuge from the time of Domitian (A.D. 81–96), its location has not yet been determined. In spite of its Asiatic setting, the culture of Perga was almost entirely Greek and, to a lesser extent, Roman. Only about one or two percent of the names represented at Perga are Anatolian; a third of them are Roman. There was presumably a synagogue, where Paul may have preached on his return visit from Galatia (Acts 14:25), but there is no tradition of any early church having been established here.

W. WARD GASQUE

PERGAMUM (PLACE) [Gk *Pergamos* (Περγαμος)]. One of the seven cities whose Christian community was addressed in the book of Revelation (1:11; 2:12). Also known by the form "Pergamon," this city had a long history. Pergamon (modern Bergama; 39°07´N; 27°11´E) emerged as the center of the most important kingdom in W Asia Minor during the early 3d century B.C. and remained one of the cultural and political centers of the region into the 4th century A.D.

The oldest portion of the city is the acropolis, which rises steeply to a height of nearly 1,300 feet above the plain of the Caicus river. This acropolis, powerfully fortified by the rulers of the Attalid dynasty in the 3d and 2d centuries B.C., was the base from which these dynasts could extend their power throughout the region and the fortress to which they could retire when overmatched in the field. The portion of the city lying around the base of the acropolis (much of it built over by modern Bergama) seems to have developed under the protection of the kings and to have expanded in the years of peace after Roman control was firmly established in Asia Minor in the 2d and 1st centuries B.C.

The earliest record of settlement at Pergamon comes in the course of Xenophon's description of the Spartan campaigns of 399 (*Hell.* 3.1.6). He says that the city was one of several which had been given to the descendants of the Spartan king Demaratus, who had been driven from his throne in 490 and became a close adviser to the Persian king Xerxes. The city itself does not appear to have been a very important place at this point, and it is possible that the Persians discouraged extensive development on a site of such great natural strength. It was not until after Alexander the Great's conquest of Asia (334–323 B.C.) that Pergamon began to emerge, first as a major military center, and then as a major political center. By the time of the battle of Courepedium, fought between Lysimachus and Seleucus in 281, the last of the *diadochoi* or "successors" of Alexander, the acropolis had become one of the most important fortresses in western Asia Minor. It was here that Lysimachus had deposited a significant portion of his treasury under the care of the eunuch Philetaerus. In the confusion which had preceded Lysimachus' defeat at Courepedium, Philetaerus had begun to assert his independence from the king (283) (Allen 1983: 11). The years after the battle were even more confused, because of the chaos in the Seleucid court after the murder of Seleucus I shortly after his victory, and because of the Celtic invasion of Asia Minor in 278/277. Philetaerus took advantage of these troubles to begin building up his own kingdom around Pergamon (283–263).

Philetaerus was succeeded by his brother, Eumenes I (263–241), who continued the work of expanding Pergamene power. Eumenes I met with considerable success in the face of the continued Celtic threat to the Greek states off the coast and the endemic military and political crises of the Seleucids (Will 1979–82, 1: 135–52; 234–301). Eumenes' son, Attalus I (241–197), made even more important contributions in this regard. It was Attalus who first claimed the title of *basileus* or "king" (as opposed to *dynastes* or "ruler") for the family after his crushing defeat of the Celts early in his reign and it was Attalus who initiated the alliance between Pergamon and Rome in 212. It seems that he made it to protect himself from the Seleucids, who had reduced his realm on one occasion to little more than the acropolis, and from the aggression of King Philip V of Macedon as well. The result of this alliance was perhaps more spectacular than anything that Attalus could ever have anticipated: the destruction of Seleucid power in Asia Minor. In 193 Rome went to war with the Seleucid king, Antiochus III. In 189 a Roman army, with Pergamene

assistance, defeated Antiochus at the battle of Magnesia so decisively that in the treaty of Apamea (187) he had to surrender his family's claim to rule any territory north of the Taurus. The Romans rewarded the Pergamenes, who were then ruled by Attalus' son Eumenes II (214–153), with massive grants of the territory taken from Antiochus throughout Anatolia and in Thrace. Although Rome's relations with Eumenes were strained during the last decade of his life, the kingdom of Pergamon remained Rome's most important ally in the E Mediterranean for the remainder of his reign and throughout the reigns of his brother, Attalus II (153–138), and son, Attalus III (138–133) (Hansen 1971: 70–163; Allen 1983: 76–135; Will 1979–82, 2: 210–38, 285–93, 379–85, 416–25). This situation came to an end in 133 when Attalus III died without issue and left the royal lands to Rome. Rome accepted the bequest in the face of an effort to seize the throne made by a man named Andronicus, who claimed to be the bastard son of Attalus II (for discussion of the circumstances and earlier bibliography, see Potter 1988). The Romans suppressed the revolt of Andronicus and created the province of Asia out of the old Attalid kingdom.

The status of the city of Pergamon remained somewhat ambiguous in the years of Attalid rule. On the one hand it functioned as the royal residence; on the other, it continued to be administered as a normal Greek city, and royal institutions never replaced civic magistracies in the administration of its daily affairs. While the kings ruled their lands and provinces through their appointed officials, Pergamon itself was governed by a council (*boulē*) and board of ten *stratēgoi* (generals). An official known as the *prytanis* appears to have been the chief executive officer of the *boulē,* though his duties appear to have been mostly ceremonial, while the *stratēgoi* looked after most matters of importance. Other important officials were the *nomoplylakes* and *astynomoi* (both groups concerned with maintaining public order), the *tamiai* (treasurers) and, after the great expansion of the Attalid kingdom in 188, a royal officer, "the overseer of the city" or "overseer of the sacred revenues," who looked after the interests of the kings (Allen 1983: 159–77). After the establishment of Roman rule, the "overseer" disappeared and was not replaced, but the civic constitution remained essentially unchanged. Aside from these officials, the most important positions were the various superintendencies of the major civic festivals, the priesthoods of the city's gods, of the royal cult, and in the years after Augustus (31 B.C.–A.D. 14) the priesthoods of the cult of the Roman emperors. These offices, as was the case in all classical cities, would have entailed substantial expenditures by the holders.

In the 2d century B.C. Pergamon emerged as one of the great artistic and intellectual centers of the Greek world. This was reflected by the construction program of Eumenes II on the acropolis (for a thorough summary, see Hansen 1971: 234–433). When he took the throne there were a few sacred buildings, including a temple of Demeter, a temple of Athena, a temple to the Magna Mater and a temple to Aphrodite, some royal palaces, a theater and two monuments which Attalus I had erected to commemorate his victories over the Celts and the Seleucids. Eumenes II made the acropolis an architectural marvel. He enclosed it with a magnificent new circuit wall and built imposing monuments: among them a new theater, a new palace, the great altar, the upper agora and the new precinct of Athena. Eumenes' temple of Athena stood on the W side of a square above the theater. The N, E, and S sides of this square were enclosed by new stoae, and behind the N stoa he constructed a new library which became one of the great centers of learning in the ancient world. The patronage of the kings also provided opportunities for the practice of the plastic arts, and the works of sculpture which adorned their monuments remain some of the most magnificent examples of Hellenistic art.

The institution of direct Roman rule in Asia Minor did, however, result in problems for Pergamon. Although certain of her citizens such as the Mithridates (not to be confused with the homonymous Pontic king) who gave Julius Caesar invaluable assistance in the 40s were clearly men of great importance, her position declined in relation to other cities in the Roman province, and Ephesus replaced her as the leading city in the region. This may have been due, in part, to Ephesus' location at the mouth of the Cayster river and her superb harbor, but it also may have resulted from the damage that Pergamon suffered in the wake of the first war between Rome and Mithridates of Pontus in 89–84 B.C. Mithridates swept over the Roman province, ordered the massacre of all Romans in the area and established Pergamon as one of his capital cities. The Roman general Cornelius Sulla exacted a heavy price from

Pergamon after his defeat of Mithridates, and a period of relative decline seems to have lasted until the end of the century. It was only in the reign of Augustus that Pergamon began to recover, and this recovery seems to have owed a great deal to the efforts of one of her citizens, Julius Quadratus. This man greatly enhanced the sanctuary of Asclepius (Asclepeium) just outside the city (Bowersock 1969: 19; Habicht 1969: 1–4), and it soon became a major intellectual center. This development may be connected with the growth of its medical staff, which appears to have been deeply concerned with both medical and rhetorical studies.

In the early years of the 2d century, Pergamon was once again one of the great cities of the region. The vigorous intellectual life of the city is eloquently reflected by inscriptions; remarks in Philostratus' *Lives of the Philosophers*; in the works of Galen, the greatest doctor of antiquity, who was born in Pergamon in 129 and practiced there in his early years; and in the remarkable spiritual autobiography, *The Sacred Tales,* of the professional rhetorician or *sophist,* Aelius Aristides, who lived in the Asclepium for many years (for the intellectual life of this period, see Bowersock 1969; for Galen, see Bowersock 1969: 59–75; for the Asclepeium, see Habicht 1969: 6–18). Even though the city seems to have suffered in the course of the 3d century—as did the other cities of Asia Minor—the writings of the 4th-century historian and biographer Eunapius of Sardis provide further glimpses of life in the city which suggest that it retained its importance as an intellectual center into his own time. His evidence also suggests that, despite the presence of a Christian community in the city since the 1st century (Habicht 1969: 19), the city as a whole was very slow to adopt the new faith. One reason for this may have been the importance to the city of the cult of Asclepius, who was himself a god of healing, and the feeling among many pagans that the healing miracles which Asclepius was believed to have performed proved that he was a true protector of his people. It is therefore not surprising that it was at Pergamon that the future emperor Julian first encountered important teachers of the Neoplatonic school. This was a decisive point in the intellectual odyssey which ended in his apostasy from the Christian faith and his effort to restore the worship of the pagan gods during his brief reign (361–363). The continuing importance of the cult of Asclepius may also be illustrated by the fact that one of Julian's closest advisers was the doctor Oribasius, who was a native of the city (Bowersock 1978: 28–29).

Pergamon appears to have declined in the centuries after Julian's visit, and it was never able to recover from the damage that it sustained during the Arab invasions of 663 and 716. The story that, in the course of the siege of 716, the defenders of the city cut a pregnant woman to pieces, and dipped their gauntlets in the pot where they had boiled the remains of mother and child (Theoph. 390), suggests that the sophistication of the inhabitants at this point was somewhat less than it had been in the 4th century. These inhabitants had, by this time, largely withdrawn to the acropolis where their humble dwellings were nestled among the monuments of the Attalid monarchy, which were torn apart to supply building materials. When the future emperor Theodore Lascaris visited the site in the 12th century he wrote with sadness that the poor modern buildings that he saw among the remains of the classical city revealed what he felt was the poverty of his own age in comparison with that of the ancients (*Ep.* 80; Foss 1977: 479–81).

PERIDA (PERSON) [Heb *pĕrîdāʾ* (פְּרִידָא)]. See PERUDA (PERSON).

PERIPHRASIS. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

PERIZZITE [Heb *pĕrizzî* (פְּרִזִּי)]. Group of pre-Israelite inhabitants of Canaan. The term is always used with the definite article as a collective name for Perizzites. The term Perizzite is found in 21 of the 27 lists of pre-Israelite nations. It occurs in ten-name lists (Gen 15:20), seven-name lists (Josh 3:10), six-name lists (Josh 7:1), five-name lists (1 Kgs 9:20), and two-name lists (Gen 34:20). In the most common six-name lists the Perizzites always occur in the fourth position in the latter half of the lists among other little known nations including the Jebusites and the Hivites (Exod 3:8; 33:2).

The fact that Canaanites and Perizzites occur together four times in two-name lists suggests that each of these groups stands for a larger combination of peoples (Gen 13:7; 34:30; Judg 1:4–5). Some have suggested that Perizzites is etymologically linked to *pĕrazî* "rural country" and that " 'Canaanites' and 'Perizzites' here stand for 'those living in fortified cities,' and 'those living in unwalled towns or hamlets' " (Ishida 1979: 479). Ishida argues, however, for an ethnic distinction between the terms and suggests that "Canaanites" refer to Semitic people and "Perizzites" refer to non-Semitic people (1979: 480).

According to Josh 11:3 the Perizzites are located in the hill country of Canaan. On the basis of Gen 15:19–21 and Josh 17:15 Ishida suggests that the Perizzites and Rephites can be "positioned in the forest country between Judah and Ephraim" (1979: 483; see also *GTTOT,* 71–72).

While the land of the Perizzites was promised to Abraham and his descendants (Gen 15:20) the Israelites found it difficult to totally defeat these people. In spite of reports that they were defeated (Josh 12:8) intermarriage took place between them and the Israelites (Judg 3:5) and the Israelites did not totally separate from them (Ezra 9:1). The descendants of the pre-Israelite nations who still lived in the land were reportedly reduced to slavery by Solomon (1 Kgs 9:20–21). The Perizzites continued to find their place in the traditional lists of pre-Israelite inhabitants of Canaan (Neh 9:8; Jdt 5:16; 1 Esdr 8:69).

There is no scholarly consensus about the ethnical or etymological background of the term Perizzites. Boling and Wright suggest that "The term may be ethnic (Hurrian) or appellative (cf. *pĕrāzôt,* 'unwalled villages,' Esth 9:19; Ezek 38:11; Zech 2:8)" (*Joshua* AB, 166). Speiser suggests that the term Perizzites is probably non-Semitic and since its suffix *-izzi* is also independently attested in Hurrian that it might be a local group of Hurrians (*IDB* 3: 242).

STEPHEN A. REED

PERSECUTION OF THE EARLY CHURCH. There were many reasons for the persecution of the Christian church in the four centuries preceding the conversion of Constantine. Different reasons predominated at different times; no single reason or simple set of explanations can explain persecution in any given period. As a result, the most promising approach to the subject as a whole is an examination of the institutions involved: the imperial government, the local civic authorities and the church itself. This makes it possible to review the different concerns of each and the changes that occurred. Scholars have had difficulty arriving at a consensus with regard to persecution because the sources are diffuse and often tendentious. Some account of these sources is therefore necessary before exploring the causes, effects and changing nature of the persecutions in more detail.

A. The Sources

The sources for the persecution fall into three categories: statements by the imperial authorities and pagan writers; Christian apologetic works and other theoretical discussion of persecution; and the extant Christian martyr acts.

The first of these three categories is the least well represented. All that survives is the correspondence between Pliny and Trajan on the subject of the Christians when Pliny was governor of the province of Bithynia-Pontus (in N Turkey) in 111 or 112; a rescript (a response to a written inquiry which had the force of law) from the emperor Hadrian to a governor of the province of Asia (W Turkey) in 122/123; *libelli* (certificates of sacrifice) preserved on papyri from Egypt from the time of Decius' edict on sacrifices in 249/250; the text of Valerian's edict of 258 summarized in a letter of Cyprian and a number of documents connected with the great persecutions of 303–313 that are either quoted in Christian writers or can be reconstructed from their accounts. Finally, there are the fragments of authors such as Celsus (whose *On True Doctrine* is quoted extensively by Origen in his response, *Against Celsus*) and some passing remarks in Suetonius' biographies and Tacitus' *Annals.* As a whole, these texts reveal the attitude of the state towards the church and the steps that the imperial authorities thought would be effective against the church.

The Christian apologetic and historiographic tradition, which begins with the Gospels, is extremely complicated. The authors of these works seem to give straightforward explanations for persecution, such as the jealousy of the Jews or Nero's edict of A.D. 64 (Nero reigned from A.D. 54–68), but these explanations often fall apart on close examination. The standard explanation from the 2d century onwards was that the "Christian name," the *nomen Christianum* (membership in the Church) was persecuted as a result of Nero's edict; persecution was an *institutum Neronianum,* a Neronian practice, that was only permitted by emperors who all agreed were evil. This explanation is unsatisfactory and was influenced by a tendency of Christian writers to interpret Roman history in the same terms as Jewish history had been presented in the OT, that "good kings" honored Yahweh and "bad" did not. The other explanation that they offer, that persecution was the result of ignorance of Christian doctrine on the part of ill-educated pagans, is similarly too simplistic. Nonetheless, these works often shed valuable light on relations between the church and the imperial authorities and the most important of them, Eusebius' *Ecclesiastical History,* written in the early years of the 4th century, preserves a number of documents which are crucial for an understanding of the persecutions. Other works such as Tertullian's *To the Martyrs* and *Concerning Flight in Persecution* or Cyprian's *Concerning the Lapsed* reveal that persecution caused serious doctrinal problems. The question that they sought to answer was "Is persecution the work of the Devil or of God?" A person's behavior in time of persecution would be conditioned by his answer to this problem.

The martyr acts, accounts of the execution of individual martyrs or groups of martyrs, are the most difficult source, but when handled with sufficient care, also the most important. Care in their interpretation is essential as these acts vary greatly in their content. Some are rhetorical fictions which provide, once the gory details of a martyr's death are stripped away, no more than the fact of the martyrdom and its date—and even these might not be authentic. Others, such as *The Passion of Pionius and his Companions* contain vivid eyewitness accounts and even documents composed by martyrs as they lay in prison awaiting execution. The details which they present are of great value for reconstructing the attitudes of both the persecutors and the persecuted, and the doctrinal statements which many of them contain shed important light upon the tensions to which persecution gave rise within the church.

B. The Imperial Government

The Gospels and *Acts* show that the Jewish communities in Palestine and other cities of the Greek East drew Romans into the persecution of the church. Suetonius' obscure allusion to problems at Rome in the reign of Claudius (A.D. 41–54) between Jews and the "followers of Chrestus" suggests the same thing, although it is debated whether there "followers of Chrestus" were Christians (Suet. *Claud.* 25). The executions of Peter and Paul at Rome, before Nero issued his edict against the Christians in 64, may have been the result of complaints about their activity from the Jewish community. But these actions can only have had a tangential relationship to that edict. When a great fire ravaged Rome in 64, Nero attempted to shift the blame for the fire from himself onto another party and ordered the mass arrest and execution of Christians in Rome. This was the event which led later Christian writers to claim that persecution was a "Neronian institution." In fact, it is not likely that Nero's edict extended to Christians who lived outside of the city and it may have been no more than an extreme version of earlier edicts, of both Republican and

imperial date, which banned or restricted the practice of certain cults within Rome or Italy. As was the case with these earlier edicts, Nero's edict probably ceased to be enforced after the immediate crisis ended. It is certainly true that Pliny does not seem to be aware of the edict when he investigates Christianity in 111/112.

The opening lines of Pliny's letter to the Emperor Trajan (98–117) reveal that he was not sure of either the specific reasons for the persecution of the church, or of the proper procedure for deciding the cases before him. He wrote (*Ep.* 10.96): "I have never been present at investigations of Christians; so I do not know how or to what extent they are to be punished or sought out. I have thought about these questions a great deal: should some distinction be shown on grounds of age, or should there be no difference in the treatment of children and adults; should mercy be given to the repentant, or should nothing be forgiven to a person who was once a Christian, should the fact of being a Christian (the *nomen Christianum*) be punished, even if there was no other crime, or should only the crimes connected with the name be punished?" Thus Pliny knew that people had been tried for being Christians, and since we know that he spent most of his adult life in Rome and Italy, we may surmise that he means Christians had been tried at Rome during his mature years. He knew the charge against these people was that they were members of a religious sect that indulged in criminal activity. This is an important point. He knew that members of the sect were punished because of crimes that they were believed to be committing in his own time, not because of anything that had happened in the reign of Nero. The explanation for this may have been that the Emperor Domitian (81–96) had taken some action against the cult—though the evidence for this is open to dispute—or it may have been that Pliny and all other Roman magistrates were charged with protecting the areas under their administration from "evil men." Whatever the case, it was membership in the cult that was at issue, and whether by being a member of that cult a person had broken the law. We know from other sources that the crimes associated with Christianity were attacks on pagan temples or images of the gods, cannibalism and incest. It is also clear from this letter that Pliny attempted to discover whether or not the Christians in his area were actively engaged in these crimes. He discovered that they were not. In the meantime he executed any Christians who were not Roman citizens if they refused his order to sacrifice to "our gods," the grounds being insolence in the face of his authority; and he sent Roman citizens who were guilty of the same offense to be tried at Rome. While he awaited Trajan's response he treated the church as an illegal private association (see de Ste Croix 1969).

Pliny's question was whether he should treat Christians as guilty because of their beliefs or simply because the church was one of a number of the private associations (*collegia*) that Trajan had banned. Trajan's response made it clear that the practice of Christianity was defined as a religious offense and that, as a cult, it was illegal. A person charged with Christianity could be forgiven past membership in the cult if he recanted and offered sacrifice to the gods. Trajan added the further provision that Pliny, whose other duties were onerous enough, should not spend his time seeking out Christians and that he should not investigate charges against people which he found in anonymous denunciations (Pliny, *Ep.* 10.97). The implication is that if someone came to Pliny in person and denounced another, that person could be charged. This decision was restated by Hadrian (117–138) in a letter that he sent to Minicius Fundanus in 122/123.

The practice of the Christian faith was therefore illegal because the Roman authorities thought that it involved the commission of crimes, but it was up to individual governors and other magistrates to act against Christians as they saw fit. They had a great deal to do: they had to maintain the tranquillity of their provinces, prevent riot and insurrection in the cities under their control, keep the highways free of brigands, and ensure that cities were able to pay their taxes. Most if not all governors probably felt that they had more important tasks than dealing with the Christians and, with the passing of time, some may even have come to feel that there was nothing wrong with the religion so long as its practitioners did not disturb the peace. In one case, a provincial governor even rescued a Christian congregation from brigands after its bishop had led it out into the desert to greet Christ at his second coming. Tertullian tells of another governor who let an unrepentant Christian go free after only "moderate torture" and of yet another who refused to act when he was confronted by a Christian community asking to be put to death. He

suggested that they jump off cliffs or hang themselves instead (Ter. *ad Scap.* 4.3; 5.1). It is a universal literary device of the martyr acts that the magistrate presiding at the investigation of Christians always asks the prospective martyrs to recant. The authorities seem always to have been more interested in convincing Christians to apostatize than in executing them. To this end the punishments inflicted were more often flogging, imprisonment, and exile, rather than death.

This state of affairs continued until the middle of the 3d century. In 249, the Emperor Decius (249–251) ordered all inhabitants of the empire to sacrifice to the ancestral gods and to obtain a certificate (*libellus*) proving that they had done so. Failure to sacrifice could result in exile, the confiscation of property, prison, or death. The edict was not aimed at eradicating Christianity, but rather at ensuring the goodwill of the ancestral gods in a time of crisis. Nonetheless, it had a significant impact on some Christian communities. In North Africa, Cyprian, the bishop of Carthage, took a very strong line against members of his congregation who either sacrificed (*sacrificati*) or fraudulently obtained *libelli* (*libellatici*). There seems to have been a great number of people who took one or the other of these options, perhaps believing that under the circumstances such a sacrifice was not a serious sin. We know of bishops who retained their sees after sacrificing, and obedience to the edict seems to have been so widespread in the east that the issue never arose as to the terms under which those who had sacrificed should be re-admitted to communion.

The edicts of Valerian (253–260) in 257 and 258 were very different matters. They represent the first empire-wide efforts to destroy the church. The first edict seems to have included the following provisions: Christians should honor the traditional gods of the empire (this did not mean that they had to cease to honor their own god, but only that they had to show respect for the others as well), clergy who would not obey the edict should be arrested and of church property confiscated. The second edict, which may have been motivated by the recalcitrance of members of the clergy who had been arrested, seems to have been concerned entirely with the treatment of unrepentant Christians. According to its terms all members of the clergy who persisted in the faith would be executed, male Christians who were members of the highest orders of society (the equestrian and senatorial) would suffer confiscation of their property and death if they persisted, and Christian women (presumably women of the same social classes) would suffer the confiscation of their property and exile. Members of the imperial household who had been or were Christians would be condemned to work in chains on the imperial estates. The reasoning behind these edicts is obscure. It is clear that they represented a radical departure from Valerian's earlier policy towards the church and it may be, as the bishop of Dionysius of Alexandria suggested (Eus. *Hist. Eccl.* 7.10), that court politics had something to do with the decision to attack the church. In any event, the edicts did not remain in force for long. Valerian was captured by the Persians in the summer of 260 and his son Gallienus (253–268) issued an edict of toleration in the same year. This edict legalized the practice of Christianity and ordered the restoration of church property that had been confiscated under the earlier edicts.

In 260, therefore, Christianity was recognized as a legal cult in the empire and persecution came to an end for a generation. We even hear of Christian bishops asking the emperor Aurelian (270–275) to intervene in a dispute over the see of Antioch and to expel the bishop, Paul of Samosata. This state of affairs continued until the very last years of the reign of Diocletian (284–305).

Diocletian's decision to issue an edict of persecution is difficult to understand. Up to this point in his reign he had been openly tolerant of the church. Christians held high positions in his court and a Christian, Lactantius, held the prestigious chair in Latin rhetoric in his capital Nicomedia (in NW Turkey). The reason may, in fact, lie in the politics of his reign, for Diocletian's edict seems to have come at the end of an elaborate campaign within the court to promote hostility to the church. This campaign appears to have been the work of the *Caesar* Galerius (an important feature of Diocletian's reign was the creation of a college of four emperors, the two senior emperors, or *Augusti*, were Diocletian and Maximian Herculius, the two junior emperors, or *Caesares,* were Galerius and Constantius, father of the future emperor Constantine). In the later years of Diocletian's reign Galerius appears to have exerted a tremendous amount of influence over the senior emperor, and he appears to have been a fervent anti-

Christian (Barnes 1981: 21–27). This also appears to have caused a split in the imperial college, for the persecution edicts—as was also the case with other measures taken in these years—were not enforced as vigorously by Maximian Herculius and Constantius as they were by Diocletian and Galerius.

The first edict was promulgated on February 23, 303. Its terms were as follows: Christian churches and houses where Christian scripture was discovered were to be destroyed, copies of scripture were to be burned, church property was to be confiscated, and meetings for Christian worship were forbidden; Christians who persisted in the faith would lose the capacity to bring actions in court; Christians whose status exempted them from physical coercion in courts (*honestiores*) would lose the protection of their status; Christian members of the imperial household would be enslaved. A few months later—in the spring or summer of 303—a second edict was issued, ordering the arrest of Christian clergy. This led to a crisis for the state as the prisons filled up, and in the autumn of 303 yet another edict was handed down, stating that Christian prisoners who sacrificed would be released. Finally, in January or February, 304, an edict was posted ordering all the inhabitants of the empire to sacrifice. None of this succeeded, in great measure because such measures depended upon the willingness of imperial officers to execute them and there were not many who went beyond token obedience. In fact, Constantius seems to have refused to act on them in anything more than the most cursory way and Maximian did not enforce any edict except the first.

Diocletian and Maximian abdicated in favor of Galerius and Constantius on May 1, 305, and this in effect ended what persecution there had been in the W since Constantius assumed supreme power there. When Constantine succeeded his father on July 25, 306, he issued a general edict of toleration in the part of the empire that he controlled (at first only Britain and Gaul). In the E, Galerius continued to enforce the edicts until 311, when he too issued a general edict of toleration a few months before his death. There were only two further outbreaks after that. Maximin Daia (*Caesar* under Galerius after 305 and *Augustus* in his own right after 311), influenced by a powerful anti-Christian lobby at court, engaged in a brief persecution between 311 and 312/313 when he issued an edict of toleration before going to war with Galerius' successor, Licinius. In July of 313, Licinius, who had defeated Maximin, issued a general edict restoring Christian property throughout the E (this edict, issued at Nicomedia, is often referred to as the "edict of Milan" because it was believed that it was the result of a meeting between Constantine and Licinius in that city during 312). Although Licinius restricted Christian worship before his final defeat by Constantine in 324, this edict effectively marked the end of imperial efforts to act against the Christian church. It was in the time of Constantine that the power of the imperial government came to be directed instead against Christian heretical sects in defense of what Constantine defined as orthodoxy, as well as, by gradual stages, traditional cult.

C. Persecution and Local Government

In the first three centuries A.D. most outbreaks of persecution did not begin with the imperial authorities. They began as local pogroms inspired by a feeling on the part of the inhabitants of individual cities that the Christians in their midst were atheists whose presence upset the traditional gods. It was a reaction that is summed up best by Tertullian's observation (*Apol.* 40.1) that, "if the Tiber rises to the walls, if the Nile does not rise to the fields; if the sky stands still, if the earth moves, if there is famine, if there is pestilence, the cry goes up, 'Christians to the lion.' "

It was the dislike of the provincials for the Christians in their midst that led Pliny to investigate the sect, and this often seems to have been the case elsewhere. Thus in 177 there was a serious outburst at Lyons which resulted in the death of a number of Christians. The incident began when a mob seized a group of Christians and dragged them to the town forum where the civic authorities asked them about their beliefs. When they confessed their faith, they were imprisoned to await the governor (who would be coming to the city in the course of his annual tour of the province). Thereafter, the governor sentenced unrepentant Christians before large and enthusiastic crowds (Eus. *Hist. Eccl.* 5.1.7–10). The members of these crowds seem genuinely to have believed that the Christians were dangerous "atheists," and also to have believed the charges that were extracted from the slaves of some of the members of the congregation: that the Christians regularly committed incest (a misunderstanding of the Christian use of the terms

"brother/sister") and that their rites involved cannibalism (a misunderstanding of the Eucharist). The charge of atheism could move crowds to a great frenzy. It was leveled against Polycarp when he was sentenced to death at Smyrna in the 150s, crowds cried, "away with the atheists" during his trial and during an earlier execution (*Mart. Pol.* 3.2; 9.2). Mobs at Alexandria tried to force Christians whom they seized to sacrifice to the gods, and Alexander, priest of an oracular cult of Glycon, is said to have had Christians cursed as atheists at celebrations of the mysteries of his god.

As the church became more familiar to people in general and Christians were more frequently people of high social status, such charges became less common, and the local authorities at times appear reluctant to engage in full-scale persecution. It is clear from the *Acts of Pionius*, that Pionius' refusal to recant and the prospect of his death at the hands of the governor deeply upset the local magistrates. It is also clear that the officials charged with enforcing Valerian's edicts in North Africa made a real effort to convince Christians to apostatize and appear to have been extremely uncomfortable when they were faced with the prospect of executing Christians who were members of the highest levels of society. A local magistrate at Cirta, in North Africa, who was charged with enforcing Diocletian's first edict, appears to have been on familiar terms with the local Christians and averse to the use of violence in carrying out his orders. The local Christians were equally averse to forcing him to do so (von Soden 1913: 28). It seems to be a general rule that in the later part of the 3d century and early 4th century, as the state became more directly involved in the persecution of the faith, local authorities became less willing to join in and there were fewer anti-Christian riots.

The exception to this general rule appears in cases where entire communities were Christian. In such cases, however, it would appear that the local jealousies characteristic of the cities and towns of the empire were more important than issues of religion. From the time of Constantine onwards we hear much about towns such as Orcistus in Phrygia, which suffered at the hands of their neighbors during the persecution of Galerius and Maximin Daia and were rewarded for their faith under the new dispensation. In the 4th century, local pride came to be intertwined with issues of religion and a new chapter opened in the tale of intercity violence in the Roman Empire, as Christians destroyed temples and pagans fought back.

The total number of Christians who suffered death or imprisonment for their faith is difficult to estimate. Pliny's letter to Trajan suggests that he killed a number of people in the course of a routine investigation and the records of local pogroms suggest that from time to time individual Christian communities suffered heavy losses. Even though enforcement was erratic, the edicts of Decius, Valerian, Diocletian and his successors caused substantial casualties in some areas. But, the numbers were probably not enormous in absolute terms: most Christian communities were not large and no community is known to have been destroyed by a persecution. A figure of around 30,000–50,000 victims in the centuries before Constantine, which would allow for an average of between 75 and 125 victims a year throughout the empire, may be roughly correct.

D. Persecution and the Church

As the attitude of the state and local authorities changed towards the church, so too did the attitude of the church towards persecution. From the earliest period, Christians who were willing to endure death, torture, and imprisonment for the faith were greatly honored. The cult of martyrs quickly came to play an important role in the church, and some movements, such as Montanism, placed a premium upon martyrdom. For any Christian, persecution was seen as a time to prove ultimate devotion, and in facing the authorities a Christian might feel that he was reenacting the Passion. The emotion is summed up most eloquently by martyrs imprisoned at Carthage in the late summer of 250: "what … could, through God's favor, befall any man which might bring him greater glory or bliss than this: in the very midst of his executioners, undaunted, to confess the Lord God … to become, by confessing the name of Christ, a partner of Christ in his passion; to have become, by God's favor, a judge of his own judge (Cyp. *Ep.* 31, 2, 3)." A number of Christians even went so far as deliberately to attract the attention of the authorities so that they might suffer for the faith. But this also led to problems within the Church.

One difficulty persecution caused the church (above and beyond the physical suffering of some of its members and the intellectual problems it raised about the nature of evil) was the challenge that martyrs posed to the established hierarchy of the church. Montanists certainly taught that martyrs were closer to God than the authorities of the church, and that attitude was also common in more conventional circles. Cyprian treated the question at length in his *Concerning the Lapsed* (*de Lapsis,* 15–21) and argued that the absolution granted by martyrs to those who had sacrificed or obtained *libelli* during the reign of Decius had no effect—that penance had to be imposed by the duly constituted officers of the church. But this did not solve the issue, even in Cyprian's own province. At the time of the great persecution there is a great deal of evidence for efforts by the church to restrict the title of martyr and regulate the celebration of the cult. The early 4th century council at Elvira in Spain ruled that "voluntary martyrs," people who were killed while insulting traditional cult, could not be regarded as true martyrs. Mensurius of Carthage refused the title of martyr to people who did not try to evade the authorities. It would even appear that he forbade members of his congregation to bring food to such people when they were in prison (cf. Jonkers 1954: 18 n. 60; von Soden 1913: n. 4, 6). But his ruling did not go unchallenged; even a Christian, such as Lactantius, who subscribed to the doctrine that people should not offer themselves to the authorities, could not restrain his admiration for a man who was executed after tearing down a copy of Diocletian's first persecution edict (Lactant. *de Mort. Pers.* 13.2–3). The problem did not end for the orthodox church until the end of the persecutions.

The second major problem was that persecution gave rise to schism. People responded differently to persecution, and while all might agree that "authentic martyrs" should be treated with the highest regard, not all could agree as to what constituted proper behavior on the part of their weaker brethren. Debate over this question became particularly vehement at the time of the Decian edict on sacrifices and even more so in the time of the Great Persecution. The great Donatist and Melitian disputes arose directly out of this issue: both sects challenged the orthodox church's more moderate treatment of those who were weak in the face of persecution. Such disputes were not easily quelled and were carried on with great vehemence, as may be seen in the statement of the schismatic bishop Majorian of Carthage at the time of his consecration in 311. He said, "I am the real vine and my father is the gardener. Every barren branch of mine he cuts away; and every fruiting branch he cleans (John 15:1–2). Thus I cast off the barren branches which have been cut, thus the incense burners, the *traditores,* who are hateful to god, may not remain in the church of god, unless, confessing their grief they are reconciled through penance. Hence it is not fitting to have communication with Caecilian, a heretic, ordained by *traditores*" (von Soden 1913: 6).

It was through the promotion of schism that persecution by the imperial authorities caused the most difficulty to the Church. The quarrels which arose in the wake of the Great Persecution did not end with the victory of Constantine. In fact, they led to the opening of a new chapter in the relationship between the Church and the empire. This was the violent persecution of heretical sects by the imperial government in defense of the orthodox faith.

PERSEPOLIS (PLACE) [Gk *Persepolis* (Περσεπολις)]. One of the ancient capitals of the Achaemenid kings of Iran (the others were Susa, Ecbatana, and Babylon). Now called Takht-i Jamshid (the Throne of Jamshid), it is located in SW Iran (29°57′N; 52°52′E) in the province of Fars (the homeland of the Achaemenids), approximately 32 miles NE of the modern city of Shiraz. The Old Persian name for the site was *Parsa.* It is mentioned in 2 Macc 9:2 as a city which rebelled against and defeated Antiochus.

The site is situated on a large platform, partially artificial and partially carved from the native rock at the W foot of the Kuh-i Rahmat (Mountain of Mercy). The platform, the cistern, an elaborate system of drains, the central part of the Apadana or large audience hall, and several sections of the Treasury building were founded and, in the main, brought to completion by Darius I (522–486 B.C.). Construction probably began shortly after 520 B.C. Late in the reign of Darius, and in the early years of Xerxes, the platform was expanded to the W and Darius' private palace, a second phase of the Treasury, part of the fortifications, the main stair and the Gate of All Nations were built. Xerxes himself built a new, larger private palace, the central building (Tripylon), and the Harem. He also reorganized and enlarged the Treasury, and laid the foundations for, and perhaps completed, a large new audience hall, the Hall of a Hundred Columns. All remaining construction can be dated to the reigns of either Artaxerxes I or his successors, but any further construction is nothing more than the completion, or the enlargement, of the building plans laid down by Darius and modified by Xerxes.

The Persepolis platform and the buildings on it are a remarkable artistic and architectural statement. It is probable, however, that what has been exposed is only the "fortification," or the citadel, of a far more extensive complex. There are several palaces on the plain to both sides of the platform, and no doubt more await excavation. It is, therefore, reasonable to suppose that a much larger "City of the Persians" stretched across the plain at the front and to the sides of the platform.

The characteristic architectural feature of the Persepolis building complex is the columned hall. Other individual elements, such as the Mesopotamian-inspired winged bulls which guard Xerxes' Gate of All Nations, are clearly borrowed from other cultures, but the columned hall is rooted in the experiences of the Iranians on the Iranian plateau. The prototypes of the great halls, such as the Apadana and Hall of a Hundred Columns, can be found in the columned structures of Hasanlu V and IV (1400–800 B.C.) and in the columned halls of the Median sites of Nush-i Jan and Godin II (8th–7th centuries B.C.).

Another major feature of the site is the relief sculpture which adorns almost every building. Characteristic of these reliefs is that they are entirely unhistorical; they tell no developing story, as did many reliefs of the Assyrians and the Egyptians. Instead they give a static picture of something that is already done, that already exists, that is accomplished (tribute brought, monsters slain, fire honored, dignitaries received). More important, the king is everywhere and is the focus, in one way or another, of almost all the reliefs. Yet this king is not an individual; there are no portraits of Darius, Xerxes, or Artaxerxes. Instead they project a dynastic image of the glory and concept of kingship, rather than a realistic depiction of a particular king. Thus the whole of even a complex composition such as the great reliefs on the stairways of the Apadana present a planned, spiritual, abstract, and almost cosmic composition of static totality.

It can be suggested that the ultimate goal of both the architecture and the decoration of Persepolis was to present to the world the concept of a *Pax Persica*—a harmonious, peaceful empire ruled by a king who contained within his person and his office the welfare of the empire.

T. CUYLER YOUNG, JR.

PERSEUS (PERSON) [Gk *Perseus* (Περσευς)]. Illegitimate son of Philip V and the last king of Macedonia, whose defeat is mentioned in a list praising Roman accomplishments (1 Macc 8:5). In the 180s B.C.E., Perseus helped his father prepare Macedonia for war against Rome, while his legitimate half brother, Demetrius, defended Philip in the Senate against accusations of illegally seizing Thrace. Jealous

of Demetrius' success in Rome, Perseus engineered his death in 181 with a forged letter implicating him in treason. Later Philip learned the truth, but he died too suddenly to prevent Perseus' accession to the throne in 179.

Perseus continued to arm Macedonia and make alliances with Rome's enemies. Seleucus IV married his daughter Laodice to Perseus in 177 to join the Macedonian cause. After Seleucus' assassination in 175, the pro-Roman King Eumenes of Pergamum put Antiochus IV on the Seleucid throne to block a Seleucid alliance with Perseus. Though Antiochus IV negotiated with Perseus, he did so secretly so as not to anger Rome.

The accusations against Perseus and the fears about his military buildup led Rome to invade Macedonia in 171. In the Third Macedonian War, Perseus would neither capitalize on his victories by destroying the Romans nor could he get them to surrender. On June 22, 168, the Roman general Aemilius Paulus finally defeated Perseus at Pydma and took him captive to Rome. Perseus lived in a dungeon in Alba until Aemilius convinced the Senate to give him better quarters. However, after two years, Perseus so antagonized his guards that they kept him awake constantly until he died from sleeplessness.

Rome's involvement in the Third Macedonian War permitted Antiochus IV to invade Egypt in 171 and to control it until 168, when Rome forced him to leave Egypt.

PERSIAN EMPIRE. In the third quarter of the 6th century B.C., the political geography of the Middle East underwent a profound change. Divided around 550 between powerful contemporary kingdoms (Babylonia, Egypt, Media, Lydia), it would be, in the decades that followed, unified by the conquests of the Persians, a small group practically absent from historical documentation until the time when, under Cyrus the Great (560/59–530), they began their indomitable expansion. Under the reigns of the first three representatives of the new "Achaemenid" dynasty, the territory controlled by the Persian armies continued to extend in all directions at a very rapid pace.

A. The Creation of an Empire

1. The Persian Kingdom Before 550 B.C. We know very little about the Persians before the appearance of Cyrus. They were an Iranian people who, coming directly from Central Asia or via the Caucasus and the Zagros around 1000 B.C., settled in the region that would become Persia (Fārs), i.e., the heart of the Persian Empire. The way of life of these Persians is poorly understood. Herodotus makes reference to tribes of nomads and tribes of farmers, but this text remains too schematic. The Persians settled in a

region that had traditionally been held by the masters of Susa, the Elamite kings. It is therefore hardly surprising that the first title held by the Persian kings was that of "king of Anshan," a direct reference to the Fārs region near Maliyan, traditionally under Susa. The expansion of the first Persian kingdom was done at the expense of Susa and the Neo-Elamite kings. But the Perso-Elamite contacts did not take place solely during periods of war. The Fārs was then inhabited by Elamite populations with whom the Persians had established fruitful contacts. The "Acropolis Tablets," whose dating is still contested (second half of the 7th century or the first half of the 6th century), attest to the presence of a Persian population in Susa during this period. All of this explains why Elamite influence was so powerful in the institutions of the Persian State: for example, the Persepolis tablets that date from the reigns of Darius and Xerxes are written in the Elamite language (sprinkled with Persian terms).

In the absence of indisputable written documents, we cannot reconstruct with certainty the different stages of the history of the Persian kingdom before Cyrus the Great. In his genealogy, Darius I affirms that eight kings reigned before him. But Darius' pretentions are highly debatable (see below). On the other hand, an inscription by Ashurbanipal (669–630 B.C.) refers to a certain Kurash, "king of Parsumash," who rendered homage to the Assyrian king and sent him his son as hostage ca. 640 B.C. It is now doubtful that this was actually Cyrus I: a recent study (de Miroschedji 1985) places his reign ca. 610–589 (Cambyses I [585–559] and Cyrus II [the Great] succeeded him). The only evidence pertaining to Cyrus I remains a seal from Persepolis referring to "Kurash of Anshan, son of Teispes." We are forced to admit that the current state of the evidence does not allow us to create a picture of Persian politics and society at the time when Cyrus II began his assault on the kingdoms of the Middle East.

2. The Conquests of Cyrus (550–530 B.C.). Cyrus' first target was the Median kingdom of Astyage and its capital Ecbatana (Hamadan). The relationship between the Medes and the Persians was ancient: they were both peoples of Iranian culture. The different versions of the "legend of the founder" transmitted by classical sources (as well as from a passage of the Sippar Cylinder) attest to the Persian kingdom's status as vassal to Ecbatana. It is probable that Cyrus was able to benefit from a certain weakening of Astyage before a group of nobles. Whatever the reason, the Median army was defeated and Cyrus seized Ecbatana and imposed himself as successor to the Median kings. Most likely the peoples of Central Asia (Hyrcanians, Parthians, Sakai, and Bactrians) who had been linked to Ecbatana came to renew their (more or less lax) state of dependence: Cyrus could certainly demand contingents of them to reinforce his army, which was already swollen with Median troops. The conquest of Ecbatana also allowed Cyrus to obtain the treasure of Astyage and to remove it to Persia.

His first conquest resulted in his territorial expansion up to the border of the Lydian kingdom of Croesus, that extended to the Halys River. Croesus, who had an alliance with the Babylonian king Nabonidus, himself took the offensive. He was defeated in pitched battle at Pteria, and the following winter (546?) Cyrus laid seige to Sardis. Most of the Greek cities, subjects of Croesus, underestimated Cyrus' power and refused to surrender. Only Miletus, a city traditionally "Medizing," abandoned Croesus' camp. After the fall of Sardis, Cyrus was called back to the E front, while his generals, under the high command of the Mede Harpage, continued to assault the recalcitrant Greek cities, which soon had to submit after hard combat. Only Miletus was able to strike an advantageous agreement with its new masters.

The reasons for Cyrus' rapid departure are thus presented by Herodotus: "Babylon in effect created difficulties for him, the Bactrian people, the Sakai, and the Egyptians; it is against these adversaries that he proposed to march in person" (1.153). After a little-known expedition on the Iranian plateau, Cyrus decided to march against the principal power opposing him, the Neo-Babylonian kingdom and its king Nabonidus. The conditions and the circumstances of the capture of Babylon in 539 are presented by classical sources (Herodotus, Xenophon) and by contemporary Babylonian texts. Cyrus' Cylinder (*ANET*, 315–316), drawn up after the Persian victory, affirms that Cyrus' victory was facilitated by the Babylonians themselves, who were eager to get rid of Nabonidus, whom they considered impious. In reality, the conquest of Babylonia was not so simple. Nabonidus and the Babylonian army tried to resist the invaders, but after a Babylonian defeat at Opis (October 539) the road to Babylon was open. One of

Cyrus' generals, Gobryas, was able to enter the next day, and shortly after, Cyrus himself made his solemn entrance. The Persian propagandists knew how to present Cyrus as a good king coming to restore order and security and to reconstruct the sacred temples.

The conquest of Babylonia allowed Cyrus the opportunity to seize the territories of the Outer-Euphrates. Several kings and cities from this region soon submitted to him. There was no doubt that Cyrus intended to march on these regions, but it was not necessary to launch any military expedition during his reign. However, it was decided to allow the Judeans who had been in exile in Babylon to return to Jerusalem. The text of the edict is cited twice in the Hebrew Bible (2 Chr 36:23; Ezra 1:2–4; cf. 1 Esdr 2:3–7). The Judeans could resettle in Judea and reconstruct the temple of Jerusalem, taking with them the objects of the cult that had been taken as booty by the Babylonians. The biblical texts present the act of Cyrus as being directly inspired by Yahweh (cf. also Isa 45:1–7). In reality, contrary to what has often been said, Cyrus had no special sympathy for Yahwism. He acted with respect to the Yahwist cult as he had acted with respect to the Babylonian temples. Placed in the historical context of the ANE, the royal decision takes on its true character: while it was a decisive episode for the Judeans themselves, at the same time it was a common and banal event for the Persian political establishment. It is probable that, in doing this, Cyrus had political objectives in mind, probably already anticipating an expedition against Egypt, which was located on the other side of Judea.

3. Cambyses and the Conquest of Egypt (530–522 B.C.). Cyrus himself was not able to lead the conquest into Egypt for reasons that are not exactly known. It is known that the king disappeared during combat in Central Asia against the Massagetai. The task of leading the Persian armies against the pharaoh fell to his son Cambyses, who had a sizeable fleet at his disposal, thanks to the support of the Ionians and the Phoenicians. The new pharaoh, Psamtik III, soon suffered a decisive defeat, and in the spring of 525 Cambyses was able to enter Saïs, the capital of the dynasty. He had less success with his expedition against Ethiopia, which ended in a military disaster. Thus, the empire had practically attained the dimensions that would stand until the arrival of Alexander, reaching from Central Asia to the Mediterranean. Certainly the next king Darius led important expeditions, but one can say that the work of conquering these lands was accomplished essentially by the first two kings. By 525 B.C., the Persians had no more neighbors in the Middle East: the ancient kingdoms of Media, Lydia, Babylonia, and Egypt had been transformed into satrapies administrated by the Persians.

Contrary to what the Greek tradition (especially Herodotus) claims, the conduct of Cambyses with respect to the Egyptian temples was not fundamentally different than that of Cyrus in Babylon. Certainly there were depredations, to which the Judeans of Elephantine would allude a century later. But the Egyptian documents attest to the respect that the king paid to the sacred bull Apis, and the autobiography of Ujahorresne, a newly-conquered Egyptian noble, indicates that Cambyses protected everything, especially the temple of the goddess Neith in Saïs. It was, moreover, necessary for the new conqueror to mold himself in Egyptian traditions: thus he also adopted the pharaonic title, and there is little doubt that he was seen as a pharaoh by the vast majority of the Egyptian population. In fact, Cambyses "pharaonized" himself in Egypt, just as Cyrus had "Babylonized" himself in Babylon. The attitude taken by the first two kings constituted the basis of a flexible policy that the Achaemenids constantly implemented within the diverse populations of their empire.

4. Uprising, Revolts, and New Conquests (522–500 B.C.). Called back to Persia by an uprising, Cambyses died on the return road (522). The consequent dynastic struggle is known to us not only from Herodotus but also from Darius, who had the facts engraved on the rock of Behistun after his victory. But Darius' account is hardly adequate for the historian. According to Darius, the uprising was the work of a magi, Gaumata, who posed as Cambyses' younger brother, Bardiya (called "Smerdis" by Herodotus). Darius presents himself as the legitimate successor to the eight previous kings, the hero who took control of a conspiracy of nobles, killed the usurper, and immediately ascended the throne (the end of September 522). But this version of events is questioned by many historians who think that Gaumata was indeed Cambyses' brother. In that case, Darius himself would have been the usurper. This dynastic competition was accompanied by a series of revolts against the Persian power. Although Darius cites Egypt among the

rebels, it seems that the most important rebellions took place in the heartland (Persia, Elam, Babylonia, Media) and to the E on the Iranian Plateau.

With the help of a necessarily reduced army, Darius launched numerous counter-offensives led by generals who remained loyal to him. The different royal armies had to fight on several fronts at the same time: in December 522, for example, one notes two victories by Darius in Babylonia, the quelling of a rebellion in Elam, a victory in Arachosia, and another in Assyria. Fortunately for Darius, two satraps on the Iranian Plateau (in Bactria and in Arachosia) joined him in the fight against the rebels, as did Darius' real father, Hystaspes, in Parthia-Hyrcania. Darius' consolidation of power was, however, long and difficult: Elam abandoned the struggle definitively only in 520. It is even later still, in 518, that Darius reestablished order in Egypt.

These revolts show a marked dynastic character. The rebels borrowed the name of a king, thereby attaching themselves to a dynasty deposed by the Persians: one of the Babylonian rebels presented himself as the son of Nabonidus, while a Median chief posed as a member of the Cyaxares family. The symbolism is clear—they were trying to terminate the short period of Persian domination and to link themselves to the history of different preexisting kingdoms (Babylonia, Media, Elam, etc.). All the rebel chiefs succeeded in mobilizing large armies against the Persians, as attested by the high number of losses recorded in the Akkadian and Aramaic versions of the Behistun inscription. The danger was greater in Asia Minor, where the satrap Oroites tried to profit from the troubles by declaring independence from the central power. Elsewhere, the problems confronting the central power instilled hope in people who did not directly take part in the revolts. There exists an echo of this in certain prophetic texts (Haggai, Zechariah) documenting Judean hopes for a restoration of the Israelite monarchy. Furthermore, the Persian people were themselves divided when Darius confronted a native Persian competitor in the person of Vahyazdata, who took for himself the name of Bardiya, thus indicating clearly that he considered himself to be Cyrus' legitimate successor. This dynastic crisis thus added to the imperial crisis.

Inversely, the victories won by Darius attest to the stability and sturdiness of the empire established by Cyrus and Cambyses. Many satraps remained loyal, and Darius found devoted aides among the nobles who had actively participated in the elimination of Gaumata-Bardiya. It is with the support of the aristocratic Persians that he was able to put an end to the secession of Oroites in Asia Minor without a military campaign. He was even able to take strong measures against the noble intaphernes who had defied his authority; no aristocrat would take Intaphernes' side. One thus understands why Darius proudly celebrated his victories on the rock of Behistun: under his feet lay Gaumata, and before him were drawn the "lying kings" he had recently vanquished. According to his own declarations, it was the victory of the Truth (*arta*) over the Lie (*drauga*), in other words, the triumph of loyalty over the rebellion. The strength of the king and the empire would soon be magnified by the construction of a new capital, Persepolis. Shortly after his victories he led a major expedition into Central Asia and India, whereby the Indus valley was annexed to the empire. In 513 the expedition into Scythia was less successful, but it still allowed the Persians to settle in Thrace and to reduce the Macedonian kingdom to vassalage. The empire had thus reached its largest extension.

5. The Organization of the Empire under Darius. According to Herodotus, Darius' victory in 520 was followed by a reorganization of the empire: "He established in the Persian Empire twenty governments (*archai*) called satrapies; the various governors were appointed, and each nation assessed for tributes (*phoroi*) that should revert to him" (3.89). In reality, satraps and tribute already existed during the reigns of Cyrus, Cambyses, and Bardiya, but Darius was the first to unify and systematize the administrative practices. The people (*ethnē*) were reunited from within the large governmental provinces (the satraps) and made to pay a tribute each year, probably calculated in prorate of cultivatable lands. Only some people (Arabs, Ethiopians, Colchidians) maintained their status as donors. The Persian territory itself was exempted from tribute. Several Achaemenid documents (royal lists, "Gift Carriers" of Persepolis, "Throne Carriers," a statue of Darius, Egyptian steles) refer to lists that have often been considered lists of satraps. They were actually selective lists of countries (*dahyu- ava*), upon which one

should not base conclusions about an administrative structure. It is also necessary to underscore the fact that both the number and the specific responsibilities of the satraps evolved over time.

Each satrapy was given to a high Persian aristocrat, aided by administrators. The satrap could call upon garrison and occupation troops. The satrapy had to pay its tribute every year to the Persian king, who deposited the sum in the stores and treasuries of the empire. The size of the stocks of precious metals later found by Alexander the Great is an indication of the viability of the system. In order to control the satraps more effectively, large numbers of native Persians were installed and were given sizeable plots of land along with the obligation of leading their cavalry troops as requisitioned by the satrap. In Babylonia, the land was awarded to the *hatru,* collectivities of diverse ethnic origin that in return were supposed to provide soldiers and diverse taxes. The satraps were required to be diligent in implementing the royal orders that they regularly received from royal couriers.

Within the satrapy the local peoples, dynasties, and other recognized communities continued to enjoy a certain degree of autonomy (e.g., the dynasties of Cilicia and of Caria remained in place). It was up to the local chiefs to conduct their contingent of the royal army. By the same token, the internal organization of the conquered Greek cities was essentially unchanged; in fact the first Persian kings happily relied on the local tyrants. Darius essentially continued his predecessors' policies with respect to conquered populations. In Egypt, he continued to present himself as pharaoh, as attested by the title engraved on his statue found at Susa. In the same way, he confirmed to the Judeans the privileges that Cyrus had granted them (Ezra 6). In a general manner, the king also recognized the earlier practices of the temples, as is so eloquently attested by the letter he sent to Gadatas, who was accused of having violated the privileges of the temple of Apollo near Magnesia of Meander (in Asia Minor). This policy has been erroneously labeled "religious tolerance"; actually it was an attempt to reconcile the central power with the local subjects, and the fundamental objective remained maintenance and reinforcement of the Persian Empire. The royal policy with respect to Babylonian temples clearly shows this orientation, since one can find abundant evidence attesting to the intervention of the Persian administration in the management of the wealth of these temples, while at the same time the cults and local temples were not threatened.

The entire imperial system was dominated by the king. While not regarded as a god himself, the Persian king was viewed as the earthly lieutenant of the great deities of the empire, the first among them being the god Ahura-Mazda. The king was consecrated at Pasargadae during the course of a religious ceremony (which is described by Plutarch). But the new king did not take his power only from the gods: he also held it from filiation. Custom required that the eldest son succeed his father, and that he, in turn, designate his heir. This frequently-attested custom did not stop the drama of succession, since certain younger brothers did not easily accept being bypassed (e.g., Bardiya's struggle against his elder brother Cambyses, and also the case of the succession after the assassination of Xerxes, when Artaxerxes II came to power after eliminating his older brother Darius in a bloody struggle).

The monumental structures built in the large capitals symbolized the new power attained by Darius' empire. During his reign the first improvements were made at the site of Susa, improvements attested both archaeologically and from numerous inscriptions of Darius and Xerxes. Darius also had a large palace built in Babylon, and work was continued at Parsagadae, the capital founded by Cyrus. It is probably during the period of Cambyses that Persepolis was first chosen as a site, but it was up to Darius to design the plan and to him and his successors to construct it. The style and grandeur of the buildings are amply documented by archaeological evidence and by a group of Elamite tablets, the Treasury Tablets, published by G. C. Cameron in 1948. Another group of contemporaneous tablets, an important part of which were published by R. T. Hallock in 1969, attest to productive activities in Persis under Darius. They are also interesting because they shed light on persons such as Artaphernes, Mardonios, and Datis, who are mentioned in classical sources. The land was worked by laborers from all parts of the empire, who are often identified in the tablets as *kurtash,* a generic term which applied to a wide variety of persons (prisoners of war, dependent peasants, "free" salaried workers). A similar ethnic diversity is found among the groups of workers employed at the building sites at Persepolis. All the buildings and inscriptions there function to exalt the vastness and the richness of the territory ruled by the Great King. If

Susa had become (according to the Greek testimony) the most frequented capital of the court, Pesepolis was always clothed with an essentially ideological function. During the course of the year, the Great King and the court moved from capital to capital: Persepolis, Susa, Babylon, Ecbatana.

A system of royal roads completed the unification of the empire. Herodotus (5. 52–53) gives a precise description of the route and the organization of the Royal Road that during Darius' reign went from Sardis to Susa. But there existed many other royal roads linking the capitals of the empire to the satraps' capitals. A group of tablets from Persepolis gives precise descriptions of the roads and the rights enjoyed by officially-authorized travelers, including the right to travel on the roads and to receive rations at wayside inns. Among other functions, these well-maintained and protected roads allowed troop convoys to deploy to various places where they had been ordered; thus the military played an essential role in the survival of the road system.

The Persian king had numerous troops at his disposal in order to control the territories and populations of the empire. In order to regulate local problems, the satraps could summon the troops of their government. Sometimes a satrap could be given command of the troops of several satraps: he would thus receive the title of *karanos.* If the king decided to mount a large campaign, he convened the royal army, composed of contingents from all the countries of the empire. Darius assembled them to lead his expeditions of conquest. The best known example is the army raised by Darius and then by Xerxes to march against the Greeks. The royal army is described in detail by Herodotus (7. 60–99). Each ethnic contingent kept its own weapons. Each of the large divisions of the army was commanded by a Persian, often a relative of the king; similarly the naval contingents were given to Persian commanders. The diversity of the contingents and the disordered character of this army (often emphasized by Greek authors) should not be misleading. Within this array, several contingents constituted the army of the elite, the real fighting army—the Persians, the Medes, the Bactrians, and the Sakai. The components of the royal army thus corresponded in effect to the political and ideological motives: it visually symbolized the grandeur and the diversity of the empire.

B. The Empire in the 5th Century

1. The First Retreats on the Mediterranean Front (500–448 B.C.). The first setbacks took place on the W front at the very beginning of the 5th century B.C. For reasons still not completely clear, the tyrant Aristagoras of Miletus led a revolt against the Persians. At the head of these forces, he ravaged Sardis (499), initiating the Ionian revolt. But the land and naval superiority of the Persians would soon become obvious, despite the fact that the cities of the straits (Bosporus) and the Cypriot kingdoms joined the rebellion. After 497 or 496, the Persians retook Cyprus and then obtained the submission of the cities to the N. After a Greek naval defeat at Lade, Miletus was taken in 494. The Persians destroyed the city and deported part of the population. Then the satrap Artaphernes relinquished the office of tyrant and accepted the democratic regimes, fixing norms for levying tributes on the territories of the cities. The Persians profited from their victory by sending an army into Thrace in 492 under the command of Mardonios, son-in-law of the king.

An expedition against Greece was launched in 490; it is referred to as the First Persian War. The objective was less the annexation of Greece than domination over the Cyclades. The Persian defeat at Marathon revealed the Persian vulnerability in the Aegean. Almost immediately Darius began a new expedition, this time directed against the Greek cities themselves. His death in 486 and the subsequent revolts in Babylonia and Egypt slowed down his son and successor Xerxes, and it was only in 480 that the immense land and sea force finally set off (the contingents are counted and described by Herodotus). Faced with this threat, Athens and Sparta concluded an alliance of common action, and Themistocles decided to abandon Attica to concentrate his effort on the sea. Although Athens was thus taken by the Persians, the Persians then suffered a major naval defeat at Salamis, which forced Xerxes to return to his kingdom. The elite-army left in Greece under the command of Mardonios suffered a disaster the following year at Plataea (479). This defeat caused renewed hope in the Asian cities, so much so that the same year the Greek fleet won yet another victory at Mykale. Soon, under the aegis of Athens, a league

was formed to which a number of Asian cities adhered. The objective was to lead reprisal expeditions against the Achaemenid territories and to protect the cities against Persian counterattacks.

In three years the strategic situation had thus been upset. The Persians had lost Thrace (where only a few garrisons still resisted) and no longer enjoyed hegemony on their Mediterranean front. Furthermore, Athens emerged from the war strong. The city had access to important resources, a first rate navy, and its leaders had decided to launch a large offensive against the Achaemenids' possessions. Around 466, Cimon achieved a double victory over Persian forces in Pamphylia. Several years later, the Athenians came to the aid of the Inaros dynasty in Egypt, which had revolted against the Persians (460). The arrival of a Persian army under the command of Megabyze (Xerxes' son-in-law) resulted in a complete disaster for the Athenians—Egypt came once again under Achaemenid domination. Several years later, after an Athenian success in Cypriot waters (450), negotiations were opened that would lead to the Peace of Callias (448), about which there has been much dispute. The two adversaries, Athens and Persia, wanted to put an end to the hostilities. Even if the Persian king continued to affirm his dominion over these cities, he still had to concede the Athenian presence, a notable setback to the Achaemenid power on the Mediterranean front. Peace was renewed later by Darius II shortly after his accession.

2. Imperial Strength and Royal Power. It is often assumed that Xerxes' setbacks inaugurated a long period of decline in Achaemenid history that would culminate with the conquest of Alexander. This is a very tendentious assumption that has no documentary foundation. The relative importance of Darius' reign and that of Xerxes is a misleading result of the unequal division of narrative Greek sources. Herodotus' work ends with the Persian defeats of 479 in Greece and Ionia. No author of his stature undertook a record of Persian affairs. Today's historian must go to Diodorus of Sicily and to Ctesius. The latter devoted several books of his *Persika* to the actions of the kings after Cyrus up until the year 398 B.C., the 7th year of king Artaxerxes II. For the most part, his story refers to dynastic problems, to the intrigues of the court, and to the difficulties encountered by the royal power. See CTESIAS. However, his vision of Persian history at the least must be nuanced because it is at the same time very biased. The paragraphs that he devotes to the reigns of Xerxes (486–465) and Artaxerxes I (464–424) are less centered on royal politics than on the picturesque and novel-like story of the noble Megabyze. As for the reign of Darius II (425–405/4), he summarizes the difficulties of the accession of the king and the revolts that he had to put down. The idea of a Persian decline beginning with Xerxes is found in other Greek authors of the 4th century (Plato and Xenophon in particular), but their interpretations arise more from their Greek ideological biases than from a reasoned analysis of the course of Persian history.

On the Persian side, the documentation is unfortunately very scanty. However, everything leads one to believe that neither the royal power nor the imperial domination were ever seriously or profoundly jeopardized by the setbacks on the Mediterranean front. The tablets from the Treasury of Persepolis recount that the construction work was more active than ever during the reign of Xerxes and the first years of Artaxerxes I (486–461). The activities of these kings are confirmed by royal inscriptions. The importance of an inscription by Xerxes must also be considered. In it, the king recalls first of all that he restored order in the provinces that had rebelled. He also affirms the preeminence of the god Ahura-Mazda. This has been seen as a modification of the religious policies of the Achaemenids—Xerxes attempting to impose the cult of the supreme Persian god by forbidding the cult of local gods. However, this is not the case. The document makes no reference to any specific measures taken in Babylonia or anywhere else. Above all, it attests to the strength of the monarchic ideology, still reinforced and codified in a rigorous manner during Xerxes' reign and fully maintained by his successors.

The strength of the monarchic ideology did not prevent dynastic difficulties, which were numerous and serious during the 5th century. If, as designated heir, Xerxes succeeded his father without difficulty, his own succession was much more tumultuous. He was assassinated by rebels, as was his eldest son Darius. The younger son, Artaxerxes, came to power only after difficult combat. In 424, the death of Artaxerxes I was soon followed by the assassination of his son Xerxes II, who reigned only a few weeks. Fierce competition then ensued between two of his illegitimate sons, Sogdianos and Ochos. The latter was finally recognized as king under the name of Darius (II) at the end of an intense civil war, recounted by

Ctesias and echoed in Babylonian tablets. At the end of his life, Darius II followed the Achaemenid custom of designating his eldest son Artaxerxes as his successor. But, his accession in 405/404 precipitated a war of succession instigated by his younger brother Cyrus and supported by their mother Parysatis, a war (401) of which Xenophon (*Anabasis*) and Ctesias have left accounts. However, one cannot talk about a deterioration of the dynasty since such dynastic struggles occurred from the beginning of Achaemenid history. They never threatened the hegemony of the Achaemenids with respect to the great aristocratic Persian families.

On the other hand, existing documentation does not allow for a continuous reconstruction of imperial affairs in the 5th century. Babylonia and Egypt are the best known governments, thanks to Babylonian tablets on the one hand, and Aramaic documents on the other. The archives of the house of Murashû give important information concerning economic and social life in Babylonia between 455 and 403. They allow us to have a precise idea as to the condition of the land and people, in particular the operation of the *hatru*-system and the military and fiscal obligations that were levied on the plots of land of the communities located in this region. Other archives also attest to the new place held by the Babylonians in the administration. One example is Belshunu who, after having been "governor of Babylon" between 421 and 404, was named satrap of Syria (i.e., Trans-euphrates) between 407 and 401; he is the Belesys of Xenephon.

In Egypt, the Aramaic documents furnish information about the satrapic government of Arshama and about the management of the large Persian domains in the Nile river valley during the last quarter of the 5th century. A group of letters (*DOTT, 260–69; ANET,* 492) refers to the hostilities that the Judean garrison of Syene-Elephantine encountered ca. 410 B.C. from the Egyptians and the Persian governor Widranga. After the destruction of the local temple of Yahweh, the dispute was taken before the king and the satrap, who judged in favor of the Judeans, who were then permitted to reconstruct their temple. The Aramaic documents and the Greek sources also point out the difficulties encountered by the Persians in Egypt from the revolt suppressed by Xerxes at the beginning of his reign (485) to the Inaros revolt crushed by Megabyze at the end of Xerxes' reign (456). The defeat of another dynasty, Amyrtaios, had not meant the end of this principality in the Delta. In 445/44, Psamtik still seemed to be a powerful pharaoh. In 404, another Amyrtaios succeeded in implanting himself firmly in Upper Egypt then, several years later (398), in Lower Egypt. That would mark the end of the Persian domination of Egypt until 343 (see C.3 below).

The Athenian defeat in Sicily in 412 and its repercussion in Ionia put Asia Minor in full light in the accounts of Thucydides (*The Peloponnesian War,* Book 8) and Xenophon (*Hellenics*). This front had practically disappeared in the documentation since the middle of the 5th century, except for Ctesias' reference to a satrapic revolt. In 412, the two principal satraps of Asia Minor—Pharnabazus (Hellespontine Phrygia) and Tissaphernes (Sardis)—tried to ally themselves with Sparta. Both had received from Darius II the order to force the Greek cities once again to pay the royal tribute. But the Greek sources for the most part treat the struggles between Athens and Sparta, disregarding Achaemenid affairs. The nomination of Cyrus in 407 as commander in chief of the Persian troops allowed the reestablishment of Achaemenid positions, but these were soon jeopardized by Cyrus' subsequent revolt against his brother Artaxerxes (404–401), the designated successor to the throne.

C. From Artaxerxes II to Alexander (404–334 B.C.).

1. Dynastic Crisis and Royal Power. Menaced on the western front, the empire once again experienced serious dynastic problems during the course of the 4th century. The succession of Artaxerxes was difficult. His eldest son and designated heir, Darius, was put to death for treason. His younger son, Ochos, was recognized under the name of Artaxerxes III (359–358). The succession of the latter took place in the middle of a bloodbath. He was assassinated by the chiliarch Bagoas who had Oarses, youngest son of Artaxerxes III, recognized as king, before making him disappear and pushing Darius (III) onto the throne. According to Diodorus, the reason for this was that the "Royal House was extinguished and there was no longer anyone to whom birth permitted them to inherit the power" (17.5.5)—an excessive judgment, given the fact that Darius was an Achaemenid. His selection is explained by the

Achaemenid custom of endogamy that had always enabled power to be conserved in the "royal line"; Darius III was in effect married to his own sister Stateira—they were both born to one of Darius II sons. Thus, dynastic continuity was maintained.

The prestige and power of the last Persian kings remained strong, as attested by their inscriptions and by their continuation of the work at Persepolis. The desire of the kings to restore and to strengthen their ties with the different Persian communities located in the different regions of the empire also attest to it. Ever since the first kings, the Persian communities of the *diaspora* constituted the "backbone" of Persian power in the empire's territories. They were under obligation to continue to live according to the Persian way of life, to promote a cult to the Persian gods, and to obey in every way the satrap, lieutenant of the king in the satrapy. An inscription found at Sardis shows that a temple and a statue dedicated to Ahura-Mazda existed there (named Zeus Baradates: "Legislator"): the text indicates that a high administrator of Sardis prohibited the followers of the cult of Ahura-Mazda from participating in the Anatolian mystery cults. One should probably link this decision to the order given by Artaxerxes II to the Persians of the large capitals of the empire reinforcing their devotion to Anahita, one of the three great deities of the Persian Empire (along with Ahura-Mazda and Mithra). This complemented similar measures aimed at identical objectives: regrouping the Persian *diaspora* around traditional Persian ideas, and thus around the royal person.

2. The Retaking of Asia Minor. On the Asia Minor front, the reign of Artaxerxes II—once the danger of Cyrus had been eliminated—showed a clear consolidation of power. The years following the defeat of Athens in 404 saw a series of expeditions by Sparta, presented as campaigns to liberate the Greek cities from Achaemenid rule. But even the most ambitious of the Spartan chiefs, Agesilaus, never threatened Persian domination. Soon the Persians supported the Athenian Konon against Sparta. The Persian king quickly became the arbiter for quarrels between Greek cities, to such a point that in 386 Artaxerxes II imposed his will on all the Greek cities by unilaterally enacting a treaty called "the Peace of Antalkidas" (from the name of the principal Spartan negotiator). The royal edict was brought to the attention of the Greek ambassadors in the following terms: "The King Artaxerxes considers the cities of Asia as belonging to him, as well as the islands Clazomenes and Cyprus; on the other hand, the other cities, large or small, remain autonomous, except for Lemnos, Imbros, and Skyros, which, as in the past, will belong to the Athenians." In other words, the Greek cities of Asia Minor reverted to direct domination of the Achaemenids. The royal decision was, in addition, accompanied by an unambiguous threat: "Those who do not consent to these conditions of peace, I will personally make war upon them with the help of all those who accept them, on land, on sea, with my fleet, and with my treasure" (Xen. *Hell.* 5.1.31). The Persians were wise enough to permit some internal autonomy for the subjugated cities. An inscription shortly after the Peace of Antalkidas indicates that, after a territorial conflict between Miletus and Myous, the satrap Strouses submitted the decision to a tribunal of Ionians, the king and the satrap confirming the judgment of the tribunal. This document attests to great continuity in Persian policy with respect to the Greek cities dating back to the measures taken by Artaphernes a century earlier.

3. Egyptian Danger and Satrapic Revolts. On the Aegean front—the only region the Greek sources talk about—the Persians won no victories. For several decades the central government tried to retake Egypt, which had been independent since 404 B.C. Numerous armies were mobilized in Syro-Palestine; all failed. Furthermore, under the reigns of Hakoris (392–380) and his successors, Egypt led a political offensive in the E Mediterranean. The successive Persian defeats in 385–382, 373, and again in 360–359 represented serious military failures and cruel losses of prestige for the Great King. The need to amass troops against Egypt was one of the reasons that pushed Artaxerxes to the Peace of Antalkidas in 386. In fact, the Persian defeats incited other revolts. Thus a two-year long war (382–381) was required to suppress the rebellion of Evagoras of Salamis, who could rely on the aid of Hakoris.

The Persian position was even more precarious because the central power had to face several satrapic rebellions in Asia Minor during the course of the 4th century. The most important was the one traditionally called the Great Revolt of the Satraps (360 B.C.) that itself led to individual revolts, of which the best known is that of Datames in Cappadocia. According to Diodorus, the revolt, directed by Orontes,

covered the entire Aegean front from Asia Minor to Cyprus; however, it probably did not have the global character that the Greek historian has given it. However, it is clear that it represented an evident danger for the Persian power. Paradoxically, the revolt dissipated after the initial successes of the royal armies. Orontes, soon followed by other chiefs, submitted to the Persian king by betraying his comrades. This alone attests to the solidarity of loyalist sentiment among the Persian chiefs of the provinces.

One of the first measures taken by Artaxerxes III upon coming to the throne was to order the satraps to dismiss their Greek mercenary troops. The massive enrollment of mercenaries had become commonplace from Cyrus' expedition on. The Persians and also the Egyptian pharaohs used them with increasing frequency. For the Greek authors of the 4th century, this growing demand for mercenary Greeks attested to the military deterioration of the Achaemenid Empire. Such a polemical view cannot be accepted without reservation. The Persian armies of the 4th century were certainly not composed only of mercenaries, and (contrary to an interpretation currently defended) the Babylonian tablets do not bring indisputable proof of the decline of the *hatru* system during the 4th century. But faced with enemies that fought like the Greeks, the satraps of Asia Minor very naturally used troops for which they themselves did not have the equivalent and that they could quickly enroll and mobilize. The existence of an increasingly abundant market in Europe and a growing demand in Asia is sufficient explanation of the phenomenon. Artaxerxes III himself did not hesitate to enroll numerous mercenaries in the army that he would lead to reconquer Egypt, but at the same time he had understood that it was extremely dangerous to leave the recruitment up to the satraps.

A new defeat at the hands of Egypt in 351–350 B.C. had disastrous consequences. The Phoenician cities revolted the following year. Artaxerxes III prepared an immense army and fleet. The campaign was initiated by the satraps Belesys and Mazaios in 345. Sidon had to surrender and suffered terrible reprisals. In 343, the Persian army (containing a large contingent of Greek mercenaries) won a victory in Egypt. Thus, around 340, the Persian Empire recovered the territorial boundaries of 480. Despite the revolts, the central power had succeeded in maintaining Persian domination. Even in Asia Minor the regions formerly left in the hands of more or less submissive dynasties had been transformed into satrapies in their own right: this was the case with Cilicia and with Caria (where the satraps were from the family of Hekatomnids, at least until 340 when a Persian acquired the satrapy). The regions that chronically proved difficult to control were thus included in the satrapies. This was the case of Lycia, now reunited with the satrapy of Caria, as the inscription of Xanthos shows. The Persian Empire was thus far from experiencing the profound decadence to which the Greek polemic authors of the 4th century constantly referred.

D. Alexander and the End of the Persian Empire (334–330 B.C.)

Reassured on the interior front, without worrying unduly about the Greeks, the Persian kings realized too late the growing power of the kingdom of Macedonia during the period of Philip II (359–336). Within several years he had extended the Macedonian territory to the Straits, had given his kingdom an army without compare, and had defeated the Greek cities at Chaeronea (338). This victory was followed by the founding of the Corinthian League, whose proclaimed objective was the liberation of the Greek cities of Asia Minor. However, from this date on, a strong Macedonian force operated within Asia Minor. The victories won by Memnon in 337 and a certain lack of lucidity no doubt explain why the central Persian power did not consider it advantageous to mobilize the royal army in 334 to oppose the young Alexander, who had succeeded his father Philip in 336. The task of pushing the Macedonian forces back to the sea was thus given to the satraps of Asia Minor. The defeat of Graneikos (May 334) would be of great importance. Alexander would soon capture Sardis, which would give him the Persian Mithrenes as well as the logistic means that he lacked. In several months (spring–winter 334), the Persian king lost Asia Minor. During the following spring (333), the death of Memnon ended an enormous naval counterattack by the Persians that might prove capable of pushing Alexander back into Europe.

Facing this danger, Darius III decided to mobilize the royal army. Almost all of the contingents of the empire, except the contingents to the E of Iran, were assembled in Babylon and marched to Cilicia to stop the Macedonians. The battle of Issos (November 333)—represented on the famous mosaics of Neapels—was a severe defeat for Darius, who had to flee the battleground and to leave royal women and children to

fall into the hands of the enemy. The negotiations initiated by the Great King proved uneventful. Incapable of defending the Syro-Phoenician coast and Egypt and abandoned by the Persian forces, Darius decided to raise a new army in which he could this time enroll the contingents from E Iran. The troops were assembled and trained in Babylonia, then dispersed in the upper valley of the Tigris, to the W of Arbela, a famous stop on the Royal Road. In the beginning of the month of October 331 Darius was again defeated. He fled toward Ecbatana, leaving open the road toward the great capitals. Babylon and then Susa without resistance fell into the hands of the conqueror, who seized the immense royal Treasuries. Alexander would soon (end of 331) come to Persepolis, which would be surrendered by the Persian governor before being pillaged in the spring of 330.

During this time, Darius tried to mobilize a new army in Media. But the rebellions within his entourage and the speed of the advancing Macedonians prevented him from even engaging in battle. The Great King was soon assassinated by a plot conceived by Bessos, satrap of Bactria (July 330). Bessos took the royal title under the name of Artaxerxes, hoping to stop Alexander at Bactria; however, he was soon handed over to the conqueror and put to death. Despite some resistance led by the small princes of Sogdia and Bactria, Alexander succeeded in imposing his dominion over E Iran (329–327), before taking the Indus River valley (327–325). Two years after his return to Babylonia, he died, at last conquered by malaria (June 323).

If one considers rightly that the death of Darius III in July of 330 marks the end of the Achaemenid Empire founded by Cyrus and his successors, one must also emphasize the imperial structures that remained intact during Alexander's lifetime. The conqueror left unchanged the satrapies and the tributary system. On the other hand, one of his concerns had been to call Persian and Iranian nobles into his service. In 334 he admitted the Persian Mithrenes into his entourage, but in 330 he made a decision of great importance by giving satrapic governments to Mithrenes himself and to Mazaios, command posts he had up until then reserved for Macedonians and Greeks. Without compromise he pursued this policy of Macedono-Iranian collaboration. Numerous Iranians were named satraps in the countries of the Iranian plateau, and Iranian contingents served in the army side by side with Greeks and Macedonians. In 327, Alexander married an Iranian princess, Roxane who, after the death of the young conqueror, gave birth to his son, Alexander IV. In Persia itself, he was careful to name as satrap his companion Peukestas, who demonstrated his goodwill by adopting the Persian way of life. As for the conqueror himself, he put to his own profit the customs of the Achaemenid court, despite opposition from within part of his entourage. His ultimate objective was to allow the Persians and the Iranians to evolve in a flexible and gradual manner into the ruling class of the new empire, that the defeat of Darius III had allowed him to create on the ruins and on the model of that of Cyrus and his successors.

PERSIAN LANGUAGE. See LANGUAGES (LANGUAGES OF ANCIENT IRAN).

PERSIS (PERSON) [Gk *Persis* (Περσις)]. A Roman Christian who received greetings from Paul in Rom 16:12 as "the beloved Persis." Having been close to Paul in the E of the Roman Empire, she had immigrated to Rome. This latter fact is confirmed by the epigraphical and literary sources from the city of Rome which show the name "Persis" only six times; the Romans very rarely used the name (Lampe *StadtrChr,* 138–41). Persis had "worked hard in the Lord" (for discussion of this phrase, see

TRYPHAENA AND TRYPHOSA). As with all names recalling a geographical area, "Persis" ("Persian") was a typical slave name; two out of three set "inscriptions" in the city of Rome attribute the name to (freed) slaves (Lampe *StadtrChr,* 145–46, 153). Persis was probably a gentile Christian. See NEREUS.
PETER LAMPE

PERSONALITY, CORPORATE. See CORPORATE PERSONALITY.

PERUDA (PERSON) [Heb *pĕrûdā*ʾ (פְּרוּדָא)]. Var PERIDA. Head of a family belonging to Solomon's servants who had returned from the Babylonian Exile (Peruda in Ezra 2:55; Perida in the parallels in Neh 7:57 and 1 Esdr 5:33). The list in Ezra-Nehemiah implies that this return took place immediately in response to Cyrus' declaration in 538 B.C.E. But 1 Esdras places this return in its more probable date at the time of King Darius (ca. 522).

Some have used 1 Kgs 9:20 to conclude that Solomon's servants were originally enslaved foreigners. Levine (1963), however, suggests that the term denotes Israelite officials supervising foreigners. In the postexilic era, when the family of Peruda appears, the term "servant" typically refers to officials. Like the temple servants (Nethinim), Solomon's servants are temple functionaries. They are members of the congregation of Israel and separated thereby from ordinary slaves (Ezra 2:65). The name Peruda could mean "the solitary one." The number, origin, and specific tasks of the Peruda family are no longer discernible. See Blenkinsopp *Ezra-Nehemiah* OTL; Williamson *Ezra, Nehemiah* WBC.

PESACH. The Hebrew name for the festival known as Passover. See UNLEAVENED BREAD AND PASSOVER, FEASTS OF.

PESHARIM, QUMRAN. The discovery of the Qumran library has brought to light a hitherto unknown type of biblical commentary, employed by the Qumran community, which has come to be known as "pesher" (pl. pesharim). This name derives from the frequent use of the term "pesher" (Heb *pšr*—in the OT it occurs only once at Qoh 8:1; Akk *pišru,* Aram *psr*ʾ) to introduce an interpretation of a biblical text. The word is used in the sense of "interpretation, realization" (Rabinowitz 1973: 226 suggests: "a presaged reality"), akin to the Heb *ptr.*

The term "pesher" is currently used in four different senses: (a) a Qumranic biblical commentary written in pesher-like form; (b) the formal term used to introduce the expositionary section of this kind of commentary; (c) the literary genre of these commentaries; and (d) the particular exegetical method of these Qumranic commentaries.

———

A. Form and Content of the Extant Pesharim

The importance of the Scriptures in the life and ideology of the Qumran community is expressly stated in the writings of the Qumranites (CD 6:3–11; 1QS 6:6–8; 8:2, 15–16; 1QpHab 2:8–10; 7:7–8), from which we learn that exposition and interpretation of the Torah and the Prophets constituted an important part of the community's special teaching. This is corroborated by the numerous biblical texts and biblical

commentaries found among the Qumran scrolls. Significantly, most of the surviving commentaries offer expositions of divine discourses, mainly from the Prophets, but also from the Torah, as well as from the Psalms and the book of Daniel (4QPs37 on Ps. 37; 11QMelch ii.9–12 on Pss. 82:1–2 and 7:8–9; 4QFlor 1–2.i.14 on Ps. 1:1 and elsewhere; 4QFlor 1+3 ii.3 on Dan 12:10; 11QMelch ii.8 on Dan 9:25), since both David and Daniel were considered prophets (11QPs^{a} 27:11; 4QFlor 1+3 ii.3). The commentaries are identified as belonging to the Qumran community by virtue of their terminology, subject matter, and ideology. These commentaries are the only Qumran texts so far published that refer to historical persons and events, and they constitute the main evidence for dating the Qumran community and understanding its history. Some scholars have concluded, based on the fact that the extant pesharim are all single Herodian mss with no copies or overlapping sections, that the pesharim were autographs and produced within the community at a later stage in its history (Milik 1959: 41; Cross 1980: 114–15). However, some pesharim betray a copyist's hand (e.g., 4QpIsa 5:5a–5, which has an interlinear addition that appears to be a correction; Horgan 1979: 3–4) and therefore may not be autographs. Moreover, the exegetical method of the pesharim is to be found already in much older Qumranic works such as 1QS, CD, and 1QM. It is possible therefore, that some of these pesharim, or their sources, may be attributed to an early stage in the community's history, or even to the founder of the community himself.

The extant pesharim appear in several forms: (a) *continuous pesharim*—running commentaries (section by section) on single biblical books, mainly the Prophets; (b) *thematic pesharim*—exposition of verses from various biblical books, organized around a common theme, such as 4QFlorilegium and 11QMelchizedek; (c) *isolated pesharim*—exposition of one or two biblical verses, within a work of a nonpesher genre (e.g., Isa 40:3 in 1QS 8:13–16; Isa 24:17 in CD 4:13–15; and Num 21:18 in CD 6:3–10). These first three forms share a common lemmatic structure: a biblical citation followed by an exposition, usually introduced by the term "pesher." There are also (d) *other forms of pesharim*.

1. Continuous Pesharim. Most of the extant pesharim are of this type. Fragments of 15 mss were discovered in Qumran Caves 1 and 4 (editions: Allegro 1968, to be used with Strugnell 1969–71; cf. also Horgan 1979). These include:

4QpIsa^{a} (= *4Q161,* on Isa 10:22–27, 33–34; 11:1–5),
4QpIsa^{b}(= *4Q162,* on Isa 5:5–30),
4QpIsa^{c}(= *4Q163,* on Isa 8:7–8; 9:11–20; 10:24; 14:8, 26–30; 29:10–23 [with a quotation from Zech 11:11]; 30:1–21; 31:1),
4QpIsa^{d}(= *4Q164,* on Isa 54:11–12),
4QpIsa^{e}(= *4Q165,* on Isa 40:11–12; 14:19; 15:4–5; 21:10–15; 32:5–7; 11:11–12),
4QpHos^{a}(= *4Q166,* on Hos 2:8–14),
4QpHos^{b}(= *4Q167,* on Hos 5:13–15; 6:4–11; 8:6–14),
1QpZeph (= *1Q15,* on Zeph 1:18–2:2),
4QpZeph (= *4Q170,* on Zeph 1:12–13),
1QpMic (= *4Q14,* on Mic 1:2–9; 6:15–16),
4QpNah (= *4Q169,* on Nah 1:3–6; 2:12–14; 3:1–14),
1QpHab (the Habakkuk pesher, the longest and best preserved ms, containing a pesher on Hab 1:1–2:20),
1QpPs (= *1Q16,* on Ps. 68:13, 30),
4QpPs^{a}(= *4Q171,* on Pss. 37:2–39; 45:1–2; 60:8–9), and
4QpPs^{b}(= *4Q173,* on Ps. 129:7–8).

Most of the continuous pesharim have a common structure, exegetical method, and subject matter. They all refer in a similar way to a certain community, its leaders and opponents, and its history. Similar references appear also in other Qumran documents. It is generally assumed that the pesharim, as well as writings such as 1QS and CD, refer to a community of Essenes, one of the three Jewish sects that, according to Josephus, flourished in Judaea during the Second Temple era. See also ESSENES.

a. The Pesher on Habakkuk (1QpHab). This pesher, the first to be published, has received the most attention. The ms is written in an early Herodian hand (Trever and Cross 1972); thirteen columns have

been preserved but, owing to extensive decay, without their lower edge (Cross 1972: 4). The author expounds the first two chapters of Habakkuk verse by verse, reading contemporary events into the prophecy.

The exposition refers repeatedly to three main persons, designated by special sobriquets, and to events connected with them. The first figure, the Teacher of Righteousness (based on Hos 10:12; Joel 2:23), is the leader of a group whose members are described as "The Men of Truth" and "The Doers of the Torah" (7:1, 10–14; 8:1–3). This leader is an inspired teacher of the Torah (5:11–12) and the Prophets. Being divinely inspired, he is able to decipher the hidden historical and eschatological meaning of the prophetic words (2:7–10; 7:4–5). The Teacher of Righteousness is involved in a bitter controversy with a second person, an ideological opponent, a person referred to as "The Man of Lies" or "The Spouter of Lies" (based on Mic 2:11), who was at one time the Teacher's follower but broke away, together with his adherents, to form his own group (2:1–3; 5:9–14; 10:9–13). The third person, yet another adversary of the Teacher, is a political leader, a ruler of Israel, who is accorded the sobriquet "The Wicked Priest" (1:12–15; 11:4–8). This Wicked Priest is described as one "who was called by the true name at the beginning of his course" (8:8–9), but who, corrupted by wealth and power, defiled the Temple (12:2–10) and amassed wealth by violent and sinful means (8:8–13; 9:8–12; 11:12–16; 12:10). He pursued the Teacher of Righteousness to "his place of exile," and disturbed his rest on the Day of Atonement (11:5–7, which seems to indicate that "The Wicked Priest" used a different calendar from that of the Teacher and his followers; Talmon 1965: 166–167; for polemic in matters concerning the calendar and festivals, cf. also CD 3:12–16; 4QpPs^{a} 1–10 ii 10–11; 4QpHos^{a} ii 16–17).

The external and internal conflicts of the Teacher and his followers were seen by the pesher as signs of the approaching eschatological era and the End of Days (7:7–14). The Qumranites believed that the day of final judgment was imminent, and hoped to see their wicked opponents punished and their own faithfulness to the true way of the Torah rewarded (8:2; 10:3; 12:14; 13:3). One of the contemporary events which made a deep impression on the author of the pesher was the approach and attack of a terrible people, the Kittim, whom he identified with the Chaldeans in Habakkuk. The Kittim are depicted as swift, cruel, mighty, merciless, and invincible (2:10–4:16; 6:1–2). Their attack is interpreted by many of the pesharim as a divine punishment of their wicked adversaries.

There is no reason to believe that all these details are invented. It is generally assumed that they refer to real persons and events. At present, the most plausible identification is that the Kittim are the Romans (note 1QpHab 6:1–12, which appears to refer to the Roman military standards. The identification of the Kittim as Romans is corroborated by 4QpNah 3–4 i 3; Milik 1959: 64–65; Cross 1980: 123). Similarly plausible is the identification of the Wicked Priest as one of the early Hasmonean rulers, generally assumed to be either Jonathan (161–142 B.C.E.; Milik 1959: 65–71; Vermes 1981: 151; Murphy-O'Connor 1974: 229–33; Delcor, *DBSup* fasc. 51: 907) or Simon (142–134 B.C.E.; Cross 1980: 142–52; Nickelsburg 1976). Both more or less fit the description in 1QpHab 9:1–2 and 11:15. Others identify the Wicked Priest as Alexander Janneus (103–76 B.C.E.; Delcor 1951; Nitzan 1986: 132–33) or Hyrcanus II (Dupont-Sommer 1980: 274). The identity of the Teacher of Righteousness remains, however, an enigma. Initially, it was argued that he was a descendant of the high priests of the Zadokite lineage who was ousted from office by the Hasmonean Jonathan (Stegemann 1971: 250–51), but this explanation is too conjectural. See also TEACHER OF RIGHTEOUSNESS. As for the Man of Lies, he was sometimes identified as the leader of the Pharisees. This is based on 4QpNah 3–4 ii 2, 4 (cf. also 4QpIsa^{c} 23 ii 10), in which the community's opponents are referred to as "the Seekers of Smooth Things," an expression interpreted as a cryptogram for the Pharisees (Amoussine 1963; Flusser 1970). Others see him as identical with the Wicked Priest (Vermes 1981: 143), but the different characteristics of the two men make this identification unacceptable.

b. The Pesher on the Psalms (4QpPs^{a}). Substantial fragments of four columns of this Herodian ms have been preserved (Stegemann 1963–64; 1967–69). The author reads the dichotomy of the Righteous and the Wicked, as described in the Psalms, as referring to the Teacher of Righteousness and his followers on the one hand and their opponents on the other. The Teacher is referred to here as "the Priest" (1–10 iii

15). He is persecuted both by the Wicked Priest (1–10 iv 8) and the "Wicked ones of Ephraim … who will seek to lay their hands on the Priest and his partisans" (1–10 ii 18). This is seen by the author as part of the events taking place "at the time of testing that is coming upon them" (1–10 ii 19–20). The community believed that its own salvation by God was imminent, as was the punishment of their enemies. The Man of Lies also figures here. He is the one "who led many astray" with false teaching (1–10 i 26–27).

The sharp contrast between the Teacher (and his followers) and their opponents is also reflected by the various epithets applied to each party. The Teacher and his adherents are variously called "those who practice the Torah" (1–10 ii 15, 23), "the Congregation of the Meek" (1–10 ii 10; iii 10), "the congregation of his chosen ones" (1–10 ii 5), and "those who returned from the wilderness" (1–10 iii 1; cf. 1QM 1:2–3; 4QpIsa^{a} 2–6 ii 18). Their adversaries are referred to as "the Ruthless Opponents of the Covenant" (1–10 ii 14; iv 1–2), "the Wicked of Ephraim and Manasseh" (1–10 ii 18), and "the Wicked Princes" (1–2 iii 7). The contrast between the community and its opponents is seen as part of the cosmic battle between the forces of Good and the forces of Evil (1–10 ii 7–11).

c. The Pesher on Nahum (4QpNah). Substantial fragments of five columns of this late Hasmonean or early Herodian ms have survived (Strugnell 1969–71: 205). Published after 1QpHab, this pesher was the first of the Qumran writings to mention historical names. It mentions "[Deme]trius King of Greece" (4QpNah 3–4 i 2), probably referring to the Seleucid ruler Demetrius III Eukerus (95–88 B.C.E.; Cross 1980: 124–25; Milik 1959: 72). It also mentions "the kings of Greece from Antiochus until the rise of the rulers of the Kittim" (4QpNah 3–4 i 3). While it is difficult to ascertain which specific king this refers to, it is at least clear that the kings of Greece (= *yawan,* as in Dan 8:21; 10:20; 11:2; also referred to in CD 8:11–12), namely the Seleucids, are distinct from "the rulers of the Kittim" (mentioned also in 1QpHab 3:5), who must then be the Roman governors. These references, therefore, place the events and persons alluded to in the pesharim on a firm historical footing, dating them in the 2d century B.C.E.

The Nahum pesher seems to refer to events dating from Alexander Janneus to the fall of the Hasmonean kingdom following the conquest of Palestine by Pompey (63 B.C.E.; cf. 4QpNah 3–4 iv). Perhaps the clearest indication is the allusion to Alexander Jannaeus, referred to here as "the Lion of Wrath." This Lion is one "who would hang men up alive" (4QpNah 3–4 i 7), apparently alluding to Alexander Jannaeus' crucifixion of the Pharisees who had transferred their allegiance to Demetrius III (cf. Josephus *Ant* 13.14.2 §§379–83; *JW* 1.4.6 §§96–98). The pesher, though it may appear to be condemning Jannaeus' act, may in fact be approving it as an appropriate punishment for the Pharisees' treachery (thus Yadin 1971, relying on the ruling of 11QTemple 64:6–13 to hang traitors alive [cf. Deut 21:22–23]; also Yadin 1983, 1: 378).

"The Seekers of Smooth Things" (4QpNah 3–4 i 7, based on Isa 30:10; cf. Ps. 21:3; Dan 11:32), namely the Pharisees, appear both as the foes of the Lion of Wrath and as the adversaries of the Qumranites. Most of the pesher's polemic is directed against them. They are referred to as "those who lead Ephraim astray; with their false teaching, their lying tongue, and deceitful lip they lead many astray" (4QpNah 3–4 ii 8; cf. 4QpPs^{a} 1–10 ii 18–19). A similar charge is leveled by 1QpHab against the Spouter of Lies and his followers. 4QpNah refers to three distinct groups within Israel, by means of three biblical symbols: Ephraim, Manasseh, and Judea. Ephraim stands for the Seekers of Smooth Things, namely the Pharisees (4QpNah 3–4 ii 2, 8). A second group, represented by Manasseh, is also condemned by the author (4QpNah 3–4 iii 9–11, iv 1–7). The third group appears to refer to the Qumran community itself, and is represented by Judea and Israel (4QpNah 3–4 iii 4–5).

It had been concluded from other Qumran writings (1QS and CD) that the Qumran community must be identical with some branch of the Essenes. If the pesher's tripartite symbolism is equated with the three Jewish sects referred to by Josephus—Pharisees, Sadducees, and Essenes (*Ant* 13.5.9 §§171–73; 18.1.2–5 §§11–22; *JW* 2.8.2–14 §§119–166)—the second group, Manasseh, must be identified with the Sadducees (Amoussine 1963; Flusser 1970; the same tripartite symbolism underlies 4QpPs^{a} 1–10 ii 18–19 and other pesharim). However, new evidence shows that the members of the Qumran community adhered to a Sadducean halakhah (Qimron and Strugnell 1985, citing the yet unpublished work 4QMMT; see also

MIQSAT MA‹ASE HATORAH), so that the identification of the triple symbolism of the pesharim with the three sects of Josephus must be modified.

d. The Pesher on Isaiah (4QpIsa^{d}). A fragment of this pesher offers an interesting insight into the self-image of the Qumran community. The pesher interprets the description of the eschatological Jerusalem in Isaiah 54 as symbolic of the eschatological community and its leadership: "the council of the community was established [among the] priests and the p[eople] [in the midst of] the congregation of his chosen ones, like a stone of lapis lazuli in the midst of the stones" (1 2–3). Underlying the equation of the eschatological Jerusalem with the community is also the equation of Jerusalem with the Temple and, consequently, the equation of the community with the Temple (also in 1QS 5:5–6; 8:5–6; 4QFlor 1–2 i 6–7; cf. Dimant 1986: 184–89). The pesher appears also to connect the twelve community leaders (cf. the twelve apostles of the early Christian community) with the twelve precious stones on the breastpiece of the High Priest (Exod 28:4, 15 etc.). A similar theme and approach are to be found in the description of New Jerusalem in Revelation 21. The concept of community as temple is applied also to the early Christian community by several NT writers (e.g., Matt 16:17–18; Eph 2:19–20; Rev 3:12; cf. Baumgarten 1977; Flusser 1965).

2. Thematic Pesharim. Unlike continuous pesharim, the thematic pesharim do not provide a running commentary on a single biblical text; they are a collection of pesharim of various biblical verses on a single, or several themes. The theme thus dominates the structure and development of the pesher, and dictates the choice of biblical texts to be interpreted. These pesharim use a structure similar to the continuous pesharim, but modify it in some ways.

a. 4QFlorilegium (4Q174). Several fragments of this ms together preserve most of one column, and parts of another two columns (editions: Allegro 1968: 53–57; Strugnell 1969–71: 220–25; Brooke 1985: 86–91). The ms dates from the end of the 1st century B.C.E. or the beginning of the 1st century C.E. (Brooke 1985: 83–84). Organized around citations from 2 Sam 7:10–14 (1 Chr 17:9–13); Exod 15:17–18; Amos 9:11; Ps. 1:1; Isa 8:11; Ezek 37:23; and Ps. 2:1; the work expounds various eschatological themes.

The best preserved column contains a pesher on 2 Samuel 7. It interprets the prophecy of Nathan concerning the House of David as alluding to three temples (Schwartz 1979; Dimant 1986): the future eschatological temple (Heb *mqdš ›dny*) to be built by God (1–2 i 1–5; also mentioned in 11QTemple 29:10); the Temple of Israel (Heb *mqdš yśr›l*), which was the temple built by Israel and later desecrated (probably to be equated with the contemporary temple; 1–2 i 5–6); and the Temple of Men (Heb *mqdš ›dm*), that is, the temple created and fashioned by the life and deeds of the Qumran community itself. The pesher accordingly states (1–2 i 6–7) that the sacrifices in this third temple are not of animals but of "deeds of Torah" (Heb *m‹śy twrh;* cf. 4QMMT *m‹śy mṣwh;* Qimron and Strugnell 1985: 406). The author goes on to interpret 2 Sam 7:11–14 as referring to the Shoot of David, the eschatological leader of the community (mentioned also in 4QPatrBless 3; cf. 4QpIsa^{a} 7–10 ii 22; CD 7:16), who will appear together with another leader of the community, the Interpreter of the Torah (mentioned also in CD 6:7; 7:18).

This first section (4QFlor 1–2 i 1–13) does not use the term "pesher" at all, whereas the second section (4QFlor 1–2 i 14–19) does. Moreover, this second section opens with the formula "Midrash of 'happy is the man …' " (Ps. 1:1) (Heb *mdrš m›šry h›yš*). These distinctions were taken to indicate that this second section (4QFlor 1–2 i 14–1–3 ii 1–6) is a real pesher in the form of a midrash, whereas 4QFlor 1–2 i 1–13 is not (Brooke 1985: 140–41, 154–55). This view is, however, questionable, since both sections employ the same exegetical procedures and syntactic patterns as other pesharim. The differences of style and terminology between the two sections may indicate that 4QFlor was originally a collection of various eschatological pesharim.

b. 11QMelchizedek (11QMelch). Parts of three columns of this early Herodian ms have survived (de Jonge and van der Woude 1965–66; fresh edition Puech 1987: 488–89). The fragments describe the events as taking place during the tenth eschatological jubilee, so that originally they must have formed part of a larger pesher on ten jubilees. But differences of style and subject matter make it doubtful whether the fragments *4Q180–181* are to be considered as part of this pesher (as Milik 1972 has suggested; cf. Dimant's criticism 1979: 89–90).

In 11QMelchizedek the author strings together pesher-type expositions of various biblical texts (Lev 25:9–10, 12:13; Deut 15:2; Isa 49:8; 52:7; 61:1–3; Pss. 7:8–9; 82:1–2; Dan 9:25). He interprets the freedom accorded in the biblical jubilee as the eschatological liberation of the Sons of Light imprisoned by the evil Belial (ii 1–6). This liberation will take place at "the End of Days" (ii 4), at the end of the tenth jubilee (ii 7), which implies a division of historical time into ten jubilees (cf. *1 En.* 93:1–10; 90:12–17; Kobelski 1981: 49–51). The chief actor in these events is Melchizedek, the eschatological judge who figures as a priest in Gen 14:18 and Ps. 110:4. In this capacity he acts as liberator and expiator of sins for the Sons of Light while wreaking vengeance upon Belial and his hosts (ii 13–14). By applying Ps. 82:1 to Melchizedek (ii 13), the author of the pesher treats him as a supernatural figure.

3. Isolated Pesharim. Most of the isolated pesharim come from the first part (the admonition) of the *Cairo Damascus Document:* 3:20–44 (on Ezek 44:15); 4:13–19 (on Isa 24:17); 6:3–11 (on Num 21:18 + Isa 54:16); 7(B):10–21 (on Isa 7:17 + Amos 9:11 + Num 24:7); 8 (A):8–15 (on Deut 32:33); and 19 (B):7–13 (on Zech 11:11 + Ezek 9:4). Only one isolated pesher is to be found outside this document (the *Community Rule* interprets Isa 40:3; note also 9:20). Significantly, all the isolated pesharim occur in paraenetic sections, where the pesharim serve as prooftexts both for events in the history of the community and for its ideological tenets. The texts commented upon in this way are mostly prophetic, but a few are taken from ancient songs found in the Torah (Num 21:18; 24:7; Deut 32:33). This means that these songs were considered prophetic and were interpreted as such.

4. Other Forms of Pesharim. Another type of biblical interpretation is the use of various sobriquets in the pesharim to refer to historical persons. Most of these sobriquets serve as cryptograms for pesher-type interpretations of biblical passages (cf. above and the examples discussed by Nitzan 1986: 43–46). Thus, for instance, the epithet "The Seekers of Smooth Things" for the community's opponents clearly refers to Isa 30:10, but implies a pesher of the entire context of Isa 30:8–14. The epithet "The Teacher of Righteousness" is based on Hos 10:12 and Joel 2:23, but has its source in a pesher of the larger context of the two verses (note esp. Joel 2:18–27). Although these sobriquets cannot formally be considered "pesharim," they are derived by the same exegetical principles.

Another form of pesher is interpretation of biblical verses by allusion, that is, without explicit quotation (cf. 1QpHab 11:12–14 on Hab 2:16, alluding to Deut 10:16; Jer 4:4; see other examples cited by Nitzan 1986: 61–78). These interpretations of alluded vv are also derived by the pesher's exegetical method. The fact that pesher-like characteristics appear in various other literary forms indicates that continuous or thematic pesharim were not the only literary forms that employed the pesher-type exegesis.

B. Nature and Structure of the Pesharim

Besides the pesharim, the members of the Qumran community employed several other modes of biblical interpretation (Gabrion, *ANRW* 2/19/1: 779–848; Fishbane 1988). However, it is the pesharim which are most typical of the community. Their distinctive historical-eschatological subject matter and typical lemma-and-exposition form reflect in a unique way the doctrines and attitudes of the Qumran community.

The *Pesher on Habakkuk* claims that the pesharim are of divine origin. It states that "God divulged all the mysteries of the words of His servants the Prophets" to the Teacher of Righteousness (1QpHab 7:4–5), and these mysteries relate to the historical events leading to the eschatological era (1QpHab 2:8–10). Biblical prophecies are, therefore, interpreted as enigmatic predictions relating to events of the Last Day, revealed to the Prophets who perhaps did not understand them (being too far removed in time from the events about which they prophesied). These enigmatic mysteries (Heb *rzym;* e.g. 1QpHab 7:8; 1QS 3:23; 1QH 2:13; 1QM 3:9; CD 3:18; cf. Dan 2:29 et al) could therefore only be unraveled by an inspired person living close to the time of the actual events. The Teacher of Righteousness, according to 1QpHab, not only possessed such great visionary powers, but was also inspired and guided by God (Elliger 1953: 154–55; Nitzan 1986: 25–26). We should not conclude from this that all the extant pesharim were necessarily composed by the Teacher of Righteousness himself, but the pesher-method, as developed within the Qumran community, may ultimately derive from him. The numerous exegetical techniques the pesharim share with other contemporary literary corpora seem to indicate that the Teacher of Righteousness, like

other contemporary Jewish writers, also drew on traditional exegetical modes and traditions (Fishbane 1988: 340–41; Dimant 1988: 379–84).

The character and form of the pesharim are best understood by observing the relationship between their formal structure and their content. The lemmatic pattern makes for a structural and stylistic distinction between the biblical citation and its exposition, thus differentiating between the word of God and man's interpretation of it. The *Pesher of Habakkuk* provides the most comprehensive illustration of pesher patterns. The work consists of small pesher units. Because the main text expounded is known, each unit opens with a biblical citation without any introductory term. The interpretation which follows is, however, always introduced by the term "pesher." Such pesher-interpretation identifies parts of the biblical citation with contemporary personages or activities (Rabinowitz 1973: 226), with further explanations (Brooke 1979–80: 498).

When applied to *persons* the identification is introduced by the formula *pšrw ʿl* ("its interpretation concerns") + a noun + the relative *ʾšr* ("who"/"which") + verb/s describing the activities of the persons mentioned. An alternative formula uses *pšr hdbr ʿl* ("the interpretation of it concerns"; cf. 1QpHab 10:9; 12:2, 12–13). A good illustration is 1QpHab 6:8–10:

> THEREFORE HE DRAWS HIS SWORD CONTINUALLY TO SLAUGHTER NATIONS AND HE HAS NO COMPASSION [Hab 1:17]. Its interpretation concerns the Kittim, who destroy many with the sword …

When applied to *activities* the identification is introduced by the formula *pšrw ʾšr* ("its interpretation is that") or *pšr hdbr ʾšr* ("the interpretation of it is that") + verb. A good illustration of this form is found in 1QpHab 7:7–7:

> FOR THERE IS YET A VISION CONCERNING THE APPOINTED TIME. IT TESTIFIES TO THE END, AND IT WILL NOT DECEIVE [Hab 2:3]. Its interpretation is that the last end will be prolonged …"

The pesher unit may be elaborated by repeating a portion of the citation and giving it a fresh interpretation. The subordinate character of such elaborations is indicated by special introductory terms: the quotation is always introduced by the formula *wʾšr ʾmr* ("and as for what he said"; cf. 1QpHab 6:2; 7:3; 9:3; 10:1–2) or *hwʾ ʾšr ʾmr* ("this is what he said"; cf. 1QpHab 3:2, 14). Such repeated quotations are followed by additional identifications, again introduced by the term "pesher" (e.g., 1QpHab 5:6–7; 7:3–4). These identifications are in the form of nominal sentences which repeat some terms from the quotation itself, and equate them with other, nonbiblical, terms. For example, 1QpHab 12:3–4 (on Hab 2:17) reads: "for 'Lebanon' *is* the council of the community, and the 'beasts' *are* the simple ones of Judah."

The above formal patterns are employed, with slight modifications, by all continuous pesharim (Brooke 1979–80: 498–500; Horgan 1979: 239–44), with a single exception: 4QpIsa^{c}, which omits comment on some passages of its main Isaiah text, contains quotations from Jeremiah and Zechariah (Horgan 1979: 237–38).

The thematic pesharim also employ the basic patterns of the continuous pesharim, with appropriate modifications. But unlike the continuous pesharim, they employ a combination of main text with subordinate ones. Thus, for example, 4QFlorilegium, like the continuous pesharim, quotes the main text of 2 Samuel 7 without any introductory formula (1–2 i 10–11) because the main text had been cited explicitly in the initial section of the pesher (which has not been preserved). As with the continuous pesharim, the interpretation which follows the quotation is identifactory, but takes the form of nominal equations (4QFlor 1–2 i 2, 11) instead of a "pesher." This is followed by fresh quotations from other biblical books, considered by the author to refer to the same exegetical subject. Since these quotations come from biblical books other than that of the main text, their source is explicitly mentioned. These quotations are introduced by the term *kʾšr ktwb* ("as it is written"; cf. 4QFlor 1–2 i 2, 12), a typical introductory formula for scriptural prooftexts (also used in explicit nonpesher quotations, chiefly in legal sections of Qumran works; cf. CD 5:1–2; 11:10; 1QS 5:15). These quotations are in turn interpreted as subordinate units (which repeat a quotation and introduce it with "and as for what he said" [4QFlor 1–2 i 7], or introduce nominal equation [4QFlor 1–2 i 12–13]). 11QMelch is too fragmentary to permit a full reconstruction of the structural patterns. The surviving quotations are all introduced by formulas used to

mark subordinate elaborations ("and as for what he said"; "this/as it is written"). The main quotation appears, therefore, to be missing.

C. Literary Genre of the Pesharim

The fact that the term "pesher" is not always used in the pesharim indicates that the use of this term is not constitutive to the genre (Brooke 1979–80: 492). Rather, the structure, terminology, and exegetical purpose of the work are of greater importance. The exegetical procedure underlying each pesher-unit may be reconstructed as follows (similarly Brooke 1979–80: 497).

The first step consists in locating within the biblical citation the subject of the exposition and identifying it with a contemporary figure or situation. The subject may be located in a noun, a verb, or a pronoun of the biblical text. These identifications may appear to the modern reader to be very arbitrary, but they are often based on an already existing exegetical tradition. Thus, for instance, the equation of the Chaldeans with the Kittim goes back to a well-established exegesis (cf. Num 24:24 together with Isa 23:12–13 and Dan 11:30; Brooke 1985: 328–29). Similarly, the identification of the term "Lebanon" in Hab 2:17 with the community (1QpHab 4:12) rests on the traditional equation of Lebanon with the Temple (in the Targums tradition; cf. Brownlee 1956; Vermes 1961: 28). It is this initial step of applying the ancient prophecy to a contemporary situation that is the most difficult. This is often done through symbolic or allegorical equations: the lion of Habakkuk stands for a human king (4QpNah 3–4 i 1–6), the eschatological Jerusalem stands for the Qumran community (4QpIsa^{d}), a reference to "a town" stands for "the town of vanity," namely, for a group of opponents led by the Spouter of Lies (1QpNah 10:9–10).

Having established the identification, the author sets out to relate the various details in the citation to the identified subject (the second step). In order to bridge the gap between the literal meaning of the biblical prophecy and the sense attributed to it in the pesher, the author will indicate the presence of analogy, similarity, or identity between various elements of the two texts.

Finally, the above aims are achieved by the application of various exegetical techniques (the third step; see D below).

The exegetical steps described above, as well as their eschatological subject matter, though not always explicitly formulated, are essential components of (and underlie all forms of) pesharim. They are the distinctive features of the pesher-commentary. The presence or absence of these constituents is, therefore, sufficient to decide if a work is to be defined as a pesher or not. The occurrence of the term "pesher" is important, but not indispensable, for such a definition. We may find pesher-type works which do not employ the term "pesher," but employ other terminological equivalents to perform the same task (cf. 4QFlor 1–2 i 1–13). Conversely, the pesher exegetical method may be employed in a different literary form and with different structural patterns (compare isolated pesharim and the sobriquets; cf. also 1 Macc 7:16–17 commenting on Ps 79:2–3; cf. Dimant 1988: 390–91).

It should be noted, however, that two Qumranic texts make a different use of the term "pesher": the text known as 4QOrdinances (= *4Q159*) 5:1, 5 uses the term to introduce a pesher on a legal passage from the Pentateuch (Lev 16:1?). In another text, *4Q180*, the term "pesher" introduces abstract themes later to be interpreted by means of pertinent quotations. This indicates that the use of the term "pesher" may have been wider than what can be gathered from the evidence of the continuous and thematic pesharim (Brownlee 1979: 28; Dimant 1979: 96).

What is the genre of the pesharim? A heated debate on this question was conducted in the years following their publication. It was argued that the pesher, serving as it does to disclose contemporary events presaged in ancient biblical prophecies, should not be termed "interpretation" or "exposition" of scripture, for it does not aim at explaining or clarifying biblical verses, but rather at disclosing coming events (thus Rabinowitz 1973). Nevertheless, the lemmatic structure and the exegetical techniques used by the pesharim link them firmly with other types of lemmatic commentaries, such as the rabbinic midrashim and the commentaries of Philo. Some scholars have, in fact, classified the pesher as a sort of Qumranic midrash (Brownlee 1979; Brooke 1985). Other scholars have discovered an affinity between the pesharim and the interpretation of dreams as practiced in the ANE and as evidenced in the biblical stories of Joseph (Gen 40–41) and Daniel (chaps. 2–6). The pesharim, like the interpretation of dreams,

aim at revealing future events alluded to in visions, and do so by similar exegetical means (Rabinowitz 1973: 230–32; Finkel 1963–64).

But although the pesher has some affinity with all these literary forms, and especially with the prophetic dreams and apocalyptic visions, it has a distinct form, distinct aims, and a distinct background. The distinctiveness of the Qumranic pesharim lies in their peculiar structure and terminology, and in their systematic application of the biblical text to the historical circumstances of the community itself. The immediate purpose of the pesharim is to vindicate the Teacher of Righteousness and his followers in their struggle against their opponents, to strengthen the adherents' faith and their powers of endurance, and to inspire them with hope for the future (Brownlee 1979: 35–36). The Qumranic pesher should, therefore, be considered as a commentary of a special kind.

D. Exegetical Method Used by the Pesharim

The pesher's strict formal distinction between the biblical lemma and its interpretation indicates the interpreter's main task: to extract the desired sense from the biblical citation by indicating the analogy and similarity between the text and the community's situation. To accomplish this a number of exegetical techniques were used (Elliger 1953: 130–48; Brownlee 1951; Bruce 1960: 11–18; Horgan 1979: 244–49; Brooke 1985: 279–352; Nitzan 1986: 39–79):

(1) modeling the interpretation on the syntactic and lexical patterns of the citation (cf. 4QFlor 1–2 i 1–13; Dimant 1986: 174);

(2) using, in the pesher, lexical synonyms of words occurring in the biblical citation;

(3) punning on words of the citation (paranomasia);

(4) atomizing;

(5) vocalizing or grouping the consonants of words in the citation in a different way; and

(6) adducing other biblical quotations which share one or more terms with the main citation.

These procedures have close parallels in the rabbinic midrashim, in early biblical versions, and in early apocalyptic literature. It is, therefore, often asserted that they are identical with the techniques used in the rabbinic midrashim (Silberman 1961–62; Slomovic 1969–71; Brooke 1985: 154–55, 283–92). These procedures, though similar, are nevertheless not identical; they are used in widely different texts, different in character, period, and social background. Identity cannot, therefore, be established until further research is carried out. However, the affinity between the exegetical methods used in all these corpora seems to indicate that the Qumranic pesher is not a unique phenomenon, but it must be placed within the wider framework of Jewish exegesis of the Second Temple era.

A. Pauline Letters

There are undisputed references to Peter in 1 Corinthians and Galatians; some would hold that there are also veiled references to Peter in 2 Corinthians. Not only do the Pauline letters represent the earliest extant literature in the canonical NT but they also contain references to Peter which predate considerably the time of their writing. However, when Paul relates such meetings with Peter, he does so in a context which is intended to reinforce his apostleship and his understanding of the gospel.

According to the evidence in Galatians and 1 Corinthians, Paul sees Peter serving at least four important functions: (1) Peter is the first-named witness to whom the risen Christ appeared according to the list in 1 Cor 15:5; (2) Peter was a source of tradition about Jesus if one accepts *historēsai* in Gal 1:18 as meaning that Paul went up to Jerusalem "to get information [about Jesus] from Cephas;" (3) Peter served as a leader in Jerusalem during the time of the Christian Paul's first visit (Gal 1:18) and continued to have a position of importance during Paul's second visit (Gal 2:1–10); (4) Peter participated in the apostolate to the circumcised as Paul did in the apostolate to the uncircumcised (Gal 2:8).

1. Galatians. In order to understand Paul's assertions about Cephas (Paul uses the name "Cephas" in Gal 1:18; 2:9, 11, 14 and in 1 Cor 1:12; 3:22; 9:5; 15:5, but the name "Peter" only in Gal 2:7–8) it is necessary to understand what factors in the Galatian controversy prompted Paul to include references to him. Since it is unlikely that Paul believed Peter himself was causing the difficulty in Galatia by preaching "a different gospel" (1:6) the solution must lie elsewhere. According to one explanation Paul's primary opponents were Judaizers who were incorrectly invoking the name of Peter in support of their position. That the Galatians understood Peter as an authority figure, either because of his personal apostolate or because of the significance of Jerusalem, is suggested by Gal 1:18. However one may wish to define the specific profile of these Judaizers this much is clear: that their "different gospel" included such Jewish practices as circumcision (5:1–6) and the celebration of feasts according to the Jewish calendar (4:10). Thus, on the one hand, Paul refers to Cephas in terms of past history: at Jerusalem (Gal 2:1–10) and at Antioch (Gal 2:11–14) Peter had been involved in two of Paul's prior confrontations with Judaizers, and in each of them he refused to capitulate to those demands which would have imposed Jewish practices on gentile converts. On the other hand, this review of the past serves to refute the attempt of the Galatian Judaizers in associating their position with that of Peter and those "who were men of repute" (2:2) at Jerusalem. Thus, for example, the fact that "those who were of repute" extended to Paul and Barnabas "the right hand of fellowship" (2:9) would certainly weaken the claim of the Galatians. Paul, then, rejects the legalistic mentality common to the groups in Jerusalem, Antioch, and Galatia.

In order to determine Paul's perception of Peter, three encounters between the two must be taken into consideration: (1) Gal 1:18, Paul's initial visit to Jerusalem and meeting with Peter; (2) Gal 2:1–10, Paul's second visit to Jerusalem concerning the circumcision issue; and, (3) Gal 2:11ff., Paul's rebuke of Peter at Antioch.

With regard to the first of these meetings, one meaning of the verb *historēsai* is "to gather information from someone" and it is possible that Paul received information about Jesus during this visit, perhaps including the Risen Christ's appearance to Cephas (1 Cor 15:5). Concerning the second visit to Jerusalem, Paul went privately to "those who were of repute […] lest somehow I should be running or had run in vain" (2:2). Critical is how one is to understand this latter phrase. Paul may have regarded himself inferior to these Jerusalem authorities, including Peter, and was concerned that if Jerusalem did not approve of his policy in not circumcising gentile converts he might be doctrinally "running in vain." Or Paul may not have been concerned about winning the doctrinal approval of the authorities in Jerusalem but rather much more concerned in bringing clarity to the political intrigues which had been launched against his policies. The degree of authority which Paul attached to Peter is conditioned by the interpretation of this phrase. At the very least, one may say that Paul took these leaders seriously even if he did not understand them to be his ecclesiastical superiors. With regard to the final encounter at Antioch it is probable that Paul is not challenging the person of Peter but rather the fact that Peter acted without principle with regard to the "truth of the gospel." The main issue is that Peter was not drawing consistent consequence from the one and only gospel (1:7; 2:14).

This incident at Antioch raises another set of interesting questions concerning possible changes in the relationship between Peter and Paul and between Peter, James, and John. With regard to the former, does the phrase "I opposed him to his face" mean that Paul opposed "*even* Peter," in the sense of implying Peter's superiority? Or does Paul's challenge of Peter face to face suggest an increasing self-assurance on Paul's part? Read in this way, one could understand 1:18 as suggesting Paul as inferior to Peter; 2:7–8 indicating that both are equal; and 2:11–21 implying Paul's superiority as a result of his ability to confront

Peter. If such a tentative interpretation is followed, one could argue for a shift in power. With regard to the latter point (Peter's relation to James and John), it is also possible, more convincingly, to suggest a change in this relationship. In 1:18–19, Cephas is named before James; in 2:9 James is mentioned before Peter and John. Thus, at least by the time Paul writes Galatians, *James*, and not Peter as was the case during Paul's first visit, is recognized as the major figure in Jerusalem.

2. 1 Corinthians. Cephas is referred to in 1:12, 3:22, 9:5, and 15:5. The first two references involve the tendency toward division in Corinth (those belonging to Paul, to Apollos, and to Cephas) and they raise the question whether Peter had ever been in Corinth. That he engaged in missionary activity is made clear by Gal 2:7–8, 11 but also by Acts 1–12 where Peter is active in Samaria, Lydda, Joppa, and Caesarea. That he was in Corinth is possible; in that case the existence of a Peter-party in Corinth included those who were converted by him during the time that he preached there. However, other cogent explanations have been put forth, viz., that the Corinthians, in an attempt to end the in-fighting decided to appeal to a higher earthly authority, Cephas. The reference to Christ would then be understood similarly. Or, the Cephas-party might have included those baptized by him in Palestine and who subsequently migrated to Corinth. Paul's reference to Peter in 1 Cor 15:5, "Do we not have the right to be accompanied by a wife, as the other apostles and the brothers of the Lord and Cephas?", unfortunately does not help decide this issue since this verse can be used on both sides of the argument. However this matter may be decided there is a likely consensus that the Cephas-party in Corinth does not necessarily reflect the views of Peter any more than the Paul-party accurately reflected the views of Paul.

In 1 Cor 15:5 a different set of problems is encountered. Verse 5 is set in a very carefully structured context which continues through 15:8: "And that he appeared: [1] to Cephas, [2] then to the Twelve; [3] and then he appeared to more than 500 brethren at one time, and then he appared: [4] to James, [5] then to all the apostles; [6] last of all, as to one irregularly born, he appeared also to me."

Most would agree that these verses contain an early tradition that the first appearance of the resurrected Christ was to Cephas, a tradition that is consonant with that in Luke 24:34; by Paul's own admission the appearance to him was the "last of all." Other than these chronological references, few would assert that the entire list as we have it before us follows any chronological order. The problem is twofold: (1) Where does the pre-Pauline tradition end and where does Pauline redaction begin; (2) how do the two groupings of three relate to one another?

Concering the first issue the question arises whether the fact that Jesus *appeared* originally belonged to a pre-Pauline formula or derives from Paul himself. Also, were the names of Cephas and the Twelve already in the pre-Pauline formula or did Paul add these names? Even if the latter should be the case he was dependent on earlier tradition for information about those to whom the Risen Jesus appeared. Concerning the second problem, several solutions have been offered—none without difficulty, however. Some suggest that the first three appearances (Cephas, the Twelve, more than 500 brethren) represent those who had been Jesus' followers during his lifetime; the second three appearances (James, all the apostles, Paul) were directed to more recent followers of Jesus. Another suggestion understands the first group as a "church-founding" appearance and the second as a "mission-inaugurating" one. Another explanation wishes to see rival lists reflected in these groupings, a suggestion that coheres with the thesis of a shift in power as reviewed in the discussion of Galatians. Still others would explain these lists as duplicate reports of the same appearances with James substituted for Cephas and "all the apostles" substituted for the Twelve. Finally, if Paul is dependent on tradition it may be that these lists have no functional significance as he uses them in 1 Cor 15:5–8. If a functional significance is to be found one should look to 1 Cor 15:11: "Whether then it was I or they, so we preach and so you believed." Whatever differences may have existed between Paul and the others, whether Christ appeared to them first or last, is irrelevant since they all preach the same gospel. By underscoring this harmony in the apostolic preaching Paul wishes to show the absurdity of the party rivalries and tendency toward division present in the Corinthian church.

3. 2 Corinthians. Although there are no specific references to Peter in 2 Corinthians, there are, nevertheless, some scholars who detect indirect references in this probably composite letter. In 10:7 Paul

argues: “If someone is confident that he is Christ’s, let him remind himself that we are Christ’s as much as he is.” Again in 11:4–5: “If someone comes who proclaims another Jesus, not the Jesus whom we proclaim […] you submit to it readily enough. But I think that I am not least inferior to these superlative apostles.” According to the interpretation under consideration, this “someone” is Peter and it is he who is causing the difficulties in Corinth. Thus it is necessary for Paul to refute him in sharp and polemical language. This view is usually rejected because it is based on a speculative identification of vague references in 2 Corinthians and because it runs counter to the neutral, if not favorable, interpretion of Peter in 1 Corinthians.

B. Book of Acts

This review of Peter in the NT attempts to follow a chronological sequence with the exception of the books of Acts. There are two primary reasons for departing from chronological order: first, the book of Acts describes activities of Peter roughly contemporaneous with those mentioned by Paul; and second, even though Acts is “volume two” of Luke’s portrait of primitive Christianity, to have discussed Acts after Luke’s gospel would effectively break the sequence of reviewing the portrait of Peter in all four gospels. However, this treatment of Acts after the Pauline letters does not suggest that Acts is a consistently reliable historical source of the events Luke describes. Luke is a theologian who shapes early traditions for his literary purposes. One of the chief problems in the study of Acts is the discrimination between Lukan redaction and Lukan sources. Even more difficult is to move behind both source and redaction to the historical level. Despite these problems an attempt will be made to describe both Luke’s understanding of Peter and, where possible, that of the sources used by Luke.

The following functions of Peter (Luke prefers the name “Peter,” using “Simon” in Acts only in 10:5, 18, 32, and “Cephas” not at all) are brought to prominence in Acts: (1) Peter is first mentioned in the post-resurrectional list of the Eleven in Acts 1:13; (2) Peter guides the process leading to the election of Matthias to fill the place left vacant by Judas (Acts 1:15–26); (3) Peter is a preacher both within the Jerusalem church and as a missionary to those outside (Acts 2:14–36; 3:12–26; 4:8–12; 5:29–32; 10:34–43); (4) Peter is a miracle worker and, as in the case of Paul, some of these miracles resemble those of Jesus as presented in the gospels (Acts 3:1–10; 5:1–11, 15; 9:32–42); (5) Peter is the object of miraculous divine care and receives visionary or heavenly guidance (Acts 5:17–21; 10:9–48; 12:6–11); and (6) Peter is a spokesman for the Jerusalem community (Acts 8:14–25; 11:1–18 [where Paul has to defend the actions described in the previous text to the entire community]; 15:7–11).

Three significant matters in Acts need to examined more closely. The first of these is Acts 10:1–11:18 which discusses the issue of Peter and the conversion of the gentiles. The problem in this text is twofold: (1) How much of this account is historical and how much is the result of Luke’s theological program? (2) What is the relationship of Peter’s apparent precedence in, if indeed not his inauguration of, the gentile mission to Paul’s statement in Gal 2:7–8 that he, Paul, had been entrusted with the gospel to the uncircumcised?

With regard to the first difficulty, two explanations are possible. First, that Peter’s conversion of the Roman centurion Cornelius at Caesarea Maritima is a historical fact incorporated by Luke into a theological context and that this incident was then recalled at the Jerusalem conference where the issue of Paul’s large-scale conversion of gentiles was the subject of discussion. A second explanation is that the entire scene is a creation of Lukan theology, viz., that the mission to the gentiles had to have the approval of the Twelve and that Peter’s action serves as the legitimation of the decision recounted in Acts 15 that the gentiles did not need to be circumcised. Common to both views is that the editorial hand of Luke is evident in this text and that God intended salvation to be extended to the gentiles (10:18) through Peter’s conversion of Cornelius. Not unimportant is that Paul’s first missionary journey only takes place after this event.

The second difficulty with this text is its relationship to Gal 2:7–8. How does Peter’s conversion of Cornelius and his statement in Acts 15:7, “God made choice among you that by my mouth the gentiles should hear the word of the gospel and believe,” relate to the conclusion found in Gal 2:7 that “Peter had been entrusted with the gospel to the circumcised.” One resolution is to acknowledge a contradiction.

Another would be to note that Gal 2:9 does not contrast Peter and Paul on a one-to-one basis, but rather each is part of a larger mission team; this suggests a more complicated missionary pattern. One also needs to take into account the fact that Luke prefaces and modifies the Petrine inauguration of the gentile mission by describing that there were missionaries to the gentiles before either Paul or Peter and that Luke records in Acts 8 the missionary activity of Philip among the Samaritans and Philip's baptism of an Ethiopian eunuch, as well as the fact that in Acts 10:2 it is emphasized that Cornelius was "a devout man who feared God." Thus, as a "God-fearer" he was already positively inclined toward Judaism and an observant of some Jewish practices. This last view would suggest that Peter's missionary relationship to gentiles might be different from that of Paul insofar as it does not involve the conversion of large numbers of gentiles who had no previous attachment to Judaism.

The second significant matter which needs to be examined is the relationship of Peter to the Jerusalem church. In Acts 8:14, 9:32, and 15:6–7, 22–23, Peter and the Jerusalem apostles are mentioned at significant points in the development of the Christian missionary strategy. Who is supervising this development? Peter? The Jerusalem church? If the latter, who is in charge? A review of the evidence in Acts would suggest the following possible models of church leadership involving Jerusalem:

(1) Peter and the other members of the Twelve were involved with a Christian missionary strategy far more extensive than just Jerusalem. Peter was not a local church leader, and once the Jerusalem church grew to the point of requiring consistent administrative leadership this role was assumed by James, the brother of the Lord. He continued in Jerusalem even after Peter and the others were no longer present either because of missionary journeys or death. The authority of James extended only to the Jerusalem church; however, he was more widely known because of his relationship to Jesus. Paul's regard for James would have been for him as a local church leader and his primary loyalty would have been to the Jerusalem church as a whole because of its historical priority as the "mother church."

(2) Although Peter was widely known because of his relationship with the ministry of Jesus, he was essentially a local church leader in Jerusalem. At some latter point James took Peter's place as the leader of the Jerusalem church. Neither had a role as leader in the churches beyond Jerusalem.

(3) Peter was a leader in the universal church centered in Jerusalem. This position of universal leadership, with the exception of his apostleship, was transferred at some latter point to James.

Whichever hypothesis one finds most convincing, each seems to support the thesis that Galatians 2 suggests a shift in leadership (however narrowly or widely one may wish to define this) from Peter to James. As one turns to Acts 15 this understanding of Galatians 2 also gains support: there one observes that Peter speaks first (15:7–11) and that the final persuasive words are spoken by James (15:12–31).

The third and last significant area that needs to be reviewed is the important chapter dealing with Peter and the gathering in Jerusalem, Acts 15. The problems as well as the proposed solutions are myriad. The issue which calls forth the gathering of the apostles and elders is the assertion by certain persons from Judea who insisted that "Unless you are circumcised according to the custom of Moses, you cannot be saved" (15:1). In partial agreement with the position outline in Gal 2:7–9, Peter, James, the apostles and the elders take a stand for freedom, not requiring that gentile Christians be subject to circumcision and the whole law, "It has seemed good to the Holy Spirit and to us to lay upon you no greater burden than these necessary things" (15:28). Even though Luke stresses the theme of "accord" *(homthymadon)* in 15:25, there are differences in the position of Peter and James. While Peter recommended to the "council" no circumcision or law based on the precedent of his conversion of Cornelius, James urges a few regulations to be observed by the gentiles. Not only did James concede less than Peter did on this issue, the apostles and elders followed James in their decision to enforce these regulations in a letter to those "who are of the gentiles in Antioch and Syria and Cilicia" (15:23). Thus in Luke's presentation all play a decisive role: Peter through his witness; James in his judgment; and, the apostles and elders in their letter of enforcement.

One of the difficulties in using chap. 15 as a straightforward historical account of the events is one we have encountered earlier: the difficulty in determining what belongs to Luke's sources and what results from his redaction of earlier materials. A few illustrations will suggest the complexity of the issue. If one

accepts the dominant scholarly view that Acts 15 corresponds to the events described by Paul in Gal 2:1–10, how should one understand the four regulations of Acts 15:20–29 (abstention from the pollution of idols, from unchastity, from what is strangled, and from blood) which are not mentioned by Paul. Further, how could Paul dispute with Peter at Antioch (Gal 2:11–14) if these regulations had been sent to the church at Antioch with Paul and Barnabas? Such inconsistencies between the two accounts lead many scholars to question the historical reliability of the Lukan portrait and even whether such a letter was ever sent by the Jerusalem gathering. It is likely that Luke had at his disposal a tradition that the Jerusalem leaders together with Paul had reached an agreement and a tradition that from an early period gentiles in mixed Christian communities had to observe certain Jewish regulations concerning impurity so that fellowship might exist with the Jewish Christians.

Although what has just been outlined represents a position frequently found in the literature, there are many alternatives. One such alternative, by way of example, would take seriously the redactional creativity of Luke while asserting the essentially reliability of the underlaying historical data. It suggests that Acts 15 conflates two Jerusalem meetings: the one is represented by Peter's address in Acts 15:6–11 and that this coheres with Paul's description in Gal 2:1–10; the other meeting took place later and was provoked by controversies about meals jointly shared by gentile and Jewish Christians. An example of such an argument can be found in Gal 2:11–14. As a result of such unrest, James and the Jerusalem church issued the four regulations described in Acts 15:20 and 29. Paul was not present at this second meeting and he may, therefore, not have known of these regulations or, perhaps, they were addressed only to that area for which the Jerusalem church had jurisdiction. By placing the confrontation between Paul and Peter prior to this second meeting, a number of the tensions between Acts 15 and Galatians 2 are resolved.

The fact that there are no further references to Peter in the book of Acts, which for the historian is regrettable, is due to Luke's primary interest in portraying the missionary advance of the early church. Luke's literary plan moves from Jerusalem and from Peter (Acts 1–15) to the gentile churches of Asia Minor/Greece/Rome and to Paul (Acts 16–28). This author is also concerned to show the links between the late 1st-century churches and the early period. Thus Acts begins in Jerusalem with the twelve apostles (Acts 2:37), with particular emphasis on Peter and John, continues on with "the apostles and the elders" (Acts 15:6, 22; 16:4) and finally to "James and all the elders" (Acts 21:18). For the purposes of his theological perspective, it is Paul who is the key figure in this latter period, and it is he who is the missionary successor to Peter—the one who had played such a dominant role in the foundational period of the early church in Jerusalem.

C. Gospel of Mark

Most contemporary NT scholars assert that Mark was the first gospel written and that Matthew and Luke used it as a source. Further, it is almost universally held that the Gospels are multidimensional, viz., they contain various levels of tradition: (1) materials and redaction stemming from the gospel writer; (2) written or oral pre-gospel sources and traditions; and, (3) material that is derived from the historical Jesus. Although it is not always possible to distinguish these levels with great certainty, the attempt is necessary and is bound to affect not only one's understanding of Mark's intention and theology but also Mark's interpretation of the role of Peter. For example, is Mark pro-Petrine, and anti-Petrine, both, or neither? In accepting these presuppositions of the historical-critical method, contemporary scholarship places little value on Papias' statement that Mark was "Peter's interpreter" and that he was dependent on Peter's testimony.

In Mark 3:16 the evangelist refers to "Simon whom he surnamed Peter." Thereafter Peter is the dominant name (eighteen times) for this disciple with only one reference to "Simon" thereafter (14:37; prior to 3:16 also in 1:16, 29, 30, 36).

The following general picture of Peter emerges in Mark's gospel: Simon and his brother Andrew were fishermen on the Sea of Galilee where Jesus called them as his first disciples to follow him and become fishers of men (1:16–18). At the house of Simon and Andrew in Capernaum, Jesus healed Simon's mother-in-law (1:29–31). Following additional healings in Capernaum, Simon, together with others,

report to Jesus that people were seeking him (1:35–38). Of the Twelve appointed by Jesus the first of these in the list of their names is Simon "whom he surnamed Peter" (3:14–16). When Jesus revived the ruler's daughter he permitted only Peter, James, and John to follow him. This is the first of three traditional scenes (cf. 9:2–13 and 13:3–8) involving an "inner group" of three disciples (but in 13:3–8 Andrew is also included in this group) among the Twelve (5:37). Peter's confession on the way to Caesarea Philippi that Jesus is the "Messiah" and Jesus' subsequent rebuke of Peter referring to him as "Satan" (8:27–33). The transfiguration of Jesus before Peter, James, and John. Peter "did not know what to say" and offered to make 3 booths for Jesus, Moses, and Elijah (9:2–13). Peter, somewhat perplexed, responds to Jesus, "Lo, we have left everything and followed you," to which Jesus responds with a word of promise concerning this life and the age to come (10:28–30). As Peter and the others pass by the fig tree which Jesus had cursed on the previous day (11:12–14) he remarks, "Master, look! The fig tree which you cursed has withered" (11:21). Peter, James, John, and Andrew ask Jesus privately when the temple buildings would be destroyed, a question which gives occasion to Jesus' apocalyptic discourse (13:3–8). Despite Peter's assertions to the contrary, Jesus predicted that Peter would deny him three times that very night (14:27–31). At Gethsemane, Jesus took Peter, James, and John and shared with them his great distress. Asking them to remain and watch, he went further to pray. Upon his return he found them sleeping and said to Peter, "Simon, are you asleep? Could you not watch one hour?" Twice again Jesus leaves only to return to a similar situation (14:32–42). Following Jesus' arrest, Peter followed him at a distance into the courtyard of the high priest. Having denied Jesus three times prior to the cock crowing a second time, Peter remembered Jesus' prediction and broke down and wept (14:54–72). A young man dressed in a white robe sitting on the right side of the tomb where Jesus had been laid, announces to the women who had come to anoint him, "But go, tell his disciples and Peter that he is going before you to Galilee; there you will see him, as he told you" (16:7).

1. Peter's Confession of Jesus as Messiah (8:27–33). The question of the historicity of this pericope is a difficult one and the opinions of scholars vary. Unfortunately, since Matthew and Luke are dependent on Mark, these gospels do not assist in evaluating this question. Some have noted a general sequential parallel between this Markan account and John 6:66–71 and have suggested that Mark may have altered and adopted a pre-Markan tradition, especially at 8:27b.

If Peter did in fact make a confession that Jesus was Messiah he probably understood that term in a way consonant with that of intertestamental Judaism, viz., as the anointed king of the House of David who would come and deliver Israel from its enemies and establish a world empire characterized by peace and justice. That some understood Jesus' role in such a regal way is confirmed by his crucifixion as a would-be Messiah king.

Jesus' charge to his disciples not to tell anyone about him (8:30) and the prediction that the Son of Man must suffer, be killed, and be raised after three days (8:31) is generally thought to stem from Markan redaction although, especially with regard to the latter, it is quite possible that Mark was drawing upon an earlier tradition concerning the passion of Jesus. Further, there is much agreement that Peter's refusal to accept the suffering of the Son of Man, Jesus' rebuke of Peter (8:32–33), and the unfavorable reaction of Peter to Jesus, all in their present wording and location stem from the hand of the evangelist. However, Jesus' rebuke of Peter in 8:33, "Get behind me, Satan! For you are not on the side of God, but of men," may well be a traditional saying which contains a historical reminiscence. In such an understanding, Peter's misguided confession and Jesus' rebuke suggest a picture of Peter marked by bungling enthusiasm.

This pericope and the general portrait of Peter outlined above raise the question of Mark's intention. Is his picture of Peter essentially a negative or a positive one? At several points Peter serves as a spokesman for others, and there are three scenes where he appears with James and John as constituting an "inner group." And yet, there are other scenes in which Peter is portrayed as the embodiment of the disciples failure, as for example in 14:50 where all the disciples forsake Jesus and flee but only Peter's denial is singled out and underscored. Is Mark hostile to Peter and does he seek to highlight his failings? Or, is Mark emphasizing the prominence of Peter in order to rehabilitate his memory and counter attacks made

by a larger anti-Petrine movement? One popular view suggests that Mark's gospel is an effort to counteract a *theios aner* christology in Mark's community. In this effort the disciples are portrayed as holding the view that Jesus was predominantly a miracle-worker. Mark has Jesus correct this view by insisting on a theology of suffering. According to this understanding of Mark's theology, Peter is presented by the evangelist as the spokesman of an erroneous christology. This later view of Mark's theological intention would see Mark 8:27–33 as a classic example of Peter's role as a spokesman for an erroneous christology which must be rejected. However, there are other scholars who would understand Mark's insertion of 8:31 not as a rejection of Peter's confession but as a corrective through the addition of the theme of suffering. Peter's confession is inadequate and must be corrected in this way. Thus, Jesus does not rebuke Peter for his confession of him as Messiah but for tempting Jesus with an understanding of messiahship that does not recognize the suffering and death of Jesus.

2. A Post-Resurrectional Message to Peter (16:7). A young man sitting in the tomb speaks to the women: "But go, tell his disciples and Peter that he is going before you to Galilee; there you will see him, as he told you." This verse is paralleled in both Matthew and Luke, although only Mark explicitly refers to Peter. Such a reference to Peter can be interpreted either positively or negatively depending on one's understanding of Mark's overall intention. If, as many scholars agree, 16:7 is a redactional insert (note the tension between verses 7 and 8: in v 7 the women are told to go to the disciples and Peter with a message and according to v 8 they said nothing to anyone), it is possible that this verse allows for a post-resurrectional appearance and even the fact that Mark was aware of a tradition that the risen Jesus had appeared first to Peter (according to this interpretation Mark means, "Tell the disciples, *especially* Peter"). Obviously such an interpretation would present Peter in a most positive light: he was one of the most important witnesses of the risen Jesus. However, there are those scholars who insist that 16:7 refers not to a post-resurrectional appearance but to the parousia. Since such appearances are linked with a *theios aner* christology Mark wishes to counteract such traditions with an emphasis on the parousia in Galilee when his disciples will Jesus return as the Son of Man. Such a perspective would interpret this specific reference to Peter negatively: Mark is attempting to discredit the tradition that Jesus had appeared to Peter by emphasizing that they all will see Jesus when the parousia occurs—"Go tell the disciples, *even* Peter …" Once again it is evident that one's understanding of Markan theology as a whole influences one's interpretation of specific pericopes.

D. Gospel of Matthew

Matthew's unique contribution to the image of Peter in the NT can be found particularly in three passages: Peter walking on the water, sinking, and being rescued by Jesus (14:28–31); Peter's confession of Jesus as Messiah and the Son of the living God and Jesus' response in the form of a blessing and promise concerning the church (16:16b–19); and Peter's question about paying the temple tax (17:24–27).

Since Matthew is dependent on Mark, most of the Petrine scenes and pericopes found there also appear in Matthew, sometimes with insignificant variations. For example, where Mark in 1:35–38, 5:37, 11:12–14, 13:3ff., and 16:7 includes a specific reference to Peter, it is omitted in Matthew. This apparent "lessening" of Peter's importance is balanced by Matthew's insertion of "first" *(prōtos)* before Matthew's name in the list of the Twelve (10:2) and the introduction of Peter in Matt 15:15 and 18:21–22, for which there are, respectively, Markan and Lukan parallels, and thus to be attributed to Matthean redaction.

Before analyzing in greater detail the three passages where Matthew makes his most important contribution, one should note that all three of these pericopes are found in the context of Matthew's fourth book (13:53–18:35), a section which reveals particularly Matthew's ecclesiastical concerns. It is in this book, for example, where the only two occurrences (Matt 16:18; 18:17) of the word *ekklēsia* (church) appear in the four gospels, and thus it is likely that we shall gain insight into Matthew's perspective about the role of Peter in the 1st-century church from these texts.

1. Jesus Rescues Peter (14:28–31). Matthew modifies Mark 6:45–52 (for example, the omission of Jesus' intention of passing by the disciples) and adds the material now found in Matt 14:28–31. As a result, there is a more positive picture of the disciples. The Markan scene ends with words of amazement: "for they did not understand about the loaves, but their hearts were hardened." Following Jesus' rescue of

Peter, both get into the boat and those in the boat worship Jesus saying, "Truly, you are [the] Son of God." Since there are no parallels for the Matthean material the question of source and historical value are difficult to evaluate. Certain similarities can be noted with the scene in John 21:7–8 where Peter rushes from the boat to Jesus who stands on the shore of the Sea of Tiberias. There one finds the same basic pattern of leaving the boat in a context of hesitation concerning the identity of Jesus and the confession of Jesus as "Lord." The suggestion that we may have here a post-resurrectional appearance (modified and retrojected by Matthew back to a point in the life of the historical Jesus) is a plausible one: the theme of Peter as a man of little faith who sinks and has to be saved by Jesus coheres well with an appearance of the risen Jesus to Peter following his denial.

In this scene Peter is portrayed as a disciple who has genuine love for Jesus as he desires to go to him but also as one who has an insufficient faith during Jesus' earthly ministry. When this tension is not held together, widely differing interpretations as to Matthew's view of Peter can be given. If only the latter is stressed, then one might be inclined to stress Peter as a man "of little faith," as one possessed by a presumptuous and misguided enthusiasm. If only the first element is stressed, it results in interpretations which view this pericope as illustrating the primacy of Peter. Perhaps more nuanced would be the view that Peter is indeed given a prominence among the disciples; certainly he had an insufficient faith, but at least there was the first glimmering of faith. Although Peter is weak, he begins to see with the help of Jesus, and although Peter sinks, Jesus rescues him. While there is an element of typical discipleship portrayed in this scene, there is also a singular emphasis on Peter; since Peter will soon be declared the rock on which the church is to be built, it becomes important for Matthew's congregation to know that Jesus saves Peter even when he begins to sink. Before leaving this pericope, one should also note that, contrary to Mark, the *disciples* confess Jesus as "Son of God." In the structure of Matthew's gospel this confession anticipates virtually the same confession that Peter will make in Matt 16:16b and for which Jesus praises him.

2. Peter's Confession and Jesus' Promise (16:16b–19). Matthew has preserved all the key elements of the Markan account and has expanded it at two points: first, in addition to confessing Jesus as Messiah, Peter also confesses him to be "the Son of the living God" (Matt 16:16b); and second, following this confession Matthew has inserted three verses (16:17–19) in which Jesus calls Simon blessed and calls him Peter, promises that his church which will be built on this rock (Peter?; see below) and that the powers of death shall not prevail against it, and the promise is made that the keys of the kingdom shall be given to Peter. Also, Matthew expands the rebuke of Peter in Mark, "Get behind me, Satan!", by adding: "You are a stumbling block for me" (16:23). Because of the complexity of this entire pericope, it is best to analyze it in several parts.

a. *Peter's confession of Jesus as "the Son of the living God"* (16:16b). In Matthew, as opposed to Mark, there is no suggestion that Peter misunderstands the title Messiah, for Jesus himself praises it (16:17) as a result of divine revelation. As we noted, this confession is expanded to include one of the most exalted titles for Jesus in the NT, "Son of God." It is frequently coupled with the title Messiah in the NT as, for example, in John 20:31: "That you may believe that Jesus is the Messiah, the Son of God." The Johannine context is certainly post-resurrectional and belongs to an appearance of the Risen Jesus to Peter. It could be argued that in Matthew 16 we have a combination of two different Petrine confessions: one located in the earthly ministry of Jesus and one located in the post-resurrectional context. This view gains some support from our previous analysis of the confession of Jesus as "Son of God" in Matt 14:33, a scene which, together with Jesus' promise to Peter that he would be the rock on which the church would be built (Matt 16:18) and the giving of the power of binding and loosing (Matt 16:19) may also be post-resurrectional in origin. Thus, while Matthew does not say that Peter was the first among the Twelve to see the risen Jesus (as some interpret Mark 16:7), much of Matthew's special material about Peter appears to have had as its original context a post-resurrectional setting.

The combination of these two confessions into one scene result in the alteration of Peter's role over against the Markan portrayal. Not only is he the spokesman for the disciples but he is the recipient of a revelation that is not shared with the other disciples. For Matthew, Peter's confession is no longer the

turning point in the gospel: His messianic origins have been the subject of reflection from the very beginning of this gospel (1:1, cf. 9:27; 12:23 and 15:22) and all the disciples confessed him as Son of God in 14:33. Although Peter's confession no longer has a chronological priority in Matthew, it will be given an ecclesiastic priority in the words that follow.

b. *"And Jesus answered him, 'Blessed are you, Simon Bar-Jonah! For flesh and blood has not revealed (this) to you, but my Father who is in heaven' "* (16:17). This verse adds strength to the suggestion that we may be dealing with an originally post-resurrectional context. The clause, "*flesh and blood* has not revealed [*apokalyptein*] this to you" is remarkably similar to Paul's description of his experience with the resurrected Jesus in Gal 1:16: when God "was pleased to reveal [*apokalyptein*] his Son to me […] I did not confer with *flesh and blood.*" Both Matthew and Galatians contrast a revelation from God with mere human information ("flesh and blood"). In all likelihood neither is dependent on the other; more probably, both have taken up a traditional way of describing post-resurrectional appearances.

Although Matthew received such a post-resurrectional tradition there are some signs of Matthean redactional elements. "Father who is in heaven" is found in Matthew's version of the Lord's Prayer (Matt 6:9) whereas Luke has the almost certainly more original "Father" (Luke 11:2). The macarism "Blessed are you" is not used by Mark and is found in Matthew's gospel 13 times. However, the fact that it is used in Luke, which may suggest that this represents a "Q" pattern, and that it is part of a post-resurrectional scene in John 20:29 might suggest that it comes from Jesus himself.

c. *"And I tell you, you are Peter; and on this rock I will build my church, and the gates of Hades shall not prevail against it"* (16:18). The argument for a pre-Matthean origin for the basic material contained in this verse is strengthened by the recognition of an Aramaic substratum lying behind Matthew's Greek. In Aramaic the Greek play on the word "Peter" is marked by an identity: "You are *Kepha* and upon this *kepha* I will build my church." Further, the Semitisms, "gates of Hades" (interpreted by the RSV as the "powers of death") as well as "flesh and blood" and "bind and loose," all suggest that 16:17–19 originated in an Aramaic-speaking environment.

The setting of this verse is in all probability post-resurrectional. While one should not exclude the possibility that Jesus might have thought of building *a church* in the sense of organizing a people in preparation for the imminent end, the reference to the "gates of Hades" not prevailing over the church does seem to suggest a permanence which would go beyond the supposed intentions of the earthly Jesus. The intentions expressed here cohere more closely with those post-resurrectional appearances described previously as "church-founding."

The identity of "the rock" is an important exegetical question. In view of the Aramaic identity of *Kepha/kepha* there can be no doubt that the rock on which the church is to be built is Peter. Even though there is a slight difference between *Petros/petra* in the Greek text of Matthew, most scholars today would hold that this same identity between the rock and Peter is also the intention of Matthew. However, other views are possible. One such view found in the Church Fathers (e.g., Origen, Ambrose, Chrysostom) and advocated by some today is that *petra* is not Peter himself but Peter when he confessed and "thinks the things of God" (16:23).

If indeed Peter is to be the rock on which the church is to be founded, how does this relate to the image of Peter as the "stumbling block" *(skandaion)* (16:23) for Jesus, an image which represents a sharpening of the Markan form of Jesus' rebuke. Although the issues are complex, one commonly held view would suggest that in response to Peter's confession "You are the Messiah" (16:16) he is given a name which will signify his *future* role as the rock on which the church will be built, a role which according to Matthew's presentation Peter would assume after the resurrection. Further, in response to misunderstanding the necessity of Jesus' suffering, Peter is referred to as a stumbling block for Jesus, as one advocating human rather than divine values. It is the same kind of weakness which Peter will display in his final denial of Jesus, a denial from which Jesus will have to save him so that he can play the role of the foundation rock.

d. *The passage that relates Peter to the "power of the keys"* (16:19) *reads as follows:*

(a) "I will give you the keys to the kingdom of heaven.

(b) Whatever you bind on earth shall be bound in heaven;
(c) whatever you loose on earth shall be loosed in heaven."

This division of v 19 not only demonstrates the parallelism between parts (b) and (c), but also raises the question about the relationship of parts (a) to (b) and (c). In other words is "the power of the keys" defined by that which follows so that they are identical or is the reference to the "keys" a reference to a more general authority of which only a part is further specified in (b) and (c)? A further difficulty is the relationship of these verses in Matthew 61 to those found in Matt 18:18. Is the power of binding and loosing given to Peter the same in *all* its aspects to that which is given to the disciples in general in Matt 18:18? If the power is the same, then it would follow that all the disciples, not just Peter, received an identical power of the keys.

Much of the uncertainty involved in answering these questions would be removed if one could with certainty define the significance of the reference to the "power of the keys." Some have suggested that the background is that of Isa 2:15–25 where Eliakim is installed as the new prime minister of King Hezekiah and on whose shoulder God places "the key of David; he shall open […] and he shall shut." The prime minister is given the power to allow or refuse entrance to the palace, that is, access to the king. Matthew, then, would be portraying Peter in a similar way and also giving to him a broad power of the keys, viz., allowing or refusing entrance into the kingdom. One part of this broader power would be the specification of binding and loosing, but others might include baptismal and post-baptismal discipline, excommunication, legislative powers, and the power of governing. Other interpretations are possible and one of these would assert that the power of the keys originally referred to the authority to forgive sins through baptism and that this authority was then at a later time reinterpreted in terms of the rabbinic pattern of binding and loosing.

What exactly is meant by the power to bind and loose? These two verbs in combination are found in at least two different contexts in rabbinic literature. Most often they are used in the sense of imposing or removing an obligation by an authoritative decision. These verbs are also used in the sense of imposing or lifting a ban of excommunication. Which meaning is intended in Matt 16:19 and 18:18? Are the meanings identical or are they being used in different ways? A key issue is to what extent 16:19 gives Peter a responsibility that is distinguished from that given to the other disciples. Some have understood Matt 16:19 as representing the first usage; Peter seen as a chief rabbi issuing binding rules in contrast to "the teaching of the Pharisees and Sadducees" (16:12), and Matt 18:18 as representing the second usage. Such a view presupposes Matthew's congregation as one which had recently emerged from within Judaism and is now in tension with it. Since other understandings of Matthew's situation are possible, other solutions to the above questions can be offered. And yet when all of these options are reviewed one can conclude that, while for Matthew Peter does function as a model of discipleship in general, Matthew does give him a prominence that the others do not receive. See also KEYS OF THE KINGDOM; BINDING AND LOOSING.

3. The Temple Tax (17:24–27). Matthew interrupts the Markan sequence he is using and inserts this unique Petrine scene. The collectors of the half-shekel tax (the didrachma) ask Peter, "Does your [in the plural; Peter representing the disciples?] teacher not pay the tax?" Peter answers in the affirmative and then in the house Jesus, addressing him as Simon, asks from whom earthly kings collect their toll and tribute. Following Peter's response "From others," Jesus concludes that the sons, therefore, are free of such tolls. In order not to give offense "to them" Peter is to go fishing and give "to them" the shekel which he will find in the mouth of the fish.

The central issue in this pericope is whether the Temple tax is to be paid. Which tax is meant? That by which every male Jew above 19 years of age had to pay, a half-shekel yearly for the maintenance of the temple prior to its destruction in A.D. 70? Or, the *fiscus iudaicus,* a poll tax imposed on the Jews after A.D. 70 for the support of the temple of Jupiter Capitolinus? Even if 17:25b–26 goes back to the historical Jesus (note, for example, the reference to "Simon" as in 16:17), which is possible, no clear answer can be given for Matthew's redaction of this traditional saying, although it is likely that he may have been addressing this later development *(fiscus iudaicus).* At both levels, viz., during the ministry of Jesus and

Matthew's redactional level, Peter is able to give the correct answer because Jesus showed him the way. Even if the pre-Matthean elements of this passage can no longer be described with complete accuracy, it is certain that for Matthew's community Peter exercises a teaching authority in the name of Jesus, an authority already ascribed to him in Matt 16:18–19. Not only in terms of this pericope but for Matthew's presentation of Peter as a whole, it can be said that he extends Peter's preeminence from the ministry of Jesus into the church situation which Matthew addresses. As in 15:15 (Jewish food regulations) and 18:21–22 (forgiveness), so here it is Peter who poses a problem facing the Christian community.

E. Gospel of Luke

As in the case of Matthew, this gospel was written toward the end of the 1st century and used Mark, Q, and some other special material as sources. That this author wrote not only the gospel but Acts as well must be kept in mind as one considers the Lukan portrait of Peter in the gospel.

One has in Luke's gospel a portrait of Peter written about the same time as Matthew's, but directed to a Christian community in a different location and context. In general it is possible to make this generalization: Luke is interested in presenting a positive picture of Peter and he effects several changes in his sources to achieve this purpose. Some examples of this intent would include Luke's omission in 9:18–21 of any reference that Peter refuses to accept Jesus' prediction about the suffering of the Son of Man and to Jesus' rebuke of Peter (Mark 8:31–33). In Mark 13:3, Peter, James, John and Andrew ask a question which could be understood as a misunderstanding on their part, viz., when will the Temple be destroyed. In Luke 21:7 this question is asked by an anonymous "they." This Lukan tendency to omit or reduce all that is blameworthy in the life of Peter is also evident in the passion narrative. The prediction of Peter's denials (Mark 14:29–31) is prefaced in Luke's account by Jesus' prayer that Simon's faith will not fail and that he will turn again and strengthen his brethren (Luke 22:31–32). Also Peter is not referred to by name in the Gethsemane scene and therefore does not receive any special blame from Jesus for sleeping as is the case in Mark 14:32–42. The denials of Jesus in Mark (14:66–72) are softened by the Lukan Peter. Not only is the intensity of these denials reduced, it is only in the Lukan account that one reads, "The Lord turned and looked at Peter," an *implicit* reproach that causes Peter to weep bitterly (Luke 22:62).

This positive Lukan view of Peter both prepares the way for his second volume, the Acts of the Apostles, and allows the image of Peter to be enhanced even further in Acts. In Mark 14:12–17 and Matt 26:17–20, it is the "disciples" who prepare the Passover meal; in Luke 22:8 it is "Peter and John" who are asked to prepare this meal for Jesus and his disciples. Not only does Luke give Peter a prominent and praiseworthy role in Acts, often, in the early chapters of Acts, this is carried out in association with John (Acts 3:1–11; 4:13–22; 8:14).

Even though they are too numerous to describe in detail, one should be cognizant of numerous other, relatively minor, changes which Luke makes in his description of Peter when contrasted with Mark and Matthew. A few examples must suffice. Unlike Matthew, Luke 4:42–43 reproduces the scene found in Mark 1:35–38 (Simon searching for Jesus) but replacing the reference to Simon with "the people," probably because he had not yet been called to follow Jesus. In Luke the message of the young man to the women to the empty tomb (Mark 16:7, "Go, tell his disciples and Peter") is omitted and replaced with a tradition that the risen Jesus had appeared to Simon (24:34). In Luke 8:45 it is Peter who responds to the question, "Who was it that touched me?" in the healing account of Jairus' daughter, information not found in Mark or Matthew. Where in Matt 18:21 Matthew inserts the name Peter to identify the questioner, it is not found in Luke 17:4. On the contrary, in Luke 14:41, Luke inserts the name of Peter in identifying the questioner, whereas in Matt 24:44–45 no name is specified.

Three Petrine scenes found in Luke's gospel must be discussed in detail and it will be necessary to ask whether the striking consistency of the use of the name "Simon" in these scenes would suggest that they have come to Luke from pre-Lukan sources. These pericopes include the miraculous catch of fish, a scene which serves as the context for the call of Simon (5:1–11); Jesus' prayer at the Last Supper that Simon's faith will not fall but that he will turn and strengthen his brethren (22:31–32); and the tradition that the risen Lord appeared to Simon (22:34).

1. The Call of Simon (5:1–11). The call of the first disciples in Mark (1:16–20) and Matthew (4:18–22) is straightforward and to the point: "Follow me and I will make you become fishers of men;" they respond by leaving their nets and following him. The story before us in Luke 5 is considerably more detailed. What is Luke's source for this information? Does he have a source independent of Mark and Matthew or has he added to the call of the disciples another narrative about Peter and a miraculous catch of fish? There are a number of awkward elements in the account of Luke 5:1–11—the transitions between Peter's response, the belated identification of James and John, Jesus' subsequent address only to Simon, as well as the fact that the response "Depart from me" would be more appropriate on land—which suggest that it originally belonged to a setting other than that of the call of the first disciples.

There are some striking similarities between this Lukan scene and the account of Simon Peter's catch of fish in John 21:1–13. Among these many similarities, one should not overlook the identical use of the name "Simon Peter" in both accounts. Although this combination of names is used more frequently by John than any other NT writer, it is found only here in Luke. These similarities have led many scholars to conclude that both Luke and John are using a common source independently of one another and that this source recounted the story as a post-resurrectional appearance as is the case in John 21. If the suggestion of a post-resurrectional context is valid, one finds Luke employing a literary technique similar to the one used by Matthew in 16:16b–19: the retrojection of post-resurrectional material into the ministry of Jesus.

Only in Luke 5:10 do we find these words of promise by Jesus to Simon: "Do not be afraid; henceforth you will be catching men." This redactional intention of Luke is preparing for the prominent role that Simon will have among the disciples in Acts. Thus, it is evident that Peter's missionary endeavors related in Acts are rooted in the pre-Easter intention of Jesus where these endeavors are always grounded in the power of Jesus which alone allows the sinful Simon to become a fisher of men.

2. Jesus' Prayer for Simon's Faith (22:31–32). Not only are these words absent from Mark and Matthew, the entire context leading up to Peter's denial (Luke 22:54ff.) is different in Luke's account. The Lukan tendency to deemphasize the weakness of the disciples is evident in these verses in which their falling away is only obliquely hinted.

In order to deal with the question of the origin of these words, we need to look at them more closely: " (31) Simon, Simon, behold, Satan demanded you [pl.] to sift like wheat. (32) But I have prayed for you [sing.] that your [sing.] faith may not fail. And you [sing.], when you [sing.] have turned again, strengthen your [sing.] brothers."

That part of this text addressed to Simon in the second person singular ("Simon, Simon […] I have prayed for you that your faith may not fail") is likely to be pre-Lukan. This proposal is strengthened by the double use of "Simon" which contrasts with the prediction of *Peter's* denials which follow. As the use of "to strengthen" suggests, this pre-Lukan source was modified by Luke and then incorporated into the present context where Luke may be following a source independent of Matthew and Luke. This would help one make sense of the awkward plural-to-singular shift which occurs here.

At the level of Lukan redaction Simon is part of the larger apostolic group (the pl. "you") whom Satan demanded so that he might sift them like wheat. For Luke the disciples are also subject to temptation, and that includes Simon. Although there is no Lukan equivalent to Mark 8:33 ("He rebuked Peter and said, 'Get behind me Satan' "), there is the implication of some kind of failure in the words "turning again" and in the denials themselves. Since the phrase "turning again" precedes the period of Peter's denial of Jesus, it is likely that Luke intends that through Jesus' prayer the lack of faith implicit in the denials would not become a permanent failure and that his faith would be revived following the resurrection.

Jesus also prays that when Simon had turned again that he would strengthen his brothers. Since Luke has never referred to a failure of such magnitude that their faith needed to be restored, it is not probable that this is the intended reference. To be preferred is that interpretation which understands "brothers" in the broader sense of strengthening the *larger Christian community* through his missionary preaching. Such activity is described in Acts and Acts 15:32 may serve as an example: "Judas and Silas, who were themselves prophets, exhorted the *brothers* … and *strengthened* them." Thus in Luke 22:31–32 the author is preparing for Peter's missionary career and role as the leading spokesman for the faith of the Jerusalem

Church as portrayed in the first fifteen chapters of Acts. By calling special attention to Simon by the use of singular "you" one again observes (as was the case in Luke 5:1–11) how Luke wishes to prepare for Peter's post-resurrectional prominence as described in Acts.

3. The Lord's Appearance to Simon (24:34). When the two disciples to whom the Risen Jesus had appeared on the road to Emmaus (24:13–32) returned to Jerusalem, they immediately told the Eleven gathered there, "The Lord has been raised indeed and appeared to Simon" (24:34). There are several problems involved in Luke's presentation of all the appearances of the risen Lord on one day and it is therefore best to understand that this announcement to the Eleven originally belonged to a kerygmatic formula that Luke has placed awkwardly into the present context. This suggestion is supported by the use of the term "Simon" in 24:34, as opposed to the previous reference in 24:12 to Peter, and the fact that this formula in 24:34 from early Christian proclamation is remarkably similar to the one found in 1 Cor 15:4–5: "He was raised […] and appeared to Cephas." Luke probably knew nothing more about the original setting of this announcement than the fact that it was the first appearance of the risen Jesus to a member of the Twelve. By inserting this piece of kerygmatic tradition, Luke is the only gospel writer to make explicit reference to a special appearance of the risen Jesus to Peter. Perhaps this was one more way in which Luke wished to prepare for Peter's post-resurrectional role. Thus, it is not by accident that Peter is the last of the Twelve to be referred to by name in the gospel and the first of the Twelve to be mentioned by name in Acts. If for Luke the Twelve are the link between the historical Jesus and the church, Peter is the most prominent example of such a link.

F. Gospel of John

The Fourth Gospel was written about the same time as the gospels of Matthew and Luke or perhaps slightly later. It was addressed to a community different from the communities addressed by the Synoptic Gospels and one familiar with a different gospel tradition. Characteristic of this divergent tradition is its emphasis on a certain unknown "disciple whom Jesus loved" (John 19:35; 21:24). Given the current state of the scholarly discussion, it is impossible to establish with any certainty that John's gospel was dependent on the synoptic tradition. It is possible, however, that this writer may have drawn upon sources independent of even the pre-synoptic sources. As a result there are a number of important scenes involving Peter that are unique to the gospel of John, such as the footwashing scene (13:6–11) and Simon's cutting off the ear of the servant of the high priest at the time of Jesus' arrest (18:10–11). While not frequent, there are several references to Peter in the Fourth Gospel which parallel those found in the synoptics: Simon Peter is called a disciple; his name is changed from Simon to Cephas (1:42); he confesses Jesus, serving as a type of spokesman for the Twelve (6:67–69); Jesus predicts his denial (13:36–38); and he denies Jesus three times (18:17–18, 25–27).

The material dealing with Peter in the gospel of John may be placed under the following headings: those passages where he appears without the Beloved Disciple; those where he appears with the Beloved Disciple; and the role of Simon Peter in John 21.

1. Peter Apart From the Beloved Disciple (John 1–20). There are six references to Simon Peter without mention of the Beloved Disciple. These include: (1) 1:40–42, Jesus meets Simon and indicates that he will be called Cephas; (2) 6:67–69, Simon Peter confesses Jesus as the Holy One of God; (3) 13:6–11, Jesus washes Simon Peter's feet; (4) 13:36–38, Jesus predicts Simon Peter's denials; (5) 18:10–11, Simon Peter cuts off the servant's ear in the garden; (6) 18:17–18, 25–27, Simon Peter denies Jesus three times.

The first two of these passages have certain parallels in the Synoptics. In the first of these (1:40–42) Jesus gives to Simon the name Peter. However, in the Johannine account it is Andrew who announces "We have found the Messiah," and it is he who leads his brother Simon to Jesus. Although Jesus' response, "So you are Simon, son of John? You shall be called Cephas (which means Peter)," has certain similarities with Matt 16:17–18—especially that the name change follows the confession of Jesus as the Messiah—here it is Andrew, not Peter, who has made the acknowledgment. In the second of these passages (6:67–69), it is Peter who was the one who spoke for the Twelve in confessing Jesus at a critical time. Important as this confession is in the Fourth Gospel, it does not play the decisive role it did in

Mark's gospel, or in a different way in Matthew's gospel, primarily because Simon is portrayed as already having participated in a similar confession in 1:40–42. In John's gospel, Simon Peter is neither rebuked as in Mark and Matthew or praised as in Matthew. While cast in the role of spokesman for the Twelve, he is given no special prominence because of his confession of Jesus.

In John 13:6–11, the third Johannine passage to refer to Peter, he does not understand the significance of Jesus washing his feet and thus insists, "You shall never wash my feet." However, when Jesus points its necessity, Peter overracts: "Lord, not my feet only, but also my hands and my head." While having no exact parallel in the Synoptic Gospels, this scene is consistent with the image of Peter as a somewhat impulsive figure who at times misunderstood the intention of Jesus.

This same impulsive tendency is found in the fifth scene, John 18:10–11. Only in John is Simon Peter identified as the swordsman who cut off the ear of the high priest's servant. Jesus' response to Peter, "Put your sword into its sheath; shall I not drink the cup which the Father has given me?" does appear to echo Peter's misunderstanding of Jesus as the suffering Son of Man following his confession at Caesarea Philippi and Jesus' subsequent reprimand (Mark 8:31–33; Matt 16:21–23).

The fourth and the sixth scenes both refer to Peter's denials of Jesus. In 13:36–38 the reference is the prediction of the denials and in 18:17–18, 25–27 to the three denials themselves. These references are substantially the same as those found in the synoptics. In John 13:36 there is indeed a word of Jesus to Simon Peter not found elsewhere: "Where I am going, you cannot follow me now, but you shall follow afterward." That the reference in John 21:18–19 to Peter's death has some connection to John 13:36 is evident. Either the writer of 13:36 had already known of Peter's death and made subtle reference to it or the connection may have been made by the redactor who wrote 21:18–19.

2. Peter and the Beloved Disciple (John 13–20). Unique to John's gospel is the relationship between the Beloved Disciple and Peter. Although there are many unanswered questions concerning the identity of the Beloved Disciple, it is reasonable to suggest that for this congregation he was a real person who had been a companion of Jesus and whose career was dramatized so that he could serve as a model for all believers. There are three pericopes which associate Simon Peter and the Beloved Disciple that deserve our special attention in John 13–20: (1) 13:23–26 at the Last Supper; (2) 18:15–16 in the courtyard of the high priest; (3) 20:2–10 at the empty tomb of Jesus.

The "disciple whom Jesus loved" appears for the first time in the setting of the Last Supper (13:23–26). In 13:23 he is "reclining on Jesus' bosom" (13:23), a reference, no doubt, to Jesus' affection for him. Simon Peter, at some distance from Jesus, must ask the Beloved Disciple what Jesus meant with regard to his statement that one of those eating at table with him would betray him. It is then in response to the Beloved Disciple's question that Jesus answers by identifying the traitor. That Simon Peter has at least a secondary part in this story indicates that he too was an important figure in the community's memory of the career of the earthly Jesus. The texts which follow will confirm the importance of both these disciples while always giving the indication that it was the Beloved Disciple who was closest to Jesus.

In 18:15–16 there is reference to "another disciple" and to "the other disciple." That this refers to the Beloved Disciple is suggested by John 19:25–27 where he is the only male disciple who stands at the foot of the cross together with Jesus' mother. It is to him and not Simon Peter that the mother of Jesus is entrusted. Thus, the Beloved Disciple, in contrast to Peter, is held up as the faithful one, as the one who neither denied Jesus nor fled during the passion.

In John 20:2–10, Simon Peter and "the other disciple, the one whom Jesus loved," run to the tomb together. Although the Beloved Disciple arrives first, he waits for Peter to enter before him. When the Beloved Disciple finally enters after Peter, it is reported in 20:8 that he "saw and believed," a possible indication that for the Johannine community it was the Beloved Disciple who first came to resurrection faith, a thesis that is strengthened when John 21:7 is examined.

That the Beloved Disciple was a basic source of tradition for this community is obvious (19:35). Thus he had to be depicted as one close to the events surrounding Jesus. Yet at the same time this community also knew that it was impossible to tell the Jesus story without reference to Peter. While the Beloved

Disciple was of enormous internal importance to the Johannine church, Peter was essential to an accurate transmission of the Jesus tradition.

3. Peter and the Beloved Disciple in John 21. Although John 21 is usually considered to be an addition by a later hand to the materials collected in John 1–20, that ought not to suggest that it might not contain traditions older than that found in the preceding chapters. Since the entire chapter is constructed around the twin figures of the Beloved Disciple and Simon Peter, it will be well to subdivide this chapter into three small units: (1) the appearance of the risen Jesus and the miraculous catch of fish (21:1–14); (2) the risen Jesus instructing Simon to feed his sheep (21:15–17); and (3) Jesus referring to the destinies of Simon Peter and the Beloved Disciple (21:18–23).

Where the story about the miraculous catch of fish in John 21:1–14 is most markedly different from the similar account in Luke 5 is in the contrast between the Beloved Disciple and Peter. Although both see a stranger on the shore, it is the Beloved Disciple who recognizes that it is the Lord and who then relays this information to Peter. As in 20:8 and elsewhere in John's gospel, Peter is important to the story, but it is the Beloved Disciple who is most closely attuned to Jesus and the events surrounding him. Also consistent with 18:10–11 where Peter rushes to defend Jesus with a sword is Peter's impetuosity in jumping from the boat to rush to Jesus.

Other changes between this Johannine account and the one reviewed previously in Luke 5 would include the fact that Simon is no longer portrayed as being alone in importance next to Jesus, but now he is in the midst of six other disciples. Nevertheless, Peter still is portrayed as having a prominent role: he takes the initiative to go out fishing; he jumps into the sea to go and meet Jesus; and he brings the nets from the boat to the shore. One would be able to say more about the symbolism involved if one could be sure that for John, as for Luke, this scene was also referring to future missionary work.

In 21:15–17 the Beloved Disciple is absent and full attention is given to Peter. The threefold question, "Simon, son of John, do you love me?" is often described as a rehabilitation of Peter following his threefold denial. Since the Beloved Disciple never denied Jesus he need not be rehabilitated.

Although some elements in 21:15–17 gain clarity from an examination of the shepherd imagery in John 10, a more immediate background to the threefold giving of pastoral authority to Simon may be an OT text such as Ezekiel 34 where the king is described as a shepherd and where the shepherd, in turn, is given enormous pastoral authority. Similarly, in John 21, Simon is given a pastoral authority rooted in love in which he is instructed to feed *Jesus'* sheep.

This scene may simply attest to Peter's rehabilitation or it may also reflect the fact that Simon Peter is increasingly being perceived by some circles in primitive Christianity as a symbol of pastoral authority. If the latter is indeed the case, then there are some partial parallels to Matt 16:18–19, although John 21 is more concerned to stress the theme of Peter's love and obligation to the sheep in contrast to Matthew's stronger emphasis on authority and legal imagery. Perhaps closest to 21:15–17 is a text which has yet to be discussed, 1 Peter 5:1–4. There, Peter addressing his fellow presbyters, urges: "Tend the flock of God that is in your charge, exercising oversight not by constraint but willingly […] not as domineering over those in your charge but being examples to the flock. And when the Chief Shepherd is manifested, you will obtain the unfading crown of glory." Here the good shepherd language of John 10 is incorporated with the themes of an authority grounded in love and an obligation to the flock.

In John 10 it is stated that the good shepherd protects his sheep even if it means laying down his life for the sheep (10:11–18). The connection between John 10 and John 21 is strengthened by the fact that the command to feed the sheep is followed by the prediction that Peter will die by laying down his life for the sheep. The language used in 21:18–23 is reminiscent of martyrdom and the invitation of Jesus in 21:19, "Follow me," may well be an invitation to martyrdom.

In this scene (21:18–23) one notes both similarities and dissimilarities between Simon Peter and the Beloved Disciple. Both are witnesses but in quite different ways. It is only Simon Peter who receives the commission to be a shepherd, a commission that involves a willingness to die. Since Jesus willed the Beloved Disciple's witness, it is not inferior, but of a different type. He "remained" as Jesus desired, viz., he lived out a long life in the love of Jesus. The Johannine community realized that, as they could not

narrate the details about Jesus of Nazareth without reference to Simon Peter, so too they could not recount the story of the Christian church without mention of Peter's important missionary and pastoral role. And yet the community made sure to place their model of discipleship, the Beloved Disciple, alongside Simon Peter and emphasized his primacy in love. For them such a manifestation of discipleship was just as authentic as that of the other traditional apostles.

G. The Petrine Epistles

1. The First Epistle of Peter. In order to discuss the role and function of Peter in this document, two items must be discussed: the origin and nature of the epistle; and the description of Peter as shepherd in 5:1–4.

Both the question of authorship and the destination of this epistle are significant for understanding the perspective of Peter presented in 1 Peter. Most NT scholars argue that 1 Peter is pseudonymous and written by someone invoking Peter's name, authority and memory; a likely dating would be late in the 1st century. Pseudonymity does not lessen the importance of this writing as a witness to Peter. If anything, it enhances its importance since it implies that some 20 or 30 years after his death Peter's name could still be thought to carry weight and be invoked to instruct Christian churches, especially if the area of Asia Minor (Pontus, Galatia, Cappadocia, Asia, and Bithynia) addressed is not Petrine territory. With regard to this latter point, it is impossible to judge with certitude whether Peter or his co-workers had missionized in this area, some of which had been evangelized by Paul. If this is not the case then 1 Peter would testify to the fact that Peter's authority extended to areas where other apostle's had worked and that one would hope to guide such churches by invoking Peter's name.

Another not unimportant issue is raised by the greetings in 5:13 from "the woman who dwells in Babylon" to these churches addressed in Asia Minor. Since "Babylon" is commonly understood to be a symbolic name for Rome it raises the question of Peter's relationship with Rome. Does this epistle attempt to exercise not only Petrine but also Roman influence over churches that may originally have been outside the orbit of Peter's influence? Not unimportant in evaluating this question is the evidence of *1 Clement*, a document of the 1st century, in which the Roman church writes to the church at Corinth, a church which had been founded by Paul.

In the description of Peter as shepherd in 5:1–4, Peter assumes the title of "fellow presbyter" and addresses the presbyters of the communities of Asia Minor. His authority is greater than simply being a "fellow presbyter" for in 1:1 his authority is defined as apostolic and in 5:1 he is identified as a "witness *(martys)* of the sufferings of Christ," a reference that may reflect knowledge that he died as a martyr *(martys)*.

The relationship between 1 Peter 5 and John 21 has already been touched on and it is quite possible that they are dependent on a common tradition related to the Province of Asia (for many the gospel of John is composed in Ephesus). This would explain the relationship between Peter's instruction to his fellow presbyters to "tend the flock of God" *(poimainein)* in 1 Peter and the fact that he had himself been charged to tend *(poimainein)* the sheep of Jesus. A similar reference to feeding *(poimainein)* is made in Acts 20:28 where Paul instructs the presbyters of Ephesus. Not only had the term "shepherd" taken on specific meaning for those who were presbyters in the churches of that area, but also for Peter who is being portrayed as the principal presbyter-shepherd.

2. The Second Epistle of Peter. The strong consensus among scholars is that 2 Peter is also pseudonymous and may well be the last NT book to be composed, perhaps in first decades of the 2d century. Peter is presented as an eyewitness authenticator of tradition about the historical Jesus (1:16–18) and as an authority who can correct misunderstandings of Paul (3:14–16). On the basis of the author's statement in 3:1 that this is "the second letter that I have written to you" one can assume that the same audience is intended although such a specific reference is absent.

The threat being addressed by this document is that of false teaching and moral confusion, a situation not dissimilar to that addressed in Acts 20:28–30. Peter is being presented as the guardian of the orthodox faith and serves to counteract the teachings of the false prophets (2:1). To their assertion that there will be no future coming of Jesus in glory (3:1–10), Peter is portrayed as an eyewitness, presumably of the

Transfiguration, when Jesus received honor and glory from God the Father (1:17). Peter is in a strong position to refute their false assertions not only as one who saw the first coming of Jesus in glory, but also because he was one of those for whom the prophetic word was made more sure (1:19) and who had been given the authority to interpret prophecy and Scripture (1:20–21). Peter's apostolic authority does not stop here: he can even correct the false interpretations attributed to other apostles and particularly those ignorant and unstable persons who are twisting the letters of Paul (3:15–16) "to their own destruction." In offering such interpretations, 1 Peter has presented us with a Petrine teaching office not dissimilar to the one outlined in Matthew 16 and one to which there could be authoritative recourse in refuting the appeal of his opponents, probably some sort of gnostics, to the letters of Paul.

H. The Apocryphal Writings

This subject is one of several important areas which go beyond the scope of this essay. Others would include the role of Peter in the Apostolic Fathers and the archaeological evidence for the presence of Peter in Rome. With regard to the latter, while it is likely that Peter did get to Rome late in his career and was martyred and buried there, the exact results of recent excavations under St. Peter's Basilica in Rome continue to be debated. Nevertheless, a brief indication of the use of the Peter tradition in some of these apocryphal writings will be useful in understanding the variety of ways in which Peter was interpreted in gnostic circles and also as a background to the kind of problems being addressed in 2 Peter and elsewhere in the NT.

Several of the church fathers (Irenaeus, Hippolytus, Tertullian, and Origen) refer to strong anti-Petrine tendencies in the literature of various gnostic groups. In some cases (e.g., Carpocratians) this is the result of a denigration of the wider body of the apostles; in other cases it is due either to their elevation of Paul into a central position (e.g., Valentinians) or to their elevation of some lesser apostle (James, Thomas, Mary Magdalene) because he or she received a special revelation. Many of these anti-Peter tendencies reflect the gnostic-orthodox controversies of the period. In the *Gospel of Thomas* 51:18–25, for example, Peter appears to represent the orthodox objections against the role of women in the gnostic groups: "Let Mary leave us, for women are not worthy of life." Peter also represents these orthodox objections to the gnostic claim that certain of their model apostles had experienced a separate and unique vision of the Lord. Thus, groups that venerate Mary, James, and Thomas precisely because of such visionary experiences would tend to elevate the importance of their model over Peter or to polemicize against Peter. In the *Apocryphon of James,* James, not Peter, is consistently regarded as the apostolic leader in the early church. In fact, in the *Apocryphon of James* many of the items attributed to Peter in the NT are reformulated and now attributed to Peter. Thus in 13:39–14:1, Jesus' response to a question asked by Peter is given to James, "I have revealed myself to you, James." Similar tendencies can be found in the *Gospel of Thomas* and in the *Acts of Thomas.*

As a result of the discovery of the Nag Hammadi texts, it is now possible to point to at least three gnostic writings which are pro-Petrine: the *Acts of Peter and the Twelve Apostles,* the *Epistle of Peter to Philip,* and the *Apocalypse of Peter.* Whereas some of the gnostic writings radically alter Matt 16:16b–19 in a derogatory way, the *Acts of Peter* accepts and amplifies this high Matthean view of Peter and understands Peter as the unquestioned apostolic leader. In the *Epistle of Peter to Philip,* heavily dependent on Luke-Acts, the reinterpreted Peter speeches are understood to be models of gnostic teaching. Peter is the apostle who has true gnostic insight. The *Apocalypse of Peter* provides several visions experienced by Peter in which Jesus explains to him the true, gnostic teachings, especially with regard to the nature of Jesus. It is a docetic view of Jesus in which a literal crucifixion, preceded by Jesus' suffering, is denied. Here, too, Peter serves as the transmitter and guarantor of the authentic gnostic teaching and here, also, Matt 16:16b–19 is reinterpreted in a gnostic manner: "But you yourself, Peter, become perfect in accordance with your name with myself, the one who chose you, because from you I have established a base for the remnant whom I have summoned to knowledge" (*Apoc. Pet.* 71:15–21). These three Nag Hammadi documents confirm Basilides' description of a secret, gnostic, Petrine apostolic tradition in which Peter is viewed most positively. But since both the gnostic anti- and pro-Petrine tendencies present

a view of Peter reconstructed through gnostic eyes, both tendencies would be rejected by such NT writings as 2 Peter.

PETER AND PAUL, ACTS OF. The *Acts of Peter and Paul* is a 6th or 7th century Greek expansion of the Pseudo-Marcellus *Passion of Peter and Paul.* It survives in an Armenian translation as well. Elaborations of Paul's travels and martyrdom give Paul a role more nearly equal to that of Peter. The Jews in Rome convince Nero to order Paul's execution, but believers in Rome express their wish to have "the two great lights" united in their city. Dioscuros, the shipmaster who brought Paul from Gaudomelite to Syracuse, converts and accompanies him to Italy. Paul ordains a bishop when he stops in Messana. In Puteoli, Dioscurus is mistaken for Paul, since both are bald. He is seized and beheaded. The town later sinks into the sea. Paul, informed by a dream, corrects the behavior of the Roman bishop Juvenalias, who had been ordained by Peter. From the point of Paul's arrival in Rome, the story follows the longer version of the *Passion of Peter and Paul.* The discussion of circumcision does not appear. The story of Perpetua is inserted into Paul's martyrdom (cf. Plautilla in the Pseudo-Linus *Passion of Paul*). Perpetua, who is blind in one eye, gives her handkerchief to Paul as he is led out to execution. Immediately after the apostle's death, the cloth is returned to Perpetua and her eye is healed. These events led to the conversion of the soldiers who beheaded Paul. Perpetua and the soldiers are eventually martyred for their faith. See also PETER AND PAUL, PASSION OF.

PETER AND PAUL, PASSION OF. The *Passion of Peter and Paul,* an account of the martyrdoms of the two apostles which circulated under the name of Peter's follower Marcellus, survives in two forms. The longer version is extant in Greek, Latin, and Slavonic. Composed perhaps in the 6th century, it is based loosely on the *Acts of Peter,* but shows knowledge of the Pseudo-Clementine Romances and the *Acts of Paul* as well. One early manuscript incorporates material from Pseudo-Hegesippus, *De excidio Hierosolymae* 3.2 (Migne, *PL* 15.2169–71). The longer version was used in the *Acts of Peter and Paul.* The briefer version of the *Passion of Peter and Paul* is a 6th or 7th century compilation of Latin sources. It deletes most of the speeches and the letter of Pilate, but adds narrative details. In both versions Paul's role is minor compared to Peter's.

The longer text of the *Passion of Peter and Paul* begins with Paul's return to Rome from Spain. Jews who have opposed Peter's gentile mission seek Paul's help but find that the two apostles agree in their teaching. Simon Magus, who claims to be the Christ, takes advantage of the disturbance to appeal to Nero against the apostles. Simon has demonstrated his divinity by appearing alive three days after an illusory decapitation (cf. *Martyrdom of Paul* 4). When Peter and Paul come before Nero to dispute with Simon, they produce the *Letter of Pilate to Claudius.* Peter demonstrates his ability to read minds by secretly blessing bread. When Simon sends a large dog against him (cf. *Acts Pet.* 7), Peter displays the bread causing the dog to disappear. Simon is silenced in a debate concerning circumcision. To prove his divinity, Simon promises to fly from a tower (cf. *Acts Pet.* 32). At the prayers of Peter and Paul, the demons supporting Simon drop him to his death.

The apostles are condemned by Nero for having caused Simon's death. The prefect Agrippa (Clement in some mss) suggests appropriate modes of execution. Paul is beheaded on the road to Ostia. Peter is hung

upside down from a cross. From that position he reports the *Quo vadis* story. Strange men appear from Jerusalem to help Marcellus bury Peter's body on the Vatican hill. Nero is forced to flee the city and dies in the desert. Finally, men from the E attempt to steal the bodies of the apostles. The relics are given temporary burial on the road to Ostia. Thus, the *Passion of Peter and Paul* authenticates the various cult sites for the apostles which had been used in Rome from the mid-3d century.

In the shorter version of the *Passion of Peter and Paul,* the two apostles arrive in Rome together. They lodge there with relatives of Pilate, believers who first bring the apostles to the attention of Nero. Other additions, drawn from the *Acts of Peter* by way of Pseudo-Hegesippus, include the resurrection of a young man, Nero's anger over Simon's death, the *Quo vadis* scene in its proper place, and the placing of Simon's death in Aricia. The apostles are sentenced by Clement rather than Agrippa. The deaths of the apostles are not described, so neither Peter's speeches at the cross nor the disposition of the relics is reported.

ROBERT F. STOOPS, JR.

PETER AND THE TWELVE APOSTLES, THE ACTS OF (NHC VI,*1*). This tractate is the first in the miscellaneous collection of Sahidic Coptic tractates comprising Nag Hammadi Codex VI. For all its brevity (12 pages) it is a remarkably complex document. The first half consists mainly of an account, with heavy allegorical overtones, about a pearl merchant who attracts the poor but is shunned by the rich, and who turns out not to have the pearl he is hawking; it is available only to those willing to journey to his city. The pearl merchant's name is Lithargoel, which means, according to the text, a lightweight, glistening stone (5.16–18) (Wilson and Parrott 215 n.). The account takes place in an island city identified simply as "Habitation" (the Coptic for which may be a translation of the Greek word meaning "inhabited world").

The observer of all this is Peter, who, with the other disciples, was brought to the city by an apparently chance wind (1.26–28) shortly after setting sail to begin what seems to be the post-resurrection apostolic ministry (relevant details at the beginning of the tractate are missing due to lacunae).

The transition between the first and second half of the tractate is briefly interrupted by Peter's vision of the waves and high walls that surround the city. An old man (angelic interpreter?) interprets it in such a way that the city is seen as a symbol of the community of the faithful who have to endure in this world in order to enter the kingdom of heaven (6.27–7.19).

The remainder of the tractate recounts the dangerous journey of Peter and the other disciples to Lithargoel's city and their meeting with a physician, who subsequently reveals himself as Christ (9.8–15), and still later makes it clear indirectly that he is also Lithargoel (10.8–13). The disciples are instructed about undertaking a ministry of healing in the city from which they had just come. Christ ends with a warning against the wealthy in the church.

Evidence of editorial activity abounds (Krause 1972; Wilson and Parrott 1979) and leads to the conclusion that *Acts Pet. 12 Apost.* is a composite, the earliest level of which was probably the allegory of the pearl merchant Lithargoel. It may be that the story was originally about a god who bore that name (Krause 1972: 51), but in the absence of evidence of a Lithargoel cult in antiquity, it seems better to assume that the name was originally created as a cover name for Christ within the context of the allegory.

Although it has been identified as gnostic (Perkins 1980: 127), there is in fact nothing within the tractate that compels that conclusion, and, furthermore, it stands within a codex that has a number of tractates that

are clearly not gnostic. It seems likely, however, that the tractate could have been used by gnostics. The allegory may well have had a Jewish Christian origin. That is suggested by the name Lithargoel, which has the form of Jewish angel names, the attraction of the poor (alone) to the pearl merchant (the Jewish Christians called themselves Ebionites, or the Poor), and the similarity of the allegory to some found in the Jewish-Christian *Herm. Sim.* The discourse of Christ and the disciples, which assumes a ministry within a church made up of both rich and poor (10.1–7; 12.8–13), may well have been added by an orthodox editor, who felt the church was becoming too worldly. The material in which Christ is identified as a physician may reflect the effort of Christians to counter the widespread attraction of the cult of Asclepius.

The earliest portion of the tractate—the allegory—probably should be dated no later than the middle of the 2d century, because of the affinity with *Herm. Sim.*, which is dated in the mid-century or before. The tractate as a whole, then, may have been put together in its present form toward the end of the 2d century, or early in the 3d.

It has been suggested that *Acts Pet. 12 Apost.* might have been part of the lost first third of the apocryphal *Acts of Peter* and perhaps even its introductory section (Krause 1972). Both share encratite characteristics and there are some connections to be made with *Act of Peter* in Papyrus Berolinensis 8502 (BG). On the other hand, the encratism of *Acts Pet. 12 Apost.* lacks the sexual element found in *Acts of Peter,* and the connections with *Act of Peter* do not clearly lead to the conclusion of a prior literary relationship; moreover, there are significant reasons for thinking they were not connected (e.g., *Act of Peter* is set in Jerusalem, which was also the setting of the first part of *Acts of Peter; Acts of Pet. 12 Apost.* is not). It seems best to think of *Acts Pet. 12 Apost.* as one of the independent narratives about the apostles that began to appear in the 2d century.

DOUGLAS M. PARROTT

PETER TO PHILIP, LETTER OF (NHC VIII,*2*). The *Letter of Peter to Philip* is the second and concluding tractate within Codex VIII of the Nag Hammadi library. Situated immediately after the long tractate *Zostrianos* (NHC VIII,*1*), *Ep. Pet. Phil.* fills most of the last nine pages of Codex VIII (132,10–140,27). The tractate opens with a superscribed title ("The letter of Peter which he sent to Philip," 132,10–11) that places the text within the tradition of letters ascribed to Peter (e.g., 1–2 Peter, and the *Epistula Petri* at the opening of the Pseudo-Clementines). *Ep. Pet. Phil.*, however, is not to be identified with any of the previously known letters attributed to Peter, and represents a newly discovered work in the Petrine corpus.

The body of *Ep. Pet. Phil.* may be divided into 2 major sections: the letter itself (132,12–133,8), and the account of the meetings of the apostles (133,8–140,27). The letter of Peter describes the separation of Philip and the need for a meeting of all the apostles. At 133,8 the letter concludes, and after the reference to the willing response of Philip to Peter, Philip disappears from the scene, and is only implicitly present as an anonymous member of the apostolic group assembled around Peter.

The balance of *Ep. Pet. Phil.* (133,8–140,27) provides an account of the apostolic gatherings, frequently in the form of a "dialogue" between the resurrected Christ and the apostles. Peter and the apostles come together for the first meeting on the Mount of Olives and offer prayers to the Father and the Son. The risen Christ appears as a light and voice, and the apostles raise several questions for Christ to answer. The

voice from the light responds by discoursing on the deficiency of the aeons and the fullness *(plērōma),* and the detainment and struggle of the apostles. At the conclusion of this meeting the apostles return to Jerusalem, and on the way the discussion about the problem of suffering prompts a response by Peter as well as by the revelatory voice. After the apostles reach Jerusalem, they teach and heal, and Peter delivers an exemplary sermon. The apostles are filled with holy spirit and part in order to preach the gospel. Finally, Jesus appears again to commission the apostles, and the tractate closes with the apostles departing "into four words" (140,25; possibly the four gospels to be sent to the four directions).

As the contents of the tractate indicate, *Ep. Pet. Phil.* bases itself upon a variety of early Christian and gnostic traditions, and interprets these traditions in a Christian gnostic fashion. Thus, numerous parallels may be noted between the tractate and portions of the first (Petrine) section of the NT Acts of the Apostles (chaps. 1–12), including scenes, themes, and terms. The revelatory discourse on fullness (136,16–137,4) also resembles the hymn to the Logos in John 1:1–18, and the little "Pentecost" of *Ep. Pet. Phil.* (140,1[?]–13) recalls not only Acts 2 but also the Johannine "Pentecost" account (John 20:19–23). Further, the depiction of the resurrected Christ as a light and voice throughout the text represents a primitive means of describing glorious appearances of Christ in the NT and other early Christian literature (e.g., Mark 9:2–8 par.; 2 Pet 1:16–19; Acts 9:1–9; 22:4–11; 26:9–18; 1 Corinthians 15; Rev 1:12–16). Conversely, the discourse on the deficiency of the aeons (135,8–136,15) addresses specifically gnostic issues by providing an abbreviated myth of the mother (cf. Eve/Sophia) which shows no overtly Christian features whatsoever. This discourse, adopted as a revelatory discourse of the risen Christ, reflects a simple version of the myth, and is similar to the Sophia myth of the *Apocryphon of John* (NHC II,*1;* III,*1;* IV,*1;* Berlin Gnostic Codex 8502,*2*) and the Barbelognostics of Irenaeus (*Adv. haer.* 1.29.1–4).

On the basis of such traditions as these, *Ep. Pet. Phil.* proclaims its Christian gnostic message. The tractate legitimates its message by deriving it from Peter and the apostles and, ultimately, from Jesus. Now, the tractate maintains, the risen Christ must speak again as a light and voice in order to provide a renewed revelation of the Christian gnostic message. The tractate thus shows its concern that the apostles, and the Christian gnostic believers themselves, be empowered to act as "illuminators in the midst of mortal people" (137,8–9). They are to gather for worship and go forth to preach, "in the power of Jesus, in peace" (140,27).

The evidence of the tractate suggests that *Ep. Pet. Phil.* very likely was composed in Greek around the end of the 2d century C.E. or into the 3d, and was translated into Coptic some time thereafter. The Coptic dialect of the tractate resembles Sahidic to a considerable extent, although dialectical peculiarities, including forms traditionally called Subachmimic and Bohairic, are also to be found. See LANGUAGES (COPTIC). In addition to the Coptic text of *Ep. Pet. Phil.* from the Nag Hammadi library, another copy of the Coptic text is reported to have been found in a papyrus codex which is not yet published or available for study.

MARVIN W. MEYER

PETER, ACT OF. The apocryphal *Act of Peter* recounts the story of Peter's paralyzed virgin daughter for purposes of encratite edification. While elements of the story were previously known through secondary sources, the sole primary text came to light in 1896 with the purchase in Cairo of a Coptic papyrus codex (*P. Berol.* 8502). *Act Pet.* is the last of four tractates preserved in the codex, the other three of which are decidedly gnostic in character (*Gos. Mary, Ap. John,* and *Soph. Jes. Chr.*). *Act Pet.* itself contains no clearly gnostic theologumena (Parrott 1979: 475–76). The text, written in the Sahidic dialect with a few non-Sahidic forms, is generally well preserved (Parrott 1979: 473).

Act Pet. reports how, while Peter was healing the sick on the Sabbath, an individual asked him why he did not heal his own beautiful virgin daughter who lay paralyzed in a corner. Peter, to reveal the power of God, restores her body whole, and the crowd rejoices. He then commands her to return to the corner where her paralysis reafflicts her. The crowd weeps.

Peter explains why this is necessary. The girl, when young, was very beautiful. Her beauty tempted a certain Ptolemy, who saw her bathing with her mother. He abducted the girl when his offer of marriage was rejected. But before he could seal the relationship through intercourse, the girl was paralyzed in answer to Peter's prayers. Ptolemy returned the child with her virginity intact. Smitten with grief, he became blind and through a vision learned that God's vessels were not given for corruption and pollution.

When he narrated these events to Peter, Ptolemy's sight was restored. He died shortly thereafter, leaving a parcel of land to Peter's daughter for her support. Peter reports that he sold it and gave the proceeds to the poor, since God cares for his own. The story finished, Peter distributes bread to the crowd and then returns to his own home.

Act Pet. represents a single act in the genre of the Acts of the Apostles. It belongs to the beginning of the longer *Acts of Peter,* though the story is missing in the surviving witnesses (especially the Latin *Actus Vercellenses*) of the longer work (Schmidt 1903: 21–25; 1924: 321–48; Vouaux 1922: 35–38; Schneemelcher *NTApocr,* 269–70; Parrott 1979: 474–75; contra Ficker 1904: 402–3; 1924: 227–28). The content is encratite and serves to warn the reader of the dangers associated with sexuality. The fact that marriage and sexual relations are not explicitly denounced and that Peter remains married to his wife may suggest a less-pronounced encratism (Parrott 1979: 475). However, the idea that beauty entices sin and that paralysis serves as an appropriate defense of virginity underscores the author's view of human sexuality as corrupting and polluting of the body.

Act Pet. was in existence by the end of the 2d century when it appeared in the longer *Acts of Peter* (*NTApocr,* 275; Parrott 1979: 476). It is an important witness to a strong encratite or ascetic presence in early Christianity in general and within the Petrine tradition in particular.

JAMES E. GOEHRING

PETER, ACTS OF. One of the earliest of the apocryphal acts of the apostles, the *Acts of Peter* reports a miracle contest between Simon Magus and the apostle Peter in Rome. It concludes with Peter's martyrdom. The *Acts of Peter* was originally composed in Greek during the second half of the 2d century,

probably in Asia Minor. The majority of the text has survived only in the Latin translation of the Vercelli manuscript. The concluding chapters are preserved separately as the *Martyrdom of Peter* in three Greek manuscripts and in Coptic (fragmentary), Syriac, Ethiopic, Arabic, Armenian and Slavonic versions. See PETER, MARTYRDOM OF.

The stichometry of Nicephoros indicates that roughly one-third of the original *Acts of Peter* has disappeared. Schmidt (1903) suggested that the missing portions recounted Peter's activities in Jerusalem, including Simon Magus's first confrontation with Peter and Paul (cf. *Acts of Peter* 23). The story of Eubula, now found in *Acts of Peter* 17, may have originally appeared in this section. Similarly, two episodes mentioned by Augustine (*Contra Adimantum* 17) probably belonged to this lost section: the story of Peter's daughter (partially preserved in the Berlin Coptic Codex), and the story of the gardener's daughter (summarized in the Pseudo-Titus Epistle). Krause's suggestion that the *Acts of Peter and the Twelve Apostles* from Nag Hammadi represents lost portions of the *Acts of Peter* has not won acceptance.

The surviving sections of the *Acts of Peter* describe the end of Paul's ministry in Rome and his departure for Spain. Soon thereafter, Simon Magus arrives in Rome, where he uses both wonders and arguments to seduce all but a handful of those who believe in Christ. To counter the works of Simon, Christ sends Peter from Jerusalem to Rome. Peter converts the ship's captain during the voyage. Once in Rome, Peter restores many to faith by preaching. Peter confronts Simon, using as intermediaries a dog and an infant, both of whom gain the powers of prophetic speech for the purpose. Marcellus, a senator who had been the patron of believers before he was misled by Simon, is restored to faith. He miraculously repairs a statue of the emperor which had been shattered during an exorcism (cf. Philost. *VA* 24).

Further visions, public miracles, and teaching from Peter lead up to a public contest with Simon. A brief debate about the identity of God and Christ precedes the contest of miracles during which Peter raises three men from the dead and exposes Simon's deceptions. When Chryse, a wealthy woman of the worst reputation, donates money to Peter in response to a vision, he takes it as a demonstration of Christ's ability to care for believers in material as well as spiritual matters. Simon tries to regain his influence by flying above the city of Rome, but he is brought down by Peter's prayer. Simon withdraws to Aricia, where he dies from the injuries suffered in his fall.

Peter's martyrdom follows. Agrippa, the prefect, is angered when his concubines decline his advances after hearing Peter preach on chastity. Xanthippe, wife of Albinus, is converted and withdraws from her husband's bed. The two men conspire to kill Peter. Peter is warned and persuaded to leave the city. At the city gate he encounters Christ entering Rome "to be crucified again." Peter recognizes his own destiny in these words and returns to be arrested. Peter asks to be crucified upside-down and explains the soteriological significance of that position in a lengthy speech from the cross. After his death, Peter appears to Marcellus to rebuke him for attending to the apostolic corpse. Meanwhile, Nero, angered at having missed the chance to torture Peter, begins to persecute the other believers. Nero is stopped by a vision, and peace comes to the faithful in Rome.

The *Acts of Peter* interweaves stories, mostly miracles, and teachings of diverse origins. It is less closely related to romance literature than are other early apocryphal acts of apostles. Travel plays a small role, because Peter is not portrayed as a wandering missionary but as the reestablisher of the Roman church. The theme of chastity is present but not dominant. Physical persecution is not important except in the martyrdom section; rather Simon is called a "persecutor" for uprooting Christians from their faith. The main concern of the *Acts of Peter* is the restoration and maintenance of faith in the face of competition from other cults. Simon is a composite figure representing a number of challenges to the faith of believers rather than a particular heresy. Each side competes for loyalty by claiming to offer superior benefits. The *Acts of Peter* shows great concern for the newly converted and the possibility of returning to the church after apostasy. Peter's falterings during the lifetime of Christ are repeatedly mentioned, as is Paul's initial role as a persecutor.

Lipsius's identification of the *Acts of Peter* as gnostic has been rejected. The theological stance represented in Peter's speeches and the stories is eclectic. The *Acts of Peter* affirms God's role as creator and the reality of Christ's sufferings. It stresses the polymorphism of Christ, a motif often associated with

docetism, but used here to show that Christ takes on whatever form is necessary to aid those in need (Cartlidge). The *Acts of Peter* reflects the piety of popular Christianity rather than the thoughts of the theologians.

Research on the questions of sources, redaction, and genre continues (Poupon). Studies of the social world of the apocryphal acts have included the *Acts of Peter.* The stories concerned with chastity have been analyzed as reflections of the roles and concerns of Christian women (Davies 1980, and Burrus 1987). It has been suggested that patron/client relationships provided a model for both Christology and propaganda in the *Acts of Peter* (Stoops 1986).

The *Acts of Peter* mentions a written gospel and may have been intended to supplement the canonical Acts of the Apostles, although it does not agree with it in detail. The *Acts of Peter* is more clearly related to the *Acts of Paul,* although which text has priority is debated. The solution depends in part on whether the first three chapters dealing with Paul and the final chapter reporting the Neronian persecution belong to the original of the *Acts of Peter.* General similarities with the *Acts of John* have been noted, but literary dependence cannot be demonstrated.

The *Acts of Peter* was not widely circulated (Eus. *Hist. Eccl.* 3.3.2), perhaps because of its association with Manichaeism (cf. Augustine and *Manichean Psalm-book*). However, the *Acts of Peter* did serve as an important source for much of the later Petrine literature. The Pseudo-Clementine Romances show a general familiarity with the *Acts of Peter* and may be designed to fit into the period between Peter's activity in Jerusalem and his journey to Rome. The *Acts of Peter* follows the Clementine *Recognitions* in the Vercelli manuscript. The Martyrdom section was expanded in the Pseudo-Linus *Passion of Peter.* The *Acts of Peter* also lies behind alternative accounts of Peter's death in Pseudo-Hegesippus and in the Pseudo-Marcellus texts, the *Passion of Peter and Paul,* and *Acts of Peter and Paul.* The later currency of these secondary texts is shown by the *Apostolic History* of Pseudo-Abdias, which drew on them all in the late 6th or early 7th century.

Stories and speeches from the *Acts of Peter* were also incorporated into other works. Elements appear in the 3d century *Carmen apologeticum* of Commodian and perhaps in the *Didascalia.* In the 4th and 5th centuries, the *Life of Abercius* and *Acts of Philip* used the *Acts of Peter.* It was used again in the *Acts of Xanthippe and Polyxena,* the *Acts of Saints Nereus and Achilleus,* and in the Syriac *Teaching of Simon Cephas in Rome* and the *History of Simon Cephas in Rome*.

ROBERT F. STOOPS, JR.

PETER, APOCALYPSE OF (NHC VII,*3*). This Gnostic tractate bears no relationship to two other apocryphal writings of the same name, the one partially preserved in Greek and fully in Ethiopic translation, the other extant only in Arabic. A complete copy of the Gnostic *Apoc. Pet.* in Sahidic Coptic is present in the Nag Hammadi Codex VII, pp. 70:13–84:14. There can be little doubt that the original was written in Greek. The title found at the beginning and end of the tractate preserves the Greek case endings and the many serious grammatical and syntactical problems suggest an incompetent translator (as in the case of NHC VI,*5; Plato Rep. 588b–589b*) rather than an inept Coptic author or major corruptions in the ms transmission. These philological problems seriously hinder the interpretation of the text.

Apoc. Pet. was appropriately named, for it confirms well to the literary genre of the apocalypse. The introductory section (70:14–72:17) places the two main characters, the Savior and Peter, in the temple, apparently shortly before the crucifixion, where they are threatened by the priests and the people. This leads to a vision (72:17–73:10) which, similar to the experience of Elisha's servant in 2 Kgdms 6:17, opens Peter's eyes to the truth about the opponents. This vision becomes the occasion for a lengthy discourse (73:10–81:3) in which the Savior reveals to Peter that there will be many who do appear to accept "our teaching" but who in reality oppose the truth. In 81:3–82:16 Peter receives another vision, or perhaps two, during which his eyes are opened for the true reality of the crucifixion. The vision is again followed by an explanatory revelation (82:17–83:15). The tractate closes by specifying those who are worthy to receive the revelation (83:15–84:13).

The generally gnostic character of *Apoc. Pet.* is evident from a radical dualism which distinguishes between two levels of reality which closely resemble each other but are opposites. The one is material, mortal and counterfeit; the other is spiritual, immortal and true. The teaching of *Apoc. Pet.* focuses on the implication of this dualistic worldview for ecclesiology and Christology. Thus in the Church there are those who have only mortal souls and who form an imitation sisterhood which stands over against the true brotherhood of the immortal ones. These false teachers, who follow the "Father of their error," are blind and deaf in that they are only able to recognize material reality. They are unaware that the one who died on the cross was only the physical Jesus and not the spiritual, living Christ. These blind Christians praise Christ in a *apokatastasis* (74:9) which probably refers to their belief in the restoration of the physical body of Jesus. There is a similar polemic against carnal resurrection in *The Testimony of Truth* (NHC IX,*3*, pp. 34:26–37:5). Another Nag Hammadi tractate, *The Second Treatise of the Great Seth* (NHC VII,*3*) joins *Apoc. Pet.* in its denial that the heavenly Christ was crucified and in portraying Christian opponents as an imitation church.

The polemic of the tractate is directed against several groups of Christians. The references, however, are so general or enigmatic that it is impossible to identify them with positions known from Patristic sources. The main opponents appear to be the bishops and deacons of the orthodox church (79:5f.). In spite of his heretical Christology, the author does not appear to speak from a sectarian viewpoint. He acts more as a champion of the "little ones" who are temporarily dominated by the counterfeit leaders, but who will eventually reject their rule (80:8–29).

As in the case of most other gnostic writings, it has not been possible to assign *Apoc. Pet.* to any of the sects described by the heresiologists. Most likely we are dealing with an idiosyncratic text and not with sectarian teaching. It is quite unnecessary to see *Apoc. Pet.* as a representative of a pro-Petrine form of Gnosticism. The figure of Peter was simply taken from the canonical literature which the author knew and accepted. On the basis of the late 4th century date of Codex VII and the nature of the polemic in *Apoc. Pet.*, one would guess that the Greek original was written not earlier than the 3d century and possibly as late the early 4th. Nothing in the tractate betrays the identity and provenance of the author.

———

A. Introduction

1 Peter is a letter of encouragement and exhortation written in the name of the apostle Peter during the latter third of the 1st century C.E. to Christian communities scattered throughout Asia Minor suffering as an oppressed minority in an alien society. Its eloquent articulation of the meaning of Christ's death and resurrection for Christian life in society, its rich use of common Christian tradition, its lofty expression of the divinely conferred dignity and responsibility of the elect and holy people of God, its courageous summons to brotherly solidarity and hope in the face of social hostility, and its moving pastoral tone gained for the letter rapid recognition in the early Church and an undisputed place in the biblical canon. Though figuring prominently in subsequent centuries of Christian theology and worship, questions raised by modern scholars regarding virtually all features of its composition, setting, and aim have made it a continuing "storm-centre of New Testament studies" (Neill 1964: 343).

B. Ancient Reception and Modern Reassessment

External attestation of 1 Peter was early and widespread. 2 Pet 3:1 may be among the earliest witnesses to its existence, though the precise letter implied is by no means certain. Numerous certain echoes of the

letter, however, are contained in *1 Clement* (Lohse, in Talbert 1986: 53–55), Polycarp's letter to the Philippians (Bigg *Epistles of St. Peter and St. Jude*[2] ICC) and Justin Martyr (Bigg *Peter and Jude* ICC, 10). Irenaeus (*Haer.* 4.9.2; 16.5; 5.7.2) was the first to cite 1 Peter by name, followed by Tertullian (*Scorp.* 12), and Clement of Alexandria *(Str., Paed., Hypotyp.).* Known in Rome by the end of the first century *(1 Clement)* and recognized in both East and West in succeeding centuries, the letter was ranked by Eusebius in the fourth century among those canonical writings about which there was universal agreement (*Hist. Eccl.* 3.25.2). "There is no book in the New Testament which has earlier, better, or stronger attestation" (Bigg *Peter and Jude*[2] ICC, 7).

Centuries later in the Reformation era, it was 1 Peter along with the gospel of John and Paul's letter to the Romans, which Luther singled out as "the true kernel and marrow" of all the NT books. "For in them you … find depicted in masterly fashion how faith in Christ overcomes sin, death, and hell, and gives life, righteousness, and salvation" (*Prefaces to the New Testament,* 1522).

Such earlier enthusiasm has waned considerably since the advent of modern biblical criticism. Preoccupation with the Gospels and the historical Jesus, Paul, and supposed Petrine-Pauline polarities in the early Church has tended to reduce 1 Peter and other neglected NT writings to the status of exegetical step-children. Often arbitrarily assigned to the Pauline orbit of early Christianity, 1 Peter has been assessed as an inferior product of a "Paulinist," a dim and deficient reflection of the Pauline legacy. Within recent decades, however, the tide has begun to change. Studies of its source and redaction, specific passages with long histories of theological importance (2:4–10: Elliott 1966 and 1976: 250; 2:21–25: Osborne 1983; Elliott 1985; 3:18–4:6: Reicke 1946; Dalton 1989; Vogels 1976), and distinctive social ethic, have led to a renewed appreciation of this letter's witness to the struggle of the early Christian movement to maintain its mission and cohesion in the face of vigorous social opposition. Goppelt (*Der erste Petrusbrief* MeyerK, 179) is not alone in the judgment that "the First Epistle of Peter was the NT document that most vigorously united the witness of the word with the witness of Christian presence in society." (For research trends and literature since Reicke's 1964 AB commentary, see Beare 1970: 212–27; Schelkle *Petrusbriefe/Judasbrief* HKNT 13: 249–55; Elliott 1976, 1981; Goppelt *Petrusbrief* MeyerK; Brox 1978; Cothenet 1980; Sylva 1986. For an earlier survey, see Martin 1962.)

C. Literary Genre and Integrity

1 Peter bears all the essential characteristics of a conventional Greek letter. It opens with an epistolary salutation including the name of the chief sender, the apostle Peter (on Peter in the early Church see Cullmann 1958; O'Connor 1969; Brown et al. 1973), a description of the "elect" addressees and their location, and a greeting (1:1–2). Following the communication proper (1:3–5:11), it concludes with a commendation of its probable bearer, Silvanus, and the personal greetings of the co-senders, including Mark and an unnamed sister in the faith (5:12–14). The mention of specific names with only minimal introductory detail ("Peter, apostle of Jesus Christ," 1:1, cf. 5:1; "Silvanus, faithful brother," "Mark, my son," 5:12, 13) implies that the senders were known to the addressees and that the former counted on this personal familiarity to underscore the common bonds of experience and faith of which they wrote.

In contrast to the letters of Paul, 1 Peter was addressed to a much wider audience which was located not in a single city but throughout several Roman provinces of Asia Minor (1:1; cf. Jas 1:1). For this reason it is included among the "general" or "catholic" epistles of the NT (James, 1–2 Peter, 1–3 John, Jude) although it nevertheless remains a particular message for a particular audience facing a particular set of circumstances. Included in the address were two large provinces (Bithynia-Pontus and Cappodocia) with no record of Pauline activity. Thus 1 Peter was not directed to an exclusively "Pauline" mission area. The interior of the territory circumscribed in 1:1, moreover, was agricultural and grazing land, a predominantly rural and less urbanized area quite distinct from the urban centers which attracted Paul (Puig Tarrech 1980; Elliott 1981: 59–65). The size of the total area addressed, moreover, presupposes a substantial advance of the Christian mission beyond the limits reached by Paul. This strongly suggests that 1 Peter was written decades after the Pauline mission to communities some of which had little if any contact with Paul.

Although the *final* and present form of 1 Peter is that of a letter, its *original* components have been the subject of sustained debate (surveyed by Martin 1962; Dalton 1989: 62–71; Elliott 1966: 11–13; Kelly *Peter and Jude* HNTC, 15–20; Goppelt *Petrusbrief* MeyerK, 37–40). Beginning with the influential study of the German scholar Richard Perdelwitz in 1911, some commentators have suspected hints of the letter's composite character. Claiming a break in thought between 4:11 (doxology) and 4:12 (new address) and a shift in situation from potential (1:3–4:11) to actual (4:12–5:11) suffering, as well as a distinction between the "hortatory" nature of the former section with its focus on baptism and the "epistolary" character of the latter, these scholars have hypothesized that 1:3–4:11 originally constituted a "baptismal homily or discourse" addressed to newly baptized converts. This sermon was subsequently incorporated into a letter (1:1–2, 4:12–5:14) intended as a message of consolation for these converts when the suffering anticipated in the sermon had become a reality (Reicke *James, Peter, and Jude* AB; Beare 1970; and the scholars listed in Kümmel 1975: 419–20). Further elaborations of the composite theory and the assumed cultic setting of 1 Peter propose that the document consisted mainly of a baptismal liturgy (Windisch and Preisker *Katholischen Briefe* HNT, 156–61) or even the celebrant's part of a baptismal eucharist occurring on the Paschal vigil of Easter eve (Cross 1954).

On the whole, such theories based on the purported composite character of 1 Peter must be judged more imaginative than cogent. Externally, there is no manuscript evidence of 1 Peter in any other than in its present form; internally, the consistency and coherence of the letter demonstrate its epistolary integrity. In ch. 4, vv 11 and 12 mark not a sudden break but rather a transition in the line of thought, similar to the transition at 2:10/11. The actual suffering of the readers is presumed throughout the letter (1:6; 2:18–20; 3:9, 13–4:6, 12–19; 5:7–10). The frequent use of the verb *paschein* ("suffer," 12x) appears prompted not by liturgical recollection during the paschal *(pascha)* vigil but by the social experience of the readers. Mention of baptism (3:21) and its related imagery (rebirth, 1:3, 23; 2:2; sanctification, 1:2, 15–16, 22; 2:5, 9; 3:5, 15; Exodus and redemption, 1:13, 18–19) and exhortation (1:14–16, 22–23; 2:1–3; 4:1) indicates the use of common Christian liturgical, catechetical and hortatory material, but provides no clear evidence that the document itself or any segment thereof was a baptismal homily or liturgy. Moreover, comparable contemporary examples of Christian homilies or liturgies embodied in letters are completely lacking. Accordingly, the theory that 1 Peter is the result of the combination of independently composed parts is both improbable and unnecessary. The consistency and coherence of its language, style, arrangement and line of argumentation indicate that 1 Peter was, in its origin, an integral letter (Selwyn 1947; van Unnik *IDB* 3: 758–66; Dalton 1989; Kelly *Peter/Jude* HNTC; Goppelt *Petrusbrief;* Elliott *James, 1–2 Peter, Jude* ACNT; Shimada 1985; Brox *Erste Petrusbrief* EKKNT^2).

D. Literary Relations and Traditional Sources

Relative to its length, 1 Peter has more affinities to more NT writings than any other NT document. Its apocalyptic perspective on the Christian social situation and the imminence of final divine judgment, its christological focus on suffering and its vindication, its stress on the distinctive corporate identity and responsibility conferred by baptismal conversion, its image of the Christian community as household of God, and the content of its moral exhortation link 1 Peter with a majority of the NT writings.

1. NT Literary Affinities. Particularly noteworthy are 1 Peter's affinities with Romans, Ephesians, the Pastorals, James, Hebrews, the Synoptic Gospels, and Acts (Forster's full listing [1913] is more useful than his analysis). In regard to the *Pauline and Deutero-Pauline writings,* compare 1 Pet 1:14–16 (Rom 12:2); 1:21 (Rom 4:24); 1:22, 3:8–9 (Rom 12:9–19); 2:4–10 (Rom 9:25, 32–33); 2:5 (Rom 12:1); 2:13–17 (Rom 13:1–7); 2:21 (Rom 4:12); 3:22 (Rom 8:34); 4:1 (Rom 6:7); 4:7–11, 14–16 (Rom 12:3–8, 13:8–10); 4:12–13, 5:1 (Rom 8:17); 1 Pet 1:3–12 (Eph 1:3–14, 3:2–6; cf. 2 Cor 1:3–11); 1:14–18, 4:2–3 (Eph 4:17–18, 5:8); 1:20 (Eph 1:4); 2:1 (Eph 4:25, 31); 2:4–6 (Eph 2:20–21); 3:1 (Eph 5:22); 3:22 (Eph 1:20–21); 5:8–9 (Eph 6:11–13); 1 Pet 1:3–5 (Titus 3:4–7); 2:1 (Titus 3:3); 2:9 (Titus 2:14); 2:13–3:7, 5:1–5 (1 Tim 2:8–15, 6:1–2; Titus 2:1–10, 3:1–2; cf. Eph 5:22–6:9, Col 3:18–4:1).

Beyond the Paulines, similarities with *James* include 1 Pet 1:1 (Jas 1:1); 1:6–7 (Jas 1:2–3. cf. Wis 3:5–6); 1:23–2:2 (Jas 1:18–22); 1 Pet 5:5 (Jas 4:6); 1 Pet 5:8–9 (Jas 4:7) and the common OT citations of Isa 40:6–8 (1 Pet 1:24–25; Jas 1:10–11), Prov 10:12 (1 Pet 4:8; Jas 5:20), and Prov 3:34 (1 Pet 5:5; Jas 4:6).

Affinities with *Hebrews* include 1 Pet 1:1, 2:11 (Heb 11:13); 1:2 (Heb 12:24); 1:23(4:12); 2:24 (Heb 10:10); 2:25, 5:4 (Heb 13:20); 3:9 (Heb 12:17); 3:18 (Heb 9:28); 4:14 (13:13) and the themes of social alienation and solidarity with the suffering of Jesus Christ.

Links with *Mark and the Synoptic tradition* include 1 Pet 2:4–8 (Mark 12:1–12 par.); 2:18–3:7, 5:2–5 (Mark 10:2–45 par. and domestic instruction for the household of God [cf. 1 Pet 2:5, 4:17 and Mark 3:20–35, 13:33–37 par.]); 1 Pet 1:19–21, 2:21–25, 3:18 (Mark 14–16 par.); 1 Pet 4:13 (Mark 13:9–13 par.); and 1 Pet 5:2–5 (Mark 10:35–45 par.). Affinities with specific *dominical sayings* include 1 Pet 1:10–12 (Matt 13:17; Luke 24:26); 1:13 (Luke 12:35); 1:17 (Matt 6:9; Luke 11:2); 2:12 (Matt 5:16); 2:19–20 (Luke 6:27–36); 3:9, 14; 4:5 (Matt 12:36); 4:13–14 (Matt 5:10–11, 39; Luke 6:22–23, 28); 5:6 (Luke 14:11); 5:7 (Matt 6:25–27).

From such similarities, earlier scholars concluded that 1 Peter manifested direct literary dependence upon much of the NT or at least upon the writings of Paul (e.g. the representative positions of Forster [1913] and Beare [1970]). More recent form-critical and traditional-critical analysis of the NT and 1 Peter in particular, however, have made it evident that similarities between 1 Peter and other Christian writings were the result not of literary dependency but of the common use of a wide stream of oral and written tradition (Selwyn 1947: 363–466; Lohse 1954; Kelly *Peter and Jude* HNTC; Best *1 Peter* NCBC; Elliott 1976; Goppelt *Petrusbrief* MeyerK; Brox 1978; *Petrusbrief* EKKNT^2; Cothenet 1980). 1 Peter has been aptly labeled an "Epitre de la Tradition" (Spicq *Les épîtres de Saint Pierre* SB, 15).

2. The Influence and Use of Common Tradition. The themes, images, and formulations of the letter reflect the influence of a broad range of Jewish, Judaeo-Christian and Hellenistic tradition. From the Greek OT (LXX) use was made of no less than twenty-four texts or combinations of texts. Linking the eschatological community with the history of God's covenant people, this material served to stress the social estrangement and oppression of God's people as resident aliens in diaspora (1:1, 17–18; 2:11; 3:6 [Gen 23:4, cf. Gen 12:1–20, 20:1–18; Isa 52:3, 5]; 3:10–12 [Ps 33(34)]; 4:14 [Isa 11:2]; 5:8–9, 13 [Jeremiah 50:51]); their election and holiness (1:15–16 [Lev 19:2]; 2:5, 9 [Exod 19:6; Isa 43:20; Hos 1:6, 9; 2:1, 3, 25]); the rejection, suffering, and exaltation of the Messiah-Servant (2:4–8 [Isa 8:14, 28:16; Ps 117(118):22]; 2:22–24 [Isa 53:4, 6, 9]); divine redemption of the righteous and oppressed (1:13 [Exod 12:11]; 1:17–19, cf. 1:2 [Exod 12–15; Isa 52:3, 5]; examples of Sarah, 3:5–6, and Noah, 3:20); fear of God rather than man (2:17 [Prov 24:21]; 3:6 [Prov 3:25]; 3:14–15 [Isa 8:12–13]); moral conduct (3:10–12 [Ps 33(34):13–17]; 4:8 [Prov 10:12]); the imminence of divine judgment (2:12 [Isa 10:3]; 4:17 [Ezek 9:6]; 4:18 [Prov 11:31 LXX]); and God's nurture (2:3 [Ps 33(34):9]) and exaltation of the humble (5:5 [Prov 3:34 LXX]; 5:7 [Ps 54(55):23]).

Though supplying no direct sources for 1 Peter, *1 Enoch* (6–16, 65–67, 106–8) illuminates the worldview behind 3:18–22 (Dalton 1989: 163–76); the Qumran writings reveal similarities in thought but differences in strategy (Goppelt *Petrusbrief* MeyerK *passim*); and works of Philo show similar expositions of the Exod 19:6 tradition (Elliott 1966: 96–101; 1981: 170–74) and similar appropriation of the Hellenistic household management tradition (Elliott 1981: 208–20).

The Christian tradition underlying 1 Peter, discernible from its contacts with other early Christian literature, is both parenetic and kerygmatic in character and Palestinian and Hellenistic in coloration (Lohse 1954). The *parenetic material,* comprising wisdom sayings on conduct (Psalms and Proverbs), Jewish-Hellenistic traditions (the domestic code in 2:13–3:7, 5:1–5; "virtues" in 3:8, 4:8–9, 5:5; "vices" in 2:1, 4:3, 15), and isolated sayings of the Lord (1:10–11, 13, 17; 2:12, 19–20; 3:9, 14; 4:13–14) was employed for the purpose of moral instruction and exhortation. The *kerygmatic material,* embodied in creedal or hymnic-like formulae (1:18–21, 2:21–25, 3:18–22; cf. 4:1), provided a christological basis for this exhortation (cf. also 1:3, 11; 2:4–10; 4:13; 5:4). Further traces of liturgical custom may be seen in the kiss of love (shared in the worship assembly, 5:14) and in the blessing (1:3) and doxology (5:10–11; cf. 4:11) with which the letter commences and concludes.

The liberal use of such a broad range of traditions served several significant ends. The socially estranged yet divinely elected company of believers was portrayed as the eschatological fulfillment of the covenant people of God. Suffering Christians were provided a rationale for endurance, hope, and God-

pleasing conduct through their solidarity with the rejected yet divinely vindicated Lord. And communities dispersed throughout Asia Minor were assured by distant fellow believers at "Babylon" of the breadth of the tradition which united the universal Christian brotherhood.

E. Style, Vocabulary, and Composition

1. Style. In 1 Peter this abundance of diverse tradition has been skillfully integrated in a composition consistent in style and coherent in theme. The letter was written in a polished Greek revealing numerous traces of literary refinement. The near-classical employment of the article and exact use of tenses is coupled with a more semitic appreciation of rhythm and parallelism (2:14, 22–23; 3:18; 4:6, 11; 5:2–3); the adept use of prepositions (1:2, 3–5, 21; 2:4; 3:18); and the effective rhetorical use of repetition, allied terms and contrasts (1:3–5, 7–8, 12, 14, 18–19, 23, 2:1, 4–10, 3:3–4, 13–17; 4:12–19; 5:2, 6–7). Evidence of the letter's predominantly hortatory tone includes some fifty-one imperatival constructions (including participles used as imperatives, 1:14; 2:18; 3:1, 7–9; 4:7–10), frequent use of the second person plural "you" (51 times), the parenetic "therefore" (2:1, 7; 4:1, 7; 5:1, 6; cf. 1:13), and the persistent thematic stress on behavior consistent with the will of God. The sequence of imperatives followed by supporting indicatives (2:18–20, 21–25; 3:3–4, 5; 3:13–17, 18–22; 4:12–16, 17–19; 5:7a, 7b; 8–9, 10) differs markedly from Paul who normally follows the reverse procedure.

2. Vocabulary. The Greek text of 1 Peter contains a total of 1,675 words and a vocabulary of 547 terms, sixty-one of which occur nowhere else in the NT. Several of these so-called *hapax legomena* express fundamental emphases of the letter: the Christian community as a "brotherhood" (*adelphotēs,* 2:17, 5:9; cf. 3:8 and 5:12) and covenant people of God (*hierateuma,* "body of priests" from the covenant formula of Exod 19:6 cited in 2:4, 9); "being (doing) good" (*agathopoios,* 2:14; *agathopoiia,* 4:19) over against "being (doing) evil" (*kakopoios,* 2:12, 14; 4:15) as characteristic of Christian conduct and holiness (Elliott 1966: 179–82). Further distinctive features include the frequent and refined use of the comparative particle "like/as" (*hōs,* 27x); the highest occurrence (12x) of *paschein* ("to suffer") in the NT; identification of the believer as "Christian" (*Christianos* [4:12], elsewhere only in Acts 11:26, 26:28), but no use of the terms *ekklēsia* ("church") or "body of Christ" as so frequently in Paul; and stress upon the believers as "elect/chosen" (1:1, 2:4–10, 5:13) "resident aliens and strangers" (1:1, 17; 2:11; cf. "Babylon," 5:13) which runs like a golden thread through the epistle.

3. Compositional Devices. Several types of compositional devices were employed to give the letter its structural and thematic coherence (Dalton 1989: 72–86; Combrink 1975; Talbert 1986: 141–51). (1) Many terms or images are repeated throughout the several sections of the letter ("elect/chosen," "call," "holy," "grace," "peace," "mercy," "believe," "hope," " (brotherly) love," "gospel/proclaim good news," "test/trial," "suffer," "rejoice," "exhort," "do (be) good versus evil"; and contrasts between righteous believers and unrighteous non-believers, "will of God" and "be subordinate," and images of Christian community such as "flock of God" or "household-family-brotherhood of God." (2) Parallel patterns of arrangement (main statement/negative/positive/conclusion) are evident in 1:13–16, 2:13–17, 3:8–9, 4:1–6; 2:18–21, 3:1–6, 13–17, 4:12–19; and 1:17–21, 22–25, 5:1–4. (3) Link-words are used to unite ideas or sources and effect continuity: "salvation" in 1:9/10 linking 1:6–9 with vv 10–12; "living stones[s] linking 2:4 and 5 and its different traditions (Elliott 1966); "evil (do evil, harm)" in 3:12/13 linking 3:10–12 and 13–17; " (be) humble" in 5:5/6 joining 5:1–5 and 6–11. (4) Chiastic arrangements have been observed (Combrink 1975 with varying degrees of cogency) in both smaller (1:10–12; 2:7, 17, 19–20; 3:19–22; 4:1–3, larger (1:3–12, 13–21[25]; 3:1–7; 4:1–6; 4:12–19; 5:12–14. (5) Some terms serve to mark the beginning ("exhort, beseech" in 2:11, 4:12, 5:12) or conclusion ("good news" in 1:12, 25; 4:6, 17) of subsections. (6) The device of inclusion (repetition of terms or motifs to signal the beginning and end of sections) was employed to integrate not only smaller units (1:13–21 ["hope"]; 1:3–2:10 ["mercy"] but also to unify and frame the letter as a whole. At both the outset and close of the letter the paradoxical relation of suffering and glory is stressed (1:6–8, 12; 5:10), peace is enjoined (1:1, 5:14), the grace of God (1:2) in which the believers are to stand fast (5:12) is given as a theme encompassing the entire letter (cf. 1:10, 13; 3:7; 4:10; 5:5), and the common social condition (diaspora, 1:1; Babylon, 5:13), familial unity (1:1, 5:12–14), and divine election (1:1, 5:13) of both senders and recipients of the letter are emphasized.

F. The Transmitted Greek Text

The Greek text of 1 Peter is relatively well preserved. The complete text is contained in Bodmer Papyrus 72 (3d century), nine chief uncials, and more than 500 minuscules. The history of its textual transmission involves no major problems, and only variants of minor significance (Beare 1970: 1–14; Schelkle *Petrusbrief,* 16–17; Goppelt *Petrusbrief,* 72–74).

G. Structure

The foregoing evidence of its genre, thematic emphases and compositional elements indicates the structure of the letter and its general line of argument. Framed by an epistolary salutation (1:1–2) and conclusion (5:12–14), the body of the letter combines an affirmation of the distinctive communal identity and divinely conferred dignity of Christian believers (1:3–2:10) with exhortation concerning their appropriate collective behavior within a hostile society (2:11–5:11). Underlying this union of affirmation and exhortation was the basic tension between the social condition of the suffering Christians and their divine vocation, their contrast to nonbelievers and their communion in Christ, their "homelessness" in society and their new home in the family of God.

H. The Addressees and Their Situation

Information concerning the addressees, their geographical location, social and religious features, and their problematic standing in society provides important indications of both the situation which prompted this letter and the strategy which shaped its response (Elliott 1981: 59–100).

1. Geographical Location. The geographical location of the addressees is indicated in 1:1: "… to the elect visiting strangers [and "resident aliens," 2:11] of the dispersion in Pontus, Galatia, Cappadocia, Asia, and Bithynia." These Roman provinces of Asia Minor (modern Turkey) were formerly independent territories which since 133 B.C.E. had gradually come under Roman control through bequest or annexation. Their total population of ca. 8.5 million included an estimated 1 million Jews and 80,000 Christians by the end of the 1st century C.E. Apart from Syria-Palestine, it was here in Asia Minor that the Christian movement made its earliest and most extensive advance. The sequence of provinces in 1:1 and the unusual separation of Bithynia and Pontus (a single unified province since 62 B.C.E.) are probable indications of the intended route of this circular letter, commencing in Pontus and concluding in Bithynia. Such a route would be compatible with a Western (Roman) origin of the letter and its emissary, arriving and departing by ship at the northern shores of Bithynia-Pontus.

2. Social and Ethnic Composition. In regard to the social composition of the audience, the letter specifically refers to free men (2:16), household slaves (2:18–20), wives with nonbelieving husbands (3:1–6), husbands with Christian wives (3:7), community leaders ("elders," 5:1–4) and recent converts ("younger persons" [in the faith], 5:5). Culturally and religiously, the audience belonged to a worldwide brotherhood (5:9) originating in a Jewish messianic sect which believed that the life, death and resurrection of Jesus as the Christ had ushered in the final age and the culmination of the history of God's chosen people (1:3–2:10). Forming a distinctive minority whose members were identified as "Christians" (4:16), this movement was engaged in a universal mission (2:12, 3:1–2) among the "gentiles" (nonbelievers including both Jews and pagans).

The audience comprised an ethnic mix of converts from both Judaism and paganism. Indicative of the former is the frequent use of the Jewish scriptures (see 3. above), reference to messianic tradition (2:4–8) and venerated Hebrew figures (prophets and their search for the Christ, 1:10–12; Sarah and Abraham, 3:5–6; Noah, 3:20), comparative allusion to key events in Jewish history (Abraham as resident alien, 2:11 [Gen 23:4]; Passover and Exodus of Israelite aliens, 1:13, 18–19; alien existence in the dispersion, 1:1, and Babylon, 5:13), and stress on the distinctive features of Israel's identity (holy, 1:14–16; 3:5; elect, 1:1; 2:4–10; 5:13) which now characterizes the believers in Christ. On the other hand, reference to an earlier ignorance of and alienation from God (1:14, 2:10) and the behavior and idolatry typical of gentiles (1:14, 18; 2:11; 4:2–4) which was to be renounced also points to many pagan converts among the readers.

3. Societal Status and Situation. The vulnerable social standing of the addressees and the conflict in which they were engaged was due to a combination of factors: their social status as "strangers and

resident aliens" and the exclusive form of their religious allegiance. This, in turn, set the stage for the hostility they encountered and the suffering this brought.

a. "Visiting Strangers and Resident Aliens." One of the most notable features of 1 Peter is the identification of its addressees by a pair of Greek terms best rendered as "visiting strangers" (*parepidēmoi,* 1:1, 2:11) and "resident aliens" (*paroikoi,* 2:11; cf. *paroikia,* 1:17). Translations such as "exiles," "pilgrims," or "sojourners" (e.g., KJV, RSV, JB, NAB), along with the unwarranted addition (e.g., NEB, TEV) of "on earth" in 1:17 (absent in the original Greek), distort the social and political connotations of these terms. They likewise have led to the equally unwarranted assumption that 1 Peter advocates a spiritual "pilgrimage on earth" for believers whose ultimate goal is a "heavenly home." Such a theme underlies the cosmic theology of the letter to the Hebrews but hardly the perspective of 1 Peter with its focus on societal conflict and social rather than cosmic contrasts.

In the Greco-Roman world of 1 Peter, as in the Greek OT, *paroikoi* and *parepidēmoi* were regarded and treated as permanent or temporary "strangers in a strange land" (Elliott 1981: 24–37). Literally, *paroikoi* were foreigners who lived "alongside" *(par-)* the "home" *(oikos)* of others. This condition of geographical and social displacement (*paroikia* and related terms) was the constant and typical lot of God's ancient people. As Abraham was a resident alien in Egypt (Gen 12:10) and Canaan (Gen 23:4, 26:3; Heb 11:8–9), so Moses in the land of Midian (Exod 2:22; Acts 7:29), Israel in Egypt (Gen 15:13; Acts 7:6) living in a foreign "house of bondage" (Exod 20:2; Deut 5:6), Judah in Babylon (1 Esdr 5:7), and later the Jewish settlement in Ptolemaic Egypt (*3 Macc.* 7:19). Inscriptional evidence from Greek secular sources indicates that resident aliens formed a specific social stratum of local populaces (ranked below full citizens and above complete foreigners [*xenoi*]) and slaves. Their cooperation or noncooperation with the native population could result in their moving up or down the social ladder. Legally, such aliens were restricted in regard to whom they could marry, the holding of land and succession of property, voting, and participation in certain associations and were subjected to higher taxes and several forms of civil punishment. Set apart from their host society by their lack of local roots, their ethnic origin, language, culture, and political or religious loyalties, such strangers were commonly viewed as threats to established order and native well-being. Constant exposure to local fear and suspicion, ignorant slander, discrimination and manipulation was the regular lot of these social outsiders.

In Asia Minor, resident aliens were found among both the urban and rural populations, working as artisans, traders and dispossessed farmers (Magie 1950: 639–40, 1503). Because of their marginal status as outsiders, they frequently joined clubs or cults which offered the promise of social acceptance, mutual support, or even salvation. As the Christian movement expanded beyond Palestine and throughout the Jewish diaspora, it moved along the trade routes of the empire. Spread by itinerant artisans and traders, it enlisted no small number of converts who were strangers and resident aliens in their local communities. As the movement grew, it experienced increased resistance from local populations of Jews and gentiles alike. By the time of 1 Peter, the precarious social condition of the movement as a whole had begun to mirror that of many of its individual adherents. Strangers who had embraced the Christian faith for the communion, hope, and salvation it promised were discovering that membership in this sect provided no escape from the prejudices and animosities of the larger society. To the contrary, membership in this strange and exclusive movement from the East resulted only in an increase in social friction and suspicion of strangers now banded together in a missionizing movement. As Israel's history indicated, social alienation and oppression had been the regular experience of God's chosen and estranged people. From this history 1 Peter drew on models and memories of dispersion and gathering, suffering and deliverance, societal rejection and divine acceptance so that continuity with the past, along with faith in the present, might serve as an effective basis for hope in the future.

b. Local Hostility, Not Official Roman Persecution. An attempt to link 1 Peter and the Christian suffering it describes to a general persecution of Christianity initiated by Rome (Beare 1970: 28–38; Windisch-Preisker *Katholischen Briefe* HNT, 76–77) has justifiably been rejected by the majority of scholars. 1 Peter speaks of Christians suffering "throughout the world" (5:9) but the first general imperial persecution of Christianity did not occur until 251 C.E. under Decius. Earlier anti-Christian actions under

Nero in 64–65 (Tac. *Annals* 15:44; Suet. *Ner.* 16:2), possibly Domitian in 93–96 (Suet. *Dom.* 10–17), and Trajan (Pliny *Ep.* 10:96–97) were limited in scope to Rome or Pontus and *were* the product of sporadic local incidents rather than of universal legal proscription. Nor is a state persecution envisioned where respect for the emperor and civil law is enjoined (2:13–17) and a positive outcome of good behavior is anticipated (2:11–12; 3:13–17). The nature of the hostility encountered—verbal abuse and reproach (2:12, 3:16, 4:14), curiosity concerning Christian hope (3:15), anger at the severance of former social ties (4:4)—likewise makes the theory of a state-sponsored persecution both improbable and unnecessary. Details of the situation point rather to social polarization and conflict which was local, disorganized and unofficial in character (Selwyn 1947; van Unnik *IDB* 3: 758–66; Reicke *James, Peter, Jude* AB; Kelly *Peter* HNTC; Best *1 Peter* NCBC; Goppelt *Petrusbrief* MeyerK; Elliott 1981; Brox *Petrusbrief*^{2} EKKNT). As strangers and aliens belonging to a novel cult and exclusive minority actively seeking adherents, these Christians were the victims of the harassment and discrimination regularly experienced by those suspected of posing a disruptive threat to local peace and prosperity.

Branded by pagans with the opprobrious label "Christians" (literally "Christ-lackeys"), and reproached for their allegiance to Christ (4:14, 16) they were called to account for their curious hope (3:15), reviled (3:9) and unjustly slandered as immoral or criminal wrongdoers by the ignorant (2:12, 14–15; 3:13–17; 4:15). Subjected to unjust treatment (2:18–20) and fear (3:6, 14), they were also abused as a result of their termination of previous social associations and modes of behavior (4:3–4). Faced with grief, sorrow, and suffering (1:6; 2:19–20; 3:14, 17; 4:1, 12–19; 5:9–10), the addressees were in danger of doubting the benefits of their conversion, abandoning hope in God's mercy, and abdicating their proper responsibilities toward both the brotherhood and the society at large.

I. Strategy

The expressed aim of 1 Peter was to encourage its suffering readers to stand fast in the grace of God (5:12). Its literary, theological, and social strategy was to set the issue of Christian suffering within the context of the tension between the readers' social estrangement and their divine vocation, their "homelessness" in society and their "at-homeness" in the family of God. To counteract the divisive and erosive effect of innocent suffering upon the confidence, cohesion, and commitment of the brotherhood and its mission, the letter reassures its readers of their distinctive communal identity as God's favored family, encourages winsome conduct among the gentiles along with love within the brotherhood, and urges continued trust in God who vindicates the faithful who share the suffering and glory of their exalted Lord.

1. Dignity and Status Conferred by God. At the outset of the letter (1:1–2:10), a rich array of terms, images, and contrasts serve to underscore the dignity and distinctiveness of the community to which the readers belonged. Elected by God (1:1), sanctified by the Spirit (1:2; cf. 1:22), redeemed by Christ's blood (1:18–19), believers in Jesus Christ, God's elect agent of salvation, belong to the elect and holy covenant people of God, the household in which the Spirit resides (2:4–10; Elliott 1966). In contrast to Jews (1:4, 10–12), pagans (1:18), and all who reject Jesus as the Christ (2:4–8), those believing the enduring good news (1:23–25) have a permanent inheritance, a sure salvation, and a firm basis for hope (1:3–5, 13, 21). Reborn by God the Father (1:3, 23; 2:2), believers as his obedient children are not to conform to the passion of their former ignorance but to the holiness of the Wholly Other in the time of their alien residence (1:14–17). Through sincere love of brothers and sisters in the faith and avoidance of divisive behavior, they are to maintain the solidarity of the brotherhood (1:22; 2:1; 3:8; 4:8).

2. Demarcation from Non-Christian Outsiders. As conversion confers new dignity and status before God, so it also demarcates believers from unbelievers and the old way of life from the new. In addition to the distinctive union that Christians are said to have with God and Jesus Christ, this point is further accentuated by the numerous contrasts drawn throughout the letter between past and present (1:14–15, 18; 2:10, 25; 4:2–3), impermanence and permanence (1:4–5, 23–25; 5:4), nonbelievers and the faithful (2:7–10), sinners and the righteous (2:24; 3:12, 18; 4:18), human desires and the will of God (2:11, 15; 4:1–3), abuse and innocent suffering (2:11–12, 18–25; 3:13–17; 4:4, 12–19; 5:8–9), devouring devil and brotherhood united with God (5:8–9). As children of God's family, Christians were indeed different and

should remain so. Within a society governed by the self-interests of human passion, futile traditions, hopelessness, and fear, Christians formed a distinctive community enlivened by mercy, faith, hope, and love.

3. Distinctive Holy Behavior. This difference, however, did not imply a Christian disdain of all societal norms and values. Although 1 Peter was hardly written to warn against Christian involvement in anti-imperial subversive activity (as argued by Reicke *James, Peter, and Jude* AB, xv–xxix and refuted by Sleeper 1968), it did stress the importance which Christians, like gentiles, attached to good conduct in both civic and domestic spheres (2:12, 14, 15, 20; 3:6, 10–12, 13–17; 4:15, 19). The ultimate norm of Christian behavior, however, was fear of God alone (1:17; 2:17, 18; 3:2, 15) and obedience to his will as exemplified by Jesus Christ (1:2, 14–17; 2:15, 18–25; 3:17; 4:2, 19). Where no conflict existed between conformity to God's will and submission to human authorities established by God (2:13), subordination was appropriate (2:13–3:7, 5:1–5) "because of the Lord" (2:13, 21–25; 3:18–22; 5:4). Respect for public law and domestic harmony was as typical of Christians as it was of gentiles. In the face of ignorant popular suspicion to the contrary, believers were urged to set the record straight.

On the other hand, the readers were reminded that they were ultimately servants of God (2:16), co-servants with the Christ (2:21–25), whose holy conduct was aimed also at gentile conversion and the glorification of God (2:11–12, 3:1–2, 4:11, 5:10). The letter's promotion of good conduct and domestic order is insufficient reason for concluding that its intention was to advocate Christian acculturation to Roman values (Elliott 1981; 1986 against Balch 1981; Stambaugh and Balch 1986). Where Christian adherence to gentile values, customs, and moral standards would obscure or contradict the distinctive features of Christian community and allegiance, there believers were to desist (1:14–19; 2:1, 11; 4:1–4), resist (5:8–9) and stand firm in God's grace (5:12). Respect was due the emperor, as to all men; but fear (awe and reverence) was to be reserved for God alone, and love, to members of the brotherhood (2:17). Retaliation sanctioned in society would be inconsistent with the solidarity believers have with their non-retaliating Lord (2:18–25; 3:9, 15–16). Exploitation of role and rank would put the lie to the humility, love, and mutual service owed one another by all believers (1:22; 2:17; 3:8; 4:8–9; 5:2–5) as "good household stewards of God's varied grace" (4:10–11). Continued association with nonbelievers and their selfish desires and futile ways (1:18; 2:11; 4:1–4) would deny the reality of their conversion, their holy union with God and Jesus Christ, and their incorporation into a new brotherhood of faith and hope (1:3–2:10). Thus the behavior encouraged in 1 Peter, while superficially consistent with some conventional standards, is ultimately and distinctively grounded in God's will for his holy children and their solidarity with Jesus Christ, God's suffering servant.

4. Solidarity in Suffering. Stress on the readers' special union with God and Jesus Christ likewise figures prominantly in the letter's discussion of their suffering. This innocent suffering is seen as a key symptom of their paradoxical situation: their estrangement in society and their union with God. In startling contrast to societal attitudes, suffering is described not as a bane but as a blessing, evidence of divine favor and sign of Christian solidarity. In continuity with earlier Jewish and Christian tradition emphasizing "joy in suffering" (Selwyn 1947: 439–58), 1 Peter regards the suffering of God's people as a sign of the end time, the day of judgment and salvation (1:6–9; 4:5–7, 17–19). Suffering, moreover, is an occasion for the divine "testing" of the purity and constancy of faith (1:6–7; 4:12). Suffering for doing good in obedience to God's will has as its reward "praise, glory, and honor" (1:7; 2:7; 5:10). Through such suffering, believers are united with their suffering Lord; his suffering serves as the model and means for theirs; and his glorification, as the basis for their endurance and hope (2:18–25; 3:13–4:6; 4:12–19; 5:1; Osborne 1983; Elliott 1985; Richard 1986). Righteous suffering is therefore a "blessing" and an opportunity to "keep the Christ (as) Lord holy in your hearts" (3:14–15). It is a sure sign of the presence of the "glory and the Spirit of God" (4:13–14) and the occasion in which those who bear Christ's name "give glory to God" (4:16). Through innocent suffering believers are united not only with God and the Christ but also with the worldwide Christian brotherhood (5:9). Therefore the suffering which the readers endure is not a reason for grief or despair but for "inexpressible and exalted joy" (1:8; cf. 4:13).

5. Christian Community as the Household/Family of God. The strategy of 1 Peter was to mobilize the resources of faith and concerted action which would enable the Christian addressees to stand firm and persevere as the community of God in a society from which they are estranged. Basic to this strategy, as the stress upon solidarity in suffering illustrates, was an emphasis upon the distinctive collective identity and responsibility of the believers. Although the term "church" *(ekklēsia)* is never employed, in the broader theological sense 1 Peter is one of the most church-oriented compositions in the NT. Through faith, believers are one "in Christ" (3:16; 5:10, 14). Their innocent suffering unites them with the suffering Christ and suffering Christians everywhere (2:18–25; 3:13–4:6; 4:12–16; 5:1, 8–9). Christians together constitute the "flock of God" (5:2). Once scattered, this flock is now being saved and gathered by its "chief shepherd" and guardian, Jesus Christ (5:4; 2:25). Within this one flock, Christian leaders ("elders"), as "under-shepherds," are to set the proper example for the people to follow (5:2–3). In 2:9–10, the culmination of a grand description of the people of God (1:3–2:10), a series of traditional communal epithets is used to depict the eschatological community of faith. This community is an "elect race, a royal residence [of God the King], a holy body of priests, God's own special people." Once the addressees were, like Hosea's illegitimate offspring, "Not-my-people" and "Without-mercy." Through God's mercy (1:3), however, they, like Hosea's contemporaries, have become the "People-of-God" and the "Ones-Shown-Mercy" (2:10; cf. Hosea 1:6; 2:1, 23). Those once alienated from God are now the very children of God (1:14).

Among these various images of community, it is the identification and exhortation of Christians as members of the *household* or *family of God* which dominates the letter from beginning to end. In two key passages of the letter, 2:4–10 and 4:12–19, the community is explicitly called the "household *(oikos)* of the Spirit" (2:5) or the "household *(oikos)* of God" (4:17). In the former passage, this phrase interprets the covenantal epithet *basileion* (Exod 19:6) cited in 2:9, and describes the eschatological community as the "house (hold) in which God's Spirit dwells" (Elliott 1981: 167–69). In the latter passage, "house (hold) of God" likewise identifies the community united with Christ and upon which God's Spirit rests. Consistent with this household metaphor are further instances of *oikos*-related terminology. The readers also are assured that they are being "built up" (*oikodomeisthe,* 2:5) by God and at the letter's conclusion this metaphor of construction and confirmation is repeated (5:10). In the household instruction of 2:18–3:7, the servant-slaves are addressed not with the conventional term for slaves (*douloi,* Eph 6:5; Col 3:22; Titus 2:9) but with the word for "household servants" (*oiketai,* 2:18). In its only NT occurrence, *synoikein* is used to exhort Christian husbands to "live together" with their wives in the knowledge that both spouses are co-heirs of the grace of life (3:7). Similarly, all the addressees are encouraged to practice hospitality, love, and mutual service as "household stewards *(oikonomoi)* of God's varied grace" (4:7–11).

In conjunction with this image of household/family, the process of salvation and conversion is pictured as a "rebirth" (1:3, 23; 2:2) initiated by God, the father of a new human family (1:2, 3, 17). Those who have been reborn have become his "children" (1:14; 2:2) subject to his will and protected by his power and care (1:14–17; 4:19; 5:6–7, 10). This process of "infamilialization" transforms believers into brothers and sisters. The senders (5:12, 13) and recipients of the letter belong to a "brotherhood" (2:17; 5:9)—the only NT occurrence of this term—whose cohesion is maintained through the practice of "brotherly love" (1:22; 3:8; 4:8) and expressed through the familial "kiss of love" (5:14). The roles, relations, and mutual responsibilities within this community are therefore appropriately defined according to the pattern of household instruction (2:13–3:9; 5:1–5). And the service owed by Christians to one other is compared to that of humble household servants (*diakonein,* 4:10, 11) and stewards (*oikonomoi,* 4:10).

The depiction of the universal believing community as the household or family of God functions as a comprehensive metaphor for coordinating the distinctive features of communal Christian identity and affirming the relation between identity and ethos. In addition to its literary utility, the image of the household constitutes a symbol of Christian community closely related to the history of the Christian mission. Most importantly, the psychological, social, and religious connotations of "house and home" make this image of community a compelling response to the problem of social estrangement.

It was the conversion of households which served as the focus and springboard of the nascent Christian mission (Luke 19:9; John 4:46–53; Acts 10–11; 16:15, 31–34; 18:8; 1 Cor 1:14, 16; 16:15). Households provided the base of Christian operations, the places of worship and centers for support and mutual aid (Acts 2:26; 5:42; 9:10–19; 12:12; Rom 16:1–23; 1 Cor 16:15; Col 4:15; Phlm 2). Household hospitality (1 Pet 4:9) facilitated the mobility of missionaries and thus the rapid expansion of the movement. The unity of this movement of household networks was expressed in several instances of greetings from "our house to yours" (Rom 16:5; 1 Cor 16:19; Col 4:15; Phlm 2; 1 Pet 5:12–14). It was a logical extension of this social reality when the Christian community as a whole was then described as the "household of God" (Gal 6:10; Eph 2:19–21; 1 Tim 3:5, 15; Heb 3:1–6, 10:21; 1 Peter).

Throughout ancient society the household or family was considered the fundamental form and model of social, political, and religious organization. For Judaism and Christianity, the house of Abraham, of Jacob, of Israel, of David, and of the new household of Jesus (Mark 3:21–35 par.) reckoned prominently in the history of salvation. With its diverse connotations, the reality and symbol of "household-family-brotherhood" provided a pregnant and powerful metaphor for describing a community created and sustained by God as Father, King, and Provider.

Finally, with this symbolization of Christian community, the letter addresses most directly the situation of its recipients, their social condition and their divine vocation. In society Christians are indeed strangers and strangers they should remain, as signs of holiness and beacons of hope. Endurance of suffering and steadfastness in faith is possible because of their incorporation in the household of God. In the family of the faithful the homeless of society *(paroikoi)* have a home *(oikos)* with God. The church, according to 1 Peter, is a home for the homeless.

J. Date, Authorship, Place of Composition

1. Date. The ambiguous nature of the letter's internal evidence concerning its date, authorship, and place of composition requires a consideration of several interrelated literary, historical, and social factors. Both a time frame for the letter's composition and a place of origin is suggested by its close links (Forster 1913: 398–411, 424–42) to two letters of Roman provenance, Romans (ca. 57 C.E.) and *1 Clement* (ca. 96). The nature of the numerous thematic affinities among all three documents, while not indicating direct literary dependency, points to the existence and use of a body of tradition common to the Christian community at Rome (Lohse, in Talbert 1986: 53–55; Best *1 Peter* NCBC, 32–36, 64–65; Goppelt *Petrusbrief,* 345–55). As Romans contributed to the tradition of the Roman church upon which 1 Peter drew, so 1 Peter subsequently added traditions and themes which recur in *1 Clement.* Accordingly, 1 Peter was written sometime between the years 57 and 96.

Other features of the letter are consistent with this general time frame and help to reduce its limits. Since the suffering described in 1 Peter was not the result of imperial persecution, scholars convinced of its Petrine authorship assign the letter to the years preceding the great fire in Rome (64 C.E.) and Nero's subsequent anti-Christian campaign (Bigg *St. Peter and St. Jude*[2] ICC, 87; Selwyn 1947: 56–63; van Unnik *IDB* 3: 765; Reicke *James, Peter, and Jude* AB 71; Spicq *Épîtres Pierre* SB, 26; Kelly *Peter and Jude* HNTC, 30). Further factors, however, including indications of the letter's pseudonymity, indicate the likelihood of a later date of composition in the middle years of the Flavian period, ca. 73–92 (Elliott 1981: 84–87; Best *1 Peter* NCBC, 63–64; Goppelt, 64–65; Brox, 38–47).

The vast scope of the letter's address (four provinces comprising ca. 129,000 sq. mi. and two provinces not reached by Paul [Bithynia-Pontus and Cappadocia]) requires the allowance of sufficient time for the spread of Christianity in this area subsequent to the mission of Paul. Moreover, the sequence of provinces given in 1:1 may reflect not only the intended route of the letter but also the alteration of these provincial boundaries undertaken by Vespasian in 72 C.E. (Elliott 1981: 60). Distance from the Pauline period and the early 60s is also indicated by the growth and coalescence of diverse traditions reflected in 1 Peter and the shift from an internal Jewish debate over the Mosaic law to a struggle of believers now labeled as "Christians" with an alien and hostile society. An accompanying shift in political perspective from the positive view of Roman government expressed in Rom 13 to the neutral stance of 1 Peter (2:13–17) would be a consequence of Nero's pogrom against the Christians of Rome, including Peter (65–67 C.E.),

as viewed from the distance of a decade or more. Though no longer under imperial attack, Christians had learned a sobering lesson about esteeming Roman officials as "ministers of God" (Rom 13:6).

The figurative use of the term "Babylon" to signify the letter's place of origin (5:13) likewise indicates its post-70 date and composition at Rome. The lack of any trace of Petrine activity in the Mesopotamian city of Babylon, or in the Roman military outpost in Egypt also known as Babylon, makes it virtually certain that, in accord with later Jewish and Christian usage, "Babylon" referred figuratively to Rome, the city attested by the unanimous witness of the early church as the location of Peter's final ministry and martyrdom. Rome, like Babylon of old (Isa 13; 43:14; Jer 50–51; Dan 1–7), was seen as the seat of a godless empire which also had destroyed Jerusalem and its temple and now marked an important site of God's dispersed people. This designation of Rome as "Babylon," occurring only in literature composed after the fall of Jerusalem in 70 C.E. (*Sib. Or.* 5:143, 159; *2 Bar.* 11:1, 67:7, *4 Ezra* 3:1, 28, 31; Rev. 14:8, 16:19, 17:5, 18:2, 10, 21), constitutes further cogent evidence for the post-70 composition of 1 Peter.

On the other hand, a date of composition no later than the early 90s is also likely. By the time of Revelation (ca. 95) the situation of Christianity in Asia, one of the provinces also addressed in 1 Peter, had worsened. In contrast to the conditions and political perspective reflected in 1 Peter, many believers had suffered martyrs' deaths (Rev 2:13; 6:9–10; 16:6; 18:24; 19:2) and the attitude toward Rome had changed to a thoroughly negative one (chaps. 12–18). Likewise, in Pontus, another province addressed in 1 Peter, Christian defections had begun by the mid 90s (Pliny, *Ep.* 10.96) and in Rome Domitian's "reign of terror" (93–96) was underway. 1 Peter reflects none of these later developments; its situation rather presupposes an earlier Flavian period marked by a relative tranquility which encompassed imperial-Christian relations as well (Magie 1950: 566–92).

These various factors taken together make it likely that 1 Peter was written from Rome sometime during the years 73 to 92 C.E. Consistent with this period of the Church's situation and theological development are further features of the letter such as the rudimentary mode of organization (4:10–11) and presbyteral leadership (5:1–5); the emergence of the household as ecclesial model (Mark, Luke-Acts, Colossians, Ephesians, Hebrews); a "servant" christology (Mark, Luke-Acts) which was later abandoned; a christological motivation of moral conduct (contrast later appeals to apostolic authority in Jude, 2 Peter and Pastorals); absence of contention over gnosis and heresy; and a still lively apocalyptic eschatological orientation.

2. Authorship and Provenance: A Petrine Group in Rome. This date of composition rules out authorship by the apostle Peter who, according to the most reliable evidence (Cullmann 1958: 70–152; O'Connor 1969), suffered martyrdom in Rome ca. 65–67. The letter's refined literary style, rich, often rare, vocabulary not occurring elsewhere in the NT; and consistent citation of the Greek OT are also difficult to reconcile with the NT picture of Simon Peter as an unschooled (Acts 4:13) and Aramaic-speaking Galilean fisherman (Schrage *Katholischen Briefe* NTD, 62–64; Brox *Petrusbrief*[2] EKKNT 43–47). The hypothesis that 5:12 identifies Silvanus as Peter's secretary and co-author (Selwyn 1947: 9–17, 241; Reicke *James, Peter, Jude* AB, 69–71) lacks convincing proof (Beare 1970: 212–16). Even less is known of Silvanus and his literary ability than of Peter and the commendation of Silvanus as "a faithful brother" would then appear a deceptive form of self-praise. The Greek expression employed in 5:12 *(dia Silouanou ... egrapsa)* conventionally identifies the *emissary* through whom a letter is delivered (cf. *Ign. Rom.* 10:1; *Ign. Phild.* 11:2; *Ign. Smyrn.* 12:1; cf. Polyc. *Ep.* 7:3) and occurs also in Acts 15:23 to identify Silas/Silvanus and Judas Barsabbas as emissaries of the letter of the Jerusalem council to the believers at Antioch (15:22–34).

Additional information from Acts records not only the personal association of Peter and Silvanus/Silas in Jerusalem and their important role in the promotion of the Gentile mission (Acts 15 and Silvanus's subsequent activity with Paul, 15:40–18:22). It also indicates Jerusalem (Acts 12:12, 13:13) as the place where both Peter and Silvanus also had contact with Mark, probably the same person identified in 1 Pet 5:13 as "my [Peter's] son." The absence of further introductory information concerning Silvanus and Mark in 1 Peter suggests that they, like Peter, were known to the addressees by reputation, if not through personal contact. In all likelihood, therefore, the Silvanus and Mark of 1 Peter were the same persons

associated with Peter in Jerusalem, later co-workers with Paul (Acts 13:4–13; Col 4:10; Phlm 24; 2 Tim 4:11; 2 Cor 1:19; 1 Thess 1:1; 2 Thess 1:1), and eventually reunited with Peter in Rome.

All three of the persons expressly named in 1 Peter would thus constitute important figures through whom the Palestinian tradition of Jesus' words and the kerygma of his death and resurrection was transmitted from East to West. The explicit mention of these three names indicates that 1 Peter is the communication not so much of an individual as of a *group,* a circle once gathered around the apostle Peter and now writing in his name. Less important than the question of who actually wrote the letter is the fact that 1 Peter represents the witness of the apostle Peter, the personal networks of a brotherhood reaching from Jerusalem to Rome, and the rich tradition of the Roman Christian community (Lohse, in Talbert 1986: 53–55; Best, 32–36, 64–65; Goppelt, 37, 65–70, 347–49; Elliott 1981: 267–95). The letter was ascribed most naturally to this group's apostolic leader, Peter, one who in his own life and death bore witness to Christ's suffering (5:1) and who was later attested as Mark's associate in Rome (Papias, Irenaeus, Origen, in Eus. *Hist. Eccl.* 3.39; 5.8.3; 6.25.3–6) and a major figure of the Roman community (*1 Clem.* 5:4; *Ign. Rom.* 4:3). Speaking in the name of their martyred leader, this Petrine branch of the family of God in "Babylon" assured fellow members of the household dispersed throughout Asia Minor of the bonds of suffering, faith, and hope which united the worldwide Christian brotherhood. In 1 Peter, accordingly, the ecumenical roots and vision of Christianity at Rome received their first significant articulation. PETER, GOSPEL OF. The *Gospel of Peter* (= *Gos. Pet.*) was a narrative gospel of the synoptic type which circulated in the mid-1st century under the authority of the name Peter. An earlier form of the gospel probably served as one of the major sources for the canonical gospels. Neither quoted nor extensively described by patristic authors, *Gos. Pet.* is preserved today only in two very fragmentary manuscripts. The partially preserved story begins abruptly with the trial scene where Pilate washes his hands, includes a unique and unusual account of the resurrection, and concludes in mid-sentence with, apparently, the beginning of a resurrection appearance scene at the Sea of Galilee.

A. Patristic Sources and Manuscripts

1. Eusebius and Origen. The church historian Eusebius (ca. 303 C.E.) passes on a tradition about bishop Serapion of Antioch (ca. 200 C.E.) in W Syria who had received a report about a certain Gospel of Peter which was in use at the church in nearby Rhossus (*Hist. Eccl.* 6.12.2–6). Bishop Serapion had no serious objections to the use of the text but determined that it could be understood by some to promote a docetic Christology. An even more obscure reference is made by Origen (ca. 250 C.E.) in his commentary on Matt 10:17 (*PG* 13, 876C–877A). The patristic authors transmit no quotes from the gospel so that its contents and nature remained a mystery until the end of the last century.

2. Akhmim Papyrus. The French archaeological mission in Cairo discovered a Greek manuscript containing part of *Gos. Pet.* in the winter season of 1886–87 while excavating in the ancient Christian cemetery of the modern Egyptian town of Akhmim (ancient Panopolis), sixty miles N of Nag Hammadi (Bouriant 1892–93). While the monk's grave in which the manuscript was found dates from the 8th to 12th century (Bouriant 1892–93: 93–94; Swete 1893: xlv–xlvii), the scribal hand of the *Gos. Pet.* text dates from the 7th to 9th century (van Haelst 1976: no. 598) giving us a tentative date in perhaps the latter half of the 8th century for the copying of the *Gos. Pet.* text (750–800 C.E.). The text has been available for the past century in a photographic facsimile edition (Lods 1892–93: pls. I–XXXIV, esp. II–VI) accompanied by a critical text edition (Lods 1892–93: 219–24). Today the manuscript is conserved in the papyrus collection of the Cairo Museum.

The Akhmim manuscript is in the form of a codex (book) which was rather crudely constructed out of pages from other manuscripts. Following the facsimile edition of Lods (1892–93: pls. I-XXIV), the codex measures six inches high by four-and-a-half inches wide and has 33 unpaginated leaves (= 66 pages). The codex contains four separate texts: (1) part of *Gos. Pet.*, (2) part of the *Apocalypse of Peter*, (3) part of *1 Enoch* (1:1–32:6), and (4) part of the martyrdom of a certain Julian. The texts are copied by two or three different scribes, the two Petrine texts copied by the same scribe. Van Haelst dates the hand of the *1 Enoch* text from the 4th to 6th centuries and thus as the earliest hand in the codex (1976: no. 595).

For our purposes, it is noteworthy that the Akhmim text of *Gos. Pet.* is surrounded by typical though crude scribal decorations both at the beginning of the texts (where the scene of Pilate washing his hands abruptly begins) and also at the conclusion of the text (where the text suddenly ends in the middle of a sentence). This means that the earlier manuscript containing *Gos. Pet.* from which the Akhmim scribe copied was already a broken fragment. There was certainly enough room on the bottom part of the last page containing the *Gos. Pet.* text (= codex page 10) for the scribe to have copied more of that Petrine text onto his page, verifying that the scribe copied all of the *Gos. Pet.* text that was available to him from an earlier and fragmentary manuscript. As a result, we know nothing of the contents and nature of *Gos. Pet.* in the portions that originally preceded the scene of Pilate's handwashing and originally followed the beginning of the resurrection appearance scene of the Sea of Galilee.

3. Oxyrhynchus Papyrus Fragments. Cambridge University Press published in 1972 an edition of two small and fragmentary Greek papyri which probably belong to *Gos. Pet.* (Coles 1972: 15–16 and pl. II). The fragments are part of the larger sensational find known as the Oxyrhynchus Papyri, first discovered in 1897 in the rubbish heaps of the ancient town of Oxyrhynchus (modern el Bahnasa, north of Akhmim halfway to the delta). The editor of the text, R. A. Coles, observes (1) that the two fragments are from the same manuscript, (2) that the manuscript was a scroll rather than a codex, (3) that the extant, though brief, text has significant affinities with the text of *Gos. Pet.* from the Akhmim manuscript, (4) that the text of the Oxyrhynchus manuscripts can be identified with *Gos. Pet.* 2:3–5a from the Akhmim manuscript, (5) that the text of *Gos. Pet.* in the Oxyrhynchus fragments represents a different recension of the text from what we find in the Akhmim manuscript (cf. Crossan 1988: 6–9), and (6) that the informal type of scribal hand can be dated to the early 3d or possibly late 2d century (Coles 1972: 15–16).

Thus, the Oxyrhynchus fragments give us a papyrological witness to the *Gos. Pet.* which predates both to the patristic allusions to the text and also predates the Akhmim manuscript by about 500 to 600 years. Further, it is clear that the early papyrological evidence for *Gos. Pet.* is now as strong as that for the gospels of Matthew and Luke (Lührmann 1981: 225) and probably *better* than that for Mark, *Gos. Thom.*, and *Gos. Mary*. The 2 Oxyrhynchus fragments are generally considered a single manuscript and so are given the single inventory number P. Oxy. 2949. The papyri are now conserved in the Ashmolean Museum, Oxford.

4. Identifying the Text. Following such analyses as those of Lührmann (1981: 216–26) and Crossan (1988: 3–9), most scholars today identify the texts on the Oxyrhynchus and Akhmim manuscripts with the *Gos. Pet.* mentioned by Eusebius. Since none of the surviving fragments contains the title of gospel, and since none of the patristic authors preserved quotes from the *Gos. Pet.*, the gospel text on the Oxyrhynchus and Akhmim manuscripts is technically from an unknown gospel. The strongest evidence which equates the gospel text of the papyri with the *Gos. Pet.* mentioned by Eusebius and used by western Syrian Christians in the late 2d century, is that the voice of the text's narrator-author is identified in the first-person singular as "Simon Peter" ("But I, Simon Peter …" 14:60; cf. 7:26; note the closely related third-person singulars in 7:27 and 14:59). Another, though weaker, indicator is that the gospel text of the papyri can be read, without too much trouble, as the same text which Serapion obliquely describes (Crossan 1988: 12).

B. Debate over Literary Relations

1. Overview of the History of Research. Debate continues over the relationship of *Gos. Pet.* to the canonical gospels. In line with the generally more conservative, and perhaps less critical approach of an earlier generation, *Gos. Pet.* was first understood to be a literary pastiche of texts borrowed from the

canonical gospels and then embellished by fanciful oral traditions (esp. Robinson 1892: 11–36, 82–88, and Vaganay 1930: 18–27; cf. also Swete 1893 and Zahn 1893). Adolf von Harnack proposed, as early as his lectures of November 3 and 10, 1892, that *Gos. Pet.* might preserve some independent traditions, but his discussion is too vague to be anything more than suggestive (1893: 32–37, 47). Clearer arguments for independent traditions in *Gos. Pet.* were later made by Gardner-Smith (1925–26a, b), Denker (1975), and most notably by Helmut Koester (1980: 126–30; 1982: 2.162–63). The most useful and fully documented analysis is the recent work of Crossan (1988: 16–30 and passim), who laments the early years of scholarly analysis with appropriately incisive statements: "one cannot help wondering if scholarship would have been better served by everyone taking a little more time instead of rushing to judgement … scholarship is at an impasse on the *Gospel of Peter* … it has accepted that impasse much too readily" (1988: 13–14).

2. Crossan's Hypothesis. A new direction in the study of the *Gos. Pet.* was initiated by the publication of Crossan's study in 1988. Rather than rephrase Crossan's statement, the present author presents here Crossan's own concise description of his hypothesis on the textual history of *Gos. Pet.*:

> I find three major stages in the compositional history of the present *Gospel of Peter* … I call the first and earliest stage the *Cross Gospel,* a document presently imbedded in the *Gospel of Peter,* just as Q is in Matthew and Luke … The second stage is the use of the preceding document by all four of the intracanonical Gospels. I hold it to be the only passion and resurrection narrative used by Mark and, along with him, by Matthew and Luke, and, along with them, by John … all the intracanonical passion and resurrection narratives are dependent on the *Cross Gospel.* … The third and latest stage occurs when this *Cross Gospel,* like John before it, comes under pressure to adapt itself to the intracanonical endings with their stories of honorable burial, discovery of the empty tomb, and apparition for missionary mandate to the apostles. This expanded composition is attributed pseudonymously to Peter, but it is already far too late to save it for intracanonical inclusion (Crossan 1988: xii–xiv).

Crossan's interpretation clearly falls into the camp of those, like Koester before him, who argue for independent traditions in *Gos. Pet.* Crossan's distinct contribution is twofold: (1) the identification of redactional strata within the present text, and (2) the construction of a theory of the development of those strata in relation to the development of the gospel tradition in general, especially the canonical gospels, Q, *Gos. Thom,* and numerous related texts.

The implications for the Koester-Crossan line of reasoning are clear. The sources now incorporated into the extant text of *Gos. Pet.* go back to the preformative stages of the development of the passion narrative and the empty tomb story, thus dating them to the mid-1st century. Koester argued for a text which was older than and "independent of the canonical gospels" (1982: 2.163) while Crossan has gone the distance in isolating those sources and demonstrating their place within the development of the tradition. One can expect that all future research on *Gos. Pet.* will need to begin with a serious consideration of Crossan's work.

C. Contents and Story Line

The standard text in English translation is divided into 14 short chapters and 60 continuously numbered verses (yet it is standard practice to list both the chapter and verse numbers). The following resume of the story line follows the larger text from the Akhmim fragment (*NTApocr,* 183–87): *1:1–2* the conclusion of the trial scene with the presence of Jesus, Pilate (who alone washes his hands), Herod (who proclaims judgment) and his judges, and the people; *2:3–5a* (also in P. Oxy. 2949) Joseph the friend of Pilate asks to bury the body of Jesus before the Sabbath so as to keep the law; *2:5b–3:9* Jesus is delivered to the people who mock and beat him; *4:10–14* he is crucified with two malefactors who suggest he is innocent, only to enrage those who cast lots for his garments and thus refuse to break his legs so that his suffering might be extended; *5:15–20* the sky darkens at noon, the people are thus afraid that the Sabbath has begun with the body still on the cross, he cries out his last words and is taken up, then the veil of the Temple is rent in two; *6:21–24* the Jews bring Jesus down from the cross, at the ninth hour the sun shines again and the Jews rejoice, Joseph prepares the body for burial and puts it in his own sepulchre; *7:25–27* the Jews begin to lament as Peter and his fellows hide with mourning and weeping; *8:28–9:34* some Jews entreat Pilate to seal the tomb and set guards to prevent a theft of the body and consequent supposition of a resurrection;

a large crowd gathers; *9:35–11:49* the tomb opens with a voice from heaven, two men (angels) enter the tomb, three men (the two angels and the resurrected Jesus) come out of the tomb with a walking-talking cross following them, the soldiers report the event to Pilate and confess "in truth he was the Son of God"; then Pilate commands the soldiers to be silent about what they had heard and seen; *12:50–13:57* Mary Magdalene and some unidentified women friends go to the tomb to prepare the body (?), find the tomb opened, and speak with a young man who tells them Jesus "is risen and gone thither whence he was sent"; the women flee the scene in fear; *14:58–59* after the feast the people return to their homes; the twelve (!) disciples are still weeping and mourning and also return to their homes; *14:60* "But I, Simon Peter, and my brother Andrew took our nets and went to the sea. And there was Levi, the son of Alphaeus, whom the Lord …" [note: sudden conclusion of extant text in mid-sentence].

D. Supposed Gnostic and Docetic Features

The history of research on *Gos. Pet.* shows a definitive preoccupation with the issue of the supposed gnostic or at least docetic character of the gospel's christology. The supposed gnostic and docetic features of the text are found in 4:10, where it is said that at the crucifixion Jesus "held his peace as if he felt no pain"; at 5:19, where it is said that at his death he was "taken up"; and at 10:39–42 where the cross walks out of the tomb behind the resurrected Jesus with the two angels, and it then replies "yes" to the voice from heaven. Such features are hardly representative of any gnostic or docetic theology, and have been given ample consideration by Crossan (1988: 10–12) and Maurer (*NTApocr,* 100–81).

Crossan (1988: 10–12) extends the theological analysis into the Serapion tradition transmitted by Eusebius and notes that Serapion's concern was not with any gnostic or docetic features in the text, nor did he consider *Gos. Pet.* to be an unacceptable text, but rather that some persons (a certain Marcianus) were able to read *Gos. Pet.* in a docetic manner. Serapion then proceeds to list what he considers docetic additions to the text, but at that point Eusebius moves on to another issue. We have no reason to suppose that the docetic additions to the text which Serapion identified were found anywhere in the brief remains of the story as we have them in the extant text from the Akhmim fragment; they could have been found in scenes preceding or following the extant story.

PAUL ALLAN MIRECKI

PETER, MARTYRDOM OF. The final chapters of the 2d century *Acts of Peter* circulated independently as the *Martyrdom of Peter.* See PETER, ACTS OF. The *Martyrdom* survives in three Greek manuscripts and in the Latin translation of the Vercelli *Acts of Peter.* Versions of varying

completeness also survive in Arabic, Armenian, Coptic, Ethiopic, Slavic, and Syriac. The text is often found in association with the *Martyrdom of Paul.*

One Greek manuscript from Mt. Athos begins with the story of Chryse in *Acts Pet.* 30 and so contains the story of Simon Magus's final flight. The other versions begin with Peter's preaching of continence and conclude with the end of Nero's persecution of believers in Rome (cf. *Acts Pet.* 33–41). Attributing persecution to the concupiscence of prominent men is a common motif in early Christian literature. The prominence of Peter's preaching on chastity in the *Martyrdom* may have led to an overestimation of its importance in the *Acts Pet.* as a whole.

Interest in Peter's status as a martyr appears by the beginning of the 2d century in both Asia Minor and Rome. All traditions which locate Peter's martyrdom place it in Rome, often connecting it to Paul's martyrdom. By the end of the 2d century, the location of Peter's martyrdom was more precisely fixed at the Vatican hill, and soon took on significance in church politics. The failure of the *Martyrdom of Peter* to locate the place of Peter's execution or burial was corrected in later developments of the tradition, such as the *Passion of Peter* and the *Passion of Peter and Paul.* See PETER, PASSION OF; PETER AND PAUL, PASSION OF.

PETER, PASSION OF. The *Passion of Peter* is a 4th or 5th century Latin elaboration of the *Martyrdom of Peter* from the *Acts of Peter.* It is based on the Greek original rather than the Vercelli Acts. Although presented as a report to the Eastern churches from Linus, Peter's successor as bishop of Rome, it is attested only in Latin. The *Passion of Peter* specifies the date and place of Peter's death and seems to have been prepared for use in the June 29 commemoration of the apostles Peter and Paul. In the ancient manuscripts, it is frequently followed directly by the Pseudo-Linus *Passion of Paul.* The *Passion of Peter* begins with Peter's conflict with Simon who is identified as the anti-Christ. It moves to Peter's preaching of chastity (cf. *Acts Pet.* 33). Because the four concubines of the perfect Agrippa follow his teaching, Peter is arrested. After Xanthippe, the wife of Albinus, visits Peter in prison, she also takes up the life of chastity. The jailors, Processus and Martinian have been converted and baptized by Peter in a miraculous spring. They add their urgings to the pleas of Marcellus and other believers to convince Peter to leave the city. The *Quo vadis* scene follows. Peter asks to be crucified head downward because he is not worthy of dying in the same manner as the Lord. The location of Peter's execution is specified as the Naumachia, near the obelisk of Nero on the hill, i.e. the Vatican. Peter's speech at the cross is retained and slightly expanded. God opens the eyes of the witnesses so that they are able to see angels crowned with flowers standing near the cross. They also see Peter standing at the top of the cross where he reads the words of his speech from a book handed to him by Christ (cf. *Acts John* 97–101).

PETER, PREACHING OF. The customary translation of the title of the *Kerygma Petrou,* which is an example of apocryphal missionary literature attributed to Peter by various early Christian writers. Not an "Acts of Peter," but rather a document that was probably made up of a series of sermons, the primary source for the "Preaching of Peter" is Clement of Alexandria, who gives a sequence of quotations from the *Kerygma Petrou* in his *Stromateis* (1.29.182; 2.15.68; 6.5.39–41; 6.5.43, 6.6.48; 6.7.58; 6.15.128, see also *ecl.* 58). Although it is clear that Clement of Alexandria considered this work to be genuine, Origen no longer accepted it as part of legitimate Christian tradition, possibly because of its use by the gnostic Heracleon (*Jo.* 13.17). The apologist Aristides as well as Theophilus of Antioch may also have known this work, although neither of them quote the *Kerygma Petrou* by name. Eusebius, however, clearly lists it under the heading of non-canonical writings (*Hist. Eccl.* 3.3.2). From the attestation and surmised use of the *Kerygma Petrou* by early Christian writers, it is thought to have been composed sometime in the early part of 2d century C.E., possibly in Egypt.

Due to the fragmentary nature of the evidence for the *Kerygma Petrou* little can be said concerning the nature of the work as a whole or concerning the order of its composition. What does remain indicates that the *Kerygma Petrou* contained supposedly Petrine discourses, the contents of which are reminiscent of later 2d century apologetic literature. Peter, a likely choice as the authoritative missionary leader of early Christianity, is depicted as preaching on such topics as monotheism, the dangers of paganism, as well as the falsity of Jewish religion and worship. The *Kerygma Petrou* may also have included christological sections which utilized OT passages in its Christian interpretation of Jesus death and resurrection. Whether the christological passages are meant to be discourses of the resurrected Christ or further sermons attributed to Peter is not clear. The emphases on monotheism and paganism, as well as the negative assessment of Judaism found in the *Kerygma Petrou* connect it to the literature of the early Christian apologists. However, the *Kerygma Petrou* also manifests tendencies of early Christian missionary preaching found in the Acts of the Apostles, and is therefore seen as a possible intermediary tradition between Christian Greek apologetic literature and early Christian missionary proclamation. Although the *Kerygma Petrou* contains discussions concerning the attributes of God and comparisons of pagan, Jewish, and Christian worship, it is not therefore surmised that the author of the document was necessarily a Jewish Christian, as such topics were common in Christian literature of the 2d century.

Other less explicit references in early Christian literature have been suggested as further fragmentary evidence for the *Kerygma Petrou,* such as a "Doctrine of Peter" mentioned by Origen (*princ* praef. 8) or a "Teaching of Peter" quoted by Gregory of Nazianzus (*ep.* 20; *or.* 17.5). However, the identification of such documents with the *Kerygma Petrou* is seen to be questionable.

———

A. Introduction

The Epistle's words of encouragement, warning, and reminder, supposedly composed shortly before the apostle's death (1:12–15), were actually intended for Christians of a later generation beset by internal division and doubt concerning the Lord's final coming.

Because its addressees are unnamed (1:1), the letter has been included among the 7 "Catholic Epistles" (James, 1–2 Peter, 1–3 John, Jude) whose destinations are less specific than the letters of Paul. Nevertheless, it provides a specific response to an urgent crisis. Gentile converts had begun to introduce novel doubts about theological assumptions long taken for granted along with forms of behavior deviating seriously from ancient norms. The letter's double aim was to refute these "false teachers" (2:1), their theory and praxis, and to reinforce stability and commitment among the faithful through reminder of their divine gifts and calling.

Its rather unique blend of apocalyptic message and Hellenistic expression gives it a culturally catholic character. Old and new are combined as in a new arrangement of an old song: a jazz improvisation on "Rock of Ages" or, more appropriately, "Give Me That Old Time Religion." To contend effectively in the present and to prepare for the future, it is argued, requires a recalling of the past. Thus 2 Peter outlines an interim ethic for the present (1:5–11, 19; 3:11–18) which is framed and guided by lessons from the past (prophecy: 1:19–21; 3:2; world history: 2:4–10a, 15–16; 3:5–6; apostolic witness: 1:12–18; 3:1–4) and by the prospect of judgment and cosmic renewal in the future (3:7, 8–10). Basic to this ethic is the assurance of God's continual and consistent action in human affairs in past (1:3–4; 2:2–8; 3:5–6), present (1:20–21; 2:3, 9–10a; 3:8–9) and future (3:7, 10–12).

B. Reception and Importance

Together with 1 Peter and a large body of non-canonical Petrine literature (including the *Apocalypse of Peter, Gospel of Peter, Preaching of Peter, Acts of Peter,* and the pseudo-Petrine gnostic writings), 2 Peter illustrates the prominence attributed to the apostle Peter in orthodox and heterodox circles. Despite its Petrine pedigree, however, no NT writing was so poorly attested among the Church Fathers or received into the canon with greater hesitation than was 2 Peter. It left no certain early traces among the churches of Antioch, Asia Minor, Africa, or Rome. In Egypt, however, the *Apoc. Pet.* (ca. 135) made use of it while Origen (died ca. 253) is the first extant author to mention it by name (*Commentary on John* 5:3). Here too it was translated into Sahidic and Bohairic versions and also included in P^{72} (ca. 350). Nevertheless doubts concerning its canonicity (Eus., *Hist. Eccl.* 3.3, 3.25) or at least its authenticity (Jer., *Epist.* 120.11; Erasmus, Luther, Calvin, and most modern scholars) have persisted down to modern times. For some contemporary commentators, particularly German Protestant exegetes (represented by the influential study of E. Kaesemann [1964]), it is the content of 2 Peter which raises serious theological problems. An identification of gospel with tradition and faith with doctrinal assent, it is claimed, and an ethic based on final retribution rather than on the christological kerygma must be seen as a loss of the authentic evangelical spirit of Paul as the Church embarked on the regrettable path of "early catholic" institutionalization.

Such a negative assessment, however, has not gone unchallenged (Green 1960; Bauckham *Jude, 2 Peter* WBC, 151–54) and more recent studies (Fornberg 1977; Neyrey 1980a, 1980b; Bauckham *Jude, 2 Peter* WBC; Elliott and Martin *James, 1–2 Peter/Jude* ACNT) have sought to provide a more comprehensive basis for appreciating the letter's situation and strategy. 2 Peter remains an important NT document for both historical and theological reasons. It records the effort of Christianity in a transitional post-apostolic period to communicate effectively in a pluralistic cultural environment while at the same time remaining faithful to its apostolic heritage and underlying worldview.

C. Literary Genre and Pseudonymity

The epistolary salutation (1:1–2) and reference to its being a "second letter" (3:1) show that 2 Peter was dispatched as a letter. However, its formal character is determined primarily by 1:12–15 and the recurrent theme of prediction and reminder (2:1–3; 3:1–4, 17). Accordingly, this letter contains the "testament" or farewell address of the apostle Peter intended to forewarn and remind Christians living after his death.

2 Peter thus resembles other parting addresses or testaments contained in the NT (of Jesus: Mark 13 par.; John 13–17; of Paul: Acts 20:17–35; 2 Timothy), the OT (of Jacob: Gen 47:29–49:32; Deuteronomy

1–3; 28–31; of Joshua: Joshua 23–24; of Samuel: 1 Samuel 12), and especially in the OT Pseudepigrapha (*Testament of Abraham, Testament of Moses, Testament of Job,* and *the Testaments of the Twelve Patriarchs*). Such testaments typically included notice of the speaker's impending death, the prediction of "future" events, and exhortation regarding the appropriate behavior of the righteous. Generally pseudepigraphical, the testament was a literary form employed to address current issues as the anticipation or forecast of some venerable figure of the past and thereby secure for its teaching the authority antiquity confers.

This appears to have been the chief motive behind the "Petrine testament" of 2 Peter. The use of this literary convention here (1:1, 3–11, 12–15; 2:1–3a; 3:1–4, 11–14, 17), along with arguments based on language and style, sources used, problems addressed, and theological content, points to pseudonymous authorship and a date long after Peter's death (Guthrie 1970: 820–48; Bauckham *2 Peter* WBC, 131–35, 158–62 for arguments for and against Petrine authorship; Metzger 1972 on the issues concerning canonical pseudepigrapha). Moreover, in the shift from future to present tense verbs (2:1–10a/10b–22; 3:2–4/5–18) "Peter's" prediction is abandoned altogether and the real author speaks to his present situation.

Aside from his familiarity with Hellenistic rhetoric, Jewish and Christian apocalyptic traditions, the Letter of Jude and unidentified letters of Paul, little can be said of 2 Peter's actual author. Considering his own identity less weighty than that of an apostle, he wrapped himself fully in Peter's mantle. Through the fiction of a Petrine testament and appeal to the apostle's eyewitness of Jesus' transfiguration (1:16–18; cf. Mark 9:2–8 par.), he attempted to combat powerful opponents and novel ideas with the authority conferred by apostolicity and earlier historical experience.

D. Sources

2 Peter is replete with anomalies (Elliott ACNT, 120–26). Two of them concern its main source and the Hellenistic stylization of its Jewish-Christian apocalyptic message.

In many respects the letter is an eccentric NT writing, outside the mainstream of early Christian kerygmatic and catechetical tradition. The author knows of a collection of Pauline letters (3:15–16) but is concerned less with their evangelical content than with their distortions by the "ignorant." Affinities with the Gospels are also few and vague, deriving from oral rather than from literary sources (compare 1:14 and John 21:18; 1:16–18 and Mark 9:1[2]–8 par.; 2:20 and Matt 12:45 = Luke 11:26; 3:4 and Mark 9:1, 13:19; 3:10 and Matt 24:43–44 = Luke 12:39–40). Not once is the OT cited explicitly though the letter abounds with OT allusions (compare 1:19 and Num 24:17; 2:4–5 and Genesis 6–8; 2:6–8 and Genesis 19; 2:15–16 and Num 22:21–35; 2:22 and Prov 26:22, Isa 66:3 [dog and sow]; 3:3 and Isa 3:4 LXX, cf. 66:4; 3:5–6 and Gen 1:6–8; 3:7, 10 and Isa 66:15–16; 3:8 and Ps 90[89]:4; 3:9, 12–14 and Hab 2:3; 3:10–13 and Isa 66:15–16, 22). Among the OT Pseudepigrapha, 2 Peter shows several striking similarities with the Syriac apocalypse of *2 Baruch* (text in *OTP* 1: 615–52) in both form (cf. the letter in chaps. 76–86) and content (delay of God's coming, divine forbearance, judgment of corruption). This late NT writing thus shows close ties with Jewish apocalyptic tradition in particular, affinities shared also by *1* and *2 Clement* and Hermas (Bauckham *2 Peter* WBC, 140).

The statement in 2 Pet 3:1 "This is now the second letter that I have written to you," along with other similarities, would seem to suggest 1 Peter as a source (Boobyer 1959). The affinities, however, are minor and superficial and derive from common convention and tradition rather than from literary dependency. The letters are thoroughly different in form, language and style, sources used, social situation and issues addressed, and theological message (Mayor 1907:lxviii–cv; Bauckham *2 Peter* WBC, 285–87).

The continuation of 3:1 in vv 2–3, however, is virtually identical with vv 17–18 of the Epistle of Jude. Moreover, of the 25 vv of Jude no less than 19, in whole or in part, have parallels in 2 Peter. Of Jude's 460 word vocabulary almost one quarter (111) are found in 2 Peter. This extraordinary correspondence of vocabulary, phrasing, ideas, and sequence argues against the use of common oral tradition (as suggested by Reicke *The Epistles James, Peter, and Jude* AB, 190) and for direct literary dependence. Earlier commentators (Bigg *Epistles of St. Peter and St. Jude* ICC^2, 216–24; Luther, Spitta, Zahn) considered Jude an excerpt of 2 Peter. However, the broad current consensus is that the longer letter is clearly a later

revision and expansion of the shorter one (Mayor 1907:i–lxvii, 1–15; Grundmann *Judas and der Zweite Brief des Petrus* THKNT, 102–07; Fornberg 1977:33–59 for detailed comparisons). 2 Pet 2:1–18 reproduces Jude 4–16 in the same general sequence; 3:2–3 echoes Jude 17–18; 3:13–14, 18 reflect and modify Jude 24–25, 1:5 and 12; and other parallels occur in 1:1–2 = Jude 1–2; 1:5 = Jude 3; 1:12 = Jude 5; 3:13–14, 18 = Jude 24–25. Jude thus constituted the main source employed in 2 Peter and supplied the latter with both the material for the polemic of chap. 2 and the important theme of apostolic prediction and reminder.

2 Peter revised and expanded upon this material and set it within a larger framework of thought provided by chaps. 1 and 3. The OT examples from Jude 5–7 were arranged chronologically and references to Noah and Lot were added to balance the themes of destruction and deliverance (2 Pet 2:4–10a). Jude's references to the apocryphal traditions regarding Michael and Enoch (vv 9, 14–15) were omitted. The "way" of truth (2:2) and righteousness (2:21; cf. 2:15) was stressed as a Christian moral norm. The disruptive Christians were identified as "false teachers" (2:1) and apostates (2:20–22). The substance of their deviant teaching was identified and refuted (1:16–21; 2:19; 3:4–7, 15–16). The theme of appropriate response to God's benefactions and coming was developed (1:3–11, 3:8–18). And the whole of this expanded revision of Jude was presented as the testament and predictive warning of the apostle Peter (1:1, 12–15; 3:1–2).

E. Style and Structure

The letter's vocabulary and style also distinguish it from other NT documents. Fifty-eight of its 402 word vocabulary (1,105 total words) are unique in the NT—the highest proportion in the NT (14.4 percent). This taste for obscure and grandiose language is matched by a style marked by excess rather than economy of expression. Many passages in the Greek original contain verbal repetitions and recurrent sounds (1:3–4, 5–7, 12–15, 17–18, 19–21; 2:1–3, 7–8, 13; 3:6, 9, 16), pairs of synonym (1:7, 10; 2:13; 3:14), and graceful rhythmic formulations (1:16, 17, 19–21; 2:4–9; 3:13). The opening section of the letter (1:3–11), as Danker (1978; 1982: 453–67) has shown, mimics the stereotyped diction and style of the omnipresent public inscriptions celebrating the virtues and deeds of benefactors and saviors.

Much of the content also has a pronounced Hellenistic hue: the conventional Greek virtues encouraged in 1:5–7; the notion of death as a "putting off of the bodily tent" (1:13–14); identification of the realm of the dead or "hell" (RSV, NEB) as "tartarus" (2:4); dispute about myths (1:16–18), prophecy (1:20–21), and involvement of the gods in human history and final judgment (3:3–7); interest in knowledge as a means of access to God (1:2, 3, 6, 8, 12; 2:20, 21; 3:3, 17, 18); salvation conceived as godliness (1:3), escape from corruption (1:4, 2:20), and participation in divine being (1:4); and the conception of God and/or Jesus Christ as Benefactor and Savior (1:1, 11; 2:20; 3:2, 18). The author is quite conversant with popular philosophies, the mystery religions, and especially with the beliefs and behavior of, as well as arguments directed against, rationalists and sceptics who disputed divine providence, life after death, and post-mortem retribution.

All these features indicate an author and audience at home in a pluralistic Hellenistic society (Fornberg 1977: 111–48). At the same time, the Jewish-Christian scripture and apocalyptic traditions employed in the letter's argument reveal that this environment embraced Jewish-Christian as well as Greco-Roman cultures. In such environments the merging as well as clash of cultures was inevitable. 2 Peter was designed to communicate effectively across these cultures while at the same time contending for the ancient truth in the face of its novel distortion. With a diction that was exceptionally Hellenistic in its makeup, the letter formulates a message that was remarkably "primitive" and Jewish in its moral and apocalyptic orientation.

The Greek text and syntax of the letter is uncertain at several places and its meaning often obscure. The many textual variants reflect early attempts to make sense of these obscurities (1:4, 10, 15; 2:1, 4, 6, 12–18, 21–22; 3:5, 7–12). Bauckham's (*2 Peter* WBC) discussion is comprehensive and is based on the most recent edition of the Greek text (*NovTG*^{26}).

A coherent development of themes and line of argumentation and a consistency of terminology and style mark the integrity of the document as a whole. It is structured in three major sections. Following the

address and salutation (1:1–2), a preamble establishes at the outset how the addressees are to respond to the divine gifts and promises to which they owe their Christian existence and future hope (1:3–11). Then, 1:12–3:13 comprises a double apostolic and prophetic reminder serving as the basis for the denunciation and refutation of sceptical false teachers. A concluding exhortation (3:14–18), paralleling 1:3–11, reaffirms the gifts and responsibilities of the faithful.

Within these major sections, the units 1:12–15; 16–21; 2:1–22; 3:1–7; 8–13 are marked off by internal content and/or inclusions (1:12–15 "remind"/"recall;" 2:1–22 ("way of truth, righteousness") and by the introductory address, "beloved" (3:1, 8, 14). Linkwords ("knowledge," 1:2, 3, 8; "borne," 1:17, 18, 21; "prophecy," 1:19–21, cf. 2:1; "ignore," 3:5, 8; "forbearance," 3:9, 15; "wait," 3:13, 14), as well as frequent demonstratives ("these things," 1:8, 9, 10, 12; 2:20; 3:11, 14) are used to relate and join smaller units of thought. A major inclusion is evident in the combination of "grace and knowledge of our God (Lord) and Savior Jesus Christ" in 1:2 and 3:18 (cf. also "stabilized" and "stability" in 1:12 and 3:17) which thereby frames the letter as a whole.

F. Situation

2 Peter was directed to a Christian community in which converts from paganism (2:20), assuming the mantle of teachers (2:1), had begun to challenge traditional Christian beliefs and norms of behavior. Their divisive factional views ("heresies," RSV) had strong appeal apparently for members who had grown impatient with the delay of the Lord's coming *(parousia)* and had begun to lose faith in its promise (3:4). In his *Anchor Bible* commentary on this letter, Reicke (pp. 160–61) imagined a different situation more political in character. He proposed that the troublemakers were greedy Christian leaders who had accepted bribes from Roman aristocrats intent on gathering support for a revolt against the Roman emperor Domitian (81–96). There is no trace of these particulars in the text, however. Here the issue is described as an internal Christian problem. Covert introduction of alluring alien ideas was endangering the community's cohesion and stability (2:1–3, 14, 18; cf. 1:10 and 3:17).

This situation is further clarified by other explicit and implicit indicators of the dissenters' program. They "deny the Master who bought them" and "despise authority" (2:1, 10a). They deny the final "coming" *(parousia)* of God in judgment and cosmic renewal, and consider its promise empty (3:4, refuted in 3:5–10). On the other hand, they themselves promise "freedom" (2:19a, refuted in 2:19b–22), a deviant brand of freedom for self-indulgence probably gained through an idiosyncratic interpretation of Paul's writings (3:15–16). As Neyrey (1980a; 1980b; followed by Bauckham *2 Peter* WBC) has shown, the formula "not … but" employed in 1:16a/16b–18, 1:20/21 and 2:3b/4–10a also identifies teaching refuted by the author. This included rejection of the Lord's previous coming *(parousia)* in power as a "myth," individualistic and idiosyncratic interpretation of scripture ("prophecy"), and again denial of divine destruction and deliverance. In sum, these sceptics denied God's past, present, and future involvement in the world and human affairs, divine communication through and control over prophecy, and divine judgment of either sinners or the righteous.

Consonant with this theoretical position, they flaunted a supposed freedom from judgment as a release from the commandment of the Lord (2:21, 3:2) and a license for self-indulgence (2:2, 10a, 13, 18), "pleasure" (2:13), and personal gain (2:3, 15–16). Over against the common good and the binding norms of the community they advocated pursuit of individual interests and rejections of social constraints.

The repeated stress in 2 Peter upon an authentic "knowledge" (1:2, 3, 5,6, 8; 2:20; 3:17) as well as upon a correct understanding of the apostolic and prophetic tradition (1:16–21; 3:1–4, 15–16) has led many scholars to identify the opponents as Christian Gnostics (from the Greek *gnosis* meaning "knowledge"). However, interest in knowledge and wisdom as a means to perfection of salvation was by no means restricted to these heretical Christian groups of the 2d and later centuries. It was rather typical of the Hellenistic age in general, in secular as well as Jewish and Christian milieux.

Since the spread of Greek culture with the advance of Alexander's armies (333 B.C.E.), numerous philosophical and religious movements had competed with one another over the nature and source of knowledge and the means it provided for discovering the nature and goal of life, the essence of human happiness, and the way to attain it. Beside the schools of Plato, Aristotle, the Cynics and Stoics, the

school of Epicurus (341–270 B.C.E.) propounded views and practices with which the false teachers of 2 Peter seem to have much in common.

Among its basic tenets, this rationalistic and quasi-religious philosophy held that: knowledge derives from sense perception of the physical world, the "nature of things" (the title of a widely influential didactic poem by Lucretius, 94–55 B.C.E.); this perception teaches that all matter is composed of atoms and eventually disintegrates; hence everything is mortal and there is no "life after death;" the gods are distant from and uninvolved in the affairs of this world; hence the notion of post-mortem retribution or divine punishment is absurd and the "myths" concerning the gods held by the general populace are ridiculous; mortals should not be motivated by fear of the gods, death, or divine judgment but by pursuit of "pleasure" (*hēdonē* in Greek, whence "hedonist"), i.e., the absence of pain and disturbance; such knowledge frees one from fear, guilt, superstition, and involvement in the affairs of social and political life.

The founder of this philosophy was generally honored for his wisdom and personal morality and was celebrated as a "savior." Later adherents, however, came under severe censure for their "atheism" (rejection of the gods as popularly worshipped), their exclusiveness and especially for their alleged immoral conduct, whence the pejorative connotation of the related labels, "Epicurean" and "hedonist." They were, in fact, compared to pigs wallowing in their self-serving passions. This practical philosophy flourished for half a millennium in the ancient world and attracted adherents from all social strata and walks of life (DeWitt 1954).

To the outsider as well as to many a Christian convert, Epicureanism and Christianity appeared to have much in common, including their repudiation of popular religion, their sectarian exclusiveness, and their disengagement from political life. In the popular mind the two groups were closely associated and commonly subjected to the same condemnation. The description of those labeled "false teachers" in 2 Peter includes numerous traits typically associated with Epicureans. In addition to the substance of their teaching, the reference to their pursuit of "pleasure" (2:13) and their comparison with dogs and swine (2:22) is particularly striking. Most significantly, as Neyrey has shown (1980a; 1980b), the critique of the opponents' teaching closely resembles the polemic regularly leveled by Jews and Gentiles alike against Epicureans and those thought tainted by Epicureanism such as the Sadducees. In all likelihood, the Christians censured in 2 Peter were perceived as persons under the influence of Epicurean thought seeking to attract other members of the community to their new amalgamation of Christian freedom and rationalistic scepticism.

G. Strategy

This serious erosion of the confidence and cohesion of the community as well as of its public reputation (2:1–3) called for a persuasive response. To combat this situation the author combined a rebuke and refutation of the sceptics with a reaffirmation of the faithful. The letter of Jude, conventional anti-Epicurean polemic, language and motifs of benefactor commemoration, apocalyptic tradition, and apostolic-prophetic testimony provided the models and substance of the argument.

To isolate and discredit the sceptics, a comprehensive contrast is drawn between their behavior and that of the faithful, their new and alien false teaching and the ancient prophetic and apostolic testimony verified by God. Those who scoff at the Lord's coming are "false teachers" who exploit and entice with "false words" like the "false prophets" of old (2:1–3, 14–16). By contrast, you the faithful know the "truth" and its reliable source (1:12–21, 3:1–2; cf. 1:2–3, 5–8; 3:17–18). They are "ignorant" (3:16) like "irrational animals" (2:12, 22); they "forget" (1:9) and "ignore" (3:8) what they once knew (2:20–22). You should "not ignore" (3:8) but "remember" the testimonies (1:12–15, 3:1–2) and advance in all the gifts you have received from God (1:3–11, 3:14–18). They have followed Balaam's "way" of error (2:15), whereas you adhere to the "way of truth and righteousness" (2:2, 21). They are "unstable" apostates who mislead others (2:2, 15, 20–22; 3:16); you must resist their efforts and remain "stable" (3:17; 1:10, 12). They distrust God's "promise" (3:3–4; but their own "promise" of freedom is vacuous (2:17–19). However, the "promises" you have are reliable for they come from God (1:4; 3:9, 13). They are "ungodly," "lawless men" (3:17; cf. 2:6, 8) seeking their own self-serving passions and interests (1:20,

2:2–3, 10–11, 13–14, 18); they are unholy "slaves of corruption" (2:19–20). But you have "escaped corruption" and "passion" and share in God's holy nature (1:3–4; 3:11, 14). They, like the sinners of old, will be "condemned," though they doubt God's judgment (2:3, 4–10a; 3:4–7). but you can trust God's coming. If, like righteous Noah and Lot of old, you remain faithful, you will be rescued (1:10–11, 3:11–18).

Accompanying this strategy of demarcation was an argument based on historical precedence and antiquity. To allay doubt in God's present and future involvement in human judgment and cosmic renewal, the author recalled scriptural evidence and apostolic eyewitness testimony from the past. God's creative and destructive action in the world is recorded in history (2:4–8; 3:5–6). This history establishes the certainty of his present and future involvement in human judgment and cosmic renewal (2:9–10a, 12; 3:7, 8–13). As God spoke at creation (3:5), so he also spoke through the prophets and to his Son (1:16–21). This word and coming of God in the past is attested by the personal experience of the earliest of the apostles, Symeon Peter. This "coming in power," already experienced in human history, is a model for, and basis for confidence in, the parousia to come at the end of time (3:1–11).

Over against the novel and alien vagaries of the false teachers, 2 Peter thus posed the older, venerable, and more probative testimony of prophetic and apostolic tradition. Over against their aberrant and divisive sense of freedom, he emphasized the unifying way of truth and righteousness and the holy commandment received from Jesus Christ. Over against scepticism concerning the future, he urged recollection of what the believers had already received and knew. "Entrance into the eternal kingdom of our Lord Jesus Christ" would be theirs if they awaited the day of the Lord in patient confidence and grew in the gifts already granted.

2 Peter has been faulted for its lack of reference to the heart of the kerygma, the death and resurrection of Jesus Christ, and its implications for Christian faith and conduct. The nature of the error confronted, however, concerned theological assumptions underlying that kerygma rather than the kerygma itself: the ancient Jewish and primitive Christian belief concerning divine providence and the exercise of divine justice. It was this previously unquestioned belief which converts from paganism had begun to challenge. Their scepticism focused not the person and role of Jesus but rather on the presence and participation of God in human history. In response, the author marshaled arguments and sources useful for the reaffirmation of this belief and the refutation of those who challenged it. Jude and anti-Epicurean polemic supplied the model and substance for the critique of the false teachers. Apocalyptic tradition likewise was used to reassert the universal scope of God's reign and to stress the link between present, past and future, protology and eschatology. The fiction of a Petrine testament supplied the letter with apostolic credentials which were older and therefore superior to those of Paul and Jude, the author of 2 Peter's chief source. Furthermore, Peter's eyewitness of Jesus' transfiguration, the foreshadowing of the future parousia in past time and space, countered the sceptics' charge that the parousia of God (or the gods) was merely a fanciful "myth." Finally, the testament form itself provided a means for depicting events of the present as already anticipated and addressed in an authoritative legacy from the past.

Linked to its theological eschatology of the endtime, 2 Peter proposed an "interim ethics" for Christians awaiting the dawning of the final day of the Lord. Between Christian conversion and cosmic consummation believers were to grow in the gifts and their stability and salvation by resisting the seduction of Christian subversives who deviate from the prophetic and apostolic norms of truth; avoid the corruption of the world by leading holy, godly and peaceful lives in accord with the way of righteousness; and with patient confidence await the promised day of the Lord.

Despite its marginal status within the course of Christian theology, the concerns of this letter retain perennial significance. For when sceptics of any age question the rule of God in human history, the certainty of afterlife, Christ's coming in power and judgment, and the implications of this for Christian morality, then this recollection of the ancient apostolic tradition assumes fresh urgency and vitality.

H. Origin, Destination, and Date

2 Peter contains only implicit information concerning its origin, destination, and date of composition. The letter's salutation (1:1–2) does not specify the geographical location of its intended audience. The

situation, style, and content of the letter indicate that both author and audience resided in culturally pluralistic Hellenistic environments. Both addressees and false teachers are said to have "escaped from the world's corruption" (1:4, 2:20), a characterization which is more appropriate to gentile rather than Jewish converts. On the other hand, the frequent allusions to the Jewish scriptures, the occasional use of Semitic turns of phrase (2:1, 2, 12–14; 3:3), and the strong reliance on Jewish apocalyptic materials, suggest that the audience on the whole was familiar with and could be persuaded by tradition drawn from the Jewish-Christian heritage. The addressees were also assumed to have known of Paul and at least some of his letters (3:15–16), of a previous Petrine letter, and possibly of the letter of Jude (3:1–3).

The location of the audience could have been in any of the cosmopolitan centers of the Mediterranean world penetrated by Christianity such as Antioch in Syria, Alexandria in Egypt, Ephesus in Asia Minor, or Rome. However, the cumulative evidence argues most strongly for Asia Minor. Here pagan, Jewish, and Christian cultures coexisted and clashed, Epicureans had a firm foothold, Pauline letters were gathered, and another epistle of Peter was known. Egypt as a possible, though less likely, place of destination is suggested by the early use of 2 Peter in the Egyptian *Apocalypse of Peter* (ca. 135 C.E.) and its first explicit citation by Origen of Alexandria (217–ca. 251).

Although the letter's place of origin is also unspecified, several indications point to Rome. This was the site of Peter's death and the location of the Petrine circle from which 1 Peter issued. The numerous affinities between 2 Peter and the clearly Roman documents of *1* and *2 Clement* and the *Shepherd of Hermas* suggest dependence on a common Roman Christian tradition (Bauckham *2 Peter* WBC, 145–51, 158–62). These documents, along with 1 Peter, also attest the pastoral concern of the Christian groups in Rome for the churches abroad.

The lower and upper limits of the letter's date of composition are established by its use of Jude (ca. 70–90) and its probable use by the author of the *Apocalypse of Peter* (ca. 135). This time frame also accords with its concerns, content, and retrospective perspective. The advanced Hellenistic spirit of the letter, the Christian divisions it describes, the delay of the parousia it must explain and the doubts it must dispel, its retrospective appeal to the legacy of an apostle no longer alive, the misuse of prophetic and Pauline writings it must correct, along with its relatively late attestation are all features which indicate that 2 Peter is, with great likelihood, the latest composition of the NT, written sometime in the first quarter of the 2d century. Composed in the name of Peter who had long since died (ca. 65–67 C.E.), it nevertheless claims to preserve a testament which provides a formal link with the past and a guideline for present and future. JOHN H. ELLIOTT

PETHAHIAH (PERSON) [Heb *pĕtaḥyâ* (פְּתַחְיָה)]. **1.** A priest who appears in an organizational list associated with David (1 Chr 24:16). According to the genealogical information in 1 Chronicles 24, Pethahiah was a descendant of Aaron through the family of either Eleazar or Ithamar. When lots were cast in order to organize the various officers of the temple, he was assigned to the nineteenth of twenty-four divisions. In light of the postexilic perspective of Chronicles, Pethahiah is further seen as an ancestor of a later priestly family (Braun *1 Chronicles* WBC, 228).

2. A Levite (Neh 9:5) who participated in the ceremonies preceding the "sealing" of the new covenant (Neh 9:38). These ceremonies included both communal confession and worship. According to Neh 9:5, Pethahiah and other selected Levites called the assembly to join in a liturgical blessing of Yahweh prior to Ezra's prayer. In addition, this is most likely the same Pethahiah who, along with other Levites, priests, and laymen, listened to Ezra and agreed to renounce their foreign wives and children (Ezra 10:23; 1 Esdr 9:23).

3. The son of Meshazabel and a descendant of Judah, he appears in a catalog of officials who served the postexilic community in and around Jerusalem (Neh 11:24). Specifically, Pethahiah "was at the king's hand in all matters concerning the people." While some have suggested that such a description indicates a Jewish representative residing in Persia and functioning in a capacity quite similar to the one held earlier by Ezra (Ezra 7:12; Brockington *Ezra, Nehemiah, and Esther* NCBC, 195; Fensham *Ezra-Nehemiah* NICOT, 248), the phrase "at the king's hand" can just as well be understood in a figurative sense. Given the general setting of Jerusalem and the surrounding towns in this passage, Pethahiah was likely a local advisor who reported to the king through regional officials (Blenkinsopp *Ezra-Nehemiah* OTL, 327).
TERRY L. BRENSINGER

PETHOR (PLACE) [Heb *pĕtôr* (פְּתוֹר)]. The home of Balaam, the Mesopotamian seer who was summoned by Balak to curse the Israelites (Num 22:4–6; Deut 23:4). According to Num 22:5, Pethor was located near the Euphrates River in the land of AMAW. Mentioned in occasional extrabiblical inscriptions, Amaw lay to the W of the Euphrates. Additional information concerning Pethor is provided in both the book of Numbers as well as the inscription of Shalmaneser III. In Balaam's first oracle, he mentions that he had been brought from Aram and the eastern mountains (Num 23:7). While such descriptions are noticeably vague, they suggest the general region that included central Syria and extended to the Euphrates (Budd *Numbers* WBC, 267; Noth *Numbers* ET, OTL, 183). Shalmaneser III's inscriptions, however, are a bit more precise. In this case, Pitru (the Hittite name for Pethor and the equivalent of the Assyrian *Ana-Aššurutîr-aṣbat,* meaning "I founded [it] again for Aššur") is positioned "on the other side of the Euphrates, on the river Sagur" (*ANET*, 278). Insofar as the Sagur joins the Euphrates some 60 miles NE of Aleppo, Pethor was situated on the W bank of the Euphrates in Upper Mesopotamia near the point where the two rivers meet. While a specific site defies certain identification, Tell Aḥmar (36°40´N; 38°08´E), located 18 miles S of Carchemish, has been suggested (Snaith *Leviticus and Numbers* NCBC, 287).
TERRY L. BRENSINGER

PETHUEL (PERSON) [Heb *pĕtû‹ēl* (פְּתוּאֵל)]. According to Joel 1:1, the name of the father of the prophet Joel. The name may mean "youth of El" or "a youth belonging to El" (*TPNAH,* 116, 123).
RICHARD D. WEIS

PETRA (PLACE). See NABATEANS.

PEULLETHAI (PERSON) [Heb *pĕ‹ullĕtay* (פְּעֻלְּתָי)]. Among the gatekeepers at the temple in Jerusalem, Peullethai (whose name means "recompense" or "reward") is named in 1 Chr 26:5 as the last of the eight sons of Obed-Edom cited. The list in which his name occurs (1 Chr 26:4–8) appears to be the

contribution of a reviser of the Chronicler's organization of the gatekeepers (Williamson Chronicles NCBC, 160–70; Rudolph *Chronikbücher* HAT, 173).
J. S. ROGERS

PHALTIEL (PERSON) [Lat *Phalthihel*]. A "chief of the people" who came to visit Ezra between Ezra's first and second vision, according to 2 Esdr 5:16. Phaltiel comes to Ezra's residence on the day after the first vision, and urges him to revive himself and lead the people. The Codex Complutensis renders the name as *Salatiel,* which is equivalent to the Heb name Shealtiel (Myers *1 and 2 Esdras* AB, 168). Shealtiel is the father of Zerubbabel in Ezra-Nehemiah (see SHEALTIEL), and so an identification of Phaltiel with Shealtiel is both possible and intriguing.

PHANUEL (PERSON) [Gk *Phanouēl* (Φανουηλ)]. Phanuel, whose name means "the face of God" (cf. Gen 32:32 LXX), is the father of Anna the prophetess and a member of the tribe of Asher (Luke 2:36). Asher was one of the lost northern tribes and the reference here indicates that after the exile some of the lost tribes returned to full membership in the Jewish nation.
JOANN FORD WATSON

PHARAKIM (PERSON) [Gk *Pharakim* (Φαρακιμ)]. Forefather of a family included under the heading the "temple servants," which returned with Zerubbabel (1 Esdr 5:31). See also NETHINIM. However, this family is not included in the parallel lists in Ezra 2 and Nehemiah 7.

CRAIG D. BOWMAN

PHARAOH. Egyptian *Pr-ˁ€* (pronounced something like ***pārĕ́*ō**), literally (the) "Great House;" a later designation of the king of Egypt.

The monarch who sat on the throne of Egypt was traditionally accorded a number of names and titles encompassing his divine and terrestrial roles in the scheme of things: "Horus" (the falcon-god incarnate), "Golden Horus," "Favorite of the Two Ladies" (i.e., the cobra and vulture, tutelary goddesses of Upper and Lower Egypt), "He-of-the-Sut-plant-and-the-bee" (i.e., King of Upper and Lower Egypt), "son of Re" (the sun-god) etc. The word "Pharaoh," however, was not initially part of his titulary. Attested from the early 3d millennium B.C. as a designation of part of the large palace complex at Memphis wherein the king and the officers of his administration lived, the term by extension came to signify the authority of the central government. During the 18th Dynasty (ca. 1560–1320 B.C.), and certainly before the reign of Thutmose III (1504–1451 B.C.), "Great House" was occasionally applied to the person of the king himself by metonymy, much as "the Porte" stood for the Turkish sultan, or the "White House" betokens the President of the U.S.A. While initially this semantic development took place within the realm of the vernacular, before the close of the New Kingdom (ca. 1070 B.C.) "Pharaoh" had become a polite circumlocution for the reigning king in official jargon, and as such from the reign of Sheshonk I (last quarter of the 10th century B.C.) is sometimes included within the king's titulary in formal inscriptions. By the 8th century B.C. it was an integral part of the royal cartouche itself (i.e., the oval within which the king's name was written in hieroglyphs); and from the 7th century on was nothing but a synonym of the generic "king," the older word which it rapidly replaced. Its occurrence in the Bible in Genesis, Exodus, and 2 Kings as synonymous with "king of Egypt" conforms to the final stage of its native evolution.

The word did not escape oblivion itself. Although Ptolemaic temples (ca. 300–30 B.C.) display "Pharaoh" frequently and consistently in the context of inscriptions where it means only "king," the termination of the monarchy by the Roman emperor Augustus rendered it obsolete. Coptic Christianity (beginning in the late 3d century A.D.) wholly misinterpreted "Pharaoh" (as definite article *p-*) followed by *-rero,* "king"—no such word exists); while classical and Islamic tradition transmogrified it into a personal name for a few individual kings (see also *LÄ* 4: 1021).

DONALD B. REDFORD

PHARATHON (PLACE) [Gk *Pharathōn* (Φαραθων)]. Variant spelling of PIRATHON.

PHARES (PERSON) [Gk *Phares* (Φαρες)]. See PEREZ.

PHARISEES [Gk *Pharisaios* (Φαρισαιος)]. Recent research on the Pharisees has paradoxically made them and their role in Palestinian society more obscure and difficult to describe. The three ancient sources—Josephus, the NT, and rabbinic literature—have very limited information which is difficult to interpret. Scholars have pictured the Pharisees as a sect within Judaism, a powerful religious leadership group, a political leadership group, a learned scholarly group, a lay movement in competition with the priesthood, a group of middle class urban artisans, or some combination of these. In most historical reconstructions of Jewish society the categories used to describe these groups, such as sect, school, upper class, lay leadership, etc. are ill defined or misused and not integrated into an understanding of the overall structure and functioning of society. Bits of evidence are often taken out of context, harmonized with each other, and used as building blocks for very improbable structures. Because Josephus names the three leading Jewish "schools of thought" as the Pharisees, Sadducees, and Essenes, and because the Pharisees, scribes, and Sadducees appear in the NT as opponents of Jesus, the importance and roles of these groups in Jewish society is vastly overemphasized. The proliferation of hypotheses about the Pharisees shows how poorly they are understood. After a review of previous scholarship, the evidence from Josephus, the NT, rabbinic literature, and Qumran will be reviewed and the historically reliable conclusions synthesized.

A. Previous Scholarship and Theories

Studies of the Pharisees in the last century have been beset with a number of political and methodological problems. Jewish interpretations of the programs of the Pharisees and Sadducees have often been covertly influenced by modern conflicts between traditional and progressive Jews. Many Christian accounts of the Pharisees have been vitiated by either uncritical acceptance of the anti-Jewish polemics of the NT or modern anti-Semitism. Apologetic defenses of the Pharisees by both Jewish and Christian scholars have distorted or romanticized the Pharisees and separated them from their historical context. Many traditional and historical studies of the Pharisees have been marred by an uncritical

acceptance of some or all of the sources (Josephus, NT, rabbinic literature) without sophisticated interpretation of the purpose, date, and natures of each. The fragmentary nature of the texts referring to the Pharisees has prompted scholars to harmonize the sources with one another, to fill in gaps with very speculative hypotheses, and to create historically unproven accounts of their origin, nature, history, teaching, and goals. Lack of evidence about the Pharisees and great discord over related issues such as the nature of Second Temple Judaism, its thought, laws, practices, and social structure, have joined to produce a welter of unproven theories concerning every aspect of the Pharisees' thought and history. Only the most influential writers and theories will be reviewed here.

A. Geiger's work on the Pharisees set the terms for the debate in the 19th and 20th centuries. He interpreted the Hillelites as more liberal and adaptable to evolving circumstances than the more conservative and literalistic Sadducees and Pharisaic Shammaites. The contrast between the rigidity of the old halakha (condemned in the NT according to Geiger) and the new halakha of the Pharisees (whom Geiger admired) roughly parallels the conflict in 19th century Germany between traditional Judaism and the Reform. Geiger's approach was popularized by the historians H. Graetz and I. H. Weiss and has continued with many modifications and variations to govern most accounts of the Pharisees until the present.

Christian accounts of the Pharisees have been greatly influenced by Wellhausen, Schürer (*HJP²*), Bousset, and Meyer, all of whom interpreted "late" Judaism as a legalistic degeneration of Judaism in comparison with prophetic ethics. Wellhausen and other 19th century writers were influenced by Hegelian and evolutionary ideas in their construction of historical schema and conveniently saw the Pharisees as symptomatic of a legalistic and materialistic Judaism, both deteriorating and about to be replaced by Christianity. This type of view, popularized by the influential histories of Schürer, Bousset, and Meyer has dominated much of Christian scholarship on the Pharisees and Judaism in general.

At the turn of the century a number of Jewish scholars had begun to argue against the prevailing Christian interpretation of the Pharisees (see the review of fourteen items by Box 1908–9). In the early part of this century, British and American scholarship was greatly influenced by the interpretations of the Pharisees by J. Lauterbach, L. Ginzberg, L. Finkelstein, L. Baeck, and H. Loewe. Lauterbach continued Geiger's tradition of reformed scholarship in a series of essays (1913–29) which relate the history of the Pharisees to the development of midrash and Mishnah in Jewish history. He interpreted the Pharisees as progressive lay leaders opposed to the conservative Sadducean priestly aristocracy. Ginzberg criticized Geiger's contention that the Pharisees changed and adapted the law and affirmed its antiquity. He related differences in the law to social and historical factors, especially the relationship of the Sadducees and Shammaite Pharisees to the aristocracy, and the Hillelite Pharisees to the common people. The laws of these groups focused on different concerns and produced different legal interpretations. Ultimately, Ginzberg's characterization of the Pharisees resembles that of Geiger. Finkelstein in early articles and studies and finally in his book, *The Pharisees*, took the sociological study of the Pharisees in a different direction, attributing differences in law and custom, not to liberalism and conservatism but to social class and geographical location, with the Pharisees representing the urban plebians and the Sadducees the rural patricians. He also attributed to some rabbinic laws and customs an origin in the monarchic period. Baeck, defending Judaism against the onslaughts of German anti-Semitism in the 1930's, understood the Pharisees as a movement which sought the dominance of religion over all of Jewish life and stressed a holiness which did not compromise with a hostile culture. The Pharisees were close to the people and led Judaism in changing social circumstances. H. Loewe, following Lauterbach and others, gave a comprehensive and sympathetic account of the Pharisees in a famous series of lectures presented to a Jewish and Christian audience in Britain.

All these scholars accepted at face value the sources which speak of the Pharisees, criticizing them only when they contradicted one another or seemed very improbable. The continuity of the Pharisaic and rabbinic movements and the pertinence of rabbinic literature for describing Pharisaic history and thought was assumed. Most understood the Pharisees as a lay movement or sect with scribal connections which was based on certain interpretations of the law. In general the rabbinic view of the Pharisees as a powerful

governing force, in competition with and eventually dominating the priesthood and other aristocratic leaders, was accepted. Their synthesis of the Pharisees and the rest of early Judaism, derived mainly from rabbinic literature's later understanding of its origins, was accepted by a new generation of Christian scholars.

R. T. Herford published a number of books which sought to counteract Christian polemics and anti-Semitism. In his study of the Pharisees he followed Lauterbach and presented a sympathetic portrait of the Pharisees as teachers of the oral law. He based his account of their teachings almost wholly on rabbinic literature and turned Wellhausen's theory on its head by arguing that the Pharisees continued the ethical tradition of the prophets. Herford, and Moore after him, encouraged an appreciation of the deep religious significance in the Pharisaic/rabbinic way of life and recognition of the vitality of Pharisaism which was the foundation of rabbinic Judaism and contributed so much to early Christianity. Herford's approach, based on the work of the Jewish apologists, influenced the presentation of Judaism in Gressmann's third edition of Bousset.

G. F. Moore's masterful and judicious synthesis of Jewish thought in the first two centuries has dominated the English-speaking world. Moore, who mastered both the primary and secondary sources, made use of rabbinic and other literature with attention to the problems of dating and continuity. His famous synthesis of "normative Judaism" which he argued formed the inner core of Judaism in all its manifestations has been decisively refuted by recent finds and research, but his study still retains value as a thoughtful summary of major themes in Jewish thought. In his account of the Pharisees and their place in Jewish history Moore followed the main lines sketched out by Geiger, Ginzberg, and others, with special emphasis on theological disagreement between the Pharisees and Sadducees, including a rough analogy between the Pharisees and Puritans.

S. Zeitlin, in numerous articles and his history of the Second Commonwealth, distinguished various meanings of the term "Pharisee" in rabbinic literature so that the historical group opposed to the Sadducees could be distinguished from other groups of "separatists" who were not Pharisees. The Pharisees according to Zeitlin had their origin in the 5th century and were not a sect, but emerged from a lay scribal movement which was focused on the oral law. Zeitlin makes critical use of the sources, but his methods for solving many problems and his exegeses of numerous texts are idiosyncratic; thus his work should be used with care.

Ellis Rivkin has taken up Zeitlin's work on the Pharisees with numerous modifications. The Pharisees are not a sect or movement, but a scholarly class dedicated to the teaching of the twofold law and interalizing Judaism through belief in life after death. They revolutionized Judaism by creating new institutions such as the synagogue, the *bêt dîn* (court), the dominance of the scholarly class, the master-disciple relationship, and the formulation of Mishnaic type law. The Pharisees originated in the Hasmonean period and were socially powerful leaders (Rivkin takes Matt 23:2 as historically accurate on this point). Rivkin more consistently distinguishes the varied uses of Pharisee in rabbinic literature, but in doing so he uncritically combines texts from very diverse documents and periods as if they formed one homogenous corpus. He too readily accepts rabbinic texts referring to the Pharisees, as well as the NT and Josephus, as reliable historical sources without taking into account the authors' purposes and historical distance from the Pharisees. In addition, he identifies Pharisaic teachings with much of rabbinic literature and Pharisees with scribes and sages. With these qualifications Rivkin's reconstruction of the Pharisees is the most detailed and critical since World War II, with the exception of that of Jacob Neusner.

Jacob Neusner has pioneered the use of rigorous historical-critical analysis of the full range of rabbinic sources. The stories of the Second Temple sages, which are usually used as the building blocks for reconstruction of the Pharisees, are found to be generally unreliable. The teachings of these sages can be accepted as 1st or 2d century only if the substance of the teaching is attested (that is, referred to or assumed) by a sage of the same or the next generation. The whole Mishnah also has been subjected to a formal and logical analysis to unravel its earlier and later layers. While no certain results can be achieved by these methods, some probable conclusions concerning the teachings of the Pharisees have been reached and correlated with the evidence in Josephus and the NT.

When the Mishnah and Tosefta are analyzed using Neusner's criteria (the logic of Mishnah's argument and the attested attributions), by far the largest body of law which can be somewhat reliably assigned to the early-and mid-1st-century concerns: ritual purity, tithes and other food laws, and Sabbath and festival observance. These laws set out an agenda of holiness for the land and people which was a fitting response for a powerless people dominated by the Romans because these laws pertain to the parts of domestic life—food, sex, and marriage—which can be controlled by people out of power in their own society. Food and reproduction within the household, rather than the public cult at the Temple and the governance of society, are within the grasp of a subject people. Neusner argues that the legal agenda of the Pharisees, centered around food laws and festivals, bespeaks a sectarian table fellowship which was not part of the political struggle or 1st-century Palestine. Neusner theorizes that the Pharisees were an active political party under the Hasmoneans (cf. Josephus), but were driven from the political arena by Herod's repression. He has further suggested that the absence of a coherent body of laws concerned with civil law and sacrifice in the Temple, though an argument from silence, indicates that the Pharisees were not in control of the Temple cult or the dominant force in society. Talmudic stories which depict the Pharisees as rulers of society are later retrojections of 3d to 6th century rabbinic power onto the Pharisees of the 1st century. It is more likely that the Pharisees had been under the Hasmoneans, and remained under the Romans, one of a large number of political-interest groups which combined a social-religious reform program with a search for power and influence over Jewish society and government. Though the Pharisees were less successful in the 1st century than in the Hasmonean period, they were still oriented toward power and continued to work for it after the destruction of the Temple. On the whole Neusner's theory is much more critical and adequate than those of his predecessors.

Two other overviews of the Pharisees by J. Bowker and H. Mantel are deserving of mention. Bowker thinks that Pharisees was the pejorative name for a movement of scholars called *hăkāmîm* (sages) who sought to make the laws fit daily life and extend priestly holiness to the people. They became a sect only when they were expelled from the Sanhedrin by John Hyrcanus and finally dominated Judaism after the destruction of the Temple. The *hakamic* movement embraced scribes and associates, *ḥăbērîm*, of *Tractate Demai* as part of their larger movement. In order to create the overarching *hakamic* movement, Bowker must uncritically meld a number of texts into an artificial whole. H. Mantel, who has written extensively on the Sanhedrin, oral law, and origins of rabbinic Judaism, locates the original disputes which separated the Pharisees and Sadducees in the time of Ezra, and envisions a scholarly social movement focused on the study of Torah spanning the centuries from the exile to the destruction of the Second Temple. His focus is on the origin and development of rabbinic halakha which he sets in the Second Temple period. Mantel accepts the rabbinic sources as historically accurate and critically assesses the sources only when they contradict each other or are incoherent. His account of the Pharisees is derived from the interpretation of rabbinic literature found in the German Jewish scholars of the 19th century.

Truly critical interpretation of the rabbinic sources and assessment of their contributions to the history of the Pharisees and their Second Temple context has only recently begun. The redactional tendencies of individual documents must be taken into account, the literary forms analyzed, and the antiquity of traditions established by comparison among many sources and with datable texts and events. As such research progresses (cf. the work of J. Neusner), hypotheses concerning the Pharisees' organization, social type, program, and purposes may be generated and tested. For the present, despite the contribution and theories of past research, much is not known concerning the inner workings of the Pharisees and their social roles in society.

B. Josephus

In his many volumes Josephus mentions the Pharisees less than twenty times, a reflection of their minor role in society. In the *Jewish War* the Pharisees are mentioned four times. Their great influence on Queen Alexandra and consequent political power in the early 1st century, B.C.E. is recounted disapprovingly. Later in that century, Herod accused his brother Pheroras' wife of subsidizing the Pharisees against him. After the long, laudatory description of the Essenes, the Pharisees are described briefly with the Sadducees as one of the three traditional Jewish philosophies. Finally, at the beginning of the Great War

the most notable Pharisees along with other Jewish leaders tried to prevent the revolt and the cessation of the sacrifices offered for Rome.

Pharisees as a group or as individuals are mentioned nine times in the *Jewish Antiquities*, three of which are parallel to passages in the *Jewish War*. Josephus gives a brief description of the Pharisees in Book 13, as he treats the Hasmonean period, and a longer one at the beginning of Book 18 (which covers the beginning of the 1st century, C.E.), parallel to the description in the *JW*. He recounts their conflict with John Hyrcanus which led to loss of influence, their political power under Alexandra, and their loss of it again at her death. During the Herodian period, Samaias and Pollion, who are Pharisees, appear in several incidents, including the defense of Herod (in a manner of speaking) at his trial before the Sanhedrin. Herod showed favor to Samaias and Pollion when he took Jerusalem and later exempted them from taking an oath of loyalty to him. Near the end of Herod's life the Pharisees formed an alliance with Pheroras' wife and her faction against Herod, an association which led to the execution of a number of Pharisees.

In the *Life*, Josephus says that he tried the Pharisaic way of life along with the Essenes, Sadducees, and an ascetic named Bannus; finally he chose the Pharisees. On the eve of the revolt, the leading Pharisees, along with the chief priests and Josephus, appear as a leadership group. Simon ben Gamaliel, a Pharisee, is the prime mover in Jerusalem to have Josephus removed from command in Galilee, and the delegation finally sent to remove Josephus from command has a priest Pharisee and two lay Pharisees along with a young chief priest.

1. Hasmonean Period. The nature of the Pharisees can be inferred from their activities during the Second Temple period. During the reign of John Hyrcanus (134–104 B.C.E.) the Pharisees were initially very influential on Hyrcanus, who was guided by their views of Jewish law and life (*Ant* 13 §288–98). Hyrcanus gave a banquet for his valued supporters, and when he asked them for any criticisms they might have, the Pharisees, like tactful clients, praised their patron. The Pharisees seem to have been allies and aids to Hyrcanus, probably as lower officials and functionaries in the newly organized Hasmonean rule. One Pharisee, Eliezer, did criticize Hyrcanus (a serious political attack is implicit) and was rejected by his fellow Pharisees. Nevertheless, a Sadducean friend of Hyrcanus, Jonathan, fanned the flames of the dispute, succeeded in outmaneuvering the Pharisees, and broke their influence on Hyrcanus. This tale of court intrigue and social conflict reflects the struggle for control of Jewish society which endured throughout the Second Temple period. In this complex political, social, and religious competition the Pharisees had at different times both major and minor roles.

The conflict between Hyrcanus and the Pharisees continued through the reign of his son. Alexander Jannaeus (103–76). Though Alexander expanded Jewish territory, Josephus criticizes him for his untactful policies and oppressive cruelty which aroused the people to disturbance and revolt and filled his reign with conflict (*JW* 1 §67–69; *Ant* 14 §85–106). On his death bed Alexander bequeathed his kingdom to his queen, Alexandra, and quieted her fears about the hostility of the people with the advice that she win the Pharisees over to her side so that they would control the people (*Ant* 13 §399–417). Alexander stresses to his wife the ability of the Pharisees to harm or help people by influencing public opinion, despite the fact that they sometimes act out of envy. He also reveals the Pharisees' political agenda, that is, their desire for power over the laws governing domestic Jewish life. Alexandra is to render them benevolent by conceding to them a certain amount of power. Alexandra followed this advice and also let the Pharisees have control over Alexander's corpse and burial, as he advised. The Pharisees, in turn, forgot their anger and gave speeches praising Alexander as a great and just king, which moved the people to give him a splendid burial. Josephus neither praises nor blames the Pharisees for their actions. He sees them as one of the political interest groups competing for power and influence. They are useful for the governing class because of their status and influence among the people. He seems to approve of Alexander's advice to his wife to win over the people and end the civil disorder which marked the end of his reign. The Pharisees are seen here as a force for order and thus win Josephus' approval. Josephus shows no interest in the details of the Pharisaic program, nor in their motives. He takes for granted their self-interested quest for power and cynical posthumous praise of Alexander. Subsequently, however, he criticizes them for causing disorder by trying to take vengeance on their enemies among Alexander's supporters and

officials, and he criticizes Alexandra for weakness in letting the Pharisees rule. Under Alexandra the Pharisees had substantial direct bureaucratic power in domestic affairs, recalled exiles, and freed prisoners; but they did not have unlimited power, because they could not punish on their own authority Alexander's old advisors and allies who had crucified eight hundred opponents of Alexander (*Ant* 13 §379–83).

In the confusion which followed the death of Alexandra the Pharisees are not mentioned. It is likely that they had lost influence and popularity with the people because of the way they had exercised power over them and thus lost political power to rival interest groups, coalitions, and factions. Though both of Alexandra's sons, Aristobolus and Hyrcanus, had supporters within Jewish society, neither is said to have turned to the Pharisees for support. The rise and fall of the Pharisees fits the pattern found in many other societies. In times of turmoil many groups and individuals emerge as partially independent power centers and compete for control and frequent changes of leadership are normal.

2. Herodian Period. Herod (37–4 B.C.E.) kept a tight hold on power, so all other groups receded before him and his network of spies. Two Pharisaic leaders, Samaias and his teacher Pollion, protested against the weak leadership of the Sanhedrin by giving Herod backhanded support (*Ant* 14 §163–84; 15 §1–4). Herod responded by treating them as favored clients. Twenty years later he exempted the Pharisees from an oath of loyalty because of his respect for Pollion (*Ant* 15 §368–72).

That the Pharisees remained a social and political force can be seen at the end of Herod's reign when the Pharisees participated in a factional intrigue over the succession to Herod with catastrophic results. Herod's brother Pheroras, the tetrarch of Perea, along with Pheroras' wife, mother, and sister, and Antipater's mother, conspired to have Antipater, Herod's son, succeed him (*JW* 1 §567–71; *Ant* 17 §32–60). Josephus recounts disapprovingly the Pharisees' long relationship with Pheroras's wife and their role in the plots. "There was also a group of Jews priding itself on its adherence to ancestral custom and claiming to observe the laws of which the Deity approves, and by these men, called Pharisees, the women (of the court) were ruled" (*Ant* 17 §41). The Pharisees are here pictured as influencing prominent women just as they had Alexandra in the previous generation. For Josephus, they are just one more group of court retainers surrounding Herod and scheming for power. "These men were able to help the king greatly because of their foresight [prediction], yet they were obviously intent upon combating and injuring him" (*Ant* 17 §41). If the number of Pharisees, six thousand, is accurate, it suggests that they were an organized group or movement with clear enough boundaries to be identified and with enough influence to be recruited by one faction of the royal family.

3. War against Rome. The Pharisees are next active during the revolt against Rome in 66 C.E. the chief priests, leading citizens, and notables (well-known leaders) of the Pharisees tried to persuade the people not to revolt but failed (*JW* 2 §409–17). Josephus makes a clear distinction between these legitimate leaders and the revolutionaries. The Pharisees, or at least their leaders, were part of the established leadership of Jerusalem during its last days. Josephus reaffirms their position when he recounts that he "consorted with the chief priests and the leading Pharisees" (*Life* 20–23) on the eve of the revolt. During the revolt while Josephus was general in Galilee his opponent, John of Gischala, recruited as an ally Simon ben Gamaliel, a high-born leader and member of the Pharisees (*Life* 189–98). Finally, when a delegation of four leaders was sent to remove Josephus from power in Galilee (*Life* 196–98), it consisted of a young chief priest, a Pharisaic priest, and two Pharisees from the common people. Clearly the Pharisees were enmeshed in the fabric of Jewish society and governance, but not in control.

4. Political Role. The minor role played by the Pharisees in Josephus is explained by his concentration on the governing class and its political and military fortunes which were so crucial for Jewish society as a whole. Neither the priesthood, the aristocrats, nor the peasants are treated except when they have an impact on the fortunes of the nation as a whole. The Pharisees are mentioned at times of change, crisis, or transition in government because when power shifted they and many other social and political forces in Jewish society became active in the competition for power and influence. When John Hyrcanus shifted his allegiance from the Pharisees to Sadducees, when Alexandra struggled to maintain control after her husband's death, at the beginning and end of Herod's reign, at the transition from Herodian rule to Roman

procurators, and in the complex events at the beginning of the war against Rome, the Pharisees and Sadducees are treated by Josephus as part of the political and social competition for power and influence.

The Pharisees functioned as a political interest group which had its own goals for society and constantly engaged in political activity to achieve them, even though they did not always succeed. They were not themselves the leaders of the Jewish community, though prominent leaders of the Pharisees—either by their station in the Pharisaic group or because of family status—were part of the governing class. The Pharisees as a group did not have direct power (except to a limited degree under their loyal patron, Alexandra) and were not as a whole members of the governing class. They were a literate, organized group which constantly sought influence with the governing class.

The Pharisees' precise goals for society and the laws by which they wished society to live are not described by Josephus, but the traditions which they promoted were popular with the people, especially in the Hasmonean period, according to Josephus. Both their activities in the Hasmonean period and the description of them at the end of Archelaus' reign imply that they were allied with traditional, nonrevolutionary Judaism. Whatever influence they achieved, they usually achieved with the help of a powerful patron, and they entered into coalitions with other groups among the upper classes in order to gain influence and move those who had power.

5. Descriptions. Josephus' descriptions of the Pharisees (along with the Sadducees, Essenes, and "Fourth Philosophy") are generally consistent with his accounts of them in action (*JW* 2 §119–66; *Ant* 18 §11–25; 13 §171–73, 297–98). However, the descriptions are far from complete and do not present a coherent picture of the groups' thought and organization. The Pharisees were noted for their practice of the law and their ability to interpret the law in their own way. This implies that they had particular views about how to live Jewish life and probably followed communal customs within an organizational structure. However, Josephus does not give us any information about the inner workings of the Pharisees or their presumably learned leadership. The Pharisees' acceptance of life after death and resurrection as well as reward and punishment is contrasted with the Sadducees' rejection of these teachings. Likewise, their positions on fate (meaning divine providence) and on free will and human responsibility are contrasted. The Pharisees' positions on life after death and divine providence are consistent with one another and probably derive from their eschatology and apocalyptic expectations: they picture God and humans as in a close relationship both in this life and the next. The Pharisees are said, both in the *Jewish War* and in the *Antiquities,* to be the leading and most influential school of thought, but their social class and status is not specified, except that most of them were of a lower social station than the Sadducees. The description of social relations among the Pharisees and with outsiders is consistent with their place in society. Since the Pharisees lacked direct political power, they cultivated harmonious relations with all and sought support for their mode of life through respect for tradition and their elders. (The Sadducees, like many who exercise power, were perceived as competitive, argumentative, and hard to get along with.) The Pharisees, most of whom did not have hereditary ties to positions of power, struggled to influence society as a group by winning influence. Consequently, they stressed social relations to build up their own group and win it favor and influence with others. That their struggle for power and influence was a group struggle is shown by the absence of names of Pharisaic leaders in most cases. Only Eleazar who attacked John Hyrcanus, Samaias and Pollion who struck up a peculiar and ambivilent relationship with Herod, Simon ben Gamaliel, and the three Pharisees who were part of the delegation sent to Josephus in Galilee (Jonathan, Ananias, and Jozar) are named.

6. Organization. Josephus says nothing about the Pharisees' internal organization. The beliefs which they espoused concerning afterlife, divine activity in history, and human freedom were most probably different enough from the traditional Jewish teachings and attitudes to require some positive commitment and explicit organization. However, their leadership structure, educational system, and criteria for membership are not described. Josephus calls them a *hairēsis,* a term often translated as "sect" or "school" (of thought). A *hairēsis* was a coherent and principled choice of a way of life, that is, of a particular school of thought (Simon 1979: 110, 104). In the view of the ancients and most importantly Josephus, once a few basic principles of a tradition were accepted one could then expect some diversity,

that is, some choice of particular ways of life and thought. Greek philosophical schools were usually ways of life based on a certain understanding of the universe and of moral law. Thus, Josephus uses *hairēsis* to describe the great currents of thought and practice in Judaism—espoused by the Pharisees, Sadducees, Essenes, and "Fourth Philosophy" revolutionaries—in such a way as to bring respectability to Judaism and attest to the antiquity and value of its traditions. The translation "sect" may be used if it does not imply withdrawal from political and social action. (Sect in classical sociological usage refers to a religious group which is in reaction to the main religious tradition and which sees itself as the true religion and an exclusive replacement for the dominant tradition.) With their distinctive interpretation of Jewish life and desire for political influence and power the Pharisees may be understood as a reformist sect. *School of thought* as a translation of *hairēsis* may be closer to what Josephus meant, though not necessarily to what the Pharisees were. Josephus is certainly comparing the Pharisees, Sadducees, and Essenes to the Greek schools of philosophy in order to show that Jews are a respectable, civilized people with its own wisdom. The comparison is at least partially appropriate because Greek schools of philosophy did not just engage in the academic study of a group of doctrines, but urged on their members and students a way of life. That the Pharisees actually were similar to a philosophical school is likely because the formation of voluntary associations and social groups was a characteristic of Hellenistic society.

C. New Testament

The Pharisees appear in the gospels and Acts, mostly as opponents of Jesus and his followers. Different roles and characteristics are assigned to the Pharisees in each source. In addition, Paul refers to himself as a Pharisee once in his letters.

1. Paul. Paul is the only person beside Josephus whose personal claim to be a Pharisee is preserved (Phil 3:5) and he is the only diaspora Jew identified as a Pharisee. Paul argues in Philippians against those who propose that Christians be circumcised that, though he has every reason to have confidence in his Jewish birth and heritage (3:4–6), he counts all that as loss in comparison with Jesus (3:7–11). In recounting his Jewish past Paul refers to his circumcision, his membership in Israel and the tribe of Benjamin, and his way of life in Judaism: "in relation to law, a Pharisee; in relation to zeal, a persecutor of the church; in relation to righteousness in law, being blameless." Paul's single allusion to his having been a Pharisee is related to living Jewish life according to the Pharisaic interpretation of Torah. The two characteristics of his Jewish way of life which follow his claim to be a Pharisee seem to derive from his Pharisaism. First, his adherence to the Pharisaic mode of interpreting the law led him zealously to attack the followers of Jesus, a group which had mounted a major challenge to the Pharisaic way of life. Second, he kept the law as one was supposed to and achieved the righteousness from law which was proper to it. Paul is not referring to a highly complex doctrine of work righteousness vs. grace righteousness, but simply saying that he live a good life according to Pharisaic standards. Paul's casual reference to Pharisaism in Philippians implies that it is well known and accepted as a legitimate and strict mode of living Jewish life.

Paul's very brief description of his Jewish way of life as a Pharisee partly fits the view of the Pharisees found in Josephus. Both Josephus and Paul say that the Pharisees had an interpretation of the law, though neither says what it is, and both refer to the Pharisees as a well-known group which does not need detailed identification. Like Josephus, Paul does not tell us of the inner organization of the Pharisees. Both Paul and Josephus say that they were once Pharisees, but never again refer to Pharisaism as part of their Jewish identities. Perhaps both habitually thought of themselves as Jews against the larger horizon of the Greco-Roman world where inner Jewish distinctions, such as membership in the Pharisees, were important.

Paul never says where he made contact with Pharisaism (Tarsus, Syria, or Jerusalem?). Since he never refers to Pharisees as his opponents nor as leaders in the Jewish community in any of the letters addressed to communities in Asia Minor and Greece, it is very probable that Pharisees were not found in those communities. Since Paul lived and worked in greater Syria as a Pharisee, it is possible that Pharisaism had some influence there and that some Pharisees lived outside Jerusalem and Judea.

Paul does not say how he came to know about Pharisaism, why he was attracted to it, and what the Pharisaic life entailed. Pharisaism, as depicted as Josephus, the New Testament and rabbinic writings,

concerned itself with Palestinian Jewish political and social issues and with a certain style of Jewish life which included tithing and ritual preparation of foods. It was especially suited to life in Jewish villages and towns. Since Paul used purity language metaphorically to describe and maintain the new boundaries of the Christian community, he was familiar with Jewish and perhaps Pharisaic purity rules. Paul consciously created a new community with a new understanding of purity, just as the Pharisees had for Judaism.

In the diaspora it is unclear what the Pharisaic life might have meant. Both Josephus and Paul claimed to be Pharisees while living in the larger world of the Roman Empire. Perhaps they found the Pharisaic view of how to live Judaism as a viable response to the intellectual and spiritual challenge of Hellenism. Pharisaism probably brought Jewish practices into daily life and created a conscious way of life which answered the questions and crises felt by some Jews when confronted with the Greco-Roman culture.

Paul's social class and status as a Pharisee is imperfectly transmitted. Though Paul's letters present him as an artisan (1 Thes 2:9; 1 Cor 9:6) and so a member of the lower classes, some facts about Paul's life suggest that he had connections with the upper classes and was more than an uneducated and powerless artisan. That he was a city dweller does not mean that he was educated or influential, though the city offered opportunities usually lacking in rural areas. His letters, written in good but not highly literate Greek, testify that Paul received basic education in grammar. His familiarity with and interpretations of the Bible show that he had received a solid Jewish education (Luke's claim [Acts 22:3] that he studied with Gamaliel is not verified by his letters). It is likely that he spoke and read Hebrew and Aramaic. Paul travelled, like many artisans in antiquity, and as an artisan he could find employment in urban centers. In the account of his life in Galatians, he says he persecuted the church of God. Acts locates this activity in Jerusalem, Judea, Palestine, and S Syria, but Paul's own letters leave this vague. Nor do the letters say why Paul had left his home in the first place or what his relationship to Jewish authorities in Jerusalem and elsewhere was before he followed Jesus.

2. Mark. The gospels and Acts do not easily provide information for the historical understanding of the Pharisees because they date from the last third of the 1st century and thus do not give firsthand witness to the period before the destruction of the Temple in 70 C.E. they project onto the life of Jesus later controversies between the Christian and Jewish communities and reflect later authors' misunderstandings of tradition and of Palestinian society. In all cases the gospel authors have woven Jesus' opponents as characters into a dramatic narrative which is controlled by their purposes in writing the story rather than by a desire or ability to reproduce faithfully the historical events of Jesus' life. Thus the Pharisees undergo mutation for dramatic and theological purposes and are often attacked as Jesus' opponents.

Mark places the Pharisees in Galilee on all occasions except one (2:16, 18, 24; 3:2, 6; 7:1, 5; 8:11; 10:2; in a Galilean setting in 7:3; 8:15). The Pharisees meet Jesus at Capernaum and other rural towns (3:2, 6; 7:1, 5) and in many often indeterminate places (2:18, 24; 8:11; 10:2). In contrast with Josephus, who shows the Pharisees closely linked with the leadership in Jerusalem. Mark sees them as active only in Galilee. They do not lack alliances, for they plot with the allies of Herod Antipas, the ruler of Galilee (3:6), join the scribes in conflict with Jesus, and have some scribes in their midst (2:16). They appear in Jerusalem only once, but this is probably due to the literary arrangement of Mark. In chap. 12, just before his arrest, Jesus meets a series of opponents: the Pharisees and Herodians (12:13), the Sadducees (12:18), and a friendly scribe (12:28). It is likely that Mark brings the Pharisees into this Jerusalem context as a dramatic device to create a complete roster of Jesus' opponents just before the arrest and crucifixion.

The Pharisees dispute with Jesus over fasting (2:18), sabbath observance (2:24; 3:2), and divorce (10:2). The scribes and Pharisees dispute with Jesus over purification of hands (7:1), and the scribes of the Pharisees question his eating with sinners (2:16). This agenda resembles the pre-70 C.E. legal agenda isolated from the Mishnah by J. Neusner. The Pharisees also question Jesus authority by demanding a sign (8:11). In concert with the Herodians, the Pharisees try to trap Jesus in a political matter—the question of Roman taxes (12:13)—and they enter into a plot with the Herodians against Jesus.

Because the Pharisees in Mark have relationships with other groups in society, enter into a political alliance with the Herodians against Jesus (3:6), and put Jesus to the test with the Herodians at the

instigation of the Jerusalem leaders (12:13), they appear to be a well-connected political interest group, of which the "scribes of the Pharisees" (2:16) may be the Jerusalem representatives. Since their religious views are integral to the way Jews live in Palestine, they sought to control or influence the political, legal, and social factors which might determine the social practices and views of the community. The Pharisees were the defenders of a certain kind of community and Jesus challenged the Pharisees' vision of community by attacking their purity regulations concerning washing and food, as well as Sabbath practice. The effect of Jesus' teaching was to widen the community boundaries and loosen the norms for membership in his community. Jesus thus created a new community outside the Pharisees' control and quite naturally provoked their protest and hostility.

Mark differs from Josephus in placing the Pharisees and their allies, the scribes, in Galilee as potent political and religious forces. Since Mark writes just before or after the war against Rome, he is not anachronistically reading the later rabbis back into Jesus' life as Pharisees. His traditions reflect the mid-1st century experience of the early Christian community if not the experience of Jesus himself. Galilee was ruled by Herod Antipas during Jesus' life and was not under the direct control of the Temple authorities. It was divided into upper and lower Galilee by topography and tradition and had several major towns (such as Sepphoris and Tiberias) which served as regional centers for tax collection and security. In view of the complex social and political structure of Galilee, Jesus and his opponents in Galilee, the Pharisees, scribes, and Herodians, must be seen as minor actors in the larger political struggle for control during the 1st century. The Pharisees, one of many political and religious interest groups seeking power and influence over Jewish society, exercise influence on the people and compete with Jesus for social and political control. They enter into political alliances with the Herodians and are associated with the scribes, who have some political control and a presence in Jerusalem. Though we cannot be certain that Mark and his sources give us a completely accurate picture of the Pharisees as a strong community force in Galilee in the early and mid-1st century, such a role in Galilean society for the Pharisees is intrinsically probable.

3. Matthew. Matthew tends to insert the Pharisees into more narrative situations than Mark, but less than Luke. He also pairs them differently from Mark. The Pharisees and Sadducees appear together in two contexts (3:7; 16:1–12). The formulaic pair scribes and Pharisees, not found in precisely that form in Mark, appears in a large number of places (5:20; 12:38; 23:2, 13, [14], 15, 23, 25, 27, 29; in 15:1 the order is reversed to conform to Mark). In several passages Matthew eliminates Mark's scribes when they are opponents of Jesus and replaces them with Pharisees (9:11, 34; 12:24; 21:45) whom he considers to be Jesus' opponents par excellance.

The scribes and Pharisees are presented as the pious and zealous official representatives of Judaism whose practice and interpretation of the Bible are contrasted with Jesus' interpretation of biblical law and with Matthew's interpretation of how Christians and especially Christian leaders should function in the second generation of Christianity. In the background of Matthew's polemic against the scribes and Pharisees are the Jewish and Christian communities in Matthew's day. The Pharisees and Jesus' followers are competing groups, each with their own teachings, practice, and identity, a situation similar to that of the Matthean and Jewish communities a generation later. The polemic against the "scribes and Pharisees, hypocrites" (23:13, 15, 16, 23, 25, 27, 29) is noteworthy. The scribes and Pharisees are attacked for their failure to practice Judaism sincerely, guide others to live Judaism correctly, interpret the Bible correctly, and attend to the major principles of the law and Jewish way of life. They are used as negative examples for how a community leader should act (23:4–7) and are contrasted with Christian leaders, who should not use titles and should be characterized by lowliness (23:8–12). Matthew pairs the Pharisees and scribes without regard for any differences in their interests and functions (chap. 23), in contrast to Luke who carefully separates the woes against the Pharisees and lawyers so that they are condemned for failings appropriate to their respective activities in society (11:37–52). Matthew has provided a traditional list of improper attitudes and activities of which he accuses both the opponents of Jesus and the adversaries of his own community, both internal and external. The list is so polemical and the Pharisees and scribes so identified with one another that little reliable historical information can be gleaned from it.

Matthew, in comparison with Mark, expands the role of the Pharisees as opponents of Jesus. The Pharisees comprise the most constant opposition to Jesus in Galilee and are concerned with the same agenda as Mark's Pharisees: Sabbath observance, food rules, and purity (9:6–13, 14–17; 12:1–14). The Pharisees in Matthew have a wider role and are less distinct from the scribes than in Mark. They challenge Jesus' authority as a religious and social leader by assaulting its divine source (9:32–34; 12:22–30) and argue with him concerning divorce (19:3–9 in Judea). After Jesus attacks the Pharisees with a series of parables which they perceive as directed against them (21:45–46), they plot against Jesus (22:15). Thus they are active in Judea and Jerusalem, in contrast to Mark's Pharisees. The hostility of the Pharisees brackets the crucifixion in which they take no direct part. A lawyer of the Pharisees asks the last hostile question (22:34–35), and the Pharisees join the chief priests in requesting a guard for Jesus' tomb (27:62–65). The Pharisees are not only part of the local leadership whose influence over the people and power over social norms are being challenged and diminished by Jesus, but they are also in direct contact with the more powerful forces of the Jerusalem leadership.

These peculiar Matthean characteristics, which are generally but not exclusively attributed to his redaction of Mark and other traditional materials, prompt questions concerning Matthew's purposes in writing. Recent work on the role of the Jewish leaders in Matthew has been dominated by a redactional perspective which has emphasized the dramatic and theological use to which Matthew has put these leaders and doubted that either Matthew or the traditions he passes on provide any accurate, recoverable knowledge of these groups (Tilborg typifies this view). Some see Matthew's characterization of the Jewish leaders as a literary and theological device for identifying the Christian community in contrast to Judaism and explaining the rejection of Jesus by Judaism. In Matthew's narrative the leaders form a united front against Jesus and need not be precisely distinguished from one another in themselves or by specific function in the community. But, though the lines which distinguished the scribes and Pharisees from other groups and from each other have become somewhat blurred, the groups are not simply identified with one another. Some argue that Matthew's view of Jewish leaders, especially the prominence given to the Pharisees, reflects the polemical confrontation between the Matthean community and the post-70 C.E. Jewish community which was dominated by the Pharisees-become-rabbis (Davies 1963). This position has been overstated as the social positions and functions assigned to the scribes and Pharisees fit 1st-century Jewish society as we know it from Josephus, other NT books, and later rabbinic sources.

4. Luke-Acts. Luke is notable for adding references to the Pharisees a number of times (alone 7:36; 13:31; 14:1; 16:14; 17:20; 18:10–14; with scribes 11:53; with lawyers or teachers of the law 5:17; 7:30; 14:3). Many have claimed that the author has a less-hostile attitude toward the Pharisees both in the gospel and especially in Acts (Ziesler). The situation is not simple, however, for in the gospel Luke inserts hostile Pharisees into several situations but removes them from some places where Mark and Matthew portray them as hostile (Sanders 1985: 149–54). It is clear that Luke is not unreservedly friendly toward the Pharisees and has his own specific and limited complaints about them.

Some aspects of the Pharisees in Luke-Acts are unique. Three times Jesus dines with Pharisees (17:36; 11:37; 14:1). The Pharisees are community leaders (14:1) involved with wealth (16:14) and are politically active and informed (13:31). Though Luke follows Mark in locating the Pharisees in Galilee and not in Jerusalem, they are more ubiquitous and powerful than in Mark or Matthew. Along with the scribes they are a leadership group with power and wealth in the Galilean villages (5:17–26, 30–32; 6:7–11; 11:37–53; 14:1–3; 15:2). Finally, the Pharisees seem sympathetic to Jesus and Christians on several occasions (Luke 13:31; Acts 5:34–39; 23:6–9). Acts especially treats the Pharisees well because the Pharisees accept resurrection. Also in Acts, Jesus' followers are seen (along with Judaism) as a small part of the larger and more diverse Greco-Roman world. Finally, the positive view of some Pharisees toward Christianity and one reference to Christian Pharisees (Acts 15:5) fit Luke's theme of continuity between Judaism and the church.

Luke's presentation of the Pharisees and other Jewish leaders is part of a theologically motivated literary inversion of ordinary society. The leaders of the Jews, the rich, the other established citizens, and

sometimes Israel itself are pictured as rejecting Jesus and thus rejecting God and ultimately any hope of salvation. By contrast, the poor, the sinners, the non-Jews, and the outcasts like tax collectors accept Jesus and salvation from God and "become" Israel. This new community is gradually outlined and formed in the narrative and the Pharisees, scribes, and other leaders serve this overarching narrative theme. Luke objects that the Pharisees and other leaders do not care for the poor who depend on them and have a claim on their generosity (14:1–24; 17:14; 18:9–14). Luke also complains that the Pharisees' use of purity regulations to maintain social order leads to unjust relationships in which the poor are deprived of justice because they are judged to be unclean and outside of the social order (14:15–24). In response Luke defines true uncleanness as a moral, not ritual, deficiency and thus opens Christianity's group boundaries to the outcasts, Gentiles, and sinners.

New aspects of the Pharisees, scribes, and Sadducees appear in Acts. Pharisees appear as members of the Sanhedrin twice. Gamaliel, a Pharisee and a member of the Sanhedrin, had enough wisdom, respect, and influence to be able to overcome the Sanhedrin's rage and to counsel prudent caution in dealing with the apostles (5:33–40). Luke's attitude toward Gamaliel was positive because Gamaliel helped the apostles and because he was open to the possibility that their teaching might come from God. Luke has Paul cite his study with Gamaliel as a warrant for his respectability as a Jew (Acts 22:3) and thus testify to Gamaliel's importance and honored place in both Judaism and Christianity. Whether the presentation of Gamaliel in Acts is historical can be questioned because as a literary figure he serves Luke's purpose of showing Christianity's continuity with Judaism. When Paul appeared before the Sanhedrin, he declared that he was a Pharisee and the son of a Pharisee, and thus garnered the support of the Pharisees in the Sanhedrin (Acts 23).

Some Jerusalem Christians are identified as Pharisees by Luke. At the meeting of the Jerusalem community with Paul "some believers of those from the school *(hairēsis)* of the Pharisees" claimed that gentile believers had to be circumcised and instructed to keep the law of Moses (15:5). This zeal for the law of Moses fits Luke's idea of the Pharisees in both the gospel and Acts, and it is consistent with his picture of Paul when Paul later claims that he lived Judaism according to the strictest school *(hairēsis),* the Pharisees (26:5). The author of Acts uses the same word as Josephus to describe the Pharisaic group and identifies them by the strict way of life they lead according to their interpretation of the biblical law. In a way similar to Josephus, Luke presents Pharisaism as a political force noted for its renewal of Jewish life. Acts also agrees with Paul's own characterization of Pharisaism where he implies that the Pharisaic way of life is a recognized, demanding, and accepted way of living Jewish life (Phil. 3:5).

A word must be said about the historicity of Luke's account of the Pharisees. That some were members of the Sanhedrin and competed for power in Jerusalem is likely on the basis of Josephus' account. However, Luke's idea that Paul could be a Pharisee and a Christian and that there were Christians who remained Pharisees is very unlikely, especially granted all the conflicts with Jewish authorities recounted in Acts and alluded to in Paul's letters. Since the Pharisees were a political interest group with a program for living Judaism and a sect-like organization, any interpretation of Christianity, no matter how Jewish, would have found itself in conflict with them. In trying to establish the continuity between Christianity and Judaism, Luke maximizes their agreements and common interests. He associates the Jews who were strict in observance of the law (Pharisees) with the Jewish Christians who wished to remain faithful to the Mosaic law. Luke correctly perceives many things about the Pharisees, but he probably overemphasizes their positive relations with the early followers of Jesus.

5. John. The Pharisees in John function both as government officials and as the learned doctors of the law who are interested in Jesus' teaching and dispute its truth. (Scribes do not appear in John, except in 8:3 [the woman caught in adultery], a non-Johannine pericope.) The presentation of the Pharisees in John differs greatly from that in the Synoptic Gospels though a few common features remain. In both Galilee and Jerusalem the Pharisees are an ominous presence, ever-watchful and suspicious adversaries of Jesus who keep the people under surveillance and influence it with their propaganda. They compete with Jesus for influence with the people and attempt to undermine his teaching. All through the gospel the Pharisees are allied with the chief priests in taking official action against Jesus, especially on his trips to Jerusalem.

In addition, the Pharisees, either alone or with other officials, control the synagogue and the judicial processes for removing those whom they oppose. This picture of the Pharisees as an officially powerful group has significant features in common with Josephus' presentation of them during the Hasmonean period. According to both accounts they attained real political power even though it was derived from the governing class which they served. That they are not the highest authorities is clear in the account of Jesus' condemnation to death, during which the Pharisees drop from view. Thus, John follows the Synoptic Gospels in the passion account in assigning the highest leadership and contact with the Romans to the chief priests.

The Pharisees are first mentioned in connection with a delegation sent from Jerusalem to the Jordan to investigate John the Baptist (1:19–28). The Pharisees in the incident are located in Jerusalem, engage in official inquiry of John, and are interested in his precise teaching and the authority for it. Here and elsewhere John locates the Pharisees in Jerusalem, contrary to the synoptic tradition but in agreement with Josephus. The supervisory role of the Pharisees in society is further attested when Jesus' trip to Galilee from Judea (4:1) is said to be motivated by his hearing that the Pharisees know that he is making more disciples than John the Baptist. The implication is that the Pharisees will disapprove of Jesus and be a threat to him in some tangible way. The characterization of Nicodemus as a Pharisee and a "ruler" *(archōn)* of the Jews confirm this picture (3:1). He has an official capacity in Jerusalem, knows about Jesus, has a learned and positive interest in his teaching, and feels the threat of disapproval from his fellow Pharisees (7:52).

The Pharisees are threatened by Jesus' teaching and reject him because none of the authorities *(archontes)* or Pharisees have believed in him, and the people who have do not know the law (7:48–49). Only once do the Pharisees directly debate with Jesus (8:13–20); usually they maintain a superior position based on social recognition of their learning, their influence with the people, and their political power in conjunction with the chief priests—and so refuse to treat Jesus as an equal.

The story of the healing of the man born blind (9:1–39) and the controversy following it reveal much about John's view of the Pharisees' place in the community. When the man born blind had been cured and returned to his neighborhood in Jerusalem, those who knew him sought an explanation for his cure and took him to the guardians of community order and custom, the Pharisees, for an evaluation of the situation. The Pharisees questioned the man and upon discovering that Jesus had mixed clay on the Sabbath dismissed him as a sinner who broke the Sabbath rest (9:13–17). In this narrative the Pharisees are leaders concerned with teaching, order, and the exercise of power in the community. They use their socially accepted role as accurate interpreters of the tradition to condemn Jesus according to the laws and customs which give the community its identity and shape. What is especially noteworthy is that the people turn to them as the local officials concerned with public order and community norms. Similarly, when Lazarus had been raised from the dead, some went and reported to the Pharisees what Jesus had done. They then met in council with the chief priests to decide how to prevent disruption of the social order and loss of power (11:46–47; also 12:19). The Pharisees are presented as having either direct power or decisive influence in determining who is recognized as a Jew in good standing. This function is made clear in the summary which ends the first half of the gospel (12:36–50). Many believed, including leaders *(archontes)*, but did not admit it because of fear of the Pharisees who might put them out of the synagogue (12:42–43).

As presented by John, the Pharisees were a learned group who had influence with the people because they were accepted by them as guides in Jewish behavior and belief. As such they were community leaders, perhaps with some direct power in both the synagogue and government council in Jerusalem, and certainly with great influence in conjunction with the chief priests and other community leaders ("the Jews"). Like Josephus, John emphasizes those Pharisees (probably only a small leadership core) who were in Jerusalem and participated in the direct leadership of the nation. In contrast with the Synoptic Gospels, John emphasizes the Pharisees' leadership role in the community. They kept watch over Jesus and how people reacted to Jesus. They were the ones the people consulted or reported to when they were disturbed or confused by Jesus. They discussed Jesus' teachings and authority to teach, but except in one

case, they did not directly challenge Jesus. Rather, they acted as established leaders should; they kept their distance from the newcomer and schemed to blunt his influence and preserve their own. When they took official action it was with the cooperation of the chief priests and other officials. They were not the main political leaders, for the chief priests took over as the main opponents of Jesus in the passion narrative just as in the Synoptic Gospels. John has undoubtedly merged many forces which opposed Jesus into one figure: the Pharisees. However, John, who partly reflects mid-1st century traditions, agrees in some particulars with Josephus in his presentation of the Pharisees and may be critically appropriated into a synthetic presentation of the Pharisees.

D. Rabbinic Literature

Most studies and textbook treatments of the Pharisees cite the rabbinic sources extensively because they provide much more information than Josephus and the NT and are assumed to be less biased. But such reconstructions of Pharisaism have been based on an uncritical reading of a diverse body of later Jewish sources, including the Mishnah (ca. 200 C.E.), Talmuds (5th-6th centuries), and early medieval midrashic collections. These texts have usually been culled for the few passages which spoke of Pharisees; for the more numerous laws, sayings, and stories attributed to the sages who dated from before the destruction of the Temple; and for anonymous passages which seem to refer to pre-destruction society. Such materials, taken out of context, have been treated as historically accurate 1st century traditions and patched together into a narrative. Rabbinic literature must be read with the same kind of critical methodology used on Josephus and the NT, because each of the rabbinic sources tells stories of earlier times and records laws to accomplish its own religious purposes. With these cautions in mind, three bodies of evidence will be evaluated: (1) sayings and stories about 1st-century C.E. sages; (2) 1st-century C.E. laws; and (3) texts which mention the Pharisees by name.

1. 1st-Century Sages. Stories and sayings attributed to sages of the 2d and 1st centuries, B.C.E. are very few in number and almost impossible to evaluate historically. Of all the pre-70 sages, only Hillel has a large body of sayings and stories attributed to him (33 traditions in 89 pericopae according to Neusner 1971, 2: 185–302; 3:255–72). Because the talmudic rabbis conceived of Hillel as their founder and major teacher, they consistently depicted him as an appealing, wise, and patient person and surrounded his legal teachings with an array of wise sayings, stories of his origin and status, and accounts of his disciples. Hillel is even made the ancestor of Gamaliel and Simon ben Gamaliel and thus a founder of the patriarchal house, though there is no evidence for this in either *m. ʾAbot* or the Babylonian Talmud. The search for legitimacy through descent reaches it speak in the later claim of the patriarchal house that Hillel was a descendent of David *(j. Taʿan* 4:2). The stories about Hillel in the later rabbinic sources serve to legitimize the patriarchal house of the 2d to 5th centuries. Hillel's rise to power, wisdom, moral teaching, and dominance on matters of law make him (and implicitly his successors) a leader of great influence and power in all areas of life.

The Hillel of these rabbinic sources is not simply historical any more than the Jesus of the gospels is. The rabbinic sources show with relative certainty only that he was a dominant Pharisaic teacher at the turn of the era whose influence was felt after his death. When he was adopted as the originator of the Pharisaic and later rabbinic patriarchate, he was turned into a larger-than-life figure and even compared to Moses (*Sipre* Deut 357). Most of the stories about Hillel come from the mid-2d century and later and attest to the rabbis' self-understanding rather than to the history of Hillel.

Shammai, Hillel's opponent, appears almost exclusively within the Hillel materials. The rabbis claimed Hillel as their own and did not independently preserve Shammaite material nor did they present a fair picture of him and his teachings. The Mishnah and Tosefta show Shammai accepting the dominance of Hillelite positions and thus co-opt him for one of their purposes, convincing all Jews to accept the mishnaic interpretation of Jewish life. The Palestinian Talmud and midrashim are less hostile to Shammai than the Babylonian Talmud, which totally stereotypes him.

The materials attributed to the Houses of Hillel and Shammai outnumber all materials attributed to pre-70 sages, even those of Hillel. The houses' materials are highly stylized and reflect a large measure of redaction during the 2d century. Since the attributions of materials to particular rabbis cannot be presumed

to be accurate, rules and disputes can only be reliably dated if they are assumed or referred to in materials attributed to sages in a later generation (Neusner 1971, 3: 180–83). For example, if the Jamnian (70–130) or Ushan (140–170) sages know of a teaching or dispute, then it existed at that time and probably came from the previous generation. The rules attributed to the houses mostly concern tithes, purity, and Sabbath observance and not other wider concerns characteristic of the late 2d century. Thus, the 2d century sages seem to have had a group of disputes which came from the 1st century and which they preserved as part of their teaching. However, the houses' disputes do not give a full or first hand view of the 1st century Pharisees. The formulation of the legal materials attributed to the Houses of Hillel and Shammai is so stereotyped and pithy that they are surely literary constructions and neither the record of lively debate from the middle of the 1st century nor the verbally exact repetition of teachings from that period.

Little more is known about the 1st century sages following Hillel. A number of named authorities are mentioned, but not many traditions are assigned to them. The major figures of the 1st century are Gamaliel I (the elder); Simon his son; and, after the destruction of the Temple, Gamaliel II. The materials which mention these leaders are mostly stories, rather than the standard legal rulings assigned to later sages. The agenda of Gamaliel the Elder is broader than that of earlier sages and its scope is consistent with the station and duties of a member of the Sanhedrin (Acts 5:34–41). Simon is known from Josephus where he was active in the Jerusalem leadership during the war (*Life* 189–98). After the destruction of the Temple, Simon's son, Gamaliel II, gained power over the fledgling rabbinic movement which owed much to Second Temple Pharisaism. Little more can be reliably known about their teachings and activities.

The Second Temple sages and the Houses of Hillel and Shammai have usually been understood as scholarly rabbinic groups. But this view, fostered by the Talmuds, is a retrojection of later rabbinic schools onto the 1st century. Given the interpenetration of religion with politics and the rest of society, it is doubtful that the picture of the Houses of Hillel and Shammai as sectarian debating societies is accurate. Since the two groups identify themselves by the name of a leader or founder, they can best be understood as factions, that is temporary associations of disparate people grouped around a leader. Later after the deaths of the leaders, these factions became institutionalized into formal, corporate groups as part of 1st century society. Factions thrive when society's central authority is weak, disorganized, or unaccepted by much of the population, exactly the sociological conditions in 1st century Palestine. Judea was subordinate to Rome, and many popular movements, both violent and nonviolent, arose in response to this situation, as Josephus attests. The priests and leading families strove to keep the populace quiet, but ultimately they failed, with catastrophic results for the Jewish nation. Amid this maelstrom of activity many groups carved out their own ways of living Judaism to preserve their identities as Jews. Generally speaking, factions which persist for a long time and outlive their leaders become a formal group with an organized, self-perpetuating leadership and defined social identity. The late 1st century and early 2d century accounts of the Houses suggest that they were this type of group, and as such, two of many organizations of zealous Jews which provided a program for defending and reforming Judaism in the face of Roman and Hellenistic pressure. Hillel, Shammai, Judas the founder of the Fourth Philosophy, Jesus the preacher of the kingdom of God, Simon bar Giora the messianic pretender, and others were very common in 1st century Judaism and easily gathered modest groups of enthusiastic followers who strove to convince other Jews to join them in seeking influence and power over social policy.

2. 1st-Century Laws. When the Mishnah and Tosefta are analyzed using Neusner's method (the logic of Mishnah's argument and the attested attributions), by far the largest body of law which can be somewhat reliably assigned to the early and mid-1st century concerns ritual purity, tithes, food laws, and Sabbath and festival observance (1981: 45–75). These laws set out an agenda of holiness for the land and people. We do not know for certain who developed these laws dating from before the destruction, but the usual hypothesis, that it was the Pharisees who bequeathed these laws to the first generation of rabbis after the destruction of the Temple, is most probable. The gospel evidence of Pharisaic interest in purity and food and Josephus' claim that the Pharisees had their own interpretation of some Jewish laws converge with Neusner's analysis of early mishnaic law.

The stress on strict tithing, on observance of ritual purity by non-priests, and on strict observance of Sabbath and other festivals probably reflects the Pharisees' internal rules and program for a renewed Judaism. The articulation of the group's program and the recounting of disputes among various factions is common in the literature of political and religious social groups. Rules concerning food, purity, and group practices are typical boundary-building mechanisms. Ethnic groups in the Roman empire needed to maintain strong boundaries in order to keep the larger Hellenistic-Roman society and culture from absorbing them. Internal rules, such as food rules, kept the intimates of Jewish groups united to one another and distinct from gentiles and even from other Jews with whom they constantly had to interact and with whom they competed. While the precise mode of living Judaism is distinctive in these laws, the Pharisees drew on an old tradition of using priestly laws concerning purity, food, and marriage in order to separate, protect, and identify Judaism. The development of the priestly tradition in the Exile and the regulations for Judaism championed by Ezra and Nehemiah in the restoration period were forerunners of the type of regulations adopted by the Pharisees in the Greco-Roman period.

Associations or fellowships, mentioned a number of places in rabbinic literature, have often been identified with or compared to the Pharisees. The associates in *Tractate Demai* who were devoted to maintaining the rules of ritual purity and tithing are the best known. Other associations in Jerusalem seem to have been devoted to good works of various types, especially burial rites (*t. Meg.* 4:15). What is unclear in all these cases is what exactly is meant by the term "associate," how the texts differ from one another in their use of the term, and whether it is even a technical term at all. The Hebrew words *ḥăbûrâ* (association, fellowship) and *ḥăbērîm* (associates) are common words which simply refer to one's fellows, that is, one's townsfolk or social familiars, with no technical meaning or special organization implied. Thus, the tendency of scholars to gather together all the citations of *ḥābēr* and *ḥăbûrâ* and create a single historical group is misguided. The Pharisees have often been identified with the associates who appear in *m. Dem.* 2:2–3 because both groups are associated with tithing and ritual purity. The associates promised one another to tithe their food and to observe certain kinds of ritual purity. This means that the associates could confidently buy and sell to one another and also eat together without fear of breaking any of the laws they wished to keep. By contrast, they had to take great care in their dealings with the "people of the land," the *ʿam hāʾareṣ*, because the "people of the land" did not keep the special priestly laws of purity and did not tithe properly and fully. Their food was not properly sanctified and could not be eaten by associates. It had to be tithed if it was acquired by an associate. The Tosefta (2:2–3:9) sets out rules for accepting a person as an associate and stages of initiation (which are unclear and have provoked numerous disputes among scholars). It also discusses doubtful cases of reliability within the family and marginal cases in relations with the *ʿam haʾareṣ*. Though the associates have been linkled to numerous historical periods and groups, no certain identification can be made.

3. Pharisee Texts. The designation Pharisee is relatively infrequent in rabbinic literature and the texts using that term, which derive from several centuries of rabbinic literature, use it in different and sometimes pejorative senses. The etymology of the term "Pharisees" is disputed. The name seems to come from the Hebrew and Aramaic root *pršˇ* which means "separate, interpret." The most common etymological understanding of Pharisees is "separate ones," though separate from whom or what is disputed. In a good sense it would mean people who separated themselves from normal Jewish society or from gentile society in order to observe Jewish law (purity, tithing?) more rigorously. In a negative sense it would mean sectarians or heretics, that is, people who separated themselves illegitimately from society at large because of beliefs and practices judged illegitimate. Rabbinic literature uses the term in both senses. Another possible meaning of their name is "interpreters"; this meaning would fit with the observations in Josephus and the New Testament that the Pharisees had their own interpretation of Jewish law and were considered accurate interpreters of the law. The two senses of the root could imply that the Pharisees separated themselves from the priestly or dominant interpretation of Jewish law. No decisive evidence or arguments have solved this issue.

No Jewish group refers to itself as Pharisees. The authors of rabbinic literature referred to themselves and their forbearers as "sages" *(ḥăkāmîm)* and after the destruction of the Temple, used the title "rabbi"

for sages. They had no name for their movement, but called themselves Israel because they considered themselves to be simply proper Jews. The name Pharisees is a name used by outsiders, such as Josephus (taking the stance of a Hellenistic historian) and the New Testament. The sages do not customarily identify themselves or their predecessors as Pharisees, except when they implicitly ally themselves with the Pharisees in disputes with the Sadducees.

The Babylonian Talmud quotes the well-known list of seven types of Pharisees as a comment on *m. Soṭa* 3:4 (*b. Soṭa* 22b): "There are seven types of Pharisee, the *sykmy* Pharisee, the *nyqpy* Pharisee, the *qwzʾy* Pharisee, the *mdwkyʾ* Pharisee, the Pharisee (who says) Let me know my duty and I will do it, the Pharisee from love, the Pharisee from fear." The transliterated words are all obscure, but all are meant pejoratively. The Babylonian Talmud explains all five etymologically, but the Palestinian Talmud, which cites the list in two places (*j. Soṭa* 5:7 [20c]; *j. Ber.* 9:5 [13b]), gives different explanations. In *Soṭa* both Talmuds are discussing motives for studying Torah and avoiding hypocrisy. Several of the names are made to refer to hypocritical behavior or obedience to the law from imperfect motives. The Babylonian Talmud even rejects the last two—those who have motives of love and fear—in favor of the study of Torah for its own sake. It ends this section with a saying of King Yannai (Alexander Jannaeus) who warns his wife against those "painted ones" who pretend to be Pharisees.

Since these lists are found for the first time in Talmudic sources, they probably do not give accurate information about 1st century Pharisaism. By the 5th and 6th centuries Christianity had attained a position of power in the empire and since both the New Testament and early Christian writings contained attacks on the Pharisees as hypocrites, these lists may be a response to Christian polemics in which the talmudic authors defuse Christian criticism by agreeing with their attack on hypocritical Pharisees and by separating some Pharisees and themselves from those being attacked.

Some texts refer to Pharisees in a positive way, with the assumption that they keep ritually pure (*t. Šabb* 1:15; *m. Toḥar.* 4:15; *m. Ḥag.* 2:7). A number of Mishnah and Tosefta passages polemically contrast the Pharisees and Sadducees (e.g., *Yad.* 4:6–7; *m. Nid.* 4:2; *m. Para* 3:7; *t. Ḥag.* 3:35). Most of the disputes between the Sadducees and Pharisees (and others) concern interpretations of the laws of ritual purity. If the Pharisees based much of their program for Jewish life on a revised understanding of the purity laws and an application of them to all Israel, as has been argued above, then the conflict between the Sadducees and Pharisees on this issue is comprehensible and probably historical in its general content. The application of purity laws to the people at large was a new mode of understanding Jewish life, law, and Scripture and it is reasonable and even inevitable that the Sadducees or someone else should oppose them. Other texts contrasting Pharisees or sages with the Sadducees or Boethusians can be found in the Talmuds and midrashic collections. Despite the claims of Rivkin (1969–70) that many of the Pharisees-Sadducees texts in the Talmud and other later sources are historically reliable, most of these passages reveal the assumptions of their rabbinic authors rather than the nature of the Second Temple Pharisees.

E. Qumran Literature

Many commentators have claimed that certain polemical Qumran texts which mention the "seekers after smooth things" refer to the Pharisees. Qumran literature is filled with polemics and invective which bear witness to the social, political, and religious strife among Jewish groups during the Hasmonean period. The wicked priest, the man of lies, the man of scorn, the spouter of lies, the lion of wrath, and the seekers after smooth things are only some of the adversaries condemned for a variety of crimes by the Qumran literature. Though the allusions to the Qumran community's opponents, which are contained in the pesharim to Habakkuk, Nahum, Psalm 37, and other documents, are very difficult to correlate with history, they testify to the political and religious strife at the inception of the Qumran community in the 2d century B.C.E. (probably under Jonathan or Simon) and also under Alexander Jannaeus. Pesher Nahum certainly refers to events in the reign of Alexander Jannaeus. It names two Greek kings, Antiochus and Demetrius, who have been convincingly identified with Antiochus IV Epiphanes (175–164 B.C.E.) and Demetrius III Eukairos (95–88 B.C.E.). The lion of wrath who opposed these kings and crucified his opponents is almost certainly Alexander Jannaeus (*Ant* 13 §379–83).

The identity of the "seekers after smooth things" remains a problem. The crucified opponents of Alexander and the seekers after smooth things are usually said to be the Pharisees because when they attained power under Alexandra (after Alexander's death), they sought to take vengeance on Alexander's allies who had supported the crucifixions (*Ant* 13 §410–15; *JW* 1 §96–98). However, Joseph does not identify Jannaeus' opponents as Pharisees. He says that Alexander's Jewish opposition came from many of the people and their leaders, not from one, limited group, such as the Pharisees (*Ant* 13 §372–76; *JW* 1 §90–92). After six years of civil disturbances in which 6,000 were killed by Alexander, this broadly based anti-Jannaeus movement asked Demetrius to intervene. After Demetrius had Alexander Jannaeus on the run, some people switched sides to give Alexander the victory. He then defeated and besieged his opponents and crucified the 800 survivors. Nowhere does Josephus identify this broad coalition with the Pharisees, though it is likely that they were partners in it.

According to Pesher Nahum, the seekers after smooth things called on Demetrius to intervene (4QpNah 3–4.1.2) and then were crucified by Alexander Jannaeus, an act which the Qumran community probably approved (4QpNah 3–4.1.7). If the identification of events is correct, the seekers after smooth things would be the coalition opposing Alexander Jannaeus. The metaphoric characterization of Alexander's and the community's opponents as "seekers after smooth things" *(dôršê ḥălāqôt),* found a number of times in Qumran literature (4QpNah 3–4.1.2, 7; 2.2, 4; 3.3, 6–7; 4QpIsa^{c} 23.2.10; 1QH 2:15, 32; CD 1:18) is derived from the Bible. The word *ḥălāqôt* means "smooth things, flattery, and falsehood." Isa. 30:10 contrasts true prophecy with the smooth things *(ḥălāqôt)* and delusions desired by rebelious Israelites who will not listen to the Tocah of the Lord. Daniel 11:32 says that Antiochus Epiphanes will seduce by flatteries *(ḥălāqôt)* those who act wickedly against the covenant. Thus the term "seekers after smooth things" suggests that the Qumran community found their opponents too accommodating to changes in Jewish society, either because they twisted the meaning of the law (Isa 30:10) or allied themselves too closely with non-Jewish authorities and practices. The use of various epithets connected to "lie" and "falsehood" suggests that the community disagreed with its opponents on many points of interpretation and practice. Since the Qumran group had left Jerusalem, the seekers after smooth things were probably still there and active in Palestinian political struggles in a way the Qumran community did not approve. The Qumran polemics against their opponents testify to the diversity and conflicts in Jewish society. Thus their opponents, the seekers after smooth things, were probably a broad coalition of groups which included the Pharisees.

F. Synthesis

The Pharisees in Josephus' narrative function as a political interest group which had its own goals for society and constantly engaged in political activity to achieve them, even though it did not always succeed. They generally did not have direct power as a group and were not as a whole members of the governing class. They were members of a literate, corporate, voluntary association which constantly sought influence with the governing class. As such they were above the peasants and other lower classes but dependent on the governing class and ruler for their place in society. They were found in Jerusalem, and they probably fulfilled administrative or bureaucratic functions in society at certain times. They appear in each era of Jewish history from the Hasmonean period until the destruction of the Temple struggling to gain access to power and to influence society.

The Pharisaic association probably functioned as a social movement organization seeking to change society. The social, political, and economic situation of Palestinian Jews underwent a number of upheavals in the Greco-Roman period which demanded adaptation of Jewish customs and a reinterpretation of the Jewish identity fashioned by the biblical tradition. The Hasmoneans and the governing class changed Israel into a small, militarily active Hellenistic kingdom and took control of political and economic resources in order to control society. The Pharisees probably sought a new, communal commitment to a strict Jewish way of life based on adherence to the covenant. If they did so, they sought to capitalize on popular sentiment for rededication to or reform of Judaism. Such popular sentiment can produce a social movement which seeks reform, but a long-lasting, complex campaign for

reform or renewal requires the formation of a social movement organization which aims at promoting or resisting change in society at large.

If the Pharisees are called a sect, they are of the reformist type which seeks gradual, divinely revealed alterations in the world (Wilson 1973: 23–26; 38–49). This type of sect engages in political and social activities similar to those of the Pharisees. Wilson characterizes reformist sects as "objectivist" because they seek change in the world, not just in individuals or in a person's relations with the world. A reformist sect differs from the three other objectivist types of sect: the revolutionist, which awaits destruction of the social order by divine forces (apocalyptic groups); the introversionist, which withdraws from the world into a purified community (the Qumran community); and the utopian, which seeks to reconstruct the world according to divine principles without revolution. However, these types are not hermetically sealed off from one another. A group may have more than one response to the world at the same time, that is, it may overlap two or three of these categories. It may also change over time and even cease to be a sect if social conditions change. Consequently, if the Pharisees are understood as a sect, they may have had introversionist tendencies, manifested in their purity regulations, without losing their involvement or desire for involvement in political society.

The Pharisees may also be compared to Hellenistic philosophical schools or schools of thought if the analogy is cautiously and loosely applied. They had a program of reform for Jewish life, a particular interpretation of Jewish tradition and a definable and sometimes controversial outlook on fundamental matters crucial to Judaism. Since the Pharisees as depicted by Josephus acted as a political interest group, they went beyond the activities of many Greek schools. The designation school (of thought) is appropriate as long as this expression is not understood to refer to an exclusively academic and theoretical association.

A major question unanswered by the sources concerns the daily activities of the Pharisees and the source of their livelihood. The older theory that they were urban artisans is very unlikely because artisans were poor, uneducated, and uninfluential. The more common theory that the Pharisees were a lay scribal movement, that is, a group of religious scholars and intellectuals who displaced the traditional leaders and gained great authority over the community (most recently, Rivkin 1978: 211–51), is likewise very unlikely. Though some Pharisees were part of the governing class, most Pharisees were subordinate officials, bureaucrats, judges, and educators. They are best understood as retainers, that is, literate servants of the governing class, who had a program for Jewish society and influence with both the people and their patrons. When the opportunity arose, they sought power over society. This means that their organizations cannot be viewed as a monastic-like community or withdrawn sect which demands primary and total commitment from every member. It is most likely that Pharisees were active in a number of occupations and roles in society and were bound together by certain beliefs and practices and by endeavors to influence social change.

Concretely, a person was not primarily a Pharisee. A member of the Pharisees retained his family and territorial allegiances, his roles in society and occupation, his friends and network of associates. In some way not revealed in reliable first-century sources he committed himself to be a Pharisee, and this commitment with its particular understanding of the Jewish covenant and Jewish life guided many of his endeavors and claimed a part of his time, energy, and resources. The Pharisaic movement has some characteristics in common with Greek schools of thought and must have educated its members to some degree. This view of the Pharisees, admittedly hypothetical due to lack of evidence, is consistent with what the sources tell us of the Pharisees, including the information given by Saul the Pharisee.

The accounts of the Pharisees' beliefs in Josephus and the gleanings available in rabbinic literature and the NT provide incomplete information which is difficult to interpret. According to Josephus, who sought to relate the Jewish schools of thought to Greek philosophy, they affirmed the influence of divine activity on human life, the joint effect of human freedom and fate, and reward and punishment in the afterlife. Josephus' contrast of the positions of the three schools of thought probably derives from their eschatology and apocalyptic expectations. The Pharisees probably held positions on eschatology, divine providence, and human responsibility which were different enough from traditional Jewish teachings and attitudes to

require some positive commitment and explicit defense. In this the Pharisees were not unusual, as the great diversity of outlook in Second Temple apocryphal and pseudepigraphical literature shows.

The rabbinic laws and stories which can be somewhat reliably dated to the 1st century show that the Pharisees had a strong interest in tithing, ritual purity, and Sabbath observance and not much of an interest in civil laws and regulations for the Temple worship. The New Testament also shows that the Pharisees had unique interpretations of these matters and sought to promote their observance and defend their validity against challenge by other establishment and reform groups, including the priests, Qumran community, and Jesus and his early followers. Serious differences in the understanding of Jewish covenant and commitment to God, people, and land separated these groups and factions within Judaism. Implicit in these programs for living Judaism were profound judgments concerning the meaning of Judaism and its place in the larger world where it was politically subordinate.

The purity rules, which seem so arcane to modern westerners, regularized life and separated that which was normal and life-giving from that which was abnormal or ambiguous, and so was a threat to normal life. Such a set of categories and rules excluded that which is foreign or strange; their usefulness against the attraction and influence of the Romans and Hellenistic culture is obvious. Purity and tithing rules separated the Pharisees, Sadducees, and Essenes, all of whom affirmed the biblical rules and had a distinctive interpretation of them in daily life, from one another and from the followers of Jesus as well as from numerous other messianic, apocalyptic, political, and reformist groups.

ANTHONY J. SALDARINI

PHARISON (PERSON) [Gk *Pharisōn* (Φαρισων)]. 1 Maccabees 9:66 relates that Jewish forces under Jonathan the Hasmonean killed the sons of Pharison along with Odomera and his brothers near Bethbasi S of Jerusalem (ca. 160 B.C.E.). On the sons of Pharison see ODOMERA.
MICHAEL E. HARDWICK

PHARPAR (PLACE) [Heb *parpar* (פַּרְפַּר)]. A river in Syria near Damascus. 2 Kgs 5:1 records that Naaman, the commander of the Syrian army, had leprosy. An Israelite captive girl informed him that a prophet in Samaria could cure him. So he went to Elisha (v 9) who did not bother to come out of the house to see him but simply told him to go wash in the Jordan. Naaman became angry and argued: "Are not Abana and Pharpar, the rivers of Damascus, better than all the waters of Israel?" (v 12). The Abana is the modern Nahr el-Barada which flows through the middle of Damascus, dividing the city in half.

The Pharpar is probably the 40-mi-long Nahr el-Awaj, "the crooked river." It is formed by two small brooks at Sasa on Mt. Hermon where the waters form in a valley below a sheer wall of 6,000 feet. It runs NE ca. 6 mi. and then E in a deep tortuous channel to Kiswe. In this first section, it is called the Sabirany. Several canals which irrigate southern parts of the Damascus oasis tap into either side of Kiswe. The Awaj passes between Jebel Maani and Jebel Aswad and then turns SE. In the rainy season, surplus water empties into Lake Hijaneh (Bahrat el-Hijaneh), a salt lake or swamp ca. 10 mi. S of Lake Ateibeh. The river runs ca. 10 mi. S of Damascus. As such, it is not a river of Damascus, the city, but of a river of the larger oasis of Damascus, the Ghouta. The oasis, at an altitude of 2,650 feet, slopes slightly eastward. It owes its fertility to the Barada/Abana, Awaj, Wadi Mnin, and other small streams with sources in Hermon and Jebel Kalamun. The Awaj roughly separates the limestone region of the Damascus oasis from the basalt formation of the Hauran (Syria 1943: 23, 32, 50). The amount of water varies greatly. In the spring, when snows are melting, there is a good supply. During the summer, there is much less. The productivity of the S part of the Damascus oasis depends on the Awaj/Pharpar. Its cool, fresh waters, particularly in the early spring, could provide a favorable contrast to waters of the lower Jordan (Bowling 1975: 752). A tributary of the Awaj is called the Wadi Barbar which would preserve the biblical name. The Arabic for Pharpar is *farfara,* "move," "shake." Gehman (1970: 742) notes that local tradition, traced back to the 16th century, identifies the Pharpar as the Nahr Taura, one of seven canals drawn off from the Barada as it nears Damascus.

PHASELIS (PLACE) [Gk *Phasēlis* (Φασηλις)]. A city on the S coast of Asia Minor (modern Turkey) in the region of Lycia near the region of Pamphylia. Located on a headland, Phaselis controlled three harbors and thereby became an important point linking E and W trade.

Phaselis is mentioned in a list of cities receiving a letter circulated by the Roman consul Lucius (1 Macc 15:23). This letter, which was to circulate to several rulers and municipalities instructed those who received it to treat the Jews in their region with favor. This request was prompted by the gift of a shield made from 1,000 minas (1 mina equals about 1.25 pounds) of gold which the Jewish ambassadors brought to the Roman ruler.

The city may have been first settled by Dorian colonist and soon became an important center for trade. The geographical setting of the city isolated it from the surrounding region and this may have contributed to its independent nature. Settlers from Rhodes established the city as a trade center in the 7th century. Soon other colonists from Naucratus, the Greek outpost in Egypt, established trade routes between the two cities.

The city struck its own coins while under the control of the Persian Empire in the 6th and early 5th centuries. Phaselis joined the Athenian League in 466 B.C. and soon established important trade contacts linking Greek cities with the Phoenician coast (Thuc. *Peloponnesian Wars* 2.69). Phaselis as indicated by the minting of its own coinage, was relatively independent during the 4th and 3d centuries B.C.

The city first came under the control of the Ptolemies in 276 B.C., who were replaced by the Seleucids from 204–190 B.C. When Phaselis regained independence in 190 B.C., it began to mint coins once again. The city may have joined the Lycian League by 168 B.C., because it began minting coins that were typical of that confederation.

The inclusion of Phaselis separately on the city list of the Roman consul Lucius (1 Macc 15:23) dated to ca. 139 B.C., may indicate that the city had separated from the league at that time. The Roman consul Servilius Isauricus seized the city in 77 B.C. because it had become the base of the leader of the Cilician pirates, Zenicetes. The city declined in importance in later times, however it was the home of a Byzantine bishopric.

The site of the ruins of the city is near the modern village of Tekrova. The remains of the city include a stadium, a Roman aqueduct, and two temples, one constructed during the reign of Trajan and the other dating from the Greek era.

JOHN D. WINELAND

PHICOL (PERSON) [Heb *pîkōl* (פִּיכֹל)]. An army commander who accompanied the king Abimelech when covenants were made with Abraham (Gen 21:22, 32) and Isaac (Gen 26:26). It is not likely that Phicol and Abimelech were involved with both covenants since a period of some 70 to 80 years lies between the two events. In this light, scholars have generally taken one of two positions. One the one hand, some assert that there never were two separate covenants. According to Speiser (*Genesis* AB, 203), for example, behind the accounts is "a single incident which was differently reported in two independent sources." Noth (*HPT*, 102) asserts as a general rule that elements of tradition which appear in duplicate belong originally to Isaac rather than to Abraham, a position with which de Vaux (*EHI*, 167) concurs. On the other hand, some scholars feel that "Abimelech" and "Phicol" were titles or family names (Kidner *Genesis* TOTC, 154). In this view, both patriarchs could have made a covenant with an "Abimelech" and a "Phicol." See also AHUZZATH.

DAVID SALTER WILLIAMS

PHILADELPHIA (PLACE) [Gk *Philadelpheia* (Φιλαδελφεια)]. A city of the Roman province of Asia addressed by the risen Jesus in the book of Revelation (3:7–13).

Located in ancient Lydia, in the W of what is today Asiatic Turkey, Philadelphia was founded by Eumenes II, King of Pergamum (197–159 B.C.) or possibly his brother, Attalus II (159–138 B.C.), whose loyalty had earned for him the epithet "Philadelphus," hence the city's name. It is located near the upper end of the very fertile plateau in the Cogamus River (today Koca Çay) valley, a tributary of the Hermus

River, E of Sardis and on the route into the interior from Smyrna on the coast (38°22´N; 28°32´E). It is in the midst of a very prosperous agricultural region, though it was (and is) notoriously subject to frequent earthquakes. A severe one in A.D. 17 destroyed the city, and this was followed by a series of intermittent shocks which led the people to continue living outside the city for some years because of the structural instability of many of the city buildings and walls (Strabo, *Geog.* 12.8.18; 13.4.10; cf. Hemer 1986: 156–57). This disaster made an indelible impact on the contemporary world as the greatest in human history (Pliny *HN* 2.86.200). The nearby city of Sardis was equally badly hurt (Tacitus *Ann.* 2.47.3–4), but Philadelphia was among the cities whose tribute was remitted for five years to allow the people to have the resources to rebuild. Hemer (1986: 157) finds an historical allusion to this situation in the promise of Rev 3:12a: "He who conquers, I will make him a pillar in the temple of my God; never shall he go out of it …" The citizens of Philadelphia subsequently expressed warm gratitude on inscriptions and coins to the emperor Tiberius for his assistance in the process of rebuilding their city, and they later took the name "Neocaesarea." Still later, under Vespasian, it took another imperial name, Flavia (*BMC,* 60 and 60 of Vespasian; 62 of Domitian). Hemer suggests that this adoption of the name of the divine emperor is referenced and contrasted with the offer of a better and more lasting name in Rev 3:12b: "And I will write on him the name of my God, and the name of the city of my God, the new Jerusalem which comes down from my God out of heaven."

Another negative event that burned itself upon the collective memory of the people of Philadelphia was an edict from the emperor Domitian in A.D. 92 (practically contemporary with the probable date of the Apocalypse). In the interest of protecting the vine growers of Italy (or perhaps to encourage the production of grain at the expense of grapes), Domitian required at least half the vineyards in the provinces to be cut down and no new ones planted (Suet. *Dom.* 7,2; 14.2; Philostr. *VA* 6.42; *VS* 1.21). As can be imagined, this edict was bitterly unpopular in Asia and the source of severe hardship in a city like Philadelphia, which was so dependent on viticulture (cf. Rev 6:6) and where Dionysius was the chief deity. Thus the contrast between the character of Christ, who will never betray his people who have continued to confess his name even when they are weak and rejected (Rev 3:8, 10, 11), and that of the imperial god who had disappointed them so severely.

Ignatius, the bishop of Antioch on the Orontes, visited the city on his way to his martyrdom in Rome (A.D. 107) and also sent a letter from Troas to the church at Philadelphia. Some of the members of the church of this city were martyred ca. A.D. 155 along with Polycarp (*Mart. Polyc.* 1). Philadelphia was a center of prophecy in the post-apostolic age, a place where Christians tended to be fearless and aggressive in their witness for the faith, and possibly the birthplace of Montanism (Calder 1923: 309–54; cf. Hemer 1986: 170–74). Today, the Hellenistic and Roman remains are located underneath the modern Turkish town of Alaşehir. There is an ancient acropolis with a few minor excavations, an ancient church (with traces of 11th century frescoes), and a rather extensive portion of the city wall from Byzantine times. Finds from Philadelphia are located in the Manisa museum, some distance away.

PHILEMON, EPISTLE TO. One of the epistles of St. Paul that now stands as the 18th book of the NT (between Titus and Hebrews).

———

A. Orientation to the Letter and Its Interpretation
B. Authorship and Rhetoric
C. Legal Context and Obligations
D. The Letter's Story

———

A. Orientation to the Letter and Its Interpretation.

While under arrest for his activities as a Christian, Paul of Tarsus with his "brother" Timothy wrote a personal but not private letter to his "beloved fellow worker" Philemon, to Apphia and Archippus (family members?), and to the congregation meeting in Philemon's house. The letter has a single theme: the future of the relationships among at least three persons: Paul, who identified himself as "a prisoner for Christ Jesus" and a "brother"; Philemon, a slave owner, who had become a Christian directly or indirectly in response to Paul's work sometime before he received this letter; and Onesimus, a male slave owned by Philemon, who was with Paul at the time of the writing and who had become a Christian directly under Paul's influence since leaving Philemon's household without permission. Paul seems to have intended also to put in question Philemon's future relationship to the Christians who met in his house (note the plural "you" in vv 22b, 25) and to "all God's people" (vv 5, 7).

The letter is correspondingly brief: 335 words encompassing an occasionally specialized vocabulary of 143 words. As such, it is the shortest extant Pauline letter in the NT canon. In its form, Paul followed more closely than in any of his other writings the pattern of Hellenistic letters known to us, particularly letters of intercession (see Stowers 1986). See also LETTERS (GREEK AND LATIN). In the context of Greek rhetoric (see below), the book of Philemon (hereafter Plmn) divides readily into five paragraphs:

Vv 1–3 Opening Greetings

4–7 Thanksgiving, Intercession, and Praise for Philemon (the exordium)

8–16 Appeal on behalf on Onesimus (the body or proof)

17–22 Reiteration and expansion of the appeal (the peroration)

23–25 Concluding Greetings

This brief document has attracted a large amount of scholarly attention during the past forty years (Schenk 1987), much of which has continued earlier efforts to explain the perplexing legal context and the extraordinary rhetorical aspects of this succinct, winsome, yet apparently slight document. Of particular importance is Petersen's attempt (1985) to embrace and move beyond these concerns in order to clarify the larger story (including the "social structures" and the "symbolic universe") within which Plmn first made sense. This story is grounded in profound theological convictions, even though Paul did not treat in the letter itself any of the obvious doctrinal or ecclesiastical issues that characterize all his other letters.

To be sure, even without focusing on the larger story as such, every scholar of Plmn has felt obliged in some way to propose as the context for exegesis a reconstruction of at least some of the circumstances which provoked the writing and preserving of this letter. Chief among the questions energizing these reconstructions and explanations have been:

Why did Onesimus decide to leave Philemon's household, and by doing so did he make himself a fugitive slave? Did Onesimus then come into contact with Paul because he searched for him and found him under arrest, or rather as an unintended result of being arrested himself as a lawbreaker? Or had his owner sent him to help Paul (see Winter 1987)?

Did the prohibition of Deut 23:16–17 (—Eng 23:15–16: "You shall not give up to his master a slave who has escaped from his master to you. He shall dwell with you …") play a role in Paul's keeping Onesimus with him during the period in which he became a Christian? And did it influence his choice of words in vv 13–14?

To what extent was Paul constrained by Roman law in his relationships with Philemon (not a Roman citizen) and Onesimus? In any case, was Paul's eventual urging of Onesimus to return to Philemon (with Plmn as a "cover letter") motivated primarily by his respect for Roman or local laws applying to the harboring and returning of fugitive slaves, or by his respect for Philemon's rights and feelings (see Getty 1987), or by his theology which required him to encourage reconciliation among estranged Christians (see 1 Cor 6:7)?

Exactly which actions was Paul urging Philemon to take with respect to Onesimus (vv 14, 16–18, 20–21)? For example, would Philemon have concluded from v 16 that Paul wanted him to change

Onesimus's legal and social status from that of his slave to being his freedman (see SLAVERY) because of Onesimus' new status as a Christian "brother" (see Daube 1986: 41)? Did Paul hope that his new "father/child" relationship with Onesimus (with implications of ownership—vv 10, 12) would strike Philemon as a prevailing counterweight to his own claims on his slave, leading to new perceptions of who was whose patron (v 11, 13, 15–17)? In any case, was Paul appealing to Philemon's honor (see vv 4–7) with the implication (vv 13–14, 21) that Philemon's "goodness" should lead him not only to restrain himself from punishing Onesimus and to reconcile with him but also to send him back to help Paul in prison or in the Christian mission (see Ollrog 1979: 101–6)?

Where and when was Paul imprisoned when he wrote (vv 1, 9–10, 13, 23)? Rome? Ephesus? Caesarea? And what should be concluded about the relation of Plmn to the Letter to the Colossians which includes references to both an Onesimus (4:9), and Archippus (4:17), and an Epaphras (4:12—see Plmn 23) whose home is Colossae? For example, could Plmn be the letter to nearby Laodicea mentioned in Col 4:16?

Was Archippus, rather than Philemon, the real addressee of Paul's appeals (see S. Winter 1986, following J. Knox)?

What role should Paul's direct advice to Christians in slavery in 1 Cor 7:21 play in interpreting Paul's letter to Philemon?

What circumstances in the subsequent lives of Paul and Onesimus contributed to the preservation of Plmn in the NT canon?

B. Authorship and Rhetoric

Although a few scholars seriously questioned Pauline authorship of Plmn in the 4th and 5th centuries (because the content seemed too slight) and again in the 19th century (because the situation presupposed by Plmn appeared too novelistic), the language, style, and structure of argumentation found in Plmn are unmistakably Paul's (Schenk 1987: 3142–3145). Many exegetes have concluded that Paul did not dictate these words but wrote the entire letter in his own hand (see Stuhlmacher 1975: 50).

Some of the many distinctively Pauline features are his self-designations in combination with "Christ Jesus" in vv 1 and 9, his use in vv 1 and 24 of the term *synergos* ("co-worker"), the phrase *en kyrio* ("in the Lord") without the definite article in Gk (vv 16, 20), participles as transitions to new clauses (vv 4, 5, 21), and the intensifying phrase *hina mē lego* ("to say nothing of") in v 19b, which suggests that he could indeed overlook a matter that by mentioning he especially emphasizes (see 2 Cor 9:4). Even the sentence that has provoked the greatest disagreements among translators (v 6) contains characteristic Pauline features (see Riesenfeld 1982).

Paul's artistry in crafting such a carefully woven argument and appeal has been widely recognized. Only recently, however, have scholars shown the strong influence of Greek rhetorical conventions on Paul's masterful argumentation in Plmn, in particular the genre of deliberative rhetoric (Church 1978; see White 1971; Schenk 1987). By use of skillful appeals to the reason, the emotions, and the character of their hearers, rhetoricians sought to establish two motives for action: maintaining honor and gaining advantage (Quint. *Inst.* 3.8.1–15, 6.2.9–14). According to Aristotle, Cicero, and Quintilian, such a deliberative statement was divided into three parts: (1) the exordium: for setting up the fitting mood and winning the favor of the hearer through praise and then linking that praise to the subject at hand; (2) the main body or proof: for making the aforementioned appeals to honor and advantage; and (3) the peroration: for restating the request, appealing again to the hearer's goodwill, expanding the argument, and placing the reader in an emotional frame of mind (Arist. *Rh.* 3.14–19).

Whether by training or observation, Paul used deliberative rhetoric when he appealed to Philemon, adapting this genre to his particular style and structure for letter writing. Following his characteristic salutatory format in vv 1–3, vv 4–7 function as Paul's exordium. With tact and succinctness, he first sought favor by praising Philemon for his love and faith (vv 4–5), then he focused the praise on those practical qualities especially pertinent to Philemon's positive response to the appeal (v 6), and then he referred to particulars (Philemon's loving care for God's people resulting in Paul's own joy and comfort) that he later developed in the body and underscored in the peroration (Church 1978: 20–24).

The body or proof is expressed in vv 8–16, opening with a perfectly balanced appeal to Philemon's character and feelings (vv 8–10a). Paul first applied the rhetorical convention of openly abandoning an apparently strong line of argument by referring to himself as an "ambassador" and a "prisoner" for Christ, and then for love's sake waiving that authority in order to make his first appeal to the free expression of Philemon's honor and love. In a further rhetorical move focused on Philemon's feelings, Paul duplicated the expression of his appeal (vv 9–10a) before finally mentioning its object—Onesimus—and punning effectively on the name's meaning: "profitable/useful." By doing so, Paul appealed to the second motive for action: Philemon's gaining advantage.

In vv 12–14 Paul returned to the first motive: maintaining honor. Not only has Onesimus become far more profitable to Philemon by becoming a Christian, but also Philemon has been presented with a further opportunity to express his true character, his "goodness." Paul emphasized the decisive character of this opportunity by stressing how important Onesimus was to him. While with Paul, Onesimus not only became his "son," but his "very heart," his own self (v 12). Thus Paul would regard Philemon's manner of dealing with Onesimus as treatment of himself (see v 17). Furthermore, by urging Onesimus to return home and depriving himself of his "son's" comfort and service, Paul set an example of selfless love for Philemon and established the basis for true reciprocity among the three men. By these means Paul was able to force a point of honor while ostensibly restraining himself from pressuring Philemon, who thus retained the freedom to respond honorably on his own.

Paul concluded his proof with reasoning that went beyond conventional rhetoric: it may have been necessary, i.e., providential, for Philemon to lose Onesimus as a slave in order to gain him as a "beloved brother" (vv 15–16).

Paul's words in vv 17–22 fulfilled all four requirements of a peroration with a fitting invoking of feelings: (1) Verse 17 restated his request. (2) Verses 18–19 expanded the argument with two strong rhetorical devices: anticipating a potential objection (by promising to compensate Philemon for any loss Onesimus had caused him), and emphasizing a point by claiming that it does not have to be made (Philemon owed Paul his life). (3) Verse 20 attempted to put Philemon in an emotional state of mind. (4) Verses 21–22 further sought Philemon's favor (Church 1978: 28–30). Paul poignantly concluded this rhetorical section with requests for hospitality (thus announcing his intention to follow the letter with a personal visit) and prayers for his release from imprisonment.

Rhetorical analysis of Paul's use of deliberative rhetoric in Plmn highlights its contrast to Pliny's Letter to Sabinianus (*Ep.* 9.21) about an errant freedman, to which Plmn is often compared. Pliny used a contrasting rhetorical model, the plea for pardon, stressing the freedman's youth and "genuine repentance" as well as the harm Sabinianus was causing himself with his understandable anger.

C. Legal Context and Obligations

Recent investigations have shown that a number of legal assumptions essential to the generally accepted reading of Plmn must be questioned: that Onesimus was a fugitive slave, that Paul in relation to Philemon was obligated to obey Roman laws regarding slavery, and that Onesimus would probably not ever have been made a freedman if Paul had not intervened on his behalf (if indeed that was included in Paul's request).

Until quite recently, leading exegetes of Plmn (e.g., Stuhlmacher 1975: 17–23; Suhl 1981: 21–23; O'Brien, *Colossians, Philemon* WBC, 266–67) have generally presupposed that according to Roman or Greek law Onesimus became a fugitive slave (Lat: *fugitivus*) when he left Philemon's household (Winter 1987 and Schenk 1987 argue that Philemon *sent* Onesimus to help Paul in prison). They have assumed that Onesimus belonged to the category of those slaves who ran away from their owners in order to find a life of freedom—by going underground in a large city, or in a faraway country, or in an outlaw band. Also noted is the possibility, respected particularly in the eastern Roman provinces, for such fugitives to seek asylum in a temple, such as the one dedicated to Artemis in Ephesus, or at a statue of the emperor, in order to beg the priests or attendants to broker their sale to a more humane owner.

Against this background, scholars have noted their varying degrees of surprise that the fugitive Onesimus chose none of these options but rather seems to have sought out the assistance of a person

respected by his owner. Or they have suggested that Onesimus did not seek out Paul but rather unintentionally met up with him in prison after having been caught as a fugitive in a large city such as Rome or Ephesus, thus assuming (or concluding) that Onesimus only decided to return to Philemon because of Paul's urging. With Onesimus' putative fugitive status in mind, exegetes have discussed the range of punishments such a captured *fugitivus* could anticipate—beatings, chains, branding, in some cases even crucifixion—and concluded that part of Paul's intent in writing to Philemon was to persuade him to restrain himself from castigating Onesimus for running away.

In contrast to these longstanding assumptions, the Roman legal evidence presents as a common case a triangular situation in which a slave who got into some difficulty with his or her owner sought out a third party for the purpose of persuading that person to become the slave's advocate before the angry owner. The slave's goal was not to run away successfully but rather to return to the owner's household under improved conditions. According to Proculus, the foremost Roman jurist in the early 1st century C.E., such a slave emphatically did not become a *fugitivus* (*Dig.* 21.1.17.4). This opinion was echoed by such jurists as Vivianus during Trajan's reign, who mentioned the slave's mother as a natural advocate (*Dig.* 21.1.17.5), and by Paulus at the end of the 2d century, who specifically mentioned a slave who sought refuge and assistance from a friend of his owner (*Dig.* 21.1.43.1).

Among Roman models, this unexceptional triangular scenario provides the most adequate context for explaining the relationship among Onesimus, Paul, and Philemon in juristic terms (Lampe 1985: 135–37). Onesimus, then, was not a fugitive slave, nor had Paul been harboring a fugitive slave. If Onesimus had indeed intended to run away, there were surely much more promising and less risky places in which to "disappear" than at the side of a friend of his owner. But in this scenario, after causing his owner some serious loss (v 18), Onesimus sought out a respected friend of Philemon precisely in order to appeal for help in smoothing things out at home. This means that Onesimus' wrongdoing was neither running away nor stealing from household funds in order to finance his travel. Rather, something that he had done wrong led Onesimus to decide to seek out Paul as his advocate.

Lampe (1985: 137) acutely observes that this decision created a delicate situation: Onesimus, who was not yet a Christian, hoped to gain advantage by persuading one honored Christian teacher to put pressure on another Christian. Onesimus' initial trust in his owner's friend and "partner" (v 17) clearly bore surprising fruit: Paul led him to become a Christian (v 10), a "usefulness" (v 11) that Philemon had been unable to achieve in his own household. And Paul himself offered to make good whatever loss Onesimus had caused Philemon (vv 18–19). With these results in view, Paul appealed to Philemon to receive Onesimus back into the household as he would Paul himself, without mentioning directly the anger that had to be put aside and the forgiveness that was needed. Did Paul also anticipate that Philemon would make the new Christian Onesimus his freedman?

Innumerable former slaves throughout the Empire were living proof that neither Greek nor Roman slavery was usually a permanent state. Most commonly, an owner granted manumission to a *servus fidelis* as the due reward for faithful work and loyalty; this was frequently done by the owner's will at death. On the other hand, owners could punish disloyal slaves by including in their wills a clause prohibiting the heirs from ever manumitting them (Wiedemann 1985: 165). Yet there is also much evidence that owners while living had a variety of reasons for choosing to manumit some of their slaves (Bartchy 1973: 88–91), many of whom had reason to anticipate being set free about the age of thirty (see Alföldy 1972, opposed by Wiedemann 1985). (This is the appropriate context for resolving the famous disagreement about Paul's advice in 1 Cor 7:21 to Christians in slavery.) See SLAVERY (NEW TESTAMENT).

In this social-legal context the question regarding manumitting Onesimus was most likely *when*, not if, Philemon planned to set Onesimus free. Paul's climactic appeal in v 16 (receive him "no longer as a slave but … as a beloved brother") seems best understood as Paul's request that Onesimus' manumission not be delayed because of any wrongdoing (see v 18) and that Philemon forgive his slave and manumit him very soon. By this appeal Paul confronted Philemon with the choice either of continuing to regard himself as Onesimus' owner or of becoming his "brother" and "partner" (v 17) in a new social reality. Paul may well

have hoped that Onesimus would then be sent back to help him, in the status of Philemon's freedman (v 13).

What role, then, did Roman law as such play in this triangular relationship? There is no evidence that Philemon, a Phrygian, was a Roman citizen; therefore Paul was not obligated to extend to him the protections of Roman private law (see Derrett 1988: 73). And in any case, scholars must beware of accounting for any of Paul's actions solely in terms of Roman or Greek or even Jewish laws; at the least, matters depended on the respective civic statuses of the persons with whom he was involved. Nevertheless, general Roman principles regarding treatment of slaves, especially those who had left their owners for any reason, seem to have been broadly respected in the empire. Among the options known from Greek and Jewish law, this Roman model does seem to account best for the story in Plmn.

D. The Letter's Story

Every letter is a part of a story, arising out of some form of previous relationship between the writer and the reader, then itself creating a new dimension in the relationship, and finally implying at least one future event: the response of the reader(s). The writers, readers, and persons mentioned in letters are related to each other as superiors, equals, and inferiors, and the fact that Paul, Philemon, and Onesimus play multiple roles has made interpreting Plmn particularly difficult (see Petersen 1985: 63–64).

Thus every interpretation of Plmn has been based on some explicit or implied reconstruction of the personal stories of which it is a part. The most adequate interpretation of Plmn will integrate those stories into the letter's own story, a brief version of which follows.

Such a story begins, to be sure, prior to the writing of Plmn—with Paul's activities as a Christian evangelist in Asia Minor and his attempts in various cities to gather household-based communities of Christians characterized by their exclusive faith in the God of Israel, their merciful love for each other, and their hope in the future mercy of Jesus Christ (see 1 Thess 1:2–10). Paul's God was seeking to create a new social reality and solidarity among people long separated by religious, ethnic, and class barriers. Before having to consider the relations among Philemon, Onesimus, and himself, Paul had become well practiced in stimulating reconciliation and developing social cohesiveness among his surprisingly heterogeneous groups. And his other letters suggest that he sensed well how to use patron-client relationships to further his goals (see Elliott 1987).

Plmn's story becomes more focused with Paul's encountering Philemon somewhere along the way (Ephesus seems quite likely) and persuading him to become a Christian. This established Paul as Philemon's patron, as v 19 especially emphasizes: "you owe me even your own self." Probably the next step was Philemon's own evangelistic work, most likely in Colossae, resulting at the least in the community of Christians who met in his house, including Apphia and Archippus (v 2). In any case, Philemon had opened his household (see Elliott 1984) to this group of Christians and gained a glowing reputation as their patron (vv 5–7).

During this period Paul was taken prisoner either in Ephesus (ca. 54–56) or Rome (ca. 60–62). (In view of Acts 24:26–27, Caesarea has been proposed for more than a century, but this seems unlikely.) Ephesus was the closest large city to Onesimus' home, less than 100 miles distant, and many scholars have suggested that one of the imprisonments mentioned by Paul in 2 Cor 11:23 (see also his "affliction in Asia," 2 Cor 1:8) was there. In addition, Paul's request for hospitality (Plmn 22) has seemed to many to fit most easily with an arrest in Ephesus. This part of the story has been complicated by the traditional association of Plmn with the Letter to the Colossians and a Roman imprisonment, in which Onesimus is mentioned with Tychicus (4:9) as the bearer of the letter. In any case, because of his public activities as a Christian, Paul was under arrest in a kind of imprisonment that permitted him sufficient freedom to have personal contact with Onesimus and to write to Philemon.

At this point the scenario described above (in C) enters the story. A slave of Philemon named Onesimus, who had not become a Christian, caused his owner some serious loss (v 18). He then decided to leave his troubles behind and to seek out a respected friend of his owner in order to appeal for help in assuaging Philemon (v 15), probably hoping to use the Christian bond between these two men to his own advantage. Onesimus found Paul under arrest (v 13), and while visiting and assisting him was himself

persuaded to become a Christian (v 10). He thereby won Paul as his own patron and "father" and successfully persuaded him to become his advocate before his wronged owner.

At some point along the way Paul had heard about Philemon's great faith and love (vv 4–7), perhaps from Onesimus himself. Paul then built on that knowledge, on his friendship (v 17) and on his patron-client relationship with Philemon (vv 19–21), on Onesimus' personal service to him (v 13), and on the fact that Onesimus had become a Christian "brother" (v 16) and his own very dear "son" (v 10) by "pulling out all the stops" in a rhetorically crafted letter to Philemon on Onesimus' behalf. He even offered to pay from his own account for any damages done or debts Onesimus owed to Philemon, an amount Philemon may well have been able to cover from Onesimus' personal funds. See SLAVERY (NEW TESTAMENT).

Onesimus then returned to Philemon with Paul's strong, written appeal. If Philemon was moved by Paul's appeals to his advantage and his honor and then did all that Paul requested, he put aside his anger, forgave Onesimus, began to treat him with honor as a "brother," and smoothed out any remaining difficulties within the household (as he would have done for Paul, if needed). By these deeds he would have maintained his honor as a generous patron within his Christian community and before his own patron, Paul.

Moreover, the most direct way for Philemon to have stopped treating Onesimus as a slave (v 16) would have been to manumit him, probably well ahead of previous plans for doing so, especially in view of his wrongdoing. By making Onesimus his freedman he would have created a far more credible basis for functioning as his "brother" and "partner" (v 17) in the new kinship group they shared, their Christian community.

If Philemon, Apphia, Archippus, Onesimus, and the other Christians in their house-church accepted Paul's request that they pray for his anticipated stay with them (v 22), Philemon may well have waited for this visit to decide if he would encourage Onesimus to join Paul's group of "fellow workers" in the gospel. In any case, the return of Onesimus as a Christian, with Paul's strong support, presented Philemon with a major and pressing decision: would he deny his Christian identity by acting first of all with the prerogatives of an angry slave owner, or would he strengthen it by doing all in his power as Onesimus' patron to make him his "beloved brother" (see Petersen, *HBC*, 1245–48)? His house-church was watching, and Paul hoped to be there soon to see for himself.

S. SCOTT BARTCHY

PHILETUS (PERSON) [Gk *Philētos* (Φιλητος)]. A Christian who, along with Hymenaeus, had "swerved from the truth by holding that the resurrection is past already" (2 Tim 2:18). Because Hymenaeus can be linked with Ephesus (1 Tim 1:3), it can be assumed that that area was also the sphere of Philetus' activity. For further discussion on Philetus and related issues, see HYMENAEUS.

FLORENCE MORGAN GILLMAN

PHILIP (PERSON) [Gk *Philippos* (Φιλιππος)]. **1.** Philip II, King of Macedonia (359–336 B.C.) and father of Alexander the Great (1 Macc 1:1, 6:2). Philip began his political career as the regent for the infant son of his dead brother Perdiccas III, but he soon displaced his nephew and became king instead. Five other contenders for the throne opposed him, but Philip captured coastal towns and the Chalcidian league, securing control over Macedon in the process. He founded new cities, beautified the Macedonian capital of Pella, and poured heavy resources into armaments. Then he turned his attention W toward Greece itself, conquering its city states and leagues in turn, ending with the defeat of Thebes and Athens in 338 and the formation of a league with all the cities except Sparta in 337. Philip next opened war on the Persian Empire, but was murdered by a Macedonian noble in 336 at the wedding of his daughter.

2. Philip V, ruler of Macedonia 221–179 B.C. mentioned (1 Macc 8:5) along with his son Perseus, the last Macedonian king, as a foe defeated by the Romans. As a young king he joined with Hannibal and waged the First Macedonian War (215–205) against Rome. Rome won, but at great cost. Hence, Philip V began attacking neighbors in the Agaean, while Antiochus III (Seleucid ruler 223–187) asserted Seleucid ambitions in Palestine and Asia Minor, causing Rome to attack Philip. After Antiochus took Palestine from the Egyptians at the outset of the reign of the child-king Ptolemy V (198), Philip V was able to secure land in Thrace and Asia Minor formerly held by Egypt. Rome, however, defeated Philip at the Battle of Cynoscephalae in 197. Philip was stripped of much of his territory and weapons, but left in power in Macedonia as a buffer against the ambitions of Antiochus III.

3. Phrygian governor of Jerusalem appointed by Antiochus IV Epiphanes (2 Macc 5:22) in 169 B.C. to complete the punishment of Jerusalem begun by Antiochus. Antiochus had attacked the city because he had been thwarted in his second campaign against Egypt in 169, causing a rumor to spread in Judea that he was dead and a battle to break out. Antiochus thought that Jerusalem had revolted and came to the city to take vengeance, ultimately robbing the Temple. He then appointed Philip to finish the task while he returned to Antioch. Philip proved more ruthless even than Antiochus, killing pious Jews who had assembled in caves to worship secretly (2 Macc 6:11). This Philip is mentioned once more (8:8), when he wrote to Ptolemy for help against the rising power of Judas Maccabeus. (According to 1 Macc 3:38, which is likely more accurate, Lysias was in charge, not Ptolemy, and dispatched Ptolemy, Dorymenes, and Gorgias to meet Judas.)

4. Foster brother of Antiochus Epiphanes (1 Macc 6:14). Upon his deathbed in Persia, Antiochus IV named Philip regent over his kingdom (6:14) and guardian of his son Antiochus V Eupator (6:55), roles he had previously entrusted to Lysius. See LYSIAS. Philip apparently carried the body of Antiochus back to Antioch (2 Macc 9:29), but the assertion that Philip fled to Egypt out of fear of Antiochus seems wrong. For one thing Antiochus was but a child, so Philip would have feared Lysias, if anyone. Second, 1 Macc 6:63 says that Lysias returned to Antioch, found Philip in control of the city, and defeated him, apparently contradicting 2 Macc 9:29. Goldstein (*2 Maccabees* 372–73) argues that 1 Maccabees is incorrect and that 2 Macc 9:29 is correct that Philip fled to Egypt, not, however, at the death of Antiochus in November or December, 164 B.C., but after April of 163. In the absence of better data, one should

approach Goldstein's reconstruction with caution. If Philip did indeed flee to Egypt, perhaps he was retreating before the advance of Lysias on Antioch.

PAUL L. REDDITT

5. The son of Herod the Great and Cleopatra of Jerusalem. Josephus reports that he spent part of his youth in Rome, during which time Antipater made accusations against him to Herod: Antipater alleged that Philip had denounced Herod as the murderer of Aristobulus and Alexander and had said that he, Philip, would be Herod's next victim (*Ant* 17.80). These allegations caused Herod to hate Philip (*Ant* 17.146). But, discovering that Antipater's allegations were false, Herod was reconciled to Philip and made him a beneficiary under his last will, allotting to him Gaulonitis, Trachonitis, Batanaea, and Panias, with the title of tetrarch (*Ant* 17.189).

Philip played a part in the disputes which followed Herod's death. When Archelaus visited Rome to press his own case with Augustus, Philip remained in Judaea as his viceroy (*Ant* 17.219). But Varus, the Roman governor of Syria, soon persuaded Philip that he, too, should travel to Rome in order to support Archelaus there and to ensure that he would also receive a share if Augustus decided to partition Herod's kingdom (*Ant* 17.303). Under Augustus' final settlement, Philip received Batanaea, Trachonitis, Auranitis, Gaulonitis, and portions of the "domain of Zenodorus" in the vicinity of Panias. Our sources are imprecise as to the full extent of his territories: the Panias region is presumably the Ituraea of Luke 3:1 (cf. *HJP²* 1: 336). Philip ruled these territories as tetrarch, and received from them an annual income of 100 talents (*Ant* 17.319; *JW* 2.95).

Philip is known primarily as a builder. He refounded the city of Panias and named it Caesarea—the Caesarea Philippi (literally, "Philip's Caesarea") of the New Testament (Matt 16:13; Mark 5:27). He also refounded the town of Bethsaida: he supplemented its population, strengthened its fortifications, and named it Julias after Julia, Augustus' daughter. The refoundation will therefore have taken place early, presumably before Julia's exile in 2 B.C. (*Ant* 18.27–8). The foundation and refoundation of cities named after the emperor and his family was characteristic of client rulers under the Principate (Suet. *Aug.* 60 with Braund 1984: 107–11). Such cities tended to be centers of imperial cult: Herod the Great had already built a splendid temple near Panias for Augustus (*Ant* 15.363–64; *JW* 1.404–6). Philip's subjects were predominantly non-Jewish. Thus Philip's coinage bears images, most notably the heads of Augustus and Tiberius respectively. They also depict a temple, probably the temple which Herod had built near Panias. These coins indicate that Philip called himself simply "Philip, tetrarch" (*HJP²* 1: 340 n. 9).

Philip reigned as tetrarch from 4 B.C. until his death in A.D. 33/4. According to Josephus, he was a good ruler. His reign was mild and he avoided external entanglements. He traveled about his territories with only a small, select entourage, which would not be a burden upon his subjects. He dispensed justice promptly and fairly from a throne which he took with him in his travels around his tetrarchy. He died at Julias, where, after a costly funeral, his body was consigned to a tomb which he had built in preparation for his death (*Ant* 18.106–8).

Philip had married Salome, daughter of Antipas and Herodias, whose dancing had cost the head of John the Baptist (Mark 6:22) and who survived Philip to marry again (*Ant* 18.137). But Philip had no children: Tiberius annexed his territories upon his death (*Ant* 18.108). Philip the tetrarch is probably to be distinguished from another son of Herod named Philip (Mark 6:17 has the best mss authority; cf. also Matt 14:3; Luke 3:19; Josephus *Ant.* 18.5.1 §109). It is possible, however, that this second Philip is the product of confusion in our sources. See HEROD PHILIP.

DAVID C. BRAUND

6. One of the twelve disciples of Jesus. In the Synoptic Gospels, he is only mentioned in the list of the disciples (Matt 10:3 = Mark 3:18 = Luke 6:14). More is known of him from the gospel of John where

Jesus called Philip to be one of the Twelve (1:43–44). Philip may have been a disciple of John the Baptist because his call took place near Bethany beyond the Jordan where John was baptizing (1:28). Philip is central in bringing Nathanael to Christ as one of the Twelve (1:45–46). Jesus tested Philip regarding how to feed the 5,000 in the wilderness, and Philip looks only to the expense of the matter (6:5–7). He acts as intermediary between Christ and Greeks who had come to worship at the Passover. They wanted to be introduced to Jesus and they sought out Philip to help them (12:20–26). He may have been chosen because he spoke Greek, had a Greek name, and came from Bethsaida, a predominantly Greek area (12:21). Within the confines of the Farewell Discourse, Philip asks Jesus for a vision of the Father, only to be told by Jesus that he already had seen the Father in him (14:8–9). Philip was present among the disciples in the Upper Room who were waiting for the coming of Holy Spirit (Acts 1:13). According to one tradition, Philip is the disciple who asked to go bury his father before following Jesus (Matt 8:21; Luke 9:56; Clem. *Str.* 3.4.25; 4.9.73).

7. One of the Seven chosen by the Jerusalem Church chosen to be an almoner to serve at table, administrate, and care for the poor and widows. The Seven were appointed as a response to the growing tension between the Hellenistic Jewish Christians and the Hebrew Christians of the Jerusalem Church. They served to relieve the disciples of such duties and permit them full time evangelism (Acts 6:1–7).

After the martyrdom of Stephen, Philip was forced to leave Jerusalem. As part of Luke's account of the spread of the Gospel to all the nations as a response to the Great Commission, an account of Philip relays his missionary work as an evangelist (Acts 8). He is noted for the conversion of non-Jewish believers. He made many converts, cast out demons, and healed the lame in the city of Samaria, even thwarting the influence and eventually converting the magician Simon Magus. Upon hearing of Philip's work, the apostles at Jerusalem sent Peter and John to Samaria to sanction officially the work and baptize the new converts in the Holy Spirit (vv 4–25).

In an episode on the road between Jerusalem and Gaza, Philip met a eunuch, the treasurer to the Candace, Queen of Ethiopia. Philip interpreted the Servant Song of Isa 53:7–8, identifying Jesus as the Servant. The eunuch was subsequently converted and baptized (vv 26–39). Philip then evangelized Azotus, the old Philistine city of Ashdod, about 20 miles N of Gaza, and proceeded to preach to cities along the coastal road until settling in Caesarea. Paul later stayed there with Philip and his four prophesying daughters (see below) on his last journey to Jerusalem (Acts 21:8–9).

Later tradition confuses Philip the Apostle and Philip the Evangelist. Confusion may have occurred as early as Papias (60–130 C.E.), for he refers to Philip the Apostle as living in Hierapolis with his daughters (Eus. *Hist. Eccl.* 3.39.8–10), but it was Philip the Evangelist who had notable daughters (see below). Also, Polycrates identified Philip the Apostle as buried at Hierapolis with his two aged virgin daughters and having another daughter buried at Ephesus (Eus. *Hist. Eccl.* 3.31.3). Eusebius does not catch Polycrates's mistake for he then quotes the *Dialogue* of Gaius to claim that Philip and his four prophetess daughters were buried at Hierapolis and goes on to quote Acts 21:8–9 (Eus. *Hist. Eccl.* 3.31.2–5).

The four virgin daughters of Philip the Evangelist are mentioned in Acts 21:8–9. Philip's daughters were Jewish-Christians who lived with their father in his home in Caesarea in Judea. They possessed the gift of prophecy and are literally called "virgin *(parthenos)* prophesying daughters." They are evidence that the gift of prophecy was the privilege of women in the early Church (cf. 1 Cor 11:5; Rev 2:20) and that the practice of prophecy among women evident in the OT was again manifested (e.g. 2 Kgs 22:14; Neh 6:14). Within Acts, these four prophetesses demonstrate the fulfillment of Joel's prophecy that in the latter days the spirit of God would be poured out on the daughters of Israel (Joel 2:28–29; Acts 2:14–21; cf. Eus. *Hist. Eccl.* 5.17.2–3).

Luke may have received information about persons and events of the early years of Christianity in Judea from the daughters of Philip. Papias received information about Joseph Barsabbas (Acts 1:23) from the daughters of Philip (he confuses him with Philip the Apostle) (Eus. *Hist. Eccl.* 3.39.9–10). Polycrates, bishop of Ephesus, mentions that Philip, one of the twelve apostles, and two virgin daughters who grew quite old were buried in a tomb at Hierapolis (Eus. *Hist. Eccl.* 3.31.2–3). Eusebius understands this reference to be to Philip the Evangelist, for he goes on to quote Proclus from the *Dialogue* of Gaius that

the four daughters of Philip were prophetesses who worked and were buried in Hierapolis along with their father Philip. In support, Eusebius cites Acts 21:8 as the biblical reference to the family (Eus. *Hist. Eccl.* 3.31.4–5).

PHILIP, ACTS OF. A text which chronicles the adventures and martrydom of Philip at Hierapolis. About 50 Greek manuscripts, menologia for the most part, transmit the *Martyrdom of Philip.* This tale, which circulated in three divergent forms, was extracted from a larger work, the *Peregrinations* or *Acts of Philip the Apostle.* The remainder of the work—long lost—has been progressively recovered. This is especially so in the following manuscripts: Vatican, gr. 824 for *Acts Phil.* I–IX; Athos, Xenophontos 32 for the overall work in its long form less the essential of *Acts Phil.* II and VIII; the totality of *Acts Phil.* IX–X and the beginning of XI, folios having been mislaid or torn away; Athens, B.N. gr. 346 which gives a long form of the beginning of *Acts Phil.* VIII; and, if it really is the original end, Oxford, Bod. Baroccianus 180, which relates the translation of the apostle's relics from Ophiorymos to Hierapolis. The work was either dismantled for liturgical reasons (extraction of the *Martyrdom* as the reading for the Feast of St. Philip, 14 November) or else expurgated for doctrinal reasons (especially encratism).

The overall work was not, moreover, a single aggregate. *Acts Phil.* VIII and what follows until the end constitute a homogenous work and relate the journey of Philip the Apostle, accompanied by his sister Marian and his friend Bartholomew, to the city of Ophiorymos where he preached an encratic message, converted Nikanora the governor's wife, and Stachys the Blind, before being martyred by order of Tyrannognophos the governor. If Baroccianus 180 is followed, the tale finishes by the translation of the apostle's relics from Ophiorymos to Hierapolis where the tomb of Philip was venerated since the 2d century (Eus., *Hist. Eccl.* 3.31.1–4). On the other hand, *Acts Phil.* I–VII is a composite: *Acts Phil.* II, an independent episode (the confrontation at Athens between Philip, some Greek philosophers, and the High Priest of Jerusalem, inspired by Acts 17), *Acts Phil.* III–IV, a whole (the divine confirmation of Philip in his ministry and the healing of a young girl); *Acts Phil.* V–VII (the controversy with a Jew, a successful miracle, and the construction of a church). Certain of these episodes, as the proper names Azotus and Candankians suggest (*Acts Phil.* 33), must have originally been about Philip the Deacon (Acts 8) and not about the apostle. Different indices (2d century sources which were used as well as the mention of the *Acts Phil.* in the Decree of Ps-Gelatus 5.2.5, line 268, 5th–6th century) suggest that these different documents were grouped together into a single work by a 4th century author. This author or the editors of the sources relied on information relative to Philip which began circulating from the 2d century (the sepulcher at Hierapolis, the resurrection of a dead man; cf. Eus., *Hist. Eccl.* 3.31.1–4 and 39.9, as well as on a few legends [cf. the Manichean Psalm, "There were ten virgins," Allberry 1938: 192]). These also adapted passages from the other apocryphal Acts transferring them to Philip (cf. *Acts Phil.* VI, the joust between Peter and Simon, *Acts Pet.* 23–28), as well as different prayers of uncertain origin. The presence of this archaic material confers an importance on the *Acts Phil.* unsuspected until now.

In order to define the author's religious conceptions, one has to rely on the least normalized form of the *Acts Phil.*, i.e., Xenophontos 32. The work is encratic, hostile to marriage, favorable to sexual continence and abstention from meat, as is evident in such passages as "Purity *(hagenia)* communicates with God" (*Acts Phil.* V, 46). Mariamne is saved and fulfills a ministry, but only insofar as she is dressed as a man and inwardly has adopted a masculine dispostion. God and Christ generously offer salvation and confer on the believer a power capable of exorcism and healing. In addition, the apostles received from Christ a special dress (*Acts Phil.* I, 6) and a small coffer or case (*Acts Phil.* XIII). Coming in Christ's wake, they are healers of the soul; they settle in an abandoned dispensary.

The *Acts of Philip* is not hostile to the OT which is quoted in the dispute between Philip and Aristarchus (*Acts Phil.* VI, 77–79). Moreover the work transmits previously unpublished sentences of Jesus of a

synoptic type, doubtlessly coming from a document of the same type as the source of the Logia (Q; *Acts Phil-Mart. Phil.* 135).

PHILIP, GOSPEL OF (NHC II,*3*). A Valentinian Christian document included among the Nag Hammadi Coptic codices discovered in Egypt in 1945. The text is extant only in this ms (Codex II,*3;* pp. 51–29–86:19), very likely a translation of an original Greek work. A Syrian provenance for the Greek text is suggested in part by the interest shown in the meaning of Syriac words (63:21–23; 56:7–9). Our Coptic copy is dated ca. A.D. 350.

A. Title

The text is anonymous and may bear Philip's name merely because he is the only apostle referred to by name (73:9–14). Among gnostics, however, Philip was considered a privileged recipient and caretaker of the Lord's revelation (*Pistis Sophia* 1:42). The apocryphal *Acts of Philip* portrays its protagonist as an ascetic who taught chastity and continence in marriage and who overcame heavenly demons by sacramental means.

B. Composition

Gos. Phil. is not like one of the NT Gospels. It is a compilation of statements in a variety of literary types: parable, paraenesis, narrative dialogue, dominical saying, aphorism, and analogy, along with samples of biblical exegesis, dogma, and polemics. These statements, however, are not placed into a narrative framework but are arranged in a sequence that is neither strictly topical nor predictable. Efforts to analyze the scheme of arrangement are hampered by inconvenient lacunae in the ms.

Some continuity of thought can be observed in the linkage of similar materials (e.g., 51:29–52:35, series of contrasts) or in the use of catchwords (e.g., 77:15–78:24, "love"). Abrupt changes of thought are frequent. Certain themes recur at unequal intervals (e.g., the need to rise before one dies, 56:15–20; 56:26–57:22; 66:16–23; 73:1–8), but with no obvious intervening development. There is a possibility that the compiler has broken coherent paragraphs into pieces (e.g., read in this order 70:5–9; 76:22–77:1; 66:7–29; or 75:13–14 followed by 61:36–62:5; or 63:5–11 prefixing 70:22–29).

C. Content

Gos. Phil. contains eight brief, enigmatic "new" sayings of Jesus (55:37–56:3; 58:10–14; 59:25–27; 63:29–30; 64:2–9; 64:10–12; 67:30–35; and 74:25–27). In addition it quotes five sayings of Jesus from Matthew (3:15; 6:6; 15:13; 16:17; and 27:46 [= Mark 15:34]) and three from John (6:53; 8:32, 34). The only other NT passages cited are Matt 3:10; 1 Cor 8:1; 15:50; and 1 Pet 4:8. There are many allusions to NT contexts and expressions, and the early chapters of Genesis receive an ongoing exegesis. There is no disparagement of the OT in *Gos. Phil.*, and the citation of Matt 3:10 is said to be as "the word says" (83:11).

Gos. Phil. tells several extracanonical stories about Jesus. He changed his appearance to suit the nature of those to whom he was revealing himself (57:28–58:10). His three female companions were each named Mary (59:6–11), though Mary Magdalene alone received many kisses from him (63:32–64:2). The result of mixing 72 colors together was a vat of white (63:25–30).

Gos. Phil. is very short on speculation about Sophia, the nature of the Pleroma, or the myth of creation. The tripartite division of humanity—fleshly, psychic, pneumatic—is not emphasized. *Gos. Phil.* speaks rather of being "a Hebrew," or "a Christian," or "a Christ."

The primary interest of *Gos. Phil.* is the restoration of Adam's original androgynous nature. Christ came expressly "to repair the separation" (70:12–17), which has brought death (68:22–26). The reunion is also spoken of as "the resurrection" (67:9–18) and must be attained before one dies, as pioneered by "the lord" (56:15–19). The reunion can be effected in the sacramental bridal chamber (70:17–22), where "the mysteries of truth" are revealed in type and image (84:20–21; 85:14–19).

Only “free men and virgins” may enter the bridal chamber; “animals, slaves, and defiled women” are excluded (69:1–4). A “virgin” is one never defiled by sexual intercourse (55:27–28), a “free man” does not sin (77:15–18); together they are called “Christians” (74:13–16), who possess “the resurrection, the light, the cross, the Holy Spirit” (74:18–21). Since “Christian” in the gnostic glossary normally designates the psychic rather than the pneumatic, *Gos. Phil.* is offering the psychic the chance to rise to the pneumatic level—by sacramental means (64:22–31; 74:12–15; 67:26–31). Even “a slave” can advance to a higher level (79:13–18).

Gos. Phil. summarizes: “The lord did everything in a mystery, a baptism and a chrism and a eucharist and a redemption and a bridal chamber” (67:27–30). This is probably the complete initiation sequence for a gnostic Christian. Initiation in the Church at the time of *Gos. Phil.* normally included baptism in water, chrism, and eucharist, set against a nuptial background. “Bridal chamber” in *Gos. Phil.* may be a covering term for the whole initiation, since a benefit of a particular sacrament (cf. 67:5–6; 69:12–14; 57:27–28) may also be associated with “bridal chamber” (86:4–11; cf. 70:5–9; 74:12–24). The converse is also the case (58:10–14; 69:4–14; 73:1–19; 75:14–24).

What the mystery of “redemption” accomplished is not explained. It is associated with both baptism and bridal chamber (69:25–27). Both Irenaeus (*Haer.* 1.21.2) and Hippolytus (*Haer.* 6.41) say that a second baptism called “redemption” was in use among Valentinians. The ritual action in the sacramental bridal chamber has been variously estimated: an act of sexual intercourse by married couples (cf. 65:1–26), or a holy kiss shared by celibates (69:1–4; 59:2–6; 63:32–64:9; 82:4–7).

PHILIPPI (PLACE) [Gk *Philippoi* (Φιλιπποι)]. Situated in N Greece at the border of E Macedonia and Thrace, ancient Philippi was the site of Paul’s earliest extensive missionary activity in Europe (Acts 16:11–40; Philippians). The city (41°00´N; 24°16´E) stood about 16 km NNW of the port city Neapolis (modern Kavalla) and originally bore the name Krenides (from the Greek for “spring”) in recognition of the abundance of streams in the area.

———

A. Historical Overview

Greek colonists from the nearby island of Thasos founded Krenides in 360–59 B.C.E. under the leadership of the exiled Athenian politician Kallistratos. In 356, King Philip II of Macedon brought the city under Macedonian dominion and renamed it after himself. It is likely that the financial resources which propelled Philip’s hegemonic policies in Greece derived in large part from the precious metals mined at Mt. Pangaion overlooking the plain of Datos in which Philippi was located.

Rome’s successful campaigns against Macedonian dynasts and dynastic pretenders in the 2d century B.C.E. led to the establishment of a Roman province of Macedonia. Over the course of the next century (mid-2d to mid-1st B.C.E.), Philippi served as a provincial outpost on the Via Egnatia, the main overland

artery linking Rome to the East. Two battles fought near the city in 42 B.C.E. resulted in the defeat of the "liberators" Cassius and Brutus who had been instrumental in the assassination of Julius Caesar. The victors at Philippi, Octavian (later titled Augustus) and Antony, emerged as the dominant powers of the Roman Mediterranean basin. Following the battles, Philippi became a Roman colony and discharged veterans receiving land allotments settled permanently in the area. Within a few years after Augustus' defeat of Antony at the battle of Actium (30 B.C.E.), as many as 500 more Roman soldiers—mostly veterans of Antony's praetorian guard who had lost their claims to land in Italy—received allotments and accompanying privileges in Philippi. Renamed Colonia Julia Augusta Philippensis, in honor of Augustus' daughter, the colony of Philippi embraced an area of more than 700 square miles extending from the Pangaion mountain range in the north to the colony's seaport of Neapolis in the S and from the Nestos river in the E to the Strymon in the W. The city of Philippi was the urban political center of the colony and with its proximity to the Via Egnatia also dominated the colony's commercial life.

Epigraphic evidence from Philippi indicates that the Egnatia in E Macedonia and Thrace was in a state of disrepair in the early Roman Imperial period. During the reigns of Augustus' immediate successors (Tiberius, Gaius, and Claudius) the colony may have been dependent largely on its access to the sea via Neapolis for commerce and communication. It was by the sea route—Alexandria Troas in Asia Minor to Neapolis and overland to Philippi—that the apostle Paul traveled to the city in 49 C.E. during the reign of the Emperor Claudius (41–54 C.E.). Trajan's (97–117 C.E.) and Hadrian's (117–138 C.E.) activities in the East occasioned the repair and upkeep of the Egnatia, and it is from this period and the time of their successors, Antoninus Pius (138–61 C.E.) and Marcus Aurelius (161–80 C.E.), that most of the Roman buildings now visible at the site originated.

Excavations at Philippi have revealed further building activity in the 3d and 4th centuries C.E. including the construction of one of the earliest known Christian churches in Greece. At least six more churches were built at or near the city during the 5th–7th centuries C.E. attesting to Philippi's dramatic ascendancy as an episcopal and ecclesiastical center and perhaps also as an important object of Christian pilgrimage. Taking their toll in this period was a series of extremely destructive earthquakes which disrupted construction and repair activity at some of the ecclesiastical sites and may have resulted in the city's general depopulation. In medieval times, there is evidence of a castle fortification at Philippi (mid-10th century C.E.) and of Christian burials (10th and 11th centuries C.E.), but by the 16th century only a small and scattered settlement occupied the site.

(Reports of the Greek Archaeological Service excavations at Philippi are included in the "Chronika" of *Archaiologikon Deltion* [in Greek]. Excavations of the Archaeological Society of Athens were reported in *Ergon,* 1958–69 [in Greek], and in *Pratika Archaiologikes Hetaireias,* 1958–67 [in Greek].)

B. Krenides, Philippi, and the Thracians

Of the Thasian settlement of Krenides little is known. Herodotus reports (7.112) that Thracian tribes were active in the Pangaion area at the time of Xerxes' invasion of Greece and that they held gold and silver mines in the region. According to Diodorus Siculus (16.3.7; 16.8.6–7), Philip II's takeover of Krenides came after the original Thasian settlers requested assistance in curbing Thracian hostilities. The impact of the native Thracians was durable throughout Philippi's early history, especially in local military, political, and religious matters. Thracian military contingents guided both Antony's and Octavian's forces as well as those of Cassius and Brutus before the first battle of Philippi—this, apparently, to insure that Thracian interests would be served whatever the battle's outcome. Inscriptions provide evidence of high civic honors bestowed by the Roman colony on Thracian dynasts who served as Roman client-rulers in the early Imperial period. Thracian royalty occupied the highest civic priesthoods even in the Roman province's capital, Thessalonica. Particularly acute was Thracian influence in Philippi's local religions. Herodotus reports a Thracian oracle of Dionysos at nearby Mt. Pangaion (7.111). The Thracian Bacchus, Bendis (associated with Artemis and Diana), and the rider hero are prominent features of Philippi's religious environment and their influence may explain certain peculiarties in the city's religious history.

C. Hellenistic Philippi

Few archaeological remains of the Hellenistic city have survived. A dedicatory inscription from the late 4th century B.C.E. provides some evidence for a temple of Apollo Komaios and Artemis. Foundations of fortification walls enclosing the acropolis and habitable area below date probably from Philip II's reign. Below the acropolis on the E within the city walls was an early theater of the Hellenistic period which was transformed on at least two occasions in Roman times.

At the SW base of the acropolis was a small Ionic prostyle structure (3d or 2d century B.C.E.) which may have served as a hero's shrine. Philippi's largest Christian basilica was to be built immediately adjacent to the sanctuary, and the church's outermost structures expanded to incorporate it into the ecclesiastical complex. Another heroön dating from the 2d century B.C.E. has been excavated in the Hellenistic city's center. A monumental temple-like structure was built above an earlier Macedonian tomb containing the remains of a young man thought to be associated with one of the city's or region's cults (as inferred from a religious relief on a pendant worn by the deceased). An inscription identifies the youth as Euephenes son of Exekestos, a name known from lists of initiates into the Samothracian cult of the "Great Gods." The earliest known Christian church at Philippi abutted the heroön which was later built over by an ecclesiastical establishment.

D. Early Roman Philippi

In the early 1st century C.E., a marble arch (no longer extant) was located two kilometers W of the city and marked the limit of Philippi's *pomerium*—an area which, according to Roman convention, was left uninhabited and uncultivated. Dating also from the early Roman colonial settlement are the foundations of a sanctuary of the Egyptian gods, a cult which enjoyed considerable popularity in Roman Macedonia. Judging from the use of expensive imported marble in the sanctuary's construction, Philippi's Egyptian cult establishment appears to have enjoyed the support of at least some wealthy adherents. The sanctuary commanded a prominent location on a central ledge at the base of the acropolis overlooking the Hellenistic Ionic prostyle heroön.

About 400 meters S of the Egnatia, a small structure was identified beneath a later Roman bath complex. Five inscriptions recovered in the bath's excavation suggest that the building was an early Roman Imperial period sanctuary of Bacchus and other gods and goddesses associated with him at Philippi. Three of the inscriptions are dedicated to Liber, Libera, and Hercules, and the other two to Liber Pater, the Roman religious analogue of the Greek Dionysos. A predominance of female dedicants in the inscriptions is striking. Dedicating a water system at the sanctuary to Liber, Libera, and Hercules was a thiasus of maenads, a cultic association of women distinctive to Dionysos religion. Three of the other inscriptions record devotional activity by individual women: one involved an offering to Liber Pater of a sestertia (1,000 denarii); another apparently the dedication of a statue directed to Liber, Libera, and Hercules. The fifth inscription was dedicated by a husband and wife to the divine triad. In addition to attesting to the financial well-being and independence of the female dedicants, the inscriptions reflect the participation of women in cultic activity involving Hercules. Such participation was unusual in Greek and Roman environments. At Thasos and Rome, for example, women could not take part in sacrificial activity for Hercules. Since Dionysos and Hercules were patron deities of Thasos, the origin of the site's original settlers, it is possible that the cult of Liber, Libera, and Hercules at Philippi stems from early Thasian devotions. In view of the cult's peculiarities (involvement of women and the additional attention to Libera), the influence of Thracian attachment to Bacchus, Bendis, and the rider hero also may have had an impact on the cult of Liber (in association with Libera and Hercules) at Philippi.

At the time of Paul's visit, the population of the colony would have included a relatively privileged core of Roman veterans and their descendants; Greeks descended from the inhabitants of the earlier Hellenistic cities (Krenides and Philippi) and from other Greek settlements in the area (e.g., Amphipolis, Maroneia, and Neapolis); Greeks involved in commerce who had migrated from Asia Minor (exemplified by the figure of Lydia of Thyatira mentioned in Acts 16:14); and native Thracians. Most of the colony's inhabitants probably lived in agrarian rural settlements, including those Roman veterans who established agricultural estates with slave work forces in the countryside. Although there is little archaeological evidence of such estates from the colony of Philippi, an excellent example of such villas from the later

Roman period has been excavated at the site of Tsoukalario on nearby Thasos. The presence of villages in the colony is attested by burial sites, inscriptions from which designate the deceased person as "villager" *(vicanus).* Epigraphic data indicate that Romans dominated the city's and colony's administration which was typically Roman (duumviri, aediles, and quaestors are in evidence). While Latin predominates in the inscriptions from the period, traces of the continued use of Greek and Thracian are apparent especially in cultic contexts. Half of the inscriptions pertaining to the Egyptian cult, for example, are in Greek—a number out of all proportion to the preponderance of Latin inscriptions in Philippi's epigraphic record. The Greek-speaking Paul was understood sufficiently well to have undertaken an extended stay at the city.

E. Later Roman Philippi

With the repair of the Egnatia during Trajan's reign (97–117 C.E.) and the increasingly eastward-oriented policies of his successors, Hadrian (117–138 C.E.) and Antoninus Pius (138–61 C.E.), Philippi enjoyed a period of extensive building activity. In the south-central part of the city, excavations have revealed a palaestra dating from the Antonine period. It included an exercise field, a compact amphitheater, a cavernous underground latrine complex, and various rooms for users of the facility. About 200 meters S of the palaestra were ornate public baths with richly decorated mosaic floors (no longer extant). Dating from the 2d century C.E., the baths were built over the earlier structure associated with dedications to Liber, Libera, and Hercules.

The palaestra's northern entrance issued onto a large street running parallel to the Via Egnatia which intersected the city as the decumanus maximus some forty meters to the n. Lying just off the large street immediately east of the palaestra was a market complex with a facade of Corinthian columns. A row of shops lined the other (N) side of the street across from the palaestra and market. Abutting the rear of the shops was the S wall of the forum.

Most of the remains of the forum presently visible date to the period of Marcus Aurelius' reign (161–80 C.E.). The forum is a clearly defined rectangle which encloses a marble-paved court measuring 100 meters from E to W and 50 meters N to S. Its N side is parallel and immediately adjacent to the Via Egnatia and features an imposing speaker's rostrum in the center, flanked by two shrine-like structures and two large fountains on either side.

Located along the forum's N axis in its E and W corners are two small temples very similar in size and ground plan. The two buildings frame the N forum complex and are aligned with stoas to the S which run along the forum's E and W sides. The structure in the W corner consisted of a pronaos *in antis* and a rectangular room within which a bench lined the side and back walls. A dedicatory architrave inscription suggests that the building may have been the scene of banquets held in honor of the divine Antoninus Pius ([*... ex*] *voluntate sua a divo* [*A*]*ntonino ex epulis ...).* The corresponding temple on the E side of the forum had a pronaos with two Corinthian columns *in antis* with a naos characteristic of a temple cella and not furnished with benches. Although there is an architrave inscription which appears to be quite similar to that of the W building, the central block presumably bearing the honored deity's name has not been recovered. An inscription on a small statue base recovered inside the cella refers in dedicatory style to Faustina Augusta, probably Marcus Aurelius' wife Faustina the Younger whose tenure as "Augusta" spanned the years 147 to 175 C.E. The presence of the statue of an emperor's wife suggests that the temple was the site of honors for the Roman imperial house as was its twin temple on the forum's E side. That the emperor's wife received divine honors at the colony is affirmed by inscriptions mentioning a priesthood of the divine Augusta recovered at Philippi and Neapolis.

Behind the stoa defining the forum's E side are a row of rooms some of which were occupied by the city's library. 2 Timothy 4:13 reflects the importance of popular literary culture in the period: Paul is portrayed as requesting the return of a cloak together with his books and parchments. Government buildings appear to have dominated the W side of the stoa in the center of which stood the curia chamber. Along the forum's S side was a large double-aisled stoa probably for the general use of the city's inhabitants and visitors.

F. Sanctuaries and Rock Reliefs

North of the Via Egnatia along the base of the acropolis were a number of sanctuaries situated in a quarry which had been used in the Hellenistic period. A well-executed inscription in Latin records devotees of Silvanus, a Roman god of woods and forests. The quarried-out rock face on which the inscription was carved served apparently as the back wall of a sanctuary otherwise constructed of semipermanent materials. Shrines dedicated to Magna Mater and Diana also are in evidence and if enclosed at all, would have been made of wood and other less durable materials. Though extremely difficult to date, the sanctuaries probably originated in the 1st or 2d centuries C.E.

The acropolis at Philippi bears 187 rock-cut reliefs. While a variety of deities are associated with the carvings (the Thracian rider, Magna Mater, Jupiter, Minerva, Isis), the vast majority of them represent a hunting goddess Diana, related to the Greek Artemis and Thracian Bendis. Some of the reliefs depicting Diana are in proximity to carvings of what appear to be human women accompanied, in some instances, with typically domestic paraphernalia. Interpreters of the reliefs have suggested that the women may have been worshippers of the goddess, as clearly was the case in certain ex votos with female dedicants and representations of a deity. It also is possible that human women depicted in the carvings were understood as being associated through funerary iconography with the protective powers of the goddess. Although the cemetery conventionally was located outside the city, the reliefs may have been religious memorials celebrating the deceased's assumption of immortal status. An analogous phenomenon occurs in mortuary iconography depicting deceased males as the Thracian rider hero.

Another set of reliefs depicting women and/or goddesses in a fairly remote area above the theater reflects perhaps the devotions and memorial activity of a group of women cult officials (priestesses of the Augustae) or associated adherents of Libera or Bacchus. However one understands the reliefs on the Philippian acropolis, it is unwise to attribute them to a single underlying religious motivation. They appear to be monuments to a rich variety of religious and honorific perspectives which were expressed in very different styles over a period of two or three centuries.

G. Early Christian Philippi

The earliest Christian building identified at Philippi is a small rectangular structure in the area just E of the Roman forum. Dedicated to Paul, the church was built in the second quarter of the 4th century C.E. (a floor inscription records donations by a bishop at Philippi who from independent testimony is known to have attended the Council of Serdica in 342 C.E.). While the church was immediately adjacent to the heroön built over the Macedonian tomb, there is no indication of a cultic relationship between the two establishments. It is noteworthy, however, that the earliest large basilica at Philippi (5th century C.E.) was constructed in immediate proximity to the heroön just above the Egnatia. This church complex, known as Basilica A, spread over an area almost as large as the Roman forum. The two-storied basilica with its apse oriented typically to the E, featured elegant frescoes in its various chambers, a long, broad nave, and an expansive narthex and exonarthex to the W. Excavations have revealed another basilica N of the Egnatia, to the W of and below Basilica A, which was carefully built and richly appointed with fine marble materials.

An even more grandiose church building (the so-called "Direkler Basilica" or Basilica B) was begun S of the forum adjacent to the palaestra. It was to have been crowned by an enormous free-standing dome which collapsed prior to completion of the church. A church of more modest dimensions later was built at the site.

East of the forum and incorporating the earlier church dedicated to Paul was an ecclesiastical complex designated by excavators as an "episkopeion" (installations associated with a bishop's residence). A monumental entryway to the complex consisted of a double-colonnaded stoa leading S from the Egnatia. Through the stoa, one gained access to a large octagonal chapel with a stepped apse to the E. Before reaching the octagon, one would have passed a number of rooms off the stoa's E edge: a pyramidal-shaped fountain (Phiale), a room of uncertain identity just above the heroön, a Diakonikon with a table or bench on its E wall, and a Prothesis which communicates with the chapel. Suggestions that an early Christian saint's cult involving water rituals continued the earlier cult at the heroön cannot be confirmed. Over 1,500 coins have been recovered in the area above the heroön, but these date only from the 4th to

6th centuries C.E. and not before. There are no architectural or other archaeological grounds for presuming cultic continuity between the two establishments.

North of the Phiale is an ensemble of elegantly executed rooms clustered around a baptistery which probably was covered with a dome, decorated on its walls and ceilings with mosaics. Hot water for the baptistery came from an adjacent thermae (bath) complex complete with caldarium, tepidarium, frigidarium, swimming pool, toilets, and perhaps a shower. The intimate proximity of such an extensive bath complex communicating with the ecclesiastical installation is a distinctive feature of the episcopal establishment at Philippi. Extensive storage areas which served the complex have been excavated as has a small burial site for infants located N and E of the octagon's apse.

Outside the city walls in the modern village of Krenides is another basilica from the early Christian period (the "Extra-muros Basilica"). Originally constructed in the 5th century C.E. in an area containing tombs, the "Extra-muros Basilica" was the site of later Christian burials some of whose epitaphs may include sectarian distinctions applied to the deceased. A series of earthquakes in the 6th and 7th centuries C.E. damaged the church, apparently beyond repair since a small Byzantine chapel was built on the site using remains from the earlier basilica. In the 10th and 11th centuries C.E., the area around the chapel served as a Christian cemetery.

In the immediate vicinity of the "Extra-muros Basilica" excavations have uncovered the apse of a much larger basilica dating from the 4th century C.E. At the site, a large funerary mosaic of the 6th century C.E. has come to light which indicates the titles of the deceased and the names of the bishops who had served during his lifetime. The mosaic is an important source in the reconstruction of Philippi's officialdom in the early Byzantine period. A possible explanation for the large number of imposing churches at Philippi is that in addition to its episcopal importance, the city enjoyed a special status as the site of early Christian pilgrimages focusing on Paul or other unknown saints. To establish whether or not this evolved out of regional attraction to Philippi's hero and/or healing cults of an earlier period will require further investigation.

Recovered near the "Neapolis Gate" SE of the theater were fragments of an inscription containing a version of the apocryphal correspondence between Abgar of Edessa and Jesus. The inscription has been dated from the mid-4th to mid-5th centuries and probably served as a device intended to protect the city.

PHILIPPIAN JAILOR. Not named in Acts 16, although two late minisucle manuscripts, 2147 of the 11th century and 614 of the 13th, call him Stephanas (Metzger 1980: 41). Acts 16:23, 27, 36 are the only places in which *desmophylax,* "jailor," appears in the NT. According to Haenchen *Acts* (MeyerK, 501), Acts 16:25–34 contain so many improbabilities that these verses cannot be historical. However, vv 25–29 very likely contain a historical kernel, because according to 1 Thess 2:2, Paul had suffered and been shamefully treated in Philippi. This narrative would have also contained miraculous elements (Giesekke 1989: 348–51): the earthquake, opened doors, being freed from the stocks, and Paul's seeing through walls. In parallel fashion, Luke writes of the apostles (5:17–26) and Peter (12:3–17) being freed from prison (Lüdemann 1987: 187–91).

The jailor was instructed to guard Paul and Silas carefully, and he did. They were put in the inner prison and their feet were placed in stocks. Later, after the earthquake had opened the doors of the prison and the prisoners appeared to be gone, the jailor wanted to kill himself. But Paul prevented him and assured him that all the prisoners were still there. The jailor demanded a light and rushed and fell at Paul's and Silas' feet. He then led them outside and asked the question, "Men, what must I do to be saved?" Their answer was that he should believe in the Lord Jesus and he and his household would be saved, and then they spoke the word of the Lord to them. The jailor washed their wounds and was at once baptized with all of his family. He brought Paul and Silas into his household and set food before them and rejoiced with all his household that he had believed in God. The next day, the jailor delivered to Paul and Silas the magistrates' instruction that they were to be freed, and let them go in peace.

To show an appropriate equality, Luke draws parallels between men and women. Both Lydia (vv 13–15) and the jailor convert, and with their households believe and are baptized. Both show Paul hospitality. In addition, God protects the Christians. The security measures taken by the jailor are to no avail. Actually, Paul's calm confidence is contrasted with the agitated state of the jailor, who later humbly recognizes the importance of Paul and Silas. Consequently, through the Philippian jailor, Luke develops his themes of salvation, belief with one's whole household in the Lord Jesus, recognition of Jesus as "Lord," the word of the Lord, baptism, sexual equality, hospitality, and rejoicing in these things (O'Toole 1984: 33–61, 86–92, 125, 206–10, 225–47).

PHILIPPIANS, EPISTLE TO THE. Written by the apostle Paul to the church in the NE Macedonian city of Philippi, the letter to the Philippians is the eleventh book of the NT canon. It is

traditionally referred to as one of Paul's four "Prison" or "Captivity" Epistles, because in this letter as well as in Ephesians, Colossians, and Philemon the author indicates that he is incarcerated at the time of writing. The contents of Philippians may be briefly summarized as follows: After a salutation (Phil 1:1–2) and thanksgiving (1:3–11), Paul discusses his imprisonment and its effects on the progress of the gospel (1:12–26). Next, he gives exhortations to the church (1:27–2:18), citing a famous hymn from the early Christian liturgy (2:6–11). After indicating his plans to send Timothy and Epaphroditus to Philippi (2:19–30), Paul warns the Philippians about false teachers who would thwart their spiritual progress (3:1–21). Finally, he concludes the letter with various exhortations (4:1–9), an expression of gratitude for a gift sent to him by the Philippians (4:10–20), greetings (4:21–22), and a benediction (4:23).

A. Establishment of the Church

According to Acts 16, Paul established the church in Philippi on his so-called second missionary journey. He was accompanied by Silas, Timothy, and possibly a third, anonymous individual whose presence may be implied by the use of "we" in the narrative of Acts (16:10–17; cf. also 20:5–15; 21:1–18; 27:1–28:16). With the founding of the church in Philippi, Christianity made its first appearance in Europe, a development that Luke attributed to divine intervention (Acts 16:6–10). Paul also attached special significance to his activity in and from this Macedonian city and referred to it as constituting "the beginning of the gospel" (Phil 4:15). It is appropriate that the first convert is identified in Acts as a woman, Lydia of Thyatira, for women played an important role not only in Macedonian social life but also in the church at Philippi (Phil 4:2–3; cf. Thomas 1972; Portefaix 1988). Paul's work in the city was marked by conflict and persecution (Phil 1:29–30). According to his own testimony, he was shamelessly mistreated there (1 Thess 2:2), and suffered abuse of the sort instanced by the account in Acts, in which he is seized, dragged into the marketplace, accused of crimes, publicly beaten with rods, and incarcerated, with his feet fastened in stocks (16:19–40). After a stay of uncertain length in Philippi (Acts 16:12, 18) and the conversion of a jailer (Acts 16:27–34) along with an unspecified number of others (Acts 16:40), Paul departed and went to Thessalonica (1 Thess 2:1–2; Acts 16:40–17:1). The preceding depiction, which incorporates the evidence of Acts, suggests a date of approximately 49 or 50 C.E. for Paul's ministry in Philippi (cf. Bruce 1977: 475; Schenke and Fischer 1978: 124; Lohse 1981: 80; Koester 1982: 103). For a different reconstruction, based on Phil 4:15 and the rejection of Acts as a reliable source for the dating and description of Paul's Macedonian ministry, see Luedemann (1984: 262), who places Paul at Philippi in either 36 or 39 C.E.

B. Paul's Continuing Contact with Philippi

Paul's departure from Philippi did not end his contact with the church there. The narrative of Acts may suggest that he left behind one of his associates (compare Acts 17:14–15), viz., the anonymous eyewitness of the "we" sections who is traditionally identified as Luke. Similarly, the resumption of first person plural language in Acts 20:5–6 in connection with another visit of Paul to Philippi may imply that this anonymous associate either remained in the city until that time or returned there to rejoin Paul. These suggestions, however, cannot be confirmed by Paul, who never mentions Luke in connection with the Philippians, and the use of "we" may be simply a stylistic device by the author of Acts (Robbins 1978).

By his own account, Paul had a unique relationship with the church in Philippi. Departing from his usual practice of refusing compensation from his converts (1 Corinthians 9), Paul accepted financial support from the Philippian church while he was in Thessalonica, and he did so on more than one occasion (Phil 4:15–16). Funds were also supplied to him later when he was in Corinth (2 Cor 11:7–9), and Paul's receipt of still another monetary gift occasioned at least part of his correspondence with the Philippians (Phil 4:10–20). Since the Philippians shared in the Macedonians' abject poverty (2 Cor 8:2), such largess was not a sign of their affluence, but of their genuine affection for the apostle and of their support of his labors (Phil 1:5; 4:10; cf. also Rom 15:26). These gifts served to solidify the bond between Paul and the Philippians and to nurture their special relationship. But communication was maintained not simply by the Philippians sending their envoys (such as Epaphroditus [Phil 2:25]) with gifts and probably letters to Paul (so Zahn 1909: 1.526; Moffatt 1923: 168). Paul, for his part, sent his co-workers to Macedonia and Achaia with messages for churches in those provinces (Acts 19:22). Timothy, who had played a part in the founding of the church at Philippi, probably traveled through that city on his way to Corinth (1 Cor 4:17; 16:10). In writing to the Philippians, Paul not only mentioned Timothy in the prescript (1:1) but also announced his intention once again to send him to Philippi (2:19, 23). Silas may also have been sent back to Philippi (cf. Milligan 1908: xxx; Lake 1919: 74). Paul was not content, however, to send his companions with oral or written messages; he had a long-standing desire to return to Macedonia in person (1 Cor 16:5; 2 Cor 1:15). This hope was finally realized after he paid a painful visit to Corinth and wrote a severe letter to the church there (2 Cor 2:13; 7:5; Acts 20:1–2). According to Acts, he paid a third and final visit to the city on his way to Troas (Acts 20:5–6; cf., however, 1 Tim 1:3). How these visits are to be related to the expectations and plans expressed in Philippians (1:19, 26; 2:24) depends on the date and place of the letter's composition (see below).

C. Analysis of the Letter to Philippi

Four matters especially germane to the interpretation of Philippians are its authenticity, character and contents, integrity and purpose, and place and date.

1. Authenticity. Four basic positions have been taken by NT scholars during the last two centuries in regard to the authenticity of the letter to the Philippians. First, a number of scholars in the 19th century denied the authenticity of the letter. The most important to do so was Ferdinand Christian Baur (1875: 2.45–79), who regarded Romans, 1 and 2 Corinthians, and Galatians as the only genuine Pauline letters. Baur argued that the letter used Gnostic ideas in 2:6–11, was dependent on the Corinthian correspondence (esp. 2 Corinthians), contained monotonous repetitions, and lacked anything distinctly Pauline, including a concrete historical occasion and purpose (cf. Mengel 1982: 119–27). He viewed Philippians as a 2d century document that was intended to glorify Paul's success in Rome and to lessen the conflict between the Jewish Christian and the gentile Christian parties in the church. His rejection of Philippians was shared by most scholars of the early Tübingen School (e.g., Schwegler 1846: 1.168–69, 298; 2.133–35) as well as the later radical skeptics, who regarded all letters in the Pauline corpus as inauthentic (e.g., van Manen [*Philippians EncBib,* 3703–13]). Although the strongest arguments for the inauthenticity of Philippians were marshalled by Carl Holsten (1875; 1876), not many scholars found his interpretation of the evidence persuasive. Consequently, this extreme position had few advocates by the end of the century and has little support today (cf., however, Morton and McLeman 1966).

The second position, a compromise adopted by some scholars, is that Philippians contains both authentic and inauthentic material. A few interpreters (e.g., Völter 1892; 1905: 286–323) have discerned large blocks of non-Pauline material in the letter, whereas several others (e.g., Barnikol 1932) have limited the inauthentic parts to glosses added by a later redactor. Critics frequently have viewed the reference to "bishops and deacons" (1:1), for instance, as an ecclesiastical anachronism and dismissed it as an ancient gloss (so, e.g., Riddle and Hutson 1946: 123; Schmithals 1971: 89–90 n. 14; Schenke and Fischer 1978: 126; Schenk 1984: 78–82, 334). Many older scholars who rejected Philippians as completely inauthentic naturally used this same reference as part of their case against Pauline authorship. (For discussions of the first two positions and bibliography, cf. esp. Lipsius *Philippen* HKNT, 211–15; Vincent *Philippians* ICC, xxvi–xxx; and Mengel 1982: 317–24).

The third position, the traditional view that Paul wrote all the material contained in Philippians, was maintained by the majority of 19th- and early-20th-century scholars and still has numerous adherents. Current advocates include those who believe that Paul is the composer of the hymn found in 2:6–11; they view the hymn as either written by Paul at the time of the letter or, as is more likely, composed on a prior occasion and incorporated in the letter as part of his exhortation (so, e.g., Scott *IDB* 1: 46–47; Furness 1959: 240–43; Kim 1981: 147–49; Wright 1986: 352; cf. also the discussion by Martin 1983: 55–61).

The fourth position on the authenticity of Philippians, a variation of the traditional view, is held by the majority of contemporary interpreters. Paul's authorship of Philippians is affirmed, but his use of traditional Christian material is also recognized (cf. Schenk 1984: 336–38). Some, for example, see in Phil 3:20–21 either Paul's creative use of traditional motifs (so Siber 1971: 122–34; Collange 1979: 139; Martin *Philippians* NCBC, 146–51) or his citation of a non-Pauline hymn (so Strecker 1964: 75–78; Güttgemanns 1966: 240–47; Becker 1971; 1976: 106–16; Reumann 1984; for a different view, cf. Kim 1981: 150–56). Again, the hymn in 2:6–11 is viewed as pre-Pauline by a wide spectrum of scholars, who usually affirm that Paul has redacted the hymn by adding one or more glosses, such as "even death on a cross" (2:8; cf., e.g., Lohmeyer 1928; 1964: 91, 96; Bonnard *Philippians* CNT, 42, 47–49; Jeremias 1953: 152–54; Gnilka *Philipperbrief,* HTKNT, 131–47; Ernst 1974: 65–79; Barth *Philipper* ZB, 40–48; Martin 1983: xviii, 42–54, 297–305; Egger 1985: 59–60; compare Hofius 1976: 1–17). It is this fourth position that is adopted in this article.

2. Character and Contents. Paul's letter to the Philippians is essentially a letter of friendship. Addressed to a church which had supported him financially and with which he had a deeply personal relationship, the letter is replete with language and concerns drawn from the ancient topic of friendship. These include the idea that friends are of "one soul" (Phil 1:27; 2:2) and "one mind" (2:3) and thus think the same (2:2; 4:2). Friendship is a fellowship (2:1) or partnership (Gk *koinonia:* 1:5) that necessitates mutuality and reciprocity, the sharing of feelings (2:17–18) and hardships (4:14) as well as giving and receiving (4:15). Certain attitudes and actions are conducive to friendship (4:8), while others are inimical to it (1:15, 17; 2:3; 3:2). Because friendship often involves finances and patronage, the issue of its relationship to other ideals, such as self-sufficiency [Gk *autarkeia*], frequently needs to be addressed (4:10–20). The meaning of friendship is often clarified by a discussion of its antithesis, viz., enmity; the use of invective (3:2) and ridicule (3:2, 19) to castigate one's enemies (3:18) is as natural as it is conventional in Greco-Roman society (cf. Marshall 1987: 1–129, esp. 35–69).

Letters play an important role in the maintenance of friendship and serve during a time of absence (2:12) as effective substitutes for personal presence. In friendly letters such as Philippians, it is natural for writers to employ the vocabulary of gratitude (1:3–5) and affection (4:1), to recall past and current experiences (1:30; 2:22; 4:15–16), to express both yearning for the friends from whom they are separated (1:7–8) and an anticipation of seeing them in the future (2:24), to provide information about their own situation (1:12–26), to offer the advice and exhortation that is appropriate to their relationship (1:27–2:18; 4:2–7), to commend friends (2:19–30) and ideals (4:8–9) shared in common, and to give warnings about enemies whose values are alien to the basis of their friendship (3:1–21). Philippians is written at a time when Paul is in prison and thus involuntarily separated from the church at Philippi. He is fairly sanguine that he will be released from prison and see his friends again, though he must reckon with the possibility that his imprisonment will be followed by his execution rather than his acquittal and release (1:19–26). The correspondence with the Philippians is ultimately occasioned by the arrival of a gift from them, which Paul accepts as an expression of their friendship and support. Using traditional literary devices such as lists of virtues (4:8) and *peristasis* catalogues (4:11–12; cf. Fitzgerald 1988: 45, 205), he thanks them for their gift (4:10–20) and encourages them to be a community that is characterized by friendship (1:27–2:11; 4:2–9) and is active in the proclamation of the gospel (2:12–18), neither stampeded by opposition (1:27–30) nor deluded into believing that their spiritual goals already have been attained (3:12–16).

3. Integrity and Purpose. Serious doubts about the unity of Philippians began to be expressed during the 19th century (Clemen 1894: 133–41) and have increased greatly in the last 30 years. At the current time, three basic positions are held concerning the question of the letter's literary integrity. Given the

importance of this subject in recent scholarly literature, each of these three positions will be presented in some detail, with a judgment on this question deferred until the end of the discussion.

First, the traditional view that canonical Philippians is a unity is defended by a number of scholars (Mackay 1961; Furnish 1963; Pollard 1966; Jewett 1970a; Ernst 1974: 27–31; Kümmel 1975: 332–35; Dalton 1979; Lindemann 1979: 23–25; Garland 1985). According to this *One-Letter Hypothesis,* the epistle was prompted by a gift from Philippi brought to Paul by Epaphroditus, who at some point fell seriously ill and nearly died. It is debated whether Epaphroditus fell ill on his way to Paul or after his arrival. A possible reconstruction of events based on the former of these options is as follows (cf. Bruce *Philippians* GNC, xxv, 71):

1. The Philippians learn of Paul's imprisonment;
2. they send Epaphroditus with a gift to deliver to Paul;
3. Epaphroditus falls seriously ill on his way to Paul and nearly dies;
4. the Philippians learn of Epaphroditus' illness and become concerned;
5. Epaphroditus recovers, completes his journey to Paul, and delivers the gift;
6. Epaphroditus learns of the Philippians' anxiety for him and becomes distressed;
7. Paul sends Epaphroditus back to Philippi with a letter in which he commends Epaphroditus, thanks the Philippians for their gift, warns them about false teachers, and informs them about his own circumstances and plans.

Next, numerous contemporary scholars are convinced that canonical Philippians is a composite work. In support of this possibility in general, appeal is made to the following four considerations: (a) Paul wrote letters that either have not been preserved (1 Cor 5:9; cf. also Col 4:16) or have been partially preserved in other letters (possibly 2 Cor 10–13); (b) Phil 3:1a suggests previous correspondence with the Philippians (cf. NEB: "To repeat what I have written to you before is no trouble to me"); (c) one of the Apostolic Fathers of the 2d century C.E., Polycarp of Smyrna (*Phil.* 3:2), uses the plural *(epistolas)* to refer to Paul's correspondence with Philippi; and (d) Polycarp's own *Letter to the Philippians* seems to preserve two originally independent letters to the church at Philippi (so Harrison 1936).

Critics who posit redactional activity in regard to Philippians differ, however, as to the number of letters or fragments of letters contained in the document and the content that originally belonged to each piece of correspondence. Some scholars adopt a second basic position and divide the canonical letter into two separate letters, whereas others hold a third distinct position and divide it into three originally independent pieces. The basis of the division into two letters is primarily fourfold: (a) Paul's use of "finally" (i.e., "in conclusion") in 3:1a seems to suggest he is about to close the letter (cf. 2 Cor 13:11); (b) a sharp change in tone and content occurs after 3:1a; the invective that follows is out of harmony with the overall tone of the letter and interrupts the exhortation to rejoice (3:1a; 4:4); (c) the discussion of travel plans (2:23–24, 28–29) normally occurs toward the end of Paul's letters; and (d) different dangers face the church in chaps. 1 and 3; in 1:27–30 the church is threatened from without, whereas in chap. three the threat comes at least in part from those within the church. A *two-letter hypothesis* is seen by many scholars (e.g., Keck 1971: 846; Friedrich *Philipper* NTD, 126–28) as the best explanation of these peculiarities.

An early supporter of this hypothesis was Goodspeed (1937: 90–96), who argued that 3:1b–4:20 was originally part of the letter that Paul wrote upon receipt of the gift brought by Epaphroditus. The latter fell sick only after this first letter was sent. Upon his recovery he was sent back to Philippi with the letter that is preserved in 1:1–3:1a; 4:21–23. These two letters were later combined by an editor who placed the earlier letter at the end.

A more recent advocate of the two-letter hypothesis is Gnilka (6–18), who divides the material into Letter A: 1:1–3:1a; 4:2–7, 10–23 and Letter B: 3:1b–4:1, 8–9. Letter A is sent following the receipt of the Philippians' gift and Epaphroditus' recovery. While Paul expresses thanks for the gift, his primary purpose is to discuss the impact of his imprisonment and possible execution on the progress of the gospel. The letter is pastoral rather than polemical; false teachers have not yet appeared in Philippi, and the church's chief internal problem is lack of love. Letter B is written later, after Paul has been released from prison and after false teachers have invaded Philippi. Hence, Paul is no longer concerned with the

fettering of the gospel, but with its endangerment. The purpose of this passionate, polemical piece is to protect his beloved community from the pernicious propaganda of his opponents.

The *three-letter hypothesis* is usually distinguished from the two-letter hypothesis by the isolation of 4:10–20 as an independent letter of thanks for the Philippians' gift. This letter's existence is predicated on four considerations: (a) it is likely that Paul acknowledged the receipt of the Philippians' gift soon after it arrived, and the statement in 4:10–20 appears to be his first expression of thanks for it; that is, it is improbable that he waited so long to do so as the one-letter or two-letter hypotheses usually require (contrast Michael *Philippians* MNTC, xxi–xxii, 208–27; (b) in 4:18, Epaphroditus seems to have just arrived, whereas in 2:25–30 he has clearly been with Paul for some time; (c) the introduction of a new subject in 4:10 following the use of "finally" and a benediction in 4:8–9 is abrupt; and (d) the discussion of the gift is a self-contained unit that concludes with a doxology. Particular reconstructions of the three proposed letters differ widely in regard to details, but 4:10–20 is usually assigned to Letter A, 1:1–3:1a to Letter B, and 3:2–4:1 to Letter C. Advocates of this hypothesis include Müller-Bardorff (1958), Beare (*Philippians* HNTC 1–5), Rathjen (1960), Bornkamm (1962), Koester (1962; *IDBSup,* 666; 1982: 132–34), Fuller (1965: 34–37), Fitzmyer (*JBC,* 248), Marxsen (1970: 61–62, 66–68), Schmithals (1972: 65–122), Vielhauer (1975: 159–66), Collange (1979: 3–15), Barth (*Philipper* ZB, 10–11) and Lohse (1981: 81–82). Of the various sequences of events reconstructed by defenders of this position, that offered by Schenke and Fischer (1978: 125–29) is one of the most detailed and suggestive:

1. Epaphroditus is sent by the Philippians with a two-fold mission: to deliver the church's monetary gift to Paul and to serve Paul for a certain period of time; the purpose in both cases is to provide support for Paul, who has not yet been arrested;
2. Paul accepts this gift from the Philippians, just as he had previously at Thessalonica and Corinth; in gratitude he writes Letter A (4:10–20);
3. soon thereafter Paul is arrested and placed in prison;
4. while Paul is in prison, Epaphroditus falls ill and nearly dies;
5. when Epaphroditus finally recovers, Paul sends him back to Philippi with Letter B (1:1–3:1; 4:4–7, 21–23), which is ultimately a letter of recommendation and certificate of good conduct for Epaphroditus;
6. in keeping with his expectations (1:19), Paul is soon thereafter released from prison;
7. Paul sends Timothy to Philippi (2:23; Acts 19:22) and Corinth (1 Cor 4:17; 16:10–11);
8. Timothy returns to Paul (1 Cor 16:11);
9. instead of going himself, Paul once again sends Timothy back to Philippi and somewhat later sends Titus to Corinth;
10. Paul learns that his opponents have invaded Philippi and sends Letter C (3:2–4:3; 4:8–9) to the Philippians and Timothy, who not only is to defend the church against these false teachers but also, as the "true yokefellow" of Phil 4:3, is to help solve the dispute between Euodia and Syntyche.

Each of the three positions presented here has its strengths and weaknesses, but the presumption of the letter's literary integrity is probably correct. Defenders of the unity of Philippians correctly point to thematic elements that link the sections of the letter and structural considerations that favor the one-letter hypothesis. The extensive use of friendship language throughout the letter points toward the same conclusion. When viewed from the perspective of ancient discussions of friendship and enmity, the sharp change of tone at 3:2 and the strong use of invective in 3:2–19 are not even surprising; the ridiculing of one's enemies is but the natural antithesis to the praising of one's friends. Furthermore, Paul's strong desire to have both Timothy and Epaphroditus in Philippi (2:19–30) is related to the danger of the "dogs" of chap. 3. Indeed, the discussion of the opponents and of the strife between Euodia and Syntyche (3:1–4:3) is framed by the commendation of Timothy and Epaphroditus (2:19–30) and Paul's other co-workers (4:3), and it is followed by the apostle's parenesis (4:4–8) and presentation of himself—along with the others (3:17)—as a proper model for the church's imitation (4:9). Such framing of a discussion is rhetorically proper, as is the combination of parenesis and the presentation of both positive and negative models of conduct.

Finally, many of the peculiarities of Philippians listed above can be adequately if not convincingly explained without recourse to a partition theory. The postponement of the discussion of the gift until the end of the letter, for example, may well be part of a strategy that reserves until the end of a communication the treatment of the most important matters. In that case, 4:10–20 will be no postscript, but the climax to Paul's whole discussion of his partnership with the Philippians in the gospel. The primary purpose of 4:10–20 is certainly not to thank the Philippians for their gift. The gift provides the ultimate occasion for the letter, but not its immediate purpose. Paul here uses the gift as the occasion for commenting on their long-standing partnership in the gospel. Their recent gift is proof of their continuing friendship, and Paul discusses it so as to strengthen his special bond with them. Similarly, the emphasis on "thinking the same" in 2:2 is probably foundational for his appeal to Euodia and Syntyche in 4:2–3; their harmony is likely to be the key for the harmony of the church as a whole (cf. also Garland 1985: 171–73). This makes it unlikely that 4:4 was originally the resumption of 3:1, as many partition theories suggest. Such theories would have much greater probability if some traces of editorial activity were evident in the textual tradition (cf. Gamble 1975: 418), but this is not so in the case of Philippians. For these and other reasons, the one-letter hypothesis seems preferable, but Philippians' literary integrity will doubtless remain a greatly disputed issue for the foreseeable future.

4. Place and Date of Composition. Another highly contested issue involves the place and date of the letter's composition. The dating of the correspondence is determined by the decision made in regard to both the letter's integrity and the place of Paul's imprisonment. If Philippians is indeed a composite of 2 or 3 Pauline letters, the possibility of more than one place and date of origin must be considered. The choices as to Paul's place of imprisonment are essentially three: Rome, Caesarea, and Ephesus. Other locations, such as Corinth (Dockx 1973), have been proposed but are not likely.

In favor of Rome are the following considerations: (a) Paul was both imprisoned and executed there, facts which are consonant with the references to Paul's bonds (Phil 1:7, 13–14, 17) and his contemplation of martyrdom (1:19–26; 2:17) (see also SUICIDE); (b) the references in Philippians to the praetorium (1:13) and Caesar's household (4:22), though applicable to other cities, are most appropriate for Rome; (c) of the imprisonments described by Acts, the one in Rome (Acts 28:14–31) most closely matches the circumstances described by Paul in his letter; and (d) the early Church was virtually unanimous in assigning Philippians to Rome. The major argument against Rome is its great distance from Philippi (ca. 800 miles) and the consequent length of time necessary for the occurrence of the number of communications presupposed and three more are contemplated prior to Paul's anticipated visit. Supporters of Rome (e.g., Dodd 1953: 85–108; Cullmann 1953: 104–6; Buchanan 1964; Reicke 1970: 282–86) usually stress the relative speed of travel in this period and seek to reduce the number of communications between Paul and the Philippians as well as the length of time required for these to take place. If all or part of Philippians emanates from Rome, it would come from ca. 58–60 or 60–62 C.E., either early in Paul's imprisonment (so Lightfoot 1891: 30–46) or, as is far more likely, toward its end (so J. Weiss 1959: 1.389). In that case, it would be the last of his authentic letters (so Moffatt 1923: 166, 168, 170).

Advocates of Caesarea (Johnson 1957; Lohmeyer 1964: 3–4; Hawthorne *Philippians* WBC, xxxvi–xliv) typically assert that Paul's description of his situation corresponds more closely to Acts' account of the imprisonment there (23:33–26:32) than it does to the one in Rome. Paul is kept under guard in the praetorium of Herod (23:35; cf. Phil 1:13), but his friends are permitted access to him to attend to his needs (24:23; cf. Phil 2:25, 30). His incarceration is of sufficient duration (24:27) to accommodate the number of communications with Philippi, and during this period Paul is called upon several times to offer an *apologia* (24:10; 25:8, 16; 26:1–2, 24; cf. Phil 1:7, 16) for his activities. If the opponents of chap. 3 are non-Christian Jews (see below), a connection can be posited between Paul's philippic against the "mutilators" (3:2) and the Jewish opponents of Acts 21–26, who were responsible for his incarceration (compare 1 Thess 2:14–16). Finally, Paul could also anticipate, if released at Caesarea, a trip to Philippi on his way through Rome to Spain; no change in his travel plans of Rom 15:28 would have to be assumed. Support for this theory must rely entirely on Acts, for the Pauline corpus is silent as to an

imprisonment in Caesarea. Yet Acts' depiction of Paul's Caesarean imprisonment does not suggest that death was an imminent possibility in that locale. Freedom could always be purchased (24:26), or an appeal made to Caesar (25:10–12). Furthermore, Paul is depicted, even prior to his arrival in Caesarea, as knowing by divine revelation that his final place of witness will be Rome (23:11); execution in Caesarea is simply not an option entertained by Acts. Finally, in view of the great distance from Philippi to Caesarea, travel considerations also militate against this option. But if Caesarea is nevertheless accepted as the place of origin, correspondence would derive from ca. 56/57–58/59 C.E.

Suggested as an option only at the turn of the 20th century, Ephesus has been adopted by an increasing number of scholars and now rivals or even surpasses Rome as the imprisonment site favored by most (cf. Feine 1916; Deissmann 1923; Duncan 1929; Michaelis 1933; *An die Philipper* THKNT, 2–6; 1961: 204–10). The great argument in its favor is its close proximity to Philippi, a location that would have facilitated numerous communications with that city. In addition, the parallels in subject matter, vocabulary, and tone with 2 Corinthians 10–12 and Galatians suggest to many that all three were written about the same time, that is, during the three-year period that Paul was in Ephesus. This would be ca. 52/53–55/56 C.E., and such a dating allows the identification of the proposed visits of Timothy and Paul (Phil 1:26; 2:19, 23–24) with the ones recorded by the apostle (1 Cor 16:10; 2 Cor 2:13; 7:5) and Acts (19:22; 20:1–6). Finally, nowhere in Philippians does Paul indicate that he has returned to the city since he founded the church there (Phil 1:26, 30; 2:12, 22; 4:15; contrast 2 Cor 2:1; 13:1); if that is the case (and he has not simply failed to mention the trips of Acts 20:1–6), both Caesarea and Rome are excluded as possibilities. The major difficulty of this option is that neither Paul nor Acts mentions an imprisonment in Ephesus. One can only be inferred on the basis of such passages as 2 Cor 1:8–10; 6:5; and 11:23 (but not 1 Cor 15:32, which refers instead to the Heraclean contest with hedonistic opponents; cf. Malherbe 1968). Yet only on the basis of this hypothesis can Philippians (or at least 1:1–3:1) be assigned to Ephesus. On the other hand, Phil 3:1b–4:9 does not mention imprisonment. Those who regard this passage as part of another letter can assign it to Ephesus without necessarily postulating an imprisonment there. Thus one could, for example, assign Phil 1:1–3:1a to Rome and 3:1b–4:9 to Ephesus (compare Bruce, xxviii). But, in that case, 3:1b–4:9 might just as easily be assigned to Corinth (so, e.g., Gnilka, 25).

In view of the uncertainty involved, all reconstructions of the historical setting of Philippians necessarily remain highly tentative. Those that presuppose an imprisonment in either Ephesus or Rome are the most persuasive, and a decision between them is difficult. In the final analysis, however, Meeks (1983: 63) is probably correct when he says that "Rome still seems the most likely" place of composition for the letter.

D. Opponents

Two key issues have dominated the discussion of the opponents mentioned by Paul in the letter. The first has to do with the number of groups presupposed. As many as five are possible: the partisan proclaimers of Christ (1:15–18), the adversaries destined for destruction (1:28), the dogs and evil workers (3:2–4), the "perfectionists" (3:12–16), and the enemies of the cross of Christ (3:18–19). The partisan proclaimers of Christ, whose relationship to the group spoken of in 2:21 is disputed, were active in the city of Paul's imprisonment, not in Philippi, though the claim is sometimes made that they were itinerant Christian missionaries whose presence in Philippi was not desired by Paul (so Jewett 1970b: 363–71). The adversaries of 1:28 were located in Philippi, but it is debated whether the opponents of chap. 3 were already active in the city and thus posed an actual threat for the Philippians or were active elsewhere (perhaps in the city of Paul's imprisonment) and were only potentially dangerous. Whether present or imminent, however, the urgency of Paul's warning (3:2) suggests the danger was real. The opponents in 1:28 and 3:2–19 occasionally are identified as four separate groups (so, e.g., Michael, 69, 133, 160, 172); often three groups are detected (so, e.g., Hock *HBD*, 1223–24); frequently only two groups are identified, with those in chap. 1 distinguished from those denounced in chap. 3 (so, e.g., Barth, 37, 67); and sometimes a single group is inferred (so, e.g., Mearns 1987).

The second issue concerns the identification of these opponents, and the decision as to the number of groups involved obviously determines the material used to describe them. Moreover, to the extent that

they are equated with opponents mentioned in Galatians, 2 Corinthians, and Romans, material from those letters is employed to elaborate their portrait. As a consequence of all these factors, a plethora of portraits has been offered, but no broad consensus has yet emerged. Indeed, no fewer than 18 different descriptions of the opponents of chap. 3 have been offered (Gunther 1973: 2).

Even when only one group in Philippi is presupposed, assessments as to their identity differ widely. For example, Schmithals (1972: 58–122) sees them as Jewish Christian Gnostics with libertine tendencies, Collange (1979: 10–14, 75) as Jewish Christian itinerants with a "divine-man" Christology and self-understanding similar to that espoused by the opponents whom Paul confronts in 2 Corinthians, and Hawthorne (xliv–xlvii, 58, 125, 163) as non-Christian Jewish missionaries who were punctilious in their observance of the law (cf. also Klijn 1965). Many interpreters agree that the adversaries of 1:28 are non-Christian opponents (so, e.g., Vielhauer 1975: 160, 163) but view them as Gentile persecutors rather than Jewish agitators (cf. Martin *Philippians* NCBC, 22, 83; Friedrich, 147; compare 1 Thess 2:14). The opponents of 3:2, on the other hand, are clearly Jewish, though the conjecture is occasionally made that they are proselytes (so, e.g., Jülicher and Fascher 1931: 119), in which case Paul's emphasis on being "a Hebrew born of Hebrews" who was "circumcised on the eighth day" (3:5) would have special point. The debate historically has centered on the question of whether these people are Jewish propagandists (so, e.g., Benoit 1969: 31; Caird 1976: 133; Houlden 1977: 95–105) or Jewish Christian Judaizers (so, e.g., Vincent, 92; Jewett 1970b: 382–89; Bruce, 79, 81).

Sharply debated also is the question of whether Paul discusses one or two (or even three) groups in 3:2–19. Dibelius (*An die Philipper* HNT, 93), for instance, identifies two groups (Jewish agitators in 3:2–4 and immoral Christians in 3:18–19), whereas Koester (1962) discerns a single group of Jewish Christian missionaries with gnostic tendencies. Crucial to the decision is often the interpretation of Paul's damning indictment of his opponents in 3:19: "their god is the belly, and they glory in their shame." Some interpret "belly" and "shame" in terms of Judaizers' values. Thus Fitzmyer (252) sees in them a reference to the Judaizers' dietary observances and their advocacy of circumcision, and Mearns (1987: 198) sees both terms as "euphemisms for the circumcised male organ." Paul's words could easily suggest, however, a devotion to sensual and sexual pleasures, so that other scholars view them as libertines (so, e.g., Delling *RGG*^{3} 5: 334; Beare, 136). It was common in rhetorical circles to accuse one's enemies of immorality (cf. Marshall 1987: 62–63), and Paul may be doing that here. Indeed, the group he has in mind could be the hedonistic opponents ("wild beasts") against whom he struggled at Ephesus (1 Cor 15:32; cf. Malherbe 1968: 79). Whoever they were, however, they seem to have been Christians whose perfectionist tendencies had a basis in a radically realized eschatology (cf. Holladay 1969).

E. The Christ Hymn

As was indicated previously, most modern interpreters regard the hymn in Phil 2:6–11 as pre-Pauline (see above). The discussion has therefore centered on questions concerning the hymn's original literary form, authorship, background, setting, and meaning, as well as its use and redaction by Paul. Of the various proposals in regard to the hymn's structure, those of Lohmeyer (1928: 5–6) and Jeremias (1953: 152–54) deserve mention. The former divides the hymn into six strophes (A-F) of three lines each (A: v 6; B: v 7a–c; C: vv 7d–8b; D: v 9; E: v 10; F: v 11), with v 8c treated as a Pauline gloss. The latter divides it into three strophes (A-C) of four lines each (A: vv 6–7b; B: vv 7c–8b; C: vv 9–11), with vv 8c, 10c, and 11c viewed as Pauline additions. Proposed sources for the hymn include the gnostic scheme of the Primal Man myth (Käsemann 1968); the Genesis story of Adam as well as later Jewish speculation about two Adams (Héring 1936; 1959); the Deutero-Isaianic figure of the Suffering Servant (Cerfaux 1954; 1959: 374–401); and the figure of divine Wisdom in Hellenistic Judaism (Georgi 1964). Sometimes only one source is recognized in the hymn, but more often the confluence of motifs from several sources, both Hellenistic and Jewish, is detected (Sanders 1971: 58–74). The author of the hymn has been sought in Jewish gnostic circles (Bonnard, 49), the early Palestinian church (Lohmeyer 1928: 9, 66), and the Hellenistic Jewish mission represented by Stephen (Martin 1983: 304–5, 318–19; cf. also Fuller 1965: 204–6). Early Christians used the hymn in a cultic setting, either at the Eucharist or during baptism. Whatever its original function may have been, Paul uses the hymn here in service of his parenesis. It is

usually assumed that the beginning of the hymn (2:6–8) refers to Christ prior to the Incarnation, so that his preexistence is presupposed (so, e.g., Bornkamm 1969: 113). Recently, however, this interpretation has been attacked by a number of scholars who insist that the hymn speaks only of the human Christ (Talbert 1967; Robinson 1973: 162–66; Bartsch 1974: 24–27; Murphy-O'Connor 1976; Howard 1978; Dunn 1980: 114–28). This controversy (Hurst 1986; Wanamaker 1987) and the continuing debate about the meaning of the term *harpagmos* (RSV: "a thing to be grasped") in 2:6 (Hoover 1971; Glasson 1974: 133–37; Moule 1970; Wright 1986) indicate that the hymn will continue to attract scholarly attention (cf. Rissi *ANRW* 2/25/4: 3314–26; Schenk *ANRW* 2/25/4: 3299–303). An excellent orientation to all the central questions involved in the study of the hymn is provided by Martin (1983; cf. also *Philippians* NCBC, 90–102, 109–16), whose survey is foundational for an understanding of current analyses of the hymn (cf. also Deichgräber 1967: 118–33; Sanders 1971: 9–12, 58–74).

F. Text and Early Versions

The text of Philippians is preserved in three fragmentary papyri, 18 parchment uncials (of which nine contain the entire text, three are fragmentary, and six are accompanied by commentary), and more than 625 minuscules (cf. Gnilka, 25–27). The earliest is P^{46}, one of the three Chester Beatty papyri of the NT. It dates from about C.E. 200 and contains 1:1, 5–15, 17–28, 30–2:12, 14–27, 29–3:8, 10–21; 4:2–12, 14–23. A second early papyrus is P^{16}, which dates from the 3d or 4th century and contains 3:10–17 and 4:2–8. The three earliest parchment uncials that contain the entire text of Philippians are Codex Sinaiticus (01), Codex Vaticanus (03), and Codex Alexandrinus (02). These five mss, plus three minuscules containing Philippians (33, 1739, and 2427), belong to the text critical "Category I," which indicates that they are "of a very special quality" and "should always be considered in establishing the original text" (Aland and Aland 1987: 105). There are ten additional manuscripts of Philippians that are of generally high quality and belong to the next class, "Category II" (Schenk 1984: 331). They include three 5th-century fragmentary uncials (04, 016, 048), the bilingual Codex Claromontanus (06, 6th century), P^{61} (ca. C.E. 700) and 5 minuscules (81, 1175, 1881, 2127, and 2464). On the basis of these and other witnesses, a fairly reliable text of Philippians which involves no major textual problems can be reconstructed.

Philippians, along with the other letters in the Pauline corpus, was translated into a number of ancient languages. It was almost certainly translated into Old Syriac, though no copy of any of Paul's letters is extant in this early version. It is, however, preserved in the later Syriac versions, esp. the Peshitta. Other extant eastern versions that contain Philippians include Coptic, Armenian, Georgian, and Ethiopic. Of the Western versions, it is extant in Old Latin (Frede 1971), the Vulgate, Gothic, and Slavonic (cf., in general, Metzger 1977).

JOHN T. FITZGERALD

PHILISTINES. This entry consists of two articles. The first surveys the history of the Philistines as it is presented in various historical sources. The second focuses particularly on Philistine material culture as it has been revealed through archaeological work.

HISTORY

The Philistines (Eg *P-r-š-t-w;* Heb *pělištîm*), whose country of origin is still unknown, must have come to Canaan through the Aegean basin, destroying the Mycenaean and Minoan civilizations. They came partly overland via Anatolia, destroying the Hittite empire, Ugarit, and Amurru, and partly by ship via

Crete (Caphtor of the Bible, cf. Amos 9:7 and Jer 47:4; Keftiu of the Egyptians) and Cyprus ("Ships come from the quarter of Kittim," i.e. Cyprus [Num 24:24] probably alludes to the first waves of the Sea Peoples). They were allied with other Sea Peoples, and their ultimate goal was to settle in Egypt. In about 1190, Rameses III clashed with them and defeated them. Rameses settled the conquered Philistines, mostly as Egyptian mercenaries, in the coastal towns, Gaza, Ashkelon, and Ashdod (cf. Deut 2:23, where "Caphtorim" refers to the Philistines). The connection between Egypt and Caphtorim is reflected in Gen 10:13–14 (cf. Speiser, *Genesis* AB). The term "the Negeb of the Cherethites" (1 Sam 30:14) may reflect Philistine occupation of that part of the Negeb (for the identification of Cherethites as Philistines, cf. Ezek 25:16).

The references to the Philistines in Gen 21:32–34; 26:1, 8, 14–15; and in Exod 13:17; 15:14; 23:31) are all anachronisms, although the expression "the Sea of the Philistines" may reflect Philistine naval supremacy in the 12th and 11th centuries.

The signs of destruction in Ashdod, Ashkelon, and Gaza suggest that sometimes after the reign of Rameses VI (ca. 1150 B.C.E.), the Philistines drove out their Egyptian overlords by force. The Philistine Pentapolis was formed, a confederation of Gaza, Ashkelon, and Ashdod, together with two towns in the Shephelah which had already been settled by Philistines: Ekron and Gath. Each of these towns was a city-state, consisting of a "royal city" ruling a number of "country towns" (1 Sam 27:5, cf. 1 Sam 6:18). The rulers of these city-states were called *sĕrānîm* (singular, **seren*), a title whose etymology has not yet been satisfactorily explained; it may be from the Hittite word for "judge." For the next 150 years, until about 1000 B.C.E., the Philistine confederation was the most powerful entity in this corner of the world, occupying the land strip from Raphia in the S to Joppa, spreading gradually N (they founded Tell Qasile) and E through the Jezreel Valley to Beth-shan, and even establishing their hegemony over the Israelite tribes in the hill country (cf. 1 Sam 10:5; 13:23–14:16, and also 2 Sam 23:13–17). The source of Philistine power was apparently in the jealously defended monopoly of iron wares and the art of forging iron (1 Sam 13:19–21).

Very early the Philistines accepted the local Canaanite deities, dedicating temples to Dagon in Gaza (Judg 16:21–23), Ashdod (1 Sam 5:2–3), and Beth-shan (1 Chr 10:10–12), and to Astarte (1 Sam 31:10).

The clashes between the Philistines and the Israelites are vividly reflected in the book of Judges. Despite the heroic exploits of Samson (Judges 13–16) and Shamgar son of Anath (Judg 3:31), the pressure of the Philistines was relentless, as seen in the tales of the migration of part of the tribe of Dan, who traveled N in their search for a safe refuge.

Further evidence of the advance of the Philistines can be found in the defeat of the Israelites at Ebenezer (the Philistines had already reached Aphek), resulting in the loss of the ark of the covenant and the destruction of the holy precinct Shiloh (1 Sam 4; cf. Jer 7:12, 14).

Samuel's victory over the Philistines (1 Sam 7:5–14), even if it is historical, did not appreciably reduce the pressure of the Philistines. The people demanded a king to lead them in war. The king chosen was Saul, whose wars with the Philistines can be traced from the beginning of his reign (1 Sam 13) until its tragic end on Mount Gilboa (1 Samuel 31). The eventual victor, however, was David, whose triumphs over the Philistines (1 Samuel 17; 18:6–9, 25–27, 30; 19:8) had gained him such renown as to arouse the jealousy and hatred of Saul. David was forced to flee, and eventually to become a vassal to his former foes the Philistines (1 Samuel 27, 29).

After the death of Saul, David was crowned king of Judah in Hebron (2 Sam 2:1–4), apparently with the consent of the Philistines. When David was chosen king over all Israel, however, and moved his capital to Jerusalem, the Philistines realized their danger and attacked. David's victories over the Philistines made Israel the leading power in the land of Canaan. We may assume that Gath became a vassal state to Israel. This change is suggested by David's mercenaries from Gath, who were under the command of Ittai the Gittite (cf. 2 Sam 15:18–22), and by his bodyguard, the Cherethites and the Pelethites (2 Sam 8:18; 15:18; 20:7, 23; 1 Kgs 1:38, 44; 1 Chr 18:17). The crushing defeat inflicted by David appears to have put an end to the Philistine Pentapolis; henceforward each city-state acted independently in its own selfish interest. It seems likely that the Philistines made a defensive alliance with Pharaoh to protect them against David;

otherwise it is difficult to explain how Pharaoh was able to capture Gezer and give it as a dowry to his daughter, the wife of Solomon (1 Kgs 9:16). Forty years later apparently the same geopolitical situation enabled Shishak to invade Judah and Israel (1 Kgs 14:25), because no Philistine city, except Gaza, his starting point, is mentioned in his list of conquered towns. After the death of Shishak, Egypt was no longer a power in Asia. In the constant struggles between the Philistines and Israel (cf. 1 Kgs 15:27; 16:15) and the Philistines and Judah, in which the Philistines turned to the Edomites and the Arabs as allies (cf. Amos 1:6–8; 2 Chr 21:16–17), Judah sometimes prevailed (2 Chr 17:11; 26:6), and sometimes the Philistines (2 Chr 21:16–17; 28:18, until a new factor appeared on the scene, Assyria.

Philistia (Akk *Pa-la-aś-tu*) appears in Assyrian records for the first time in the inscriptions of Adad-nirari III (810–783 B.C.E.; *ANET,* 281b, 282a), but Assyrian domination of Philistia started only after the conquest of Syria by Tiglath-pileser III, when the Assyrian empire reached the Mediterranean, and the Assyrians began to try to dominate the maritime trade of the coastal towns of Phoenicia and Philistia. In 734 B.C.E., the first Assyrian campaign against Philistia began; its main object was the conquest of Gaza (the sequence of events is very fully expressed in Zech 9:5–6). The king of Gaza, Hanno, fled to Egypt, but later returned and was reinstated as a vassal of Assyria. The Assyrians were not interested in incorporating the Philistine territories into the Assyrian empire. They preferred to leave the towns as more or less autonomous tribute-bearing states. In the long list of kings bearing tribute are Mitinti of Ashkelon, Hanno of Gaza, and *Mu-še-ḫu-(...)* of Ashdod or Ekron. It appears that Mitinti of Ashkelon was allied with Rezon of Damascus, because when the latter was defeated by Tiglath-pileser, Mitinti "disappeared," and his son Rukibtu became king in his place. Because of the heavy hand of Tiglath-pileser, all these petty states breathed a sigh of relief when he died in 727 B.C.E., but their rejoicing was premature (cf. Isa 14:29, 31).

About five years later, when Sargon ascended the throne of Assyria, Hanno joined the Syro-Palestinian rebellion headed by the king of Hamath, which was also supported by Egypt. In 720, Sargon, having crushed the rebels near Qarqar, attacked Philistia. Hanno called on the Egyptian army for help. The Assyrians met the Egyptians near Raphiah, defeated them, captured Hanno and took him captive to Assyria. Gaza subsequently remained a loyal vassal until the end of the Assyrian empire.

In 713 or the beginning of 712 B.C.E., Ashdod rebelled against Assyria, and in 712 Sargon sent an army to crush the rebellion (cf. Isa 20:1). This campaign is well documented in the annals, and two reliefs from Khorsabad, which depict the sieges of Gibbethon and Ekron. Sargon's victory is also attested on a stela, pieces of which have been found in the excavations in Ashdod. Ashdod was made a province, but the political arrangement is problematic since we also hear of kings in Ashdod, Mitinti in 701 and Ahimilki in 677 and 667.

The death of Sargon in battle in 705 set off a wave of rebellions in nearly all the vassal states in W Asia, who were apparently supported by Egypt. The loyal king of Ashkelon was replaced by his brother. In Ekron the local nobility deposed their king Padi and sent him to Jerusalem for safekeeping. Probably it is to this time that we must ascribe the notice in 2 Kgs 18:8 that Hezekiah "overran Philistia as far as Gaza and its border areas." In 701, after having suppressed the revolt in Babylon, Sennacherib appeared in the W. Near Tyre he received tribute from the vassal kings of Amurru, but of the Philistine kings, only Mitinti of Ashdod is mentioned. The king of Gaza does not appear on the list, perhaps because he had not rebelled. The rebel king of Ashkelon, Sidqia, was deported to Assyria and replaced with a new king with a typically Assyrian name, Sharruludari. When Ekron was besieged, the Egyptian army came to the support of the rebels but was defeated at Eltekeh. Ekron was conquered and its loyal king, Padi, restored to kingship as part of Hezekiah's submission. The loyal Philistine kings (Mitinti of Ashdod, Padi of Ekron, and Sillibel of Gaza) were rewarded with towns that had formerly belonged to the kingdom of Judah (cf. Isa 1:7). Philistia was thus both enriched and more firmly established as a buffer region between Assyria and Egypt.

The more belligerent policy toward Egypt which Sennacherib's successor, Esarhaddon, pursued involved a firm grip on Philistia, too. In his first campaign (679) Esarhaddon plundered Arzâ, apparently a town on the Egyptian border, and took its king captive. Four Philistine kings, Sillibel of Gaza, Mitinti of

Ashkelon, Ikausu (a Philistine name!) of Ekron, and Ahimilki of Ashdod, appear among "the kings of the country Hatti" who were required to do corvée work for Esarhaddon in Nineveh, apparently in 677/76. Esarhaddon conducted three campaigns against Egypt, and we may assume that in all these campaigns the Philistine towns served as depots and secured the long line of communication, although they are never mentioned, except for indications that in the second campaign Ashkelon supported Egypt, which was defeated.

All the vassal kings in W Asia, among them the four Philistine kings, Sillibel, Mitinti, Ikausu, and Ahimilki, were called upon to be auxiliary troops when Esarhaddon's successor, Assurbanipal, resumed the campaign against Egypt, which this time proved successful. About ten years later, however, Psammetichus I (656–610), prince of Saïs and founder of the 26th Dyn., was able to establish his independence.

As the Assyrian empire declined, Egypt seized dominion over the Philistine city-states. Herodotus (2.157) records that Psammetichus besieged Ashdod for twenty-nine years before he could conquer it. Psammetichus' invasion may be reflected in Zephaniah's prophecy against Philistia (Zeph 2:4), which describes events from the S (Egypt) to the N, Gaza, Ashkelon, Ashdod, and Ekron. Jeremiah's phrase "what is left of Ashdod" (Jer 25:20) may also reflect the conquests of Psammetichus I. A witness to Egypt's dominion over Philistia is the statuette of Padese "the king's envoy to The Canaan (Gaza?) and Philistia." The fact that the Philistine cities were vassals of Psammetichus I and his son Neco II enabled these kings to come to the aid of a failing Assyria against the rising power of Babylonia. Nebuchadnezzar's great victory over Neco at Carchemish in 605 (cf. Jer 46:22–26) changed the whole situation, and in the following years the Babylonian armies swept through Philistia. The Aramaic letter found in Saqqara, in which a Philistine king asks urgent help from Pharaoh against the Babylonian king, probably belongs to this time. Only Ashkelon made any opposition, and it was turned into a heap of ruins for its temerity (cf. Jer 47). Some years later (592/1), the sons of Aga king of Ashkelon became hostages and they along with other exiles from Ashkelon are mentioned in a provisions list of the Babylonian court.

In 601/600 Neco II defeated Nebuchadnezzar decisively at Migdol, and occupied Gaza (Hdt. 2.159; cf. Jer 47:1). Three years later, Nebuchadnezzar returned and conquered Jerusalem (cf. Jer 52:28; 2 Kgs 24:12). It is probable that Gaza profited by Jerusalem's revolt in 598, sharing with Edom, the Negeb that had been lost by Judah (cf. Jer 13:19 and also Ezek 25:15–17).

When Pharaoh Hophra (Apries) succeeded to the throne of Egypt in 589 B.C.E., he persuaded Zedekiah to revolt and even came to the aid of Zedekiah against Nebuchadnezzar, but the Egyptian army retreated as soon as the main Babylonian forces left Jerusalem to fight them (cf. Jer 37:7). It is likely that the Philistine cities joined in the revolt, and it was probably at this time that Nebuchadnezzar deported people from the Philistine towns and settled them in the vicinity of Nippur, although our evidence comes from later times. The kings of Gaza and Ashdod appear (together with several other kings from W Asia) at the end of a list of high court officials from ca. 570 B.C.E. During the reign of Nabonidus, there existed a place named Gaza *(Ḫa-za-tu)*, which must have been founded by exiles from Gaza although the people mentioned all had Babylonian names. The archives of the Murasu family from Nippur (455–403 B.C.E.), also mention settlements near Nippur named "Ashkelon," "Bît Arsa," and "Gaza."

By the time the Persians became masters of Philistia (in 539 B.C.E.), the Philistine element in the language and culture had disappeared. ("Ashdodite" [Neh 13:24] was probably an Aramaic dialect). The towns became Persian towns, some belonging to Sidon or Tyre, some autonomous. Gaza became the base for Persian military operations against Egypt.

After the conquest by Alexander the Great in 332 B.C.E., Ashdod, Ashkelon, and Gaza became Greek *poleis* in every respect. The only trace of the Philistines that remained was the name Palestine, which was first used in Greek by Herodotus (1.105; 2.104) and in Latin by Pliny (*HN* 5.12), and which Hadrian made the name of the region for nearly two thousand years.

ARCHAEOLOGY

The Philistines were among the Sea Peoples, probably of Aegean origin, who first appeared in the E Mediterranean at the end of the 13th century B.C. These peoples were displaced from their original homelands as part of the extensive population movements characteristic of the end of the LB Age. During this period, the Egyptians and the Hittites ruled in the Levant, but both powers were in a general state of decline. The Sea Peoples exploited this power vacuum by invading areas previously subject to Egyptian and Hittite control, launching land and sea attacks on Syria, Palestine, and Egypt, to which various Egyptian sources attest.

The various translations of the name *Philistine* in the different versions of the Bible reveal that even in early times translators and exegetes were unsure of their identity. In the LXX, for example, the name is usually translated as *allopsyloi* ("strangers"), but it occurs also as *phylistieim* in the Pentateuch and Joshua. In the Hebrew Bible, the Philistines are called *pĕlištîm*, a term defining them as the inhabitants of *pĕlešet*, i.e., the coastal plain of S Palestine. Assyrian sources call them both *Pilisti* and *Palastu.* The Philistines appear as *prst* in Egyptian sources.

Encountering the descendants of the Philistines on the coast of S Palestine, the historian Herodotus, along with sailors and travelers from the Persian period onward called them *palastinoi* and their country *palastium.* The use of these names in the works of Josephus, where they are common translations for *Philistines* and *Philistia* and, in some cases, for the entire land of Palestine, indicates the extent to which the names had gained acceptance by Roman times. The emperor Hadrian officially designated the province of Judaea *Provincia Palaestine,* and by the 4th century C.E., the shortened name *Palaestina* had become the general term for the whole of Palestine.

The biblical references to Philistine origins are few and enigmatic. The first appears in the "Table of Nations" in Gen 10:14. The probable meaning of this verse, insofar as it relates to the Philistines, is "… and the Caphtorim, out of whom came the Philistines." The homeland of the Philistines, Caphtor (cf. Amos 9:7, Jer 47:4, Deut 2:23), is generally recognized by scholars as Crete, although some believe Caphtor to be located in Cilicia in Asia Minor. In other biblical references, the Philistines are synonymous with the Cherethites, that is Cretans (cf. Zeph 2:5, Ezek 25:16). Various biblical traditions, then, suggest that the Caphtorim are to be identified with the Cherethites, thus linking the Philistines with a Cretan homeland. The evidence supplied by the architectural remains, material culture and pottery from archaeological sites in Israel, strongly suggests that the Philistines originated in the Aegean.

Several key references to the Sea Peoples have been identified in Egyptian sources. According to inscriptions of Pharaoh Merneptah (ca. 1236–1223 B.C.), the Sea Peoples attempted to invade Egypt from the direction of Libya. The attack was led by Libyans joined by "foreigners from the Sea"—the Sherden, Sheklesh, Lukka, Tursha (Teresh), and Akawasha. This list of Sea Peoples does not, however, include references to the Philistines and Tjekker, who are first mentioned as invaders during the reign of Rameses III (ca. 1198–1166 B.C.). The reliefs and inscriptions at his mortuary temple at Medinet Habu in Thebes describe fierce naval and land battles with the Sea Peoples. An inscription under the land battle scene indicates that the Egyptian army fought the Sea Peoples in the "land of Djahi," i.e., the Phoenician coast and hinterland down to Palestine.

This information is supplemented by the Harris Papyrus I, in which Rameses' decisive defeat of the Sea Peoples, including the Philistines, is described. Subsequently, Rameses gave the Philistines permission to settle on the S coastal plain of Palestine. There they vied with the disunited Canaanite city-states and the newly arrived Israelites for cultural and political domination of the country.

The Onomasticon of Amenope, which dates from the end of the 12th or beginning of the 11th century, mentions the areas settled by the Sea Peoples in Palestine, as part of the sphere of Egyptian influence. It records a number of peoples, lands, and cities. Three ethnic groups, the Sherden *(srhn)*, the Tjekker *(tkr)*, and the Philistines *(prst)* are listed, together with Ashkelon, Ashdod, and Gaza, cities situated in the territory controlled by the Philistines.

Philistia, "The land of the Philistines," consisted of five major cities—Gaza, Ashkelon, Ashdod, Gath, and Ekron—which were united in a confederation. In addition to the Pentapolis, several smaller Philistine cities, called *ḥăṣērîm* ("villages") or *banôt* ("daughters"), are mentioned in the Bible. These include Ziklag, Timna, and Jabneh. The role of these smaller cities was as secondary, nearly autonomous centers under the control of the capitals of the city-states.

The territory of the Philistines as defined in Josh 13:2–3 designates the Brook of Egypt (Wadi el-Arish) and the Sihor as the S border, the N boundary as defined by the region N of Ekron, Judah as the E border, and the Mediterranean Sea as the W boundary. This region, as corroborated by archaeological evidence, was occupied by the Philistines for several generations after their arrival in Palestine and before their expansion in the 11th century. Major excavations have established a clear stratigraphic sequence by which the initial appearance, then the flourishing, and subsequently the assimilation of the Philistines can be traced, a process spanning most of the Iron I period (c. 1200–1000 B.C.E.). The discovery of archaeological remains of unmistakably Philistine character at sites quite distant from this area has raised the question of how Philistine culture spread beyond the confines of Philistia—through military conquest, through the establishment of military outposts, or through peaceful trade and commerce.

Four of the cities of the Philistine Pentapolis have been positively identified—Gaza, Ashkelon, Ashdod, and Ekron. The location of the fifth, Gath, remains an open question. At Gaza, the ancient tel lies beneath the modern city and as a result, large-scale excavations have not been undertaken. Excavations at Ashkelon have revealed that the last Canaanite stratum was destroyed, followed by a Philistine settlement. The most extensive evidence of Philistine settlement and expansion is provided by excavations at Ashdod, Ekron, and Tell Qasile on the N border of Philistia. These sites provide complementary data on the nature of Philistine urban settlement, facets of their material culture, and cultic structures and practices.

Philistine occupation at Ashdod began in the early 12th century B.C.E. The first indication of the arrival of a new population was the partial destruction of the Egyptian-Canaanite fortress over which was built an open-air cultic installation. Adjacent to this installation was a potter's workshop in which was found a rich assemblage of locally made Mycenaean IIIC:1b pottery, Aegean in style and a precursor of the earliest Philistine bichrome pottery. In the following occupational phases, Ashdod was a well-planned, fortified city. Two building complexes were uncovered, one of which included an apsidal structure with adjacent rooms and a courtyard. The last phase of Philistine settlement (ca. 1050 B.C.E.) at Ashdod was the largest and most prosperous. At that time, the lower city outside the acropolis area was occupied for the first time and massive mudbrick walls and a gate were built to protect the enlarged city. While the Philistine population had grown and flourished, the pottery and material culture reflect assimilation of local tradition and new Phoenician influences.

A clear understanding of the ceramic repertoire within the stratigraphic sequence is one of the keys to defining the settlement pattern of the Philistines, both within the borders of Philistia and beyond. The initial phase of Philistine settlement has been recognized at Ashdod and Ekron by virtue of the appearance of locally made Mycenaean IIIC:1b pottery (see Fig. PHI.01), while the second phase of Philistine settlement and expansion is associated with the Philistine bichrome wares. The shapes and decorative motifs of Philistine pottery were a blend of four distinct ceramic styles: Mycenaean, Cypriot, Egyptian, and local Canaanite. The dominant traits in shape and almost all the decorative elements were derived from the Mycenaean repertoire and point to the Aegean background of Philistine pottery. Philistine shapes

of Mycenaean origin include bell-shaped bowls, large kraters with elaborate decoration, stirrup jars for oils and unquents, and strainer-spout "beer jugs." A few of many decorative motifs are stylized birds, spiral loops, concentric half-circles, and scale patterns. Although Philistine vessels were richly decorated with motifs taken from the Mycenaean repertoire, these motifs were rearranged and integrated with other influences to create the distinctive "signature" known as Philistine.

Excavations at Ekron (Tel Miqne) have revealed a LB Canaanite city-state which was transformed by the Philistines in the 12th century B.C.E. into a large, well-planned, fortified city which included industrial and elite quarters. A monumental building, possibly a palace with shrines, was discovered at the heart of the city in the elite quarter. See Fig. PHI.02. This building, probably part of a larger complex, included rooms which contained mudbrick altars and a number of bronze and iron artifacts of cultic significance. These rooms opened onto a hall in which was constructed a circular hearth flanked by two pillar bases. Hearths are an important feature in the Aegean and Cyprus where they are the central architectural element in the plan of the megaron. Mudbrick altars, a continuation of local Canaanite tradition, are also well-known in Cyprus and the Aegean at such sites as Enkomi, Kition, Phylakopi, and Mycenae.

The city at Tell Qasile was founded by the Philistines in the first half of the 12th century B.C.E. on the N bank of the Yarkon River. The site was obviously chosen because it was a perfect inland port site. Established on virgin soil, Tell Qasile was undoubtedly part of the Philistine expansion which followed their initial phase of settlement. In addition to industrial and residential structures found in other quarters of the city, three superimposed temples dating from the end of the 12th to the beginning of the 10th century B.C.E. were uncovered in the sacred precinct. These structures in their various phases included raised mudbrick platforms, mudbrick benches, pillars, and small chambers at the back of the temples interpreted variously as holy-of-holies or treasuries. A related building adjacent to the earliest temple (12th century B.C.E.) contained a hearth and two pillars, similar in plan and conception to the hearth and pillars found at Ekron.

There is both agreement and discrepancy between the Bible and the archaeological record with respect to Philistine religious organization and beliefs. The Aegean background of Philistine religion, which is not disclosed in the Bible, is evident through cultic architectural features such as the hearth mentioned above, as well as through small finds such as the "Ashdoda," a ceramic figurine found at Ashdod. See Fig. PHI.03. The Ashdoda is most likely a schematic representation of a female deity and throne, and is evidently a variant of the Mycenaean female figure seated on a throne, sometimes holding a child. These figurines are usually associated with the worship of the "Great Mother" or "Great Goddess." Several figurine fragments of the "Ashdoda" type have also been discovered at Ekron and Tell Qasile. At Ekron, head fragments with spreading headdress and birdlike features resemble the Ashdoda, while at Qasile the torso of a flat figurine of the Ashdoda type was found.

Archaeological evidence has revealed that in the Aegean, female, not male deities were primarily worshipped. Apparently by the 11th century this predominantly female pantheon was replaced by a male Canaanite pantheon reflecting the Philistines' more recent cultural milieu. The head of the Philistine pantheon appears to have been the Canaanite god, Dagon (1 Chr 10:10), to whom the temples of Gaza and Ashdod, and possibly also at Beth-shan, were dedicated. Another god, Baal-zebub (Baal-zebul), has his oracular temple in Ekron. The goddess Ashtoreth apparently also had a temple at Beth-shan (1 Sam 31:8–13). Philistine priests appear only once in the Bible, when the Ark was captured and taken to Ashdod (1 Samuel 5). The Bible also refers to the Philistine custom of carrying idols into battle (2 Sam 5:21) and to "Houses of Images," apparently a reference to temples in which images of the gods were kept. Among the few specifically Philistine religious beliefs that appear in the Bible are the golden images of mice and boils that were sent as a guilt *(ʾašam)* offering to God (1 Sam 6:4–16).

Philistine cult vessels also provide insights into Philistine rituals and beliefs. The *kernos*, reflecting Aegean influences, is a hollow ceramic ring on which objects such as birds, bulls' or rams' heads, or pomegranates are set. See Fig. PHI.04. It was apparently used for the pouring of libations in some religious ritual. Examples of *kernoi* decorated in Philistine style are known from Ashdod, Ekron, Gezer, and Megiddo.

A distinctive Philistine cult vessel is the one-handled lion-headed rhyton, a ritual or drinking cup. Similar rhyta have been found at Tell Jerishe, Tell Zeror, Megiddo, Tell es-Safi, Tell Qasile, and Ekron. The Philistine rhyton is a ceramic adaptation of animal-headed rhyta in metal and stone of Mycenaean-Minoan tradition.

Three high cylindrical cult stands from Tell Qasile were found in the Philistine temple. Each had a bowl topped with a bird's head. Another cult stand found at Ashdod features five musicians around its base. Each of the five figures plays a musical instrument: cymbals, double pipe, frame drum, and stringed instrument that is probably a lyre. These musicians represented on the stand were probably part of a Philistine cult, their role similar to that of the "Levites who were singers" in the temple of Jerusalem (2 Chr 5:12–13).

Other facets of Philistine life, such as mourning customs and burial practices, may be understood through several interesting types of finds. For example, terra-cotta female mourning figurines from Philistine burials at Tell 'Aitun and Azor show women with both hands on their heads, or with one hand on their heads and one on their breasts. Similar mourning figures are closely associated with the burial customs and the cult of the dead found in the Aegean world at the end of the Mycenaean period.

Burial customs are generally a sensitive indicator of cultural affinities, and Philistine burial customs reflect the same fusion of Aegean background with Egyptian and local Canaanite elements that distinguishes every other aspect of their culture. The use of anthropoid clay coffins (an Egyptian custom) and interment in rock-cut chamber tombs (of Mycenaean affinities) are two such indicators.

Anthropoid coffins are built roughly in the outline of a body. The lids are ineptly modeled with faces in what has been termed the "grotesque" style, with only a schematic outlining of facial features and arms. Five such coffins dating from the 12th–11th centuries B.C.E. were discovered at Beth-shan. The distinctive feature of the Beth-shan "grotesque" lids is the applique headdress. However, one lid portrays a headdress crowned by vertical fluting, identical to the "feathered" cap worn by the Peleset (Philistines), Tjekker, and Denyen on the Medinet Habu reliefs of Rameses III. This headgear provides decisive evidence that the bodies buried in these coffins were Sea Peoples, quite possibly Philistines.

Several stamp seals found in 12th-century strata at Ashdod may provide the only extant examples of Philistine language and writing. Used to imprint a lump of clay affixed to a letter, the text is apparently related to the Linear A and B scripts and the Cypro-Minoan syllabary utilized in the Aegean during the LB Age. Philistine words and personal names as they are preserved in the Bible are another possible key to the enigma of the origins of the Philistines and their language. The word *seren*, the head of each Philistine city-state, seems to be linguistically related to the Greek *tyrannos* ("tyrant"), likely a proto-Greek Illyrian or Lydian word that later entered the Greek language. The name Achish, *Agchous* in the LXX and Homer, which closely resembles the name Ikusu, king of Ekron in the Essarhadon annals, is sometimes compared with *Agchisēs* (Homer, *Il.* 2.189). *Agchisēs*, in Greek tradition, was related to the Dardanians, one of the Illyrian tribes that later migrated to Asia Minor and Greece. Scholarly opinion is divided on Goliath, which is sometimes compared to the Lydian *Alyattēs.*

Archaeological finds illuminating Philistine material culture are not limited to the ceramic medium. Though it is the latter that appears in greater quantities at excavations, no less significant is the Philistine contribution in the area of metallurgy. A key biblical reference in 1 Sam 13:19 reads: "Now there was no smith found throughout all the land of Israel; for the Philistines said, 'Lest the Hebrews make them swords and spears.' " Here it is clear that a worker in metal, without specifying whether the material was bronze or iron or both, is intended. Material evidence for bronze-working has been found at numerous sites associated with the Philistines, including Ekron, Tel Mor (harbor of Ashdod), and Tell Qasile. Significant small finds in bronze from the city of Ekron include wheels of a cultic stand similar to the type found at Cypriot sites of the same period, and a double-headed peg with suspension hole which may have parallels in Crete.

The discovery of various iron artifacts, including several bimetallic knives from 12th century strata at Philistine sites, raises the question of the role of the Philistines in the introduction of iron-working technology to Israel. Though it cannot be demonstrated with certainty that it was they who introduced this

new technology, it is very likely that these new settlers brought with them a knowledge of iron-working which acted as a stimulus to local industry.

A superior knowledge of metal-working, whether in bronze or iron, may have given the Philistines a military advantage in their early conflicts with the Israelites. The well-known biblical account in 1 Samuel 17 of the duel between David and Goliath provides a detailed description of Philistine armaments. Unlike the Philistines in the Medinet Habu reliefs, which depict an earlier period, Goliath of Gath wears a bronze helmet rather than a "feathered" headdress. Nevertheless, Goliath's spear, helmet, coat of mail, and bronze greaves, as well as the duel itself, are all features of Aegean arms and warfare. The Bible compares Goliath's spear to a "weaver's beam" because this type of weapon was new to Canaan and had no Hebrew name. Mycenaean warriors are depicted very similarly equipped on the 12th century Warriors' Vase from Mycenae.

Philistine material culture is a syncretistic blend of Aegean, Egyptian, and Canaanite elements. The dominant element is Aegean, as demonstrated by decorative motifs on pottery, cult practices, burial customs and funerary rites, and architectural styles. The same period which witnessed the collapse of empires in the Levant with the resulting cessation or reduction of trade (13th century B.C.E.), also produced migrations of populations, among them the Sea Peoples. When they settled, as they did on the coastal plain of Israel, these peoples introduced by means of material culture, cultic practices, and architecture a new ethnic element which reflected their origins in the Aegean. This period, from the beginning of the 12th century to the end of the 11th century B.C.E. was the Philistines' most flourishing era, both historically and culturally. From the early 10th century on, the Philistines gradually lost their cultural distinctiveness and assimilated into the Canaanite population, steadily declining in importance until they played no more than a minor role in the history of Palestine.

———

A. The Man and His Family

Philo was a prominent member of the Jewish community of Alexandria, the largest Jewish settlement outside Palestine. The only certain date known from his life comes from his account of the great pogrom in Alexandria which started in A.D. 38 under the prefect Flaccus, during the reign of the Roman emperor Gaius Caligula. Philo was then chosen to head a delegation (*Gaium* 370) sent in A.D. 39/40 by the Jewish community to Gaius Caligula in Rome.

A few other datable events are found in his writings. In *Alexander*, or *Whether the Animals Have Reason* (*Anim*) 27, Philo speaks of the celebrations in various places given by Germanicus Iulius Caesar, probably in A.D. 12, when he entered on his first term of consulship. The horse race account in *Anim* 58 is found also in Pliny *HN* 8:160–61, where the event is said to have occurred during the games of Claudius Caesar in A.D. 47. Philo was aged already at the time of the embassy. On the basis of these observations, the time of Philo's death should probably be set around A.D. 50, and his birth to around 20–15 B.C.

Philo belonged to one of the wealthiest Jewish families in Alexandria. His brother, Alexander, was probably chief of customs (alabarch) of the Eastern border of Egypt and guardian of the Emperor Tiberius' mother's properties in Egypt. Alexander was rich enough to lend money to the Jewish king Agrippa I, and to plate the gates of the Temple of Jerusalem in gold and silver. Alexander's apostate son, Tiberius Iulius Alexander, born ca. A.D. 15, had a public career which took him to the highest post of a Roman official in Egypt, that of prefect (A.D. 66–70). He had then already served as procurator of Judaea (A.D. 46–48) and served as chief of staff under Titus during the siege of Jerusalem A.D. 70.

On the basis of information from Philo and Josephus, A. Terian has set up the following tables (see Fig. PHI.05) (*ANRW* 2/21/1: 282–83):

Although direct and datable information about Philo is scanty, it is possible to give a picture of him. His role as political leader is mentioned above. He was the head of the Jewish delegation sent to Gaius Caligula in Rome. A competing legation was sent by the Greek citizens of Alexandria, headed by Apion. Philo's mission turned into failure. The Jews thought they should meet a judge and get their rights, but discovered that Gaius Caligula was their foe. Gaius Caligula died in A.D. 41, and his successor, Claudius, issued an edict to normalize conditions in Alexandria. Claudius confirmed the particular religious and judicial rights of the Jews, but denied them equal rights with the Greek citizens.

Also apart from this legation to Gaius Caligula, Philo had political responsibilities. He tells in *Spec Leg* III:1–5 that circumstances forced him to leave philosophy and contemplation because envy had plunged him into the ocean of civil cares. By envy, Philo seems to allude to the tensions which existed between the Jews and other ethnic groups in Alexandria.

Philo was a learned person. In his youth he received the Greek general education of the encyclia. This general education consisted of literature, rhetoric, mathematics, music, and logic. Philo's writings show that he had a broad education also beyond the encyclia. He not only had excellent command of Greek language and literary style, but was well acquainted both with Greek authors and philosophers.

Although Philo was clearly conscious of being a Jew, he took an active part in the social life of Alexandria. He attended banquets, frequented the theatre, watched boxing matches, and attended horse races. Nevertheless, he was a religious person, loyal to Judaism and its institutions. His engagement in philosophy had its setting in the activities of the synagogues, which according to Philo were schools of philosophy. His writings prove that his philosophical interest largely was expressed in exegesis of the laws of Moses. At times (*Spec Leg* III:1ff; *Cher* 27) Philo indicates that he had mystical experiences in connection with his exegetical activity. At least once in his life he made a pilgrimage to the Temple of Jerusalem to offer up prayers and sacrifices. He was so strict in his emphasis on loyalty to the Jewish

ethnic community and its cause, that he advocated immediate execution of apostates without any formal trial (*Spec Leg* I:54–56; 315–18).

B. Philo's Writings

There has long been general agreement among scholars on the classification of Philo's expository writing. These fall into two main groups:

1. Exposition of the Laws of Moses *(Op; Abr; Jos; Dec; Spec Leg All; Virt; Praem).* These writings are but parts of one comprehensive rewriting of the law of Moses. On the basis of Philo's own terminology and outline, the "Exposition" can be divided in three parts: the story of creation, the historical part, and the legislative part. The *Life* of Moses was formerly classed in a group of miscellaneous writings, but Goodenough has shown that this and the "Exposition" were companion works. In these exegetical works, Philo paraphrases and expands the biblical text and so gives his own views. A similar method may be found in the book of *Jubilees*, the *Genesis Apocryphon*, and the *Biblical Antiquities of Pseudo-Philo.*

2. Exegetical Commentaries. These fall into two subordinate series:

(a) Questions and Answers on Genesis and Exodus, which is a brief commentary in the form of questions and answers on parts of the first two books of the Pentateuch. Most of the Greek original has been lost; modern editions depend mainly on the ancient Armenian version. The original work may have included other books of the Pentateuch, but Eusebius knew only the section on Genesis and Exodus. Greek fragments preserved by Byzantine writers deal only with Genesis or Exodus with two doubtful exceptions. Therefore we probably have the whole of the work.

(b) Allegorical Interpretations of Genesis, which consists of *Leg All* I–III; *Cher*; Sacr; Quod Det; Post; Gig; Quod Deus; Agr; Plant; Ebr; Sobr; Conf; Migr; Heres; Congr; Fuga; Mut; Somn; Deo. This series covers the main parts of Genesis 2–41. They have the form of a verse-by-verse commentary on the biblical texts. These commentaries vary in length and are more complex in form than Questions and Answers, though the question-and-answer form is also used. In this respect they are closer to the Midrashim than to the commentaries found at Qumran. Originally the title of all these commentaries seems to have been *Legum Allegoriae.* This name is now given only to the first work, on Gen 2:1–3:19. The others have different titles.

The commentary is mostly on two levels: the literal and the allegorical. The relationship between Questions and Answers and the Allegorical Interpretation of Genesis 2–3 is much discussed. Both works have the form of a commentary on verses or passages from the Pentateuch. Some scholars have suggested that "Questions" is catechetical, while "Allegorical Interpretation" is more scholarly. Against this is the fact that in general, where *Quaes* overlaps with sections of questions and answers in the "Allegorical Interpretation," there is no substantial difference. Moreover, the question-and-answer form also occurs in the "Exposition of the Laws of Moses," where it does not serve a catechetical aim. Scholars have observed that the question-and-answer form is also found in Greek commentaries on Homer. But it equally occurs in Palestinian exegetical tradition, and Philo may therefore share this influence from Greek exegetical forms with Jewish tradition.

3. Remaining Writings. There has been more uncertainty in the classification of the remaining writings. In general they have been divided into purely philosophical writings (*Aet; Provid; Anim; Quod Omn*) and historical and apologetic treatises (*Flacc*; 118 *Gaium*; *Vita Cont*; *Apol Jud; Vita Mos*). E. R. Goodenough (1933: 109–25) has rightly challenged the placement of *De vita Mosis* among the historical and apologetic writings. He has shown that this treatise and the Exposition of the Laws of Moses were companion pieces.

Apart from the questions related to *Vita Mos*, the classification of other writings as historical and apologetic is also rather unsatisfactory. The main weakness of this heading is that it fails to integrate these treatises with the other works of Philo. It therefore also seems pertinent here to start from the fact that Philo was an exegete. Against this background, the classification of these writings should be given the heading: Pentateuchal principles applied to contemporary issues and events.

These writings fall into three groups: (1) Writings in which Pentateuchal material, considered as literal narrative or as an adumbration of deeper principles, is applied to socioreligious factors in the Jewish community. *Apol Jud* and *Vita Cont* fall into this category. (2) Writings in which Pentateuchal principles are applied to, or are developed in dialogue with contemporary philosophical issues and religious phenomena: *Quod Omn, Aet, Provid,* and *Anim.* (3) Writings in which Pentateuchal principles are applied to specific historical events and persons: *Flacc* and *Gaium.*

The preserved fragments of *Apol Jud* deal with events and laws which cover parts of the Pentateuch from Jacob (Genesis 25) to the conquest of Palestine in the books of Joshua and Judges. The emphasis in *Apol Jud* is placed on a characterization of Judaism in Philo's own time, and it can therefore be listed among Philo's writings on contemporary issues.

In *Vita Cont,* Philo tells about the religious community of the Therapeutae to illustrate the aspect of heavenly ascent (*Vita Cont* 11). They are citizens of Heaven even in this life in the world (*Vita Cont* 90). They are in this way model Jews, since to be a true Jew is to be a citizen of Heaven; a proselyte receives a place in Heaven when he becomes a Jew (see for instance *Praem* 152).

The second group of treatises deals with philosophical issues. In these writings Philo uses his interpretation of the laws of Moses in evaluating and developing philosophical notions (see especially *Quod Omn* 42ff.; 53–57; 75–91; *Aet* 13–19; *Provid* I:22; 35; 84).

Even the view expressed by Philo in the treatise *Anim* seems to be selected on the basis of his Jewish attitude, and can be combined with ideas which he puts forward in other writings: the animals know nothing of God, cosmos, law, ancestral customs, state and political life. These attributes are exclusive to man. Some of these Stoic ideas are part of Philo's Exposition of the Laws of Moses. Thus, in saying that the animals know nothing about man's conscious and purposeful art, Philo in *Congr* 141 gives the full Stoic definition of art in the course of his exposition of Gen 16:5. Notwithstanding the Stoic influence, the Mosaic treatment of animals must be considered as the determining factor in moulding his thought. And the philosophical ideas of God, cosmos, ancestral customs, state and political life are points which in several places are central to Philo's interpretation of the Pentateuch. The conclusion is that Philo's views stated in *Anim,* as elsewhere, are influenced by his attitudes and views as a Jew in the sense in which he himself defines Jewish ideas in his other writings.

When Philo draws on Pentateuchal passages and principles in his philosophical writings, he presupposes the kind of exegesis which he has developed in his various expository works. They therefore presuppose Philo's work as an exegete, and do not belong to a period of his life before he had settled down to interpret the laws of Moses.

The hypothesis that Philo's philosophical writings were written prior to his expository works is built on the doubtful assumption that Philo had less interest in philosophy after he began to interpret the Pentateuch. But his expositions show that he was continually drawing on Greek philosophy and philosophical works. Some of the philosophical writings point rather to a later period than to youth: *Alexander,* or *Whether the Animals have Reason,* for example, must have been written some time after the year A.D. 12, and in it there is also probably a reference to the Jewish Alexandrian embassy to Rome in A.D. 39/40 of which Philo himself was the head. And if, as it seems, his own nephew Alexander was old enough to be his dialogue partner, Philo was most probably of advanced age.

It is, therefore, doubtful whether Philo's life should be divided into his philosophical period as a young man and his exegetical period as a mature and old man. He lived all his life in the double context of the Jewish community and the Alexandrian Greek community. Philosophy was Philo's life interest. The dialogues seem to be apologetic writings and thus to fall in line with the rest of his works.

The third group, the writings on contemporary matters, deals with the historical events connected with the pogrom in Alexandria in A.D. 38. The situation is portrayed as a conflict between the Jewish belief that they were the elected people of the one God, the Creator, and the usurpatory claim of power and of divine prerogatives of the Greek *polis* and the Roman emperor.

The connection between the historical writings *Flacc* and *Gaium* and Philo's expository writings can be quite closely drawn. In his exegetical works also Philo at times applies Pentateuchal principles to

historical events and persons. Thus as an example of persons who (as seen in Gen 37:9–11) exalt themselves above men and the world of nature, he lists Xerxes, who was punished with insanity. Another example was a governor over Egypt who attempted to disturb the ancestral customs of the Jews (*Somn* II:123ff.).

In *Flacc* and *Gaium* the same approach is followed, in such a way that the Pentateuchal principles—as understood by Philo—are used as an interpretative key, and the actual biblical passages are presupposed as background.

Of particular interest is *Gaium* 3–7, where Philo gives a summary of the main points of his interpretations of the laws of Moses and thus of the Jewish religion. He places emphasis here as elsewhere on God's creative, kingly, and providential powers, and on such of the other powers which serve both beneficial and punitive purposes (*Quod Deus* 77–78; *Plant* 50). This nation, whose God is the Creator, is according to Philo the race of suppliants (§3) in the sense that they serve as link between God and man. God's care for all men is in a sense the outcome of His care for the Jews (cf. *Praem* 44). Philo then tells how Flaccus and Gaius Caligula proved to be enemies of the Jews (*Flacc* 24 *Gaium* 373), but were in reality enemies of God himself: Flaccus was puffed up with arrogance (*Flacc* 124; 152), and Gaius even overstepped the bounds of human nature and claimed to be god (*Gaium* 75; 367f.).

Philo here narrates theologically interpreted history. In this respect these treatises show a similarity to history writing in the Old Testament, in Judaism, and in the New Testament. In the New Testament especially, the Passion narrative in the Gospels and the persecutions of the early church according to the Acts of the Apostles describe historical events and interpret them on the basis of the Old Testament. As for Philo's specific point about rulers being punished for their blasphemous arrogance, the brief story in Acts 12:20–23 applies this principle to the same King Herod who aided the Alexandrian Jews: "And the people shouted, 'The voice of a god, and not of a man!' Immediately an angel of the Lord smote him, because he did not give God the glory; and he was eaten by worms and died."

Philo's works are based on the interpretation of the Pentateuch, although also other LXX books are used. The predominance of his use of the Pentateuch probably reflects the reading practice in the Alexandrian synagogues. In this case, Pentateuchal pericopes were read in the synagogal gatherings, and other writings would have been drawn upon only in expositions or in other parts of the services. It should also be added here that the Pentateuchal books would be of special interest to the Jewish community in Egypt, since Egypt and the Exodus are central geographical and theological elements in these books.

Since Philo builds his exegesis on the Greek text of the LXX, he develops a theological understanding of this translation: the LXX is an exact and inspired translation of the Hebrew original. Moreover, it has a central role, since it serves as a revelation of the sacred writings to the Greek-speaking part of mankind. In spite of this fact, many details of the textual affinities of Philo's LXX text are uncertain, particularly because he sometimes departs from the LXX readings. The reason is that in the paraphrasing expositions Philo deals with the text as an active exegete; moreover, he works exegetical traditions into his paraphrase. Thus, it is impossible to reconstruct an original LXX text on the basis of his exegesis.

The question whether Philo knew Hebrew has been much discussed, but no consensus has been reached. The question is not of decisive importance, however. He undertakes etymological interpretations based on Hebrew, and he employs some traditions which were common to Greek-speaking and Hebrew-speaking Jews. He may have relied on written documents or on oral traditions in the Synagogues. Philo's broad knowledge and his role and place in the Jewish community suggest that he used both kinds of sources.

C. Philo and the Jewish Community in Alexandria

The situation of the strong Jewish community in Alexandria from the Roman takeover in 30 B.C. to the settlement of the increasing unrest by the Emperor Claudius in A.D. 41 has been subject to thorough examination.

The general conclusion can be summed up in this way: the Romans made a distinction between, on the one hand, the citizens of the Greek cities and the Hellenes of the provincial towns and villages, and on the other, the native Egyptian population. The first group was either exempted from the poll tax, in the case of the Greek citizens, or paid a lower rate, as did the Hellenes, while the native Egyptians paid the tax in full.

For the Jews in Alexandria, therefore, the question of their legal status was a burning issue, and they pressed for equal status with the Greek citizens of the city. The Greek citizens, on the other hand, tried to deprive the Jews of the privileges granted them by the Emperor Augustus and wished the Jews to be classified together with the native Egyptians.

After Gaius Caligula became emperor in A.D. 37, this state of cultural, judicial, and religious strife led to anti-Jewish riots which grew into a pogrom. A military uprising by the Jews against the Greeks followed in A.D. 41 on the death of Gaius Caligula and the accession of Claudius to the throne. Jews from Palestine and Egypt took part in the armed revolt, as can be seen from the fact that Claudius forbade the Alexandrian Jews to permit Jews from Syria and Egypt to enter the city. The emperor, furthermore, would not permit Jews to participate in the various activities connected with the gymnasium.

From these observations the following hypothesis can be formulated: It is probable that some Jews in Alexandria were content with the status quo under which they were permitted to live according to their own laws and customs as a separate *politeuma* of its own. Furthermore, it is certain that others coveted Greek citizenship for the sake of higher social and political prestige and greater economic advantages.

Strong forces among the Alexandrian Jews, however, seem to have entertained the (eschatological) expectations that other nations would acknowledge the law of Moses, and the people of God, the Jews, as the center of the world. Among these Jews there seem to have been two different perspectives as to methods which should be used. Some were in favor of using force, even arms, if necessary. The armed revolt by the Jews in Alexandria in 41 seems to have been inspired by such convictions, since the rebels were able to motivate even Jews from Syria and Egypt to come and join them. Others among the Alexandrian Jews advocated that the Jews were to conquer their surroundings by peaceful means; i.e., by their religion, based on the laws given by the Creator, and by their growing prosperity. Philo was of this opinion. In *Vita Mos* II:44, he expresses the conviction that increased prosperity and progress among the Jews will lead other nations to accept the laws of Moses; and Philo's writings serve the general aim of interpreting these laws to the surrounding world and preparing the Jews for their universal task.

Accordingly, in *Somn* II:83, Philo advises his fellow Jews to be cautious and not to use revolutionary provocations in their dealings with the non-Jewish political authorities: "… Surely then they are all lunatics and madmen who take pains to display untimely frankness, and sometimes dare to oppose kings and tyrants in words and deeds. They do not perceive that not only are their necks under the yoke like cattle, but that the harness also extends to their whole bodies and souls, their wives and children and parents, and the wide circle of friends and kinsfolk …" The conclusion drawn from this evidence is that Philo supported the policy that Jews should participate actively in the social life of Alexandria. He therefore belonged himself to those who infiltrated the Greek milieu centered around the gymnasium. At the same time, however, he attacked and passionately criticized pagan worships and pagan life-standards.

Among the burning issues are mentioned the paying of fees and participation in the life of the clubs. Reluctantly, Philo says: "… when the object is the share in the best of possessions, prudence, such payments are praiseworthy and profitable; but when they are paid to obtain that supreme evil, folly, the practice is unprofitable" (*Ebr* 20ff.), and it can lead to Egyptian animal worship (*Ebr* 95). Another issue is participation in the triennial festivals of athletic contests, which were organized by the cities. To Philo, these festivals are examples of contests in rivalry, lust, anger, and licentiousness. A Jew should try to avoid participation in these, but if compelled to take part, he should not hesitate to be defeated (*Agr* 110–21). In *b. Giṭṭin* 47a we find an example of this attitude. According to this text, Simeon S. Lakish at one period of his life was a professional gladiator. He justified this on the ground of grim necessity.

The treatise *De Josepho* reflects problems related to sexual ethics and to table fellowship. In *Jos* 42ff. and in 56–57 the difference is pointed out between the Hebrew nation and other nations in sexual ethics and marriage laws. The Hebrews have strict customs and strict laws on marital matters, while licentiousness has destroyed the youth of the Greek race and the barbarians. In Egypt it is easy for Jewish youth to leave the ancestral way of life and change to alien ways, because the Egyptians deify things created and mortal and are blind to the true God (*Jos* 254).

Another area of tension was that of table fellowship. Joseph gave a feast both for his own family and for Egyptians. Joseph feasted each party according to its ancestral practice, but Philo adds that the Egyptians followed the same seating order as the Hebrews. The Egyptians indicated that in other times the style of life in their country was less civilized, until Joseph introduced good order (*Jos* 202–6).

Philo speaks of Jewish institutions in Alexandria. He refers to the Jewish council of elders. There were many synagogues in each section of the town, and one synagogue was very large and notable. He often describes how the synagogues function, stressing the reading and explanation of the Bible: "And will you sit in your conventicles and assemble your regular company and read in security your holy books, expounding any obscure point and in leisurely comfort discussing at length your ancestral philosophy." Unfortunately, he does not provide any definite information about Jewish education or his own part in it. With regard to the LXX Philo refers to an old custom "to hold every year a feast and general assembly in the island of Pharos, whither not only Jews but multitudes of others cross the water, to do honour to the place in which the light of that version shone out."

Philo's writings show that he had a wide Greek education. He has an excellent command of Greek, a good literary style, and knows many Greek philosophers and writers. Some conclusion about Philo's knowledge of Greek philosophy may be drawn from explicit quotations, and the philosophical ideas he uses. Stoicism, Pythagoreanism, and Platonic traditions predominate. Philo's view that general education prepares for philosophy and his definition of philosophy as "the practice or study of wisdom, which is the knowledge of things divine and human in their causes." (*Congr* 79) are Stoic, as is also his division of philosophy into logic, ethics, and physics. From the Platonic tradition he takes over the distinction between the "forms" or ideas and the visible world, and between soul and body. From the Pythagoreans come speculations on numbers. Philo also shows familiarity with other philosophical schools and with Greek literature in general.

Non-Jewish sources have been incorporated in such a way that on the whole little identification of authors seems possible, but in some cases names of philosophers and authors are given.

D. Philo as Biblical Exegete

With regard to Philo's exegetical aims and methods, some scholars see him as the main representative of Hellenistic Diaspora Judaism, in contrast to Palestinian Judaism as represented in the rabbinic sources. This distinction does not do justice to Philo's own view of the situation. While he is involved in debates with fellow Jews in Alexandria, their views may, from this perspective, reflect debates in Judaism in general, Palestine included. Philo is primarily an exegete. Sometimes he agrees with other exegetes, sometimes he supplements them, and often he repudiates them; but he does not reveal the identity, whereabouts, or social status of his partners in debate. Indeed, more research is needed to examine whether his interlocutors represent specific schools. Tentatively, the following observations can be made.

Philo seems to refer to two different varieties of exegetes who championed literal exegesis. One was faithful to Judaism, while the other used literal exegesis to attack and ridicule the Pentateuch and Judaism. Some of the views of the "faithful literalists" are: in Deut 34:4 God humiliates Moses by not permitting him to enter the promised land; in Gen 11:7–8 the confusion of tongues refers to the origin of the Greek and barbarian languages; Gen 26:19–32 tells about actual digging of wells; in Exod 22:26–27 material return of garment is meant; the consistency of the rules about leprosy in Lev 14:34–36 is a matter of discussion. In arguing with the other group, Philo reflects disputes between non-Jews or Jewish apostates and Jews. The treatise *On the Change of Names* serves as defense against the literalism of a jester whom Philo himself had heard, and who committed suicide as a punishment from God (*Mut* 60–62). The change of one letter in Abram/Abraham and Sarai/Sarah is ridiculed by this group, as is the story of Jacob and Esau and their food; some of them maintain that the Bible contains myths (such as the story about the tower of Babel) similar to those which Jews themselves ridicule when recited by others. *On the Confusion of Tongues* serves also as defense against such mockery.

Philo also tells of Jews who used allegory to such an extent that valid Jewish custom was undermined. The central passage is *Migr* 89–93:

> There are some who, regarding laws in their literal sense in the light of symbols of matters belonging to the intellect, are overpunctilious about the latter, while treating the former with easygoing neglect. Such men I for my part should blame for handling the matter in too easy and off-hand a manner: they ought to have given careful attention to both aims, to a more full and exact investigation of what is not seen and what is seen, to be stewards without reproach. As it is as though they were living alone by themselves in a wilderness, or as though they had become disembodied souls, and knew neither city nor village nor household nor any company of human beings at all, overlooking all that the mass of men regard, they explore reality in its naked absoluteness. These men are taught by the sacred word to have thought for good repute, and to let go nothing that is part of the customs fixed by divinely empowered men greater than those of our time. It is quite true that the Seventh Day to meant to teach the power of the Unoriginate and the non-action of created beings. But let us not for this reason abrogate the laws laid down for its observance, and light fires or till the ground or carry loads or institute proceedings in court or act as jurors or demand the restoration of deposits or recover loans, or do all else that we are permitted to do as well on days that are not festival seasons. It is true also that the Feast is a symbol of gladness of soul and of thankfulness to God, but we should not for this reason turn our backs on the general gatherings of the year's seasons. It is true that receiving circumcision does indeed portray the excision of pleasure and all passions, and the putting away of the impious conceit, under which the mind supposed that it was capable of begetting by its own power: but let us not on this account repeal the law laid down for circumcising. Why, we shall be ignoring the sanctity of the Temple and a thousand other things, if we are going to pay heed to nothing except what is shown us by the inner meaning of things. Nay we should look on all these outward observances as resembling the body, and their inner meanings as resembling the soul. It follows that, exactly as we have to take thought for the body because it is the abode of the soul, so we must pay heed to the letter of the laws. If we keep and observe these, we shall gain a clearer conception of those things of which these are symbols; and besides that we shall not incur the censure of the many and the charges they are sure to bring against us (Loeb ed.).

In this passage, Philo summarizes his attitude as an exegete. The allegorical, though higher and more important, practically never invalidates the literal. (Only exceptionally does Philo discard the literal meaning altogether or allow it only a limited role.) Philo combines literal and allegorical methods of exegesis, stressing allegorical exposition against literalists and the literal sense against over-spiritualization.

Philo discusses other views which do not readily sort into the classes of literal and allegorical exegesis, although they may be combined with such an approach. As an example, we quote the following: "There are some whose definition of reverence is that it consists in saying that all things were made by God, both beautiful things and their opposites. We would say to these, one part of your opinion is praiseworthy, the other part on the contrary is faulty …"

The sources of Philo's allegorical method have been much discussed. Did he draw on Greek allegorical methods (especially as employed by the Stoics on Homer) or on Jewish traditions? He undoubtedly followed the Stoics, who read natural phenomena and ethical norms into Homer, though Philo emphasized the ethical, which he based on his concept of God. But other parallels are found in the Haggadah, especially as regards the idealization of the patriarchs and other biblical persons, often by means of etymologies.

It may be maintained that Philo attempts to make the allegorical method serve his aims as a Jewish exegete. In this respect, his allegorical interpretation shows affinities with the hermeneutical concept of prophecy and fulfillment. He spells out abstract principles which he sees in the biblical text, and these in turn can be applied to individuals and the Jewish community, serving to interpret specific events. Philo also adapts allegorical interpretation to the Jewish notion of election, which he uses to claim for the Jews and their sacred writings elements from Greek philosophy, education, ethics, and religion. Conversely, to Philo, allegorical interpretation is a way in which the wisdom of the laws of Moses and Jewish religious institutions can be disclosed to the world.

Philo often indicates that he uses other Jewish sources as well as the Bible. He refers to these sources in *On the Life of Moses:* "But I will … tell the story of Moses as I have learned it, both from the sacred books … and from some of the elders of the nation; for I always interwove what I was told with what I read." The question arises here whether Philo depended only on local Jewish tradition, or also on wider ones, including Palestinian Haggadah and Halakah. Philo's own visit to Jerusalem, his knowledge of conditions and events in Palestine, the frequent contacts between Alexandrian and Palestinian Jews, and the fact that both groups recognized the Temple of Jerusalem as their center, at least strongly indicate that Philo knew and followed Palestinian traditions. This conclusion is confirmed by a comparison of Philo with the rabbinic writings.

Philo practiced the common Halakah with regards to worship in the Temple of Jerusalem, the Temple tax, and pictures and statues in Temple and synagogues. His visit to the Temple may indicate that he recognized its rules about calendar and sacrifices. Philo knew of the conflicts between Pilate and the Jewish authorities in Palestine arising from the Halakah. In some cases where Philo's views are in conflict with the rabbinic Halakah, it can be proved that they represent an earlier stage of common practice (Alon 1977). Examples of haggadic views in Philo which have parallels in the rabbinic writings are: the rivalry among the stars as to precedence, the angel who appeared to Moses in the burning bush being the image of God; Moses growing extraordinarily fast; why Adam was last to be created; the manna and the well not conforming to the regular sequence of rain from heaven and bread from earth.

E. Central Ideas and Perspectives

At times Philo maintains that God is unknowable, transcending virtue and the good and the beautiful. He is "that which exists" (*tò on*), or "he who exists" (*ho ōn*). But, although God himself is unknowable, his activities, which are called his powers (*dynameis*) can be known. Central powers are: God's activity in creating the world, represented by the name "God" (*Theos*), and his continued activity in governing the world, indicated by the name "Lord" (*Kyrios*). The universe consists of the intelligible and the sensible world, both created and governed by God. God's powers are in the intelligible sphere, but reach into this world and are knowable by man.

Philo's technical use of the term *Logos* connotes God's mental activity during the act of creating. The parable of the architect in *Op* 15–25 illustrates this point: Philo tells about an architect who made a model of the various parts of the city he was to build. Similarly, *Pirqe R. El.* 3, portrays a king who wanted to build a palace, and first modeled on the ground its foundations, entrances, and exits. According to Philo, the architect thought out in his mind how he should build. Similarly, in an anonymous midrash, it is stressed that the man first sat and calculated how he wanted the building (Urbach 1975: 1.200–1). Philo applies this picture to the creation of the world; and he identifies the intellectual planning of the architect with Logos, meaning God's mental activity during the act of creating. Similarly, the parable of the architect in the anonymous midrash is supported by Ps 33:6: "By the word of the Lord the heavens were made." In his use of the parable of the architect, Philo thus to a large degree stays within the context of Jewish exegesis of the creation story. Nevertheless, Philo develops a philosophical exegesis on this basis. He focuses the attention on the intellectual activity of the architect, and in this way the model is not an "empirical" sketch or model, but the image of the city in the mind of the architect. Thus, the parable expresses the idea that the model of the world is the intelligible world (of ideas) conceived by God before he created the world perceived by the senses. Here Jewish exegetical tradition about God as architect and Stoic and Platonic terminology and thought categories are brought together in a synthesis. The Logos, as one of the powers of the intelligible world, reaches into our world, mainly through the mediators Moses and Aaron, both called Logos. The plural *logoi* can indicate the heavenly principles which are embodied in the laws and precepts given to the Jews through Moses.

In another sense, the Logos and the logoi may be conceived as heavenly figures such as angels and archangels. The Logos is also called a "second god," or God's firstborn. This Logos has many names: "the beginning," "the name of God," "the man after his image," and "he that sees" (Israel). The meaning of Philo's Logos is therefore complex: it embraces the scriptural "word," biblical figures, heavenly beings, the laws of Moses and Platonic and Stoic elements. In some places Philo uses the related concept

of wisdom, *Sophia.* When Sarah is a cosmic and heavenly figure she can be named Sophia, following Jewish Wisdom tradition.

Philo sometimes uses sexual imagery to describe the relationship between God and the world. The contrast between male and female means the contrast between the spiritual and the irrational or between the eternal and the transitory. Matter is female, while form and logos is male. The highest Logos and God himself are essentially asexual.

In Philo's anthropology, humans consist of soul and body, but Philo utilizes a variety of concepts such as soul, mind, and spirit. He distinguishes between the lower mind and soul, which operate within the context of sense perception and are mortal, and the higher mind and soul, which are indestructible and immortal. In Philo the higher soul does not have primarily an individualistic sense. In *On Drunkenness* 36–37 Philo writes: "He (Moses) in his wisdom was recalling the whole *people of the soul* to piety and to honouring God and was teaching them commandments and holy laws." Thus "the soul" is associated with piety, the honoring of God, the commandments and holy laws, the very characteristics of the Jewish people, in contrast with "a city of commonwealth peopled by a promiscuous horde, who swing to and fro as their idle opinions carry them."

Philo's dualism must also be connected with the distinction made between the chosen people, the Jews, and other nations. Philo combines an ethical dualism between heaven and earth and between soul and body with the dualism between Judaism and the pagan world. For example, the Jews who make education, wealth, and office serve the heavenly values, as manifested in the laws of Moses, bring heaven to rule over earth. If, on the other hand, the Jews have luxurious living, political careers, and licentiousness as their objectives, they join with the earthly, pagan disorder. Accordingly, when Philo interprets references to Egypt and Egyptians allegorically to mean the body, passions, moral values, etc., he combines these two aspects of his dualism: Egypt and Egyptian represent the pagans in contrast to the Jewish nation, and at the same time they represent evil body over against the Jewish nation which has the heavenly quality of the soul. When Jews yield to the somatic passions and other evils, they then join with the Egyptians in their vices.

Looking for a dominant feature in Philo's thought, some scholars have pointed to the tendency to bridge the gap between the transcendent God and man by intermediaries, such as Logos, the powers, etc. This is not enough. To Philo, it is specifically the Jewish people which intermediates between God and man. The notion of the cosmic and universal significance of Israel dominates in this thought.

The center of Jewish existence is Jerusalem and its Temple. All Jews see Jerusalem as mother city, their metropolis. Its earthly buildings are not its totality, but essentially represent God's cosmos. Surprisingly, the Logos is equally characterized as a "metropolis," and Philo regards Jerusalem as a manifestation of the divine Logos spoken by God when he created the world. Indeed the chief, surest, and best mother city—which is more than just a city—is the Divine Logos, and to take refuge in it is supremely advantageous. Furthermore, Philo seems to expect that all Jews of the Diaspora would be brought back to Jerusalem and the Holy Land in the eschatological age.

Equally, the Temple in Jerusalem is an earthly counterpart of the cosmic heavenly Temple:

> The highest and in the truest sense the holy, temple of God is, as we must believe, the whole cosmos, having for its sanctuary the most sacred part of all existence, even heven, for its votive ornaments the stars, for its priests the angels who are servitors to His powers … There is also the temple made by hands; for it was right that no check should be given to the forwardness of those who pay their tribute to piety and desire by means of sacrifices either to give thanks for the blessings that befall them or to ask for pardon and forgiveness for their sins. But he provided that there should not be temples built either in many places or many in the same place, for he judged that since God is one there should be also only one temple (Loeb ed.).

Of the Levitic priests, Philo says that their perfection of body and soul makes them the image of God. This requisite perfection of body is a token of the perfection of the immortal soul, fashioned after the image of God, i.e. of the Logos through whom the whole universe was created. So, the high priest in the Jerusalem Temple is the true portrait of man.

Again, the biblical picture of Aaron as a mediator and as Moses' interpreter is developed into the high priest as the sacred Logos who separates and walls off holy thoughts from the unholy. Aaron was Logos in utterance, and the perfect interpreter. Along the lines of Jewish tradition, Philo attributes cosmic significance to the high priest. His vestments symbolize the whole cosmos, he is consecrated to the Father of the world, and thus is invested with universal meaning for the service of the Creator. The worship of the One God is seen in contrast to the erroneous polytheism of other nations. Therefore, it is worship on behalf of all mankind: through the Levites, the Jewish nation is the priesthood of all nations.

Philo's explanation of the feasts, of which only the Sabbath can be mentioned here, is illuminating. Jews, he says, regard the Sabbath with great reverence and will not yield to political authorities who want to abolish it. Already in the Pentateuch, the celebration of the Sabbath is founded on creation (Gen 2:2–3), and Philo is fertile in his interpretation of the Sabbath and its cosmic role. For instance, he elaborates in Pythagorean fashion on the number seven. One example out of many may be given: Moses recognized in the seventh day the birth of the world, celebrated in heaven and on earth, as all things rejoice in the full harmony of the sacred number seven. Hence, the Hebrew people, who follow the laws of nature, must celebrate this festival too. Basically, feasts and joy belong to God alone, for God alone is entirely blessed, exempt from all evil. But from this joy of God the joy of man flows, as a mixed stream.

The above illustrates how Philo gives a cosmic and universal relevance to Jerusalem, the Temple and the Sabbath, as also to the laws of the Jewish nation and the role of Moses. By introducing his laws into the story of creation, Moses implies that the universe is in harmony with the Law and the Law with the world. Thus the man who observes the Law is constituted a loyal citizen of the world. Primarily, this is Moses, a true cosmopolitan, in accordance with the development of that idea. In the second place, the people of Israel is meant.

Like Aaron the high priest, Moses is a messenger and mediator between God and man. As such, he is identified with an archangel, or with the Logos and in this capacity says: "and I stood between the Lord and you" (Deut 5:5), that is neither uncreated as God, nor created as you, but midway between the two extremes, a surety to both sides, … For I am the harbinger of peace to creation from that God whose will is to bring wars to an end, who is ever the guardian of peace. Similarly, Moses was one among the many angels when he mediated at Sinai and spoke on God's behalf to the people. He served as one of the logoi. Philo can even say that God sent Moses as a loan to the earthly sphere.

In *Vita Mos* 1:158 Philo interprets Moses' ascent of Mount Sinai to mean that he ascended into the realm of God. In rabbinic writings the same interpretation is found, and both Philo and the rabbis see Moses as god and king (cf. Exod 7:1). This explains Moses' authority: Though a figure of the past, he still is to determine the lives of Jews in the time after him. In his ascent and vision of the divine world they are to imitate him. They are Moses' disciples.

It was Moses who communicated the basic self-revelation of God as "I am He that is." This means that "God alone has veritable being," and that God's nature is to be, not to be spoken. Yet, so that the human race should not lack a title to give to the supreme goodness, he allows them to use the title of "Lord God."

In his references to examples and persons outside Judaism, Philo can use various lines of argumentation. In his discussion of the free men (in: *Quod Omn*) he says that the various levels of freedom of the worthy man receives their full dimension and true expression in Moses and in those who follow him in worshipping the Self-existent only. At several places Philo maintains that the Greek philosophers drew their thought from Moses and his Laws, *Heres* 214, *Leg All* I:108, *Spec Leg* IV:61, *Post* 133, *Quaes Gen* IV:152, *Quod Omn* 53–57, *Congr* 176. In agreement with this, Philo pictures Moses as the embodiment of all knowledge and wisdom. Although Moses had Egyptian and Greek teachers, he was independent in his apprehension so that he seemed a case rather of recollection than of learning.

Abraham, the ancestor of the Jewish race, is at the same time the prototype of proselytes, since he left his native country and its polytheism to discover the One God. In doing so he gained all the other virtues. Philo distinguishes three types of men: the earth-born, the heaven-born, and the true men of God. Abraham began as a man born of heaven, searching into the nature of the ethereal region. Later, he became a man of God, and the God of the Universe was his God in a special sense and by a special grace.

The sons of earth are those who follow the pleasures of the body. By combining these notions, we see that the sons of earth are in fact pagans or apostates. The men of heaven are pagans who, like young Abraham, seek heaven and the Creator. The men of God then are the Jews, who like the older Abraham are wholly owned by God.

Philo's concept of revelation can now be better understood. According to some scholars, he distinguishes in a general way between the lesser mystery of knowing God through creation and the greater mystery in which man experiences the vision of God himself. This distinction should be understood more specifically on the basis of the difference between Jews and other men: the chosen people received the revelation of God. Although other men share in a certain knowledge of God through creation and reason, it is only through the revelation received by the Jews that man is truly known by God.

F. The Significance of Philo

Scholars have interpreted Philo in a variety of ways. He has been seen as a great (Pharisaic) system builder and philosopher (Wolfson); as a representative of anti-normative Hellenistic Judaism, a Jewish mystery religion (Goodenough); as a representative of gnosticism (Jonas, Klein, Käsemann, etc.); or as a representative of Middle Platonism (Theiler, Früchtel, Dillon, Pearson). Since Philo combines motifs of Platonic/Pythagorean and Stoic nature, he shows obvious kinship with Middle Platonism. These Greek elements of Middle Platonic background are woven together with biblical and Jewish notions. His writings reflect the fact that different streams and traditions were present in Alexandrian Judaism. Philo's own emphasis on heavenly ascent and the complementary roles of ruler (Moses) and law-abiding person suggests that he draws on traditions from early Jewish mysticism. Furthermore, Philo and mystical Judaism share the idea of a heavenly being or angel, Israel, understood by means of a pseudo-etymology to mean "the one who sees God."

Was Philo then fundamentally Greek or Jewish? His loyalty to the Jewish institutions, the laws of Moses, the role of Israel as the priesthood of the world, and his harshness against renegades (even to the point of advocating lynching) shows that he was fundamentally a Jew. When Philo draws on Greek philosophy and various notions from pagan religions, his intention was not to compromise Jewish convictions and aims. He was such an extreme Jew that he referred all ideas and phenomena of value, also including those outside Judaism, to Moses as their origin and/or authentic formulation. Whatever good there was had its source in Scripture and thus belonged to the Jewish nation and its heritage. Consequently, being so extreme in his claims, he was on the verge of ending at the other extreme, that of being overcome by the ideas he wished to conquer. In this way, Philo's extreme form of particularism risked ending up in a universalism where Jewish distinctiveness was in danger of being lost.

Philo may have belonged to an elite group, small in number within the Jewish community of Alexandria. Nevertheless, his place is clearly within the community in such a way that he took part in debates and conflicts among different Jewish streams, and understood himself to represent traditions and interpretations of the synagogues, the Jewish schools of philosophy.

Philo reflects more firsthand knowledge of Hellenistic culture in general and Greek philosophy in particular than earlier Alexandrian Jewish writers, though direct historical lines can be drawn from Aristobulus' allegorical and philosophical exegesis and the philosophical language of the Wisdom of SolomonSolomon to Philo. Philo was literally the culmination of a literary tradition within Alexandrian Judaism: apparently, no significant works were produced after him by Alexandrian Jews.

Philo remained almost unknown in Jewish tradition until the 16th century. It was the Christian Church which preserved and adopted Philo; Byzantine anthologies even cite excerpts of Philo under the heading "of Philo the Bishop." Clement of Alexandria, Origen, and Ambrose were influenced by Philo in their allegorical exegesis and their use of such concepts as wisdom, Logos, and faith.

In modern historical research, Philo is studied as a source for Greek philosophy, as a representative of Second Temple Judaism and as a forerunner of early Christian thought. As for the latter, Philo has especially been studied to throw light on the concept of Logos in the Gospel of John, on Platonisms in the Epistle to the Hebrews, and on exegetical techniques and forms used in the New Testament. Philo's

writings reflect a variety of movements within Judaism in the time of the beginnings of Christianity, and this observation has thrown light on some of its conflicts and debates, particularly in relation to Judaism and the Hellenistic world.

PEDER BORGEN

PHILO OF BYBLOS. One of a number of learned scholars of Near Eastern origin active in the Roman empire. He was born ca. A.D. 70 and died in 160; we have no information where he lived, although Byblos and Rome are the obvious possibilities. His circle of friends centered around the ex-consul Herennius Severus, and included men such as Hermippos of Beirut, an exceedingly learned slave, who wrote *Concerning Dreams.* Philo himself was the author of several works. Worthy of particular notice is his encyclopedic compilation *Concerning Cities and the Illustrious Men Each of Them Produced.* This book was eventually abridged, and while it has not survived either whole or in abridgement, numerous citations from it can be found in the writings of Stephanus of Byzantium (who lived in the 7th century A.D.).

Philo is, however, best known for his *Phoenician History (PH).* The *PH* has not been preserved intact, and we know it only through the mediation of Eusebius of Caesarea (ca. 260–340), who quoted extensively from it in his *Praeparatio Evangelica.* The *PH* suited Eusebius's apologetic and polemical interests almost perfectly. The principal pagan competitors of Christianity in his day were mystery cults, often based on allegorizing or physiologizing interpretations of myths. Philo opposed mystery cults as humbuggery, and strongly rejected allegorizing and physiologizing interpretations. Philo argued for a Euhemeristic interpretation of mythology, maintaining that the gods of myth were either immortal forces of nature or humans deified for their contribution to culture by a grateful posterity. As such, Philo provided Eusebius with a pagan witness whom he could employ to attack pagan opponents.

The excerpts preserved by Eusebius do not read as a smooth whole. Transitions are abrupt, and there are rarely more than two sentences devoted to any topic; hence Philo's comments are often difficult to understand. This obscurity may explain part of the fascination Philo has held for scholars over the centuries. More substantial reasons for scholarly interest in Philo are the obvious importance of the Phoenicians for understanding the background of the biblical world, and the desire to evaluate the material preserved by Philo in the light of our growing knowledge of the ANE. Indeed, for the past century, work on Philo has usually been undertaken under the influence of the latest discoveries from the Near East: there was a new impetus to read Philo at the time of the discovery of ancient Babylonian literature, and a similar wave in the aftermath of the publication of Ugaritic and Hittite myths. The latest scholarly tendency, however, has been to emphasize that Philo was an author in the Hellenistic-Roman world, and to balance interpretations of his work in ANE terms against those that employ the culture Philo himself knew as a frame of reference.

Philo's work has a strong polemical quality. It is Euhemeristic to the core, and it agrees on a relatively large number of small points with the little we know of the writings of other Euhemeristic historians. In this sense, the *PH* conforms to the canons of Euhemeristic historiography. As noted above, Philo opposed mystery cults which were growing popular in his day (cf. Lucian of Samosata) and violently attacked allegorizers and physiologizers (Plutarch may be a convenient example of the sort of opponent Philo had in mind). The antipathy between allegorizers and physiologizers on the one hand, and Euhemerists on the other, was mutual: thus Plutarch presented a "critical" attack against Euhemerus, while Philo argued at length against the interpretations of myths proposed by allegorizers and physiologizers.

Philo was also a strong Phoenician nationalist. He writes as if everything important happened first in Phoenicia, or was discovered by a Phoenician. He displayed a deep dislike of Greeks typical of learned Near Easterners of his day. For all these reasons, we should not expect objectivity of the *PH.* Philo was not a dispassionate historian, but an author determined to make a case with important contemporary implications, concerning which he felt intensely. All of this, as noted above, made Philo especially useful to Eusebius, but should be a constant source of caution in reading and evaluating the fragments of the *PH*.

The surviving extracts of the *PH* fall into a number of distinct sections. Eusebius has preserved part of Philo's introduction in which he discussed the purpose of the work and described Sanchuniathon, his supposed source, whom he claimed to be translating from Phoenician to Greek. Sanchuniathon was also known to Porphyry (232/3–ca. 305), and Eusebius cited a passage from the latter's polemic against the Christians in which Sanchuniathon was described and praised. According to both Porphyry and Philo, Sanchuniathon was a learned man of great stature and antiquity, antedating Hesiod, and either prior to or contemporary with the Trojan War.

Eusebius then presented passages from Philo's supposed translation of Sanchuniathon, beginning with a verse cosmogony, and continuing with a section on discoverers of essentials of civilized life. The latter are regularly gods, who have been turned into mortals by Philo (in accordance with his Euhemeristic beliefs) and whose area of divine function has become a discovery or invention. Philo continued with a long section on Kronos and his wars, describing the division of the world by the victorious party at the end of the battles. One of the major events of the conflict between Kronos and Ouranos is the castration of the latter by the former. Philo concluded this discussion with harsh criticism of the Greeks, foremost of whom was Hesiod, who misappropriated this Phoenician material and fashioned theogonies, gigantomachies, and castration stories of their own. Philo commented that we have become so accustomed to these distortions of the truth that it has become difficult to give up the incorrect versions and to recognize the authentic story—as he has presented it from Sanchuniathon—for its true worth.

Eusebius cited two additional sections from Philo's work, one explaining the origins of child sacrifice, and another on the nature of snakes. Snakes played an important role in some mystery cults (such as the rites created by Alexander of Abonuteichos, described by Lucian). Philo is therefore anxious to explain the true nature of snakes lest we be misled and accept the interpretation of them offered in the mysteries he hated.

Philo's work raises a number of questions around which scholarly interest has focused. What sources did Philo use in composing the *PH*? Did he have any very ancient document(s) from which he worked directly? What is the true relationship between Philo and Hesiod? Finally, was Sanchuniathon a historical personality, a legendary hero, a religious authority, or a fiction created by Philo or some prior forger?

As noted above, there have been several cycles in the answers proposed to these questions. Philo's claims are now, however, regarded with considerable skepticism. His cosmogony was written in the verse technique typical of Ugaritic, Phoenician and biblical poetry, but the contents stress a scientific explanation of meteorological phenomena difficult to conceive before the rise of rationalism in 6th-century Greece. In the Wars of Kronos, Philo tells a Byblian version of the common Mediterranean myth of "Kingship in Heaven," also known in Babylonian, Hittite, and Greek forms, but Philo knows these Byblian myths in their classical or Hellenistic versions; they have been touched up to look more like Hesiod. Moreover, Philo has exploited the similarities with Hesiod for his polemical purposes: to attack the Greeks as being inferior to the great ancient cultures of the Near East.

Philo does present Phoenician traditions—this is indisputable—but he has not discovered and somehow preserved unaltered texts from hoary antiquity. Rather he has retold contemporary versions of Phoenician myths, modified them to suit his pet theories, and presented the results as the true ancient versions. We therefore do not read relatively unaltered Bronze Age or early Iron Age sources in Philo.

As for Sanchuniathon, his name is a good Phoenician one, attested in inscriptions. He may have been a venerable figure of Phoenician religion, and Philo's sources must have been connected in some way with this outstanding authority. Unfortunately, the Sanchuniathon strata in Philo's work are beyond recovery. That material was part of a living tradition and was further modified by Philo as part of his reworking the

stories to fit his personal hypotheses. What little we are told of Sanchuniathon is of dubious value: he supposedly dedicated his book to Abibalos, king of Beirut; but book dedication did not become widespread until the Hellenistic period. The early date claimed for him is typical of the desire of barbarian historians to make their authorities equal in age with or older than Homer. Sanchuniathon therefore remains a shadowy figure of antiquity.

The *PH* and the Bible illuminate each other on a large number of points. For example, the verse cosmogony has the seeming anomaly of having the first stages of animal life preceding the blazing forth of the sun and moon. This seems so contrary to the logic of our expectations that one scholar proposed reorganizing the text of the *PH* so that animal life would commence after the sun and moon shone forth. Such drastic measures are, however, unnecessary, particularly in the light of Genesis 1, where the heavenly luminaries are created after the plants—another sequence jarring to the modern mind.

Philo's entire section on discoverers is reminiscent of Gen 4:19–22, where the Bible mentions several people who were the first to invent crafts or skills. Philo tells of mortal giants who gave their names to mountains which they conquered: to the Kassios, Lebanon, Anti-lebanon and Brathys (?). Their descendants were called after their mothers, because the women of the time had sexual relations with anyone upon whom they chanced. Philo is clearly writing about the Baals of these mountains, of whom the Baals of Kassios, Lebanon, and Anti-lebanon are known from other sources. The enigmatic Brathys may be an error for Itaburion, the usual name for Mt. Tabor in Greek. If this suggestion is correct, it would fit well with biblical evidence for the worship of Baal Tabor (Hos 5:1, Deut 33:18–19).

The entire section on these giants and their mountains is connected with the enigmatic passage in Gen 6:1–4. The Bible tells a fragment of myth about the union of divine beings or minor gods with human women. This story is further expanded in Jewish legend. Two hundred angels, under the leadership of Shemhazai, were attracted by the lewd practices, beauty, and sensual charm of human women. They descended on Mt. Hermon (= Anti-lebanon) and swore to cooperate in choosing wives. Giants resulted from these unions and the fallen angels then taught mankind all sorts of evil practices, from weapons and cosmetics to exorcism, magic, and divination. The version in Jewish legend is a relic of Canaanite myth: Danel (the hero of Ugaritic epic) appears among the fallen angels, and one of the skills humans learn is that of dyeing cloth—a reference to the chief industry of Phoenicia. Both the similarities and differences between Philo's story and the Jewish legend are clear. The original story, if there ever was one common source behind Philo and Jewish legend, would have spoken of gods or heroes. Philo has turned these into mortals, while Jewish legend would have transformed them into angels.

Deuteronomy 32:8 contains an account of the division of the world by *ʿelyôn*, the "Most High" one. As the text now stands, this *ʿelyôn* is the God of the Bible, who as the senior deity assigning shares could have taken any nation for his own, but chose to take Israel. In earlier versions of the text things might not have been so clear, as is suggested by fragments of Deuteronomy found at Qumran, in which the God of the Bible might have had a subsidiary role, with the main part assigned to El. On this understanding, Philo's account of the division of the world by the victorious El-Kronos is especially important.

In summary, there was extensive contact between the world of the Bible and the Phoenicians. Philo's sources go back to good Phoenician tradition, even if that material has changed with time and been modified by Philo to suit his polemical purposes. It is therefore appropriate that a number of points of contact between the *PH* and the Bible remain visible.

ALBERT I. BAUMGARTEN

PHILO, PSEUDO-. Pseudo-Philo's retelling of the biblical story from Adam to David is known by its Latin title *Liber Antiquitatum Biblicarum (L.A.B.)* and its English equivalent *Biblical Antiquities.* But the title is late, and the text itself makes no claim to have been written by Philo of Alexandria. The Latin title appeared first in the 1552 printing of the work, though one 14th-century manuscript bore the heading

Liber Antiquitatum. The term "Antiquities" suggests that some analogy was perceived with Josephus' *Antiquities,* and thus the work was attributed to Philo of Alexandria as the other great Jewish writer of antiquity known to Christian scribes. Manuscripts of *Biblical Antiquities* were transmitted along with the Latin translations of Philo's writings. Nevertheless, the nonallegorical approach to the biblical text, the likelihood that it was composed in Hebrew in Palestine, and the conflicts with Philo's genuine works indicate that the ascription to Philo has no historical foundation.

Biblical Antiquities exists in 18 complete and three fragmentary Latin manuscripts (Harrington and Cazeaux 1976: 15–57), all of German or Austrian origin, from between the 11th and 15th centuries. All break off abruptly in the midst of Saul's speech in chap. 65 and have gaps in content between 36:4 and 37:2 and between 37:5 and 38:1. The most important Latin manuscripts are Fulda-Cassel Theol. 4^{o}, 3 (11th cent.) and Phillipps 461 (12th cent.). The Hebrew sections of *L.A.B.* in the medieval *Chronicles of Jerahmeel* appear to have been translated from Latin (Harrington 1974).

Pseudo-Philo retold the biblical story from Adam to David by selecting material from Genesis (1:1–8:14), Exodus (9:1–13:2), Leviticus (13:3–10), Numbers (14:1–18:14), Deuteronomy (19:1–15), Joshua (20:1–24:6), Judges (25:1–48:5), and 1 and 2 Samuel (49:1–65:5). Some biblical material was greatly expanded (especially the Kenaz story in chaps. 25–28 [see Judg 3:9, 11]), and other sections were severely abbreviated or bypassed almost completely (e.g., Genesis 1–3, Leviticus). Particular attention is given to the leaders of ancient Israel: Abraham, Moses, Joshua, Kenaz, Zebul, Deborah, Ehud, Gideon, Abimelech, Jair, Jephthah, Abdon and Elon, Samson, Micah, Phinehas, Samuel, Saul, and David (Nickelsburg 1980: 49–65).

While incorporating various literary forms (genealogies, dream visions, apocalypses, prayers, speeches, poems, etc.), *L.A.B.* is best described as an example of the "rewritten Bible" (Vermes 1961) comparable to *Jubilees, Genesis Apocryphon*, and Josephus' *Antiquities.* It treats the biblical texts more freely than the Targums and is not as directly concerned with the exposition of the biblical texts as the midrashim. It may reflect popular biblical interpretation as practiced in the ancient Palestinian synagogues.

Even though Latin is the language of the most important extant manuscripts, several passages are best explained by assuming a Greek stage in the transmission of the work and by supposing mistranslation from Hebrew to Greek (Harrington 1970). Therefore it seems likely that *L.A.B.* was composed in Hebrew, translated into Greek, translated into Latin, and partly retroverted into Hebrew *(Chronicles of Jerahmeel).*

A Palestinian origin is indicated by its original composition in Hebrew, use of a Palestinian biblical text, knowledge of Palestinian geography, literary parallels to *4 Ezra* and *2 Baruch*, and theological interests. A date at the turn of the era is suggested by the silence about the destruction of the Second Temple, the assumption that worship continued at the Jerusalem Temple, and the use of a Hebrew biblical text-type that was suppressed around 100 C.E. (Perrot and Bogaert 1976: 22–74). Those who argue for a late 1st- or early 2d-century C.E. dating (James 1917) appeal to the parallels with *4 Ezra* and *2 Baruch* (both post-70 C.E.), the great interest in Jewish leaders, and the possible allusion to the fall of the Second Temple in 19:7.

Attempts at relating *L.A.B.* to specific Jewish groups (e.g., Essenes, Pharisees, Samaritans, anti-Samaritans) are not convincing. Rather the work appears to reflect the general spirit of the Palestinian synagogues. It illustrates how Jews read the Bible, tells us about the popular theology of the day, and contains some legends and motifs not found elsewhere in ancient Jewish literature. It may have been intended as a complement to the canonical books of Chronicles, though its theological interests were different.

Biblical Antiquities is the earliest witness to some popular Jewish motifs (Ginzberg 1909–38; Feldman 1971): Abraham's escape from Ur (6), Israel's being spared from the Flood (7:4), Job as Dinah's husband (8:8), Moses' being born circumcised (9:13), etc. It also contains some unique motifs and material: e.g., the connection between the tower of Babel and casting Abraham into the fire (6:3–18), the long section on Kenaz (25–28), and the idols of Micah (44:5). The focus of Pseudo-Philo's eschatological teaching was what happens after death (33:2–5; 44:10) and what will happen during and after God's eschatological intervention. He looked on idolatry and intermarriage of Jews with gentiles as especially reprehensible

offenses against God's covenant with Israel. Other special interests included prophecy, the "holy spirit," good and bad leaders, angels, and the Deuteronomic interpretation of history (sin, punishment, salvation).

L.A.B. provides important evidence about the text and interpretation of the Hebrew Bible from Genesis to 1 and 2 Samuel around the turn of the era. It also contains references to Psalms, Isaiah, and Jeremiah. It shares many apocalyptic motifs with *4 Ezra* and *2 Baruch*, though it lacks their four-empire scheme of history and any interest in the messiah. In addition to some verbal parallels with the NT, its stories about the birth of Moses (9:9–16) and Samson (42:1–10) share features with the Matthean and Lukan infancy narratives. Its treatment of Abraham's sacrifice of Isaac according to Genesis 22 (see 18:5; 32:2–4; 40:2) may have influenced early Christian ideas about Jesus' sacrificial death.

Medieval Christian writers (Rhabanus Maurus, Rupert of Deutz, Peter Comestor) referred to the work. The earliest explicit Jewish reference was by Azariah dei Rossi in the 16th century. Leopold Cohn's 1898 article revived modern scholarly interest in the document, but its omission from important modern collections of Jewish writings has prevented it from being taken as seriously as it deserves. The Latin text was edited by Kisch (1949) and Harrington (1976). It has been translated into English by James (1917) and Harrington (*OTP* 2: 297–377), German by Riessler (1966) and Dietzfelbinger (1975), Modern Hebrew by Hartom (1967), French by Cazeaux (1976), and Spanish by de la Fuente Adánez (1984).

DANIEL J. HARRINGTON

PHILOLOGUS (PERSON) [Gk *Philologos* (Φιλολογος)]. A Roman Christian who received greetings from Paul in Rom 16:15. He was probably a gentile Christian. See NEREUS. That Philologus was the husband (or brother) of Julia, being coupled with her in v 15, is only a possibility. According to the literary sources and to more than 37,000 Roman inscriptions, the name "Philologus" occurs only twenty-three times (whereas "Julia" appears more than 1,400 times; Lampe *StadtrChr*, 139–41). Since the name was not very common in the city, it probably indicates that Philologus had immigrated there.

PETER LAMPE

PHILOMETOR (PERSON) [Gk *Philomētoros* (Φιλομητορος)]. The coronation of Philometor as king of Egypt and his antipathy for the Seleucid king Antiochus IV are mentioned in 2 Macc 4:21. Philometor was Ptolemy VI Philometor, son of Ptolemy V Epiphanes and Cleopatra, daughter of Antiochus III. Philometor was born ca. 184 B.C.E. and ruled from ca. 180–145. Philometor ruled under the regency of his mother until her death in 176 B.C.E. during which time relations between Ptolemaic Egypt and Seleucid Syria were cordial. Upon Cleopatra's death in 176 B.C.E., the regency was assumed by Eulaios and Lenaios, who were opposed to Seleucid control of Coele-Syria. The deterioration of relations between

Egypt and Syria, due to the regents, and not Philometor's personal opposition, led to Antiochus' hostile actions in Coele-Syria described in 2 Macc 4:21–22. The reference in 2 Macc 4:21 to Philometor's "coronation" (RSV; Gk *prōtoklēsia*) may be erroneous. *Prōtoklēsia* is found in Codex Alexandrinus but *prōtoklisia*, "first reclining" from the Gk roots for "first" (*prōt-*) and "recline" (*klin-*), appears in numerous other authorities. As *ēta (ē)* and *ipsilon (i)* were pronounced alike by the time of Codex Alexandrinus (Goldstein *II Maccabees* AB, 234), scribal error is possible. This "first reclining" or taking the place of honor at a banquet would possibly indicate a coming of age ceremony for Ptolemy VI Philometor rather than a coronation (Otto 1934: 16 and Robert 1969: 13). Polybius (xxvii 12.8–13.4) mentions Ptolemy Philometor's *anaklētēria* which is described as a coming of age ceremony. However, although the practice was known in Hellenistic Egypt, no such royal ceremony is known from the Ptolemaic period.

MICHAEL E. HARDWICK

PHILOSOPHY [Gk *philosophia* (φιλοσοφια)]. Referring most obviously to the classical Greek schools of thought and their investigation of nature and truth, "philosophy" could denote the study and scientific treatment of, or speculation about, diverse subjects. Besides the intellectual disciplines, it could signify prescribed training or, even more broadly, a way of life. Thus, Diodorus of Sicily (1st century B.C.E.) calls the priestly discipline and the study of astrology and divination undertaken by the Chaldeans of Babylon "philosophy" (2.29.1–4). (See *TDNT* 9:172–88.)

In the LXX, "philosophy" occurs only in *4 Maccabees*, where it has a broad meaning. Countering the charge that the religion *(thrēskeia)* of the Jews is foolish philosophy (5:7–11), the author defends obedience to the Law as sound philosophy because it enables one to achieve the cardinal Greek philosophical virtues (5:22–24). Philo, too, characterizes Judaism as a philosophy. In a discussion of Sabbath, he notes that the day of rest prescribed by Jewish law allows for the pursuit of wisdom and the study of the ancestral philosophy (*Mos.* 2.39. §211, 216). Josephus uses the term more narrowly, applying it to each of the religious parties in pre-70 C.E. Jewish Palestine; the Pharisees, Sadducees, and Essenes constitute the philosophies of the Jews (*Ant* 18.1.2. §11; cf. *JW* 2.8.2 §119).

"Philosophy" appears only once in the NT (Col 2:8). In that context, the writer combats a threat to the Christian community at Colossae, disparaging the threat there as empty deceit and philosophy, specifically, a philosophy according to human tradition and the elements of the world, and not according to Christ. The label "philosophy," by itself, says nothing certain about what the letter writer opposes. The term's lack of any pejorative connotation may indicate that "philosophy" is the self-designation of a group at Colossae, but the semantic breadth of the word precludes any further deductions. (See Lohse *Colossians* Hermeneia, 127–31.)

Since contemporary Jewish writers describe Judaism as a philosophy, and both dietary regulations and Sabbath observances belong to the practices of the Colossian philosophers (2:16), the Colossian philosophy may have been a form of Judaism. On the other hand, philosophical schools of the period, particularly Middle Platonism and Neo-Pythagoreanism, exhibited a markedly religious hue. The letter writer may have applied the term "philosophy" to a brand of pagan philosophy in Colossae that had adopted certain Jewish practices.

RICHARD E. DEMARIS

PHINEHAS (PERSON) [Heb *pînĕḥās* (פִּינְחָס)]. Var. PHINEAS. The name most likely derives from Eg *nḥsj* which meant "southerner" (the preformative *p3* adds the definite article "the"). "The southerner" was a term which referred to those people from south of ancient Egypt, such as the Nubians, and hence it

implied those of "dark skin." The association of Phinehas #2 with Hophni, another name of Egyptian origin, supports the contention of the Egyptian origin of Phinehas.

1. Phinehas was the son of Eleazar and Putiel, the grandson of Aaron and a descendant of Levi (Exod 6:25; Num 25:7; Judg 20:28; 1 Chr 5:30—Eng6:4; 1 Chr 6:35—Eng6:50; Ezra 7:5; *4 Ezra* 1:2b; *Ps-Philo* 28:1, 3). He was a priest (Num 25:7) and, as demonstrated by several passages, he was known for his strong and sometimes violent defense of the Israelite worship of Yahweh.

When the Israelites began to worship Baal-peor instead of Yahweh, Phinehas stood against them (Num 25:1–13; see also Ps 106:28–31; Sir 45:23–24; 1 Macc 2:26, 54; *4 Macc.* 18:12; *Hel. Syn. Pr.* 8:4–5, where Phinehas' actions are seen as exemplary). In particular, when an Israelite brought a Midianite woman into his family, Phinehas slew the man and woman with a spear (Num 25:6–8). Phinehas' action brought forth four reactions by Yahweh: (1) Yahweh's anger toward the people was tempered and, as a result, only 24,000 people died by a plague (Num 25:8–9); (2) Yahweh praised Phinehas for his action in abating the wrath of God against the people (Num 25:11); (3) Yahweh rewarded Phinehas with a "covenant of peace" *(bĕrît šālôm)* (Num 25:12); and (4) Yahweh conferred on Phinehas and his descendants the "covenant of priesthood forever" *(bĕrît kĕhunnat ʿôlām)* (Num 25:13; 1 Macc 2:54). This last point refers to the fact that this passage is one in which the Israelite priesthood is established. Another such text is Exod 32:25–29, where the Levites "ordain" themselves to the service Yahweh as a result of their violent killing of the unfaithful; it is another account where militaristic actions lead to priesthood. A third passage is Exod 28:1, where Aaron and his descendants become priests; however in this instance it is not as a consequence of any violent action on their part (see also Num 1:47–54; 8:5–26; Deut 33:8–11).

A second incident where Phinehas was involved with the defense of the worship of Yahweh was in the holy war against Midian (Num 31:1–54). Phinehas, as priest, accompanied 12,000 people into battle at Peor (Num 31:6). The battle concluded with the slaying of all males and females, except the young women who were virgins (Num 31:17–18), and a long instruction, in part by Phinehas' father, Eleazar, on the proper handling of the spoils of war (Num 31:21–54).

In Joshua 22, when the Reubenites, Gadites, and the half-tribe of Manasseh returned to the Transjordanian region, they built an altar near the Jordan River (Josh 22:10). The priest Phinehas and 10 leaders of Israel took offense at this construction, claiming it indicated a turning away from Yahweh (Josh 22:11–20). The situation was resolved only when the Reubenites, Gadites, and half-tribe of Manasseh asserted that the altar was an "altar of witness" (Josh 22:26–27) to remind their children of their relationship with the 10 tribes of Israel, not an altar of sacrifice (Josh 22:28). This story not only reflects the defense of the worship of Yahweh, but it also introduces and defends the concept of a single central sanctuary, as is advocated in Deuteronomy 12.

A fourth episode which indicates Phinehas' defense of Yahweh is found in Judges 20. Here, the tribes of Israel are seeking revenge upon the Benjaminites in retaliation for their atrocities against the concubine of a Levite (Joshua 19). Just before the battle at Gibeah, Phinehas stood *(ʿmd)* before the ark of the covenant, consulting Yahweh and seeking his blessing prior to commencing the battle. Phinehas' role is again to defend the mainline Israelite tradition against those who would violate or turn away from that tradition.

Finally, Phinehas appears in the midst of a genealogy in 1 Chronicles 9. In this late genealogy, various priests, Levites, and temple servants are mentioned, and in the list of Levites who were gatekeepers at the temple, Phinehas, the son of Eleazar, is named as the one who rules over these gatekeepers (1 Chr 9:20). This relationship indicates the tension and rivalry between the Aaronite priesthood represented by Phinehas and the Levitical priesthood represented by the gatekeepers. Furthermore, these gatekeepers act as guards for the temple and temple treasury (1 Chr 9:26–27) which again reflects the military nature of the priesthood.

Three factors of significance can be derived from examining the activities of this Phinehas. Yahweh bestows the priesthood on Phinehas and his descendants, and all priestly factions (Aaronites, Levites, and Zadokites) must somehow be related to Phinehas. Secondly, Phinehas is a priest of Yahweh whose

zealous defense of Yahweh becomes a model for subsequent generations. Finally, Phinehas' defense of Yahweh, like that of other priests and priestly groups, clearly takes on militaristic characteristics.

The descendants of Phinehas are prominently mentioned among those who returned from Exile at the time of Zerubbabel and Ezra (Ezra 8:2; 1 Esdr 5:5). In 1 Esdr 8:29, the RSV form is Phineas (Gk *Phinees*), though the same Greek spelling appears throughout the LXX for Phinehas, including the parallel passage in Ezra 8:2.

2. Phinehas was the brother of Hophni, the son of Eli the priest (1 Samuel 1). These priestly brothers began as good priests, but they quickly turned into bad priests who abused their sacred trust (1 Sam 2:12–17). This deterioration is in sharp contrast to Samuel who was portrayed as a model priest. These incidents in 1 Samuel 1–4 thus provide reason for the later elimination of the Elide priesthood (see 1 Kgs 2:27). The story also asserts that ritual cleanliness was essential for participation in holy war. See HOPHNI for a more detailed discussion of the brothers Hophni and Phinehas.

At the end of 1 Samuel 4, Phinehas' wife had a child (1 Sam 4:19). She named the child Ichabod ("no glory") since Eli, Hophni, and her husband Phinehas were dead and the ark of the covenant was in the hands of the Philistines (1 Sam 4:21–22). She died almost immediately after naming her son (1 Sam 4:20).

According to 1 Sam 14:3, Phinehas had a brother, Ahitub, whose son was Ahijah the priest. Abiathar, the priest Solomon banished when he assumed the throne, is apparently the son of Ahimelech, who was the brother of Ahijah (1 Sam 22:20). Thus, the genealogical connection between Phinehas and Abiathar is established, the guilt of Phinehas and Hophni was visited upon Abiathar, and the line of Eli was at an end (1 Kgs 2:27).

3. Phinehas was the father of Eleazar (Ezra 8:33; 1 Esdr 8:63). Eleazar was one of the people, along with Meremoth the priest and Jozabad and Noadiah the Levites, who received the temple vessels and gold when they were returned from their captivity in Babylon. See ELEAZAR #5.

JOHN R. SPENCER

PHLEGON (PERSON) [Gk *Phlegōn* (Φλεγων)]. A Roman Christian who received greetings from Paul in Rom 16:14. See PATROBAS. He was probably a gentile Christian. See NEREUS. According to the epigraphical and literary sources from Rome, the name "Phlegon" occurs only nine times (Lampe *StadtrChr*, 139–41). Because the name was not common there, it probably indicates the Phlegon had immigrated to Rome. It has been proposed that he was a (freed) slave, but the inscriptions do not support the argument that the name was one commonly held by slaves (see Lampe *StadtrChr*, 150, 152–53; three out of seven inscriptions show slaves or freedman).

PETER LAMPE

PHOCYLIDES, PSEUDO-. A gnomic poet who lived in Milete in the 6th century B.C.E. Only a very few lines of his poetry are still extant, but ancient testimonies make abundantly clear that throughout antiquity he was regarded as a great authority in matters of ethics and correct behavior in daily life (van der Horst 1978a: 59–63). Under his mask a Jewish Wisdom poet, who probably lived in the second half of the 1st century B.C.E., or in the first half of the 1st century C.E., wrote a gnomic poem of 230 hexameters in the old Ionic dialect. It is a skillful forgery that remained unrecognized as such until the end of the 16th century. Up to that time this poem enjoyed an enormous popularity as a schoolbook; hence it is extant in over 150 mss (Derron 1980). From the early 17th to the middle of the 19th centuries it was often regarded as a Christian forgery because of its biblical resonances, until Jacob Bernays demonstrated its undeniably Jewish origin (Bernays 1856). In recent times there have been new critical editions (Young 1971; Derron 1986), translations and commentaries (van der Horst 1978a; Walter 1983), and several important studies on the poem (e.g., Küchler 1979 and Niebuhr 1987; further details in van der Horst 1988).

One of the striking characteristics of the poem is that on the one hand it draws heavily upon the Pentateuch (esp. Leviticus 18–20 and the Decalogue) and on the other hand it consistently avoids references to specifically Jewish precepts like sabbath observance, circumcision, and dietary rules. All cultic precepts are passed over in silence, only "moral" precepts for conduct in daily life are presented,

with a very heavy emphasis on sexual matters and on avarice, an emphasis to be found in other Jewish writings as well. Much of his material is also found in the "summaries of the Law" as presented in Philo's *Hypothetica* (in Eus. *P.E.* 8: 7, 1–9) and in Jos. *AgAp* 2 §190–219. They draw upon a common source in which the essentials of the Torah are summarized in the form of a short catechism. These catechism-like summaries (more examples in Neibuhr 1987) do not give any or only a minimum of cultic rules, but all of them emphasize strict sexual ethics, the viciousness of greed, the duty to care for the poor and the needy, honesty, modesty, and moderation. Mixed with these biblical and early Jewish rules one finds, both in *Ps.-Phoc.* and in Philo and Josephus, precepts of originally pagan Greek provenance, which are also presented as God's Law. Although not deriving from the Torah, this material is presented as God's commandments since it can be derived from the Torah and is in essential accordance with its intentions. Hence there are a great many lines in *Ps.-Phoc.* that have only pagan parallels (van der Horst 1978a: 105–262; Derron 1986: 35–54).

A much debated question is that of the author's purpose. Why did a Jew write a summary of the Torah, mixed with non-biblical ethical rules, under a heathen pseudonym? It has often been thought that he had a pagan audience in mind and wanted (*not* to make converts to Judaism but) to bring pagans to a kind of "ethical monotheism" (Crouch 1972: 89, 97); one scholar even asserted that this author cannot have been a Jew but must have been a "sympathizer" or "God-fearer" who wished to win over others to his way of life on the fringes of the synagogue (Rossbroich 1910). But there is a growing consensus now that the author's intended audience was Jewish and that what he hoped to achieve was to make clear to Hellenized Jews who were fascinated by the dominant Greek culture and were in danger of dropping Jewish values: (1) that biblical and Greek ethics are not incompatible; (2) that even the famous pagan Wisdom poet Phocylides promulgated biblical ethics; and (3) that their attachment to Judaism should be reinforced instead of slackened because it is perfectly possible to reconcile the Jewish religion with the surrounding Greco-Roman culture (Goodman *HJP²* 3: 687–92; van der Horst 1988).

The poem shares the characteristics of both Greek gnomologies and Jewish Wisdom literature and is as such a typical example of cross-cultural didactic poetry. In spite of its use of the old Ionic dialect, its origin in the late Hellenistic or early Imperial period is betrayed by its vocabulary, meter, and syntax (van der Horst 1978a: 55–58; Derron 1986: LXVI–LXXXII). Its place of origin is unknown but Alexandria is a good possibility since v 102 prohibits dissection of the deceased which was practiced in Alexandrian medical circles; but other possibilities cannot be excluded. The poem is an important source for our knowledge of popular morality in diaspora Judaism and as such it sheds light on several parenetic passages in the NT (van der Horst 1978b). See also *OTP* 2: 565–82.

PIETER W. VAN DER HORST

PHOEBE (PERSON) [Gk *Phoibē* (Φοιβη)]. A woman from Cenchreae (near Corinth) commended by Paul in Rom 16:1–2 to the recipients of that letter, evidently because she was delivering it to them. Paul's reference to Phoebe uses three titles to describe her: *adelphē*, "sister"; *diakonos*, "deacon"; and *prostatis*, "patroness." The first term indicates that she was a Christian; the second and third denote various roles she had as a believer and each has inspired much discussion.

While some translations such as the RSV render *diakonos* as "deaconess," this is not an appropriate translation of the Greek. From the term Paul uses, Phoebe must be called a "deacon." For, to say Phoebe was a deaconess implies that Paul used the term *diakonissa*, which in fact is not known to have been used in 1st century C.E. Greek. Furthermore, it also suggests, in view of later deaconess movements, that Phoebe's role was subordinate to male deacons or that it primarily involved ministry to other women. But Paul's description of her implies no such restrictions. In his eyes she was a deacon in the same sense as he applied the term to himself (e.g., 1 Cor 3:5; 2 Cor 3:6; 6:4; 11:23) and to various co-workers (e.g., Apollos in 1 Cor 3:5; Timothy in 1 Thess 3:2). Since in these texts Paul portrayed himself and his co-workers as missionaries who preached and ministered within churches, the same role must be attributed to Phoebe. Apparently she was a ministerial leader in the church at Cenchreae. The possessive expression "deacon of the church" (16:1) makes it probable that, unlike Paul and some others, hers was a local function rather than an itinerant one.

In describing Phoebe as *prostatis* to himself and to many others (16:2), Paul uses the feminine form of a term not found in either the feminine or masculine elsewhere in the NT. While in wider Greek usage the masculine *prostatēs* definitely has the technical sense of a legal patron, it has been argued by Käsemann, for example, that in Phoebe's case the term "cannot in the context have the juridical sense of the masculine form, i.e., the leader or representative of fellowship," since women could not take on legal functions (1980: 411). Rather, in this scholar's view, "the idea is that of the personal care which Paul and others have received" at Phoebe's hands (1980: 411). Schüssler Fiorenza has assessed this interpretation as "an androcentric model of historical reconstruction [which] cannot imagine or conceptualize that women such as Phoebe could have had leadership equal to and sometimes even superior to men in early Christian beginnings" (1986: 425). Also, Jewett has argued that recently published data indicates that women actually did function in many instances in a legal role as a *prostatis* (1988: 149).

Paul's statement that Phoebe was a *prostatis*, i.e., patroness, to many as well as to himself suggests she was prosperous and thus assumably had a high social standing. Probably Phoebe's house was large enough to accommodate the Cenchreaen Christian gatherings. She would have been not only hostess but also a leader in her role as deacon. In Jewett's judgment, with respect to Phoebe as such a key member of the church of Cenchreae, specifically as benefactress, Paul would have had a "relatively subordinate social position as her client" (1988: 150).

Paul's commendation of Phoebe asks the Romans to "receive her in the Lord as befits the saints, and help her in whatever she may require from you" (16:2). This has invited some speculation concerning the purpose of Phoebe's trip to Rome (or Ephesus, according to those who defend that city as the destination of Romans 16). Several commentators have thought that perhaps business or family matters occasioned her travel, and thus she could also conveniently deliver Paul's letter. Recently Jewett has advanced the provocative theory that Phoebe actually went to Rome to persuade the church there to support Paul's planned evangelization of Spain (cf. Rom 15:24, 28). In his judgment Phoebe "had agreed to cooperate with Paul as the patroness [*prostatis*] of the Spanish mission" (1988: 151). A problem with the theory, however, is that when Paul refers to his Spanish plans and his desired support from the Roman church in Rom 15:24, he does not immediately mention Phoebe as one would expect were she such an integral link in his plans.

FLORENCE MORGAN GILLMAN

PHOENICIA, HISTORY OF. Phoenicia was the Greek name for the Syrian littoral north of Palestine. The name meant "dark red" and was applied first to the people and region renowned for dyes of this color, and then to some of the natural products that became associated with them in international trade. Phoenicia was neither a country nor a nation but a conglomerate of city-states that was distinguished from adjacent areas by its habitual outreach into the Mediterranean world and by its preferred dealings with Indo-Europeans and Greeks. Its history consists in the contribution of these individual cities and their dominions to the civilization and gradual maturation of the Mediterranean world.

A. Sources

The Phoenician cities are known from their own records and from Egyptian, Greek, Assyrian, Babylonian, and Judean sources. Their own records are inscriptions and artifacts that attest their influence on art and culture, religion, politics, international trade, and commerce in the 1st millennium B.C. The main Egyptian sources are the Amarna letters and the mid-11th-century story of Wen-Amon. The Greek sources include references in Mycenaean texts but begin coherently with Homer and continue through Herodotus and later historians and in scattered epigraphic materials. The Assyrian and Babylonian sources are the intermittent records of subjugation and conquest in the annals and chronicles of the kings. The Judean sources include some 7th-century geographical references, a few inscriptions, a 6th-century encomium of Phoenician economic and cultural superiority, and some contemporary allusions to the grandeur of the past and to the gradual deterioration of Israelite-Phoenician relations.

1. Judean. The earliest biblical reference to the Phoenicians includes them in the world of the Greeks. In the 7th-century geography composed by P the Kittim (Gen 10:4) are listed as descendants of Japheth, children of Ionia, and brothers of Cyprus, Tarshish, and Rhodes (Westermann *Genesis* BKAT, 673–81). But they were, in fact, the Phoenician inhabitants of Kition in Cyprus, a city founded in Mycenaean times, resettled by the Phoenicians early in the 1st millennium and continuing as the center of Phoenician expansion in the Mediterranean until the 4th century B.C. (Karageorghis 1976). Jeremiah, later in the 7th century, still thought of the Kittim as inhabitants of the far W islands (Jer 2:10; 31:10). In early 6th-century letters from Arad (AI) they are mentioned as recipients of rations and seem to have been agents or mercenaries stationed in S Judah. Later in the 6th century Ezekiel included them in the Tyrian fleet (Ezek 27:6), the Dtr historian thought of them as pirates (Num 24:24), and 2 Isaiah described them as inhabitants of an island, trading partners with Sidon, and adventurers on the high seas (Isa 23:1, 12). Still they retained their mysterious character, and as late as Daniel and Maccabees the Kittim symbolized the power that lurked on the far shores of the Mediterranean (Dan 11:30; 1 Macc 1:1; 8:5).

The earliest biblical reference to particular Phoenician cities is in Ezekiel's lamentation for Tyre (Ezekiel 26–28; Zimmerli *Ezechiel* BKAT, 600–96). He describes an imagined capture and destruction of the city (Ezekiel 26), its effect on Mediterranean trade (Ezekiel 27), and its consequences for the Phoenician way of life (Ezekiel 28). The Phoenician cities are mentioned by name but are included indiscriminately with Greece, Cilicia, and Anatolia in a catalogue of the nations of the world.

Tyre is described as a fortified island city with mainland dominions and an interest in the overland trade routes (Ezek 26:1–6). The supposed destruction of the city by Nebuchadnezzar (Ezek 26:7–14) is portrayed in detail: the invasion, the capture of its mainland possessions, construction of siege mounds

and redoubts, attacks with battering rams on the walls and towers, the taking of the city, execution of its inhabitants, demolition of its pillars, plunder and total destruction—leaving Tyre a bare rock in the water, a place for drying nets. Tyre had been settled by seafarers (Ezek 26:17 *nôšebet miyyammîm*) and the repercussions of its sudden collapse were felt throughout the Mediterranean by the people and princes who enjoyed its renown and relied on its naval power (Ezek 26:15–18). But its destruction was by divine decree and Tyre had descended into the netherworld never to rise again (Ezek 26:19–21).

The effect of Tyre's symbolic demise on Mediterranean trade and economic stability is the topic of a lament (Ezekiel 27) that compares Tyre to a ship and describes how it was built and why it foundered (Ezek 27:1–7, 31–36), where its crew was hired and how they were stunned by its loss (Ezek 27:8–11, 25–30), where it loaded cargo and where it traded (Ezek 27:12–16, 20–24), and where it got the provisions it carried on its long voyages (Ezek 27:17–19). Provisions were gathered from its overland trade with Judah, Israel, and Damascus. Its cargo came from Ionia and Rhodes, Cilicia, Anatolia, and the Arameans of N Syria, and was traded to Arabia and N Mesopotamia. But its crew was Phoenician from Sidon, Arvad, Tyre, and Byblos; its troops were mercenaries from Persia, Lydia and Libya; its garrison was recruited from Arvad and her dependencies in the North. Tyre, in this portrayal, is a great cosmopolitan city, unrestricted in its foreign relations, the convener of the Mediterranean world.

The contrast that Ezekiel draws is between Tyre, lamented by the whole world, and Jerusalem whose destruction did not matter to anyone else. For Tyre, in particular, the fall of Jerusalem was an opportunity to trade with Judah's neighbors to the E ("So Jerusalem is broken, the gate to the nations has swung open to me, I will get my fill from her destruction" [Ezek 26:2]). Ezekiel eulogized Tyre's worldliness but castigated its insouciance and its sense that life goes on by depicting Tyre as a royal city that thinks it will live forever like a god (Ezek 28:1–5) but will die, he protests, and will not return from the dead (Ezek 28:6–10; cp. 26:19–21; 32:17–32; 37:1–14).

The Dtr historian, writing in the mid-6th century, was familiar with Tyre's preeminence in the Mediterranean world but was also interested in Phoenician geography and ethnography. The Phoenicians are Canaanites who live in the E and in the W, along the coast and in the Jordan valley (Gen 10:19; Num 13:29; Deut 1:8; 11:30; Josh 11:3; Judg 18:7, 28). They are called Sidonians (Gen 10:15; Judg 3:3; 10:11–12; 18:7; 1 Kgs 5:20; 11:1, 5, 33; 16:31; 2 Kgs 23:13). Their land is N of Philistia and S of Amurru, and includes both the littoral and the possessions of Byblos in Mt. Lebanon as far as Lebo Hamat in the interior (Deut 3:9; Josh 13:2–6). Some of their towns, such as ʿAkko and ʿAkzib, belonged theoretically to Asher (Judg 1:31), other towns such as ʿArqa, Siyannu, Arvad, and Ṣumur were N of Canaan in Amurru (Gen 10:17–18; Westermann *Genesis* BKAT, 694–99) but Phoenicia was not part of the land of Canaan that had been allotted to the tribes of Israel (Gen 10:15–19; 49:13; Josh 11:8; 19:28; 2 Sam 24:6–7).

Tyre is mentioned in the Dtr history only in connection with David and Solomon and the building of the temple. This history ascribes to Solomon the wealth, wisdom, and world renown that Ezekiel admired in the king of Tyre (1 Kgs 3:1–15; 5:1–14; Ezek 28:1–5). Solomon, like Ezekiel's king of Tyre, achieved world dominion (1 Kgs 5:1; 10:23–24; Ezek 26:17–18; 27:1–36) and acquired his wealth from international trade (1 Kgs 10:14–15; Ezek 28:1–5). They both had ships of Tarshish (1 Kgs 10:22; Ezek 27:12, 25), traded with Sheba (1 Kgs 10:1–13; Ezek 27:22) and all the countries from Cilicia and Anatolia to Egypt (1 Kgs 10:26–29; Ezek 27:7, 12–16), and sent their fleets on joint expeditions to Ophir (1 Kgs 9:26–28; 10:11, 22). For both, their grandeur and the richness of their foreign relations was ultimately their downfall (1 Kgs 11:1–3; Ezek 28:1–10).

The Dtr historian portrayed Solomon as a Phoenician king, made him the contemporary and friend of Hiram of Tyre, and gave them joint responsibility for building the temple. Israel exchanged ambassadors with Tyre and made a treaty (2 Sam 5:11–12; 1 Kgs 5:15–20, 26). The Tyrians, following the pattern described by Ezekiel, bartered their materials and expertise for wheat and oil (1 Kgs 5:21–25; Ezek 27:17), summoned the Byblians to help them with the timber and masonry (1 Kgs 5:27–32; Ezek 27:9), imported all the wood and gold and precious stones needed for the construction of the temple (1 Kgs 9:26–28; 10:11–22; Ezek 27:22; Lemaire 1977: 253–55), supplied the bronze for the temple vessels and

for the two pillars that stood before it (1 Kgs 7:13–47; Ezek 26:11; 27:13), and acquired the right to settle by the coast in return for their wares (1 Kgs 9:10–14; Ezek 27:3). The magnificence of the temple matched the splendor of its founder. Together they represented the wonder of new beginnings and the innocence of primordial times. The temple was the replica of the created order, a place like sky and earth where Yahweh might dwell (1 Kgs 8:12–13, 27–30), with pillars to sustain the heavens (1 Kgs 7:15–22; cp. Ps 75:4) and a bronze sea to contain the mighty waters (1 Kgs 7:23–26). The king, like God and Adam, had the knowledge of good and evil (1 Kgs 3:9; Gen 3:22) and, like Adam, was led astray by his wives to worship other gods (1 Kgs 11:1–3; Gen 3:8–13). He was like the king of Tyre in the book of Ezekiel who was created in the garden of Eden but sinned and defiled his temples and was removed from the mountain of God (Ezek 28:11–19).

This Tyrian interlude in the Dtr history makes the beginning of the Davidic dynasty coincide with the origin of right worship in the distant and idyllic past. But it differs from the usual Dtr interpretation of Israel's dealings with the Phoenicians and Sidonians. The Dtr historian included them among the nations left in the land to test Israel (Josh 13:2–6; Judg 3:3). They were mentioned with the Philistines in a list of Israel's oppressors (Judg 10:11–12). Their women lured Solomon into the worship of Astarte (1 Kgs 11:1, 5; 2 Kgs 23:13). The worship of Ba‹al was introduced into Israel in the early 9th century when Ahab married Jezebel the daughter of ›Ittôba‹al the "king of the Sidonians" (*mlk ṣdnm*, 1 Kgs 16:31; Katzenstein 1973: 129–192). This critical attitude toward the Sidonians and Phoenicians was governed by the Dtr interpretation of Israel's distinctiveness that required its separation from all the nations of the world. But Tyre's exemption from criticism was based on the Dtr reconstruction of history that reflected 2 distinct phases in Phoenician expansion. The inveterate conflict with the Phoenicians or Sidonians corresponds to the era of Sidonian expansion that began, as the Dtr writer affirmed, at the time of Israel's struggle for independence and that lasted, as the Dtr author suggested, almost until the fall of the Northern Kingdom. The following era of Tyrian supremacy that continued to the fall of Judah and beyond inspired Ezekiel's eulogy and lament and was the paradigm of prosperity and good relations that the Dtr historian used to describe the time of Solomon.

The works of Ezekiel and the Dtr historian were known to all the later biblical authors who wrote about Tyre or Sidon. The revision of the book of Amos, for instance, includes an oracle against Tyre (Amos 1:9–10) that is copied from its context (Amos 1:6–8) but also refers to the treaty between Hiram and Solomon recorded by the Dtr historian (Amos 1:9; 1 Kgs 5:26), and to the Tyrian slave trade and commerce with Judah's neighbors to the E that were exposed and condemned by Ezekiel (Amos 1:9; Ezek 26:2; 27:13). Joel considered the same topics, criticizing Tyre and Sidon for their slave trade with the Greeks and for dedicating in their temples the silver and gold they took from trade with Judah (Joel 4:4–8). Joel was also familiar with the Dtr geography, which associated Philistia with the Phoenician cities (Joel 4:4) and put Sheba at the ends of the earth (Joel 4:8; 1 Kgs 10; cf. Gen 10:7; Ezek 27:22). Ezekiel had connected Sidon with Arvad and the principalities of the N (Ezek 27:8; 32:30) but the revision of his book made Sidon an accomplice of Tyre in the economic repression of Judah (Ezek 28:20–26). The psalms reminisce about Tyre's grandeur and great wealth (Ps 45:13) and perpetuate the idea that Tyre belonged with Philistia among Israel's enemies on the seacoast (Ps 83:8; 87:4). Second Isaiah reviewed Ezekiel's lamentation on Tyre but included Sidon as an equal partner and predicted that the wealth of the two cities eventually would belong to the people of Yahweh (Isaiah 23). The book of Jeremiah mentioned Tyre and Sidon among the traditional enemies of Judah (Jer 25:22), observed in passing that Jerusalem was a negotiant in their trade with Judah's neighbors to the E (Jer 27:3), and condemned Philistia in the S as an accessory after the fact (Jer 47:4; cp. Zeph 2:5). Zechariah was familiar with the geography of the coast, condemned Philistia for its alignment with Tyre and Sidon, and rebuked Ionia for its participation in the slave trade (Zechariah 9). But at the end of the 6th century the Chronicler interpreted Solomon's dealings with Hiram of Tyre as trade relations with both Tyre and Sidon (1 Chr 22:4; cp. 1 Kgs 5:15–26), and these relations evidently had withstood the test of time and theological tradition and persisted through the era of the restoration to the building of the second Temple (Ezra 3:7; Neh 13:16).

The Tyrians and Sidonians were famous and successful merchants living in coastal Canaan (cf. Obad 20) and the geographical designation, consequently, acquired a commercial connotation. Hosea criticized Ephraim for its deceitfulness and dealings with the powerful nations of the world (Hos 12:1–3) and then illustrated his point by comparing Ephraim to a wealthy and arrogant Canaanite merchant with no sense of allegiance (Hos 12:8–9). In the mid-6th century the book of Zephaniah blamed the leading people of Jerusalem for the downfall of the city and included among them the merchants *(ʿam kĕnaʿan)* who made their money at the Fish Gate and in the marketplace (Zeph 1:11). But at the end of the century the book of Proverbs compared a good wife to a shrewd dealer in purple garments trading with the Phoenicians (*kĕnaʿănî*, Prov 31:24). The attitude of biblical writers to the Phoenicians of Tyre and Sidon reflected diverse historical situations but was dictated by theological theory and often conflicted with an implicit admiration for the relentless adventurers who had discovered the Mediterranean world and given the East a new role in the history of civilization.

2. Phoenician. The Phoenician discovery of the Mediterranean world proceeded initially from the mainland via Cyprus to N Syria, Cilicia, Anatolia, through the Aegean to Greece and W to Italy, North Africa, and Spain (Coldstream, *PhönWes*, 261–75; Riis, *PhönWes*, 237–60). It was primarily a Sidonian venture with some collaboration or competition from Byblos. A later series of expeditions was conducted mainly by Tyre and led through Philistia and Egypt, along the Libyan coast past Malta and North Africa to the Atlantic (Breglia 1955). Both directions of discovery are marked by inscriptions and artifacts that delineate the features of Phoenician culture and civilization and confirm the evidence of the biblical sources.

The northward expansion of the Phoenician cities was a reflex of the invasion of the Philistines and the other Sea Peoples. The earliest distinctive Phoenician pottery was a derivative of Cypro-Aegean fashions of the 11th century B.C. (Culican, *PhönWes*, 45–82). The earliest E Phoenician inscriptions are from Crete and Cyprus from the end of the 11th century and later (Cross 1979a: 105; 1980: 15–17). Inscriptions of the 9th and 8th centuries from Zinjirli and Karatepe attest the continuing coexistence of Phoenicians with the Danunian Sea People (*dnnym, KAI* 24.7; 26 A I 2, 3, 4 [etc.]). A 9th-century inscription from Nora in Sardinia shows that the Phoenicians knew the Sherden Sea People *(šrdn)* and had learned from them the navigation of the W seas (Cross 1972).

From the time of their earliest voyages the Phoenicians were in immediate contact with the Greek cities and emerging Greek civilization. The Greeks borrowed the alphabet from them and finally developed their own in the 9th century, but they knew the Phoenician scripts and scribal traditions of the 11th century and later (Cross 1979a: 105–11). Ninth-century ivories in the N Syrian style still betray an early Mycenaean influence (Winter 1976: 9–10). The Phoenicians had settled in Spain by the early 8th century B.C. (Aubet Semmler 1985) but their products were Greek and their business was the transport of Greek goods (Shefton 1982). One of the first Phoenician inscriptions from Carthage is on a gold pendant from the early 7th century and it is dedicated to Phoenician Astarte and her Greek associate Pygmalion (*KAI* 73).

Byblos was the most ancient and renowned of the Phoenician cities and maintained the strictest ties with its traditions. The earliest mainland inscriptions are from the 11th century, one a commercial agreement (McCarter and Coote 1973), two others with personal names illustrating familial (*ʾḥʾš*, "My brother has given") and cosmological (*ʿbdḥmn*, "Servant of [Baʿal] Ḥamōn") aspects of the local Phoenician religion (Cross and McCarter 1973). Royal inscriptions from the 10th century and again from the 5th manifest a similar concern, in the same language and style, for the long life and welfare of the king, and attest the constant devotion of the city to Baʿal the king *(bʿl, mlk)* and to the "Mistress of Byblos" (*bʿlt gbl* KAI 1–10; Bordreuil 1977). Two other royal inscriptions from the early 5th century (Cross 1979b; *KAI* 9) have lexical and ideological connections with contemporary texts from Sidon and suggest a change in Byblian foreign policy during the Persian wars (cp. Dunand 1969), but Byblian adherence to tradition is evident in a 1st-century offering to Baʿal that continues to petition for the long life and welfare of its donor (*KAI* 12).

Byblos and its dominions were distinguished from the other Phoenician cities by their language (Lane 1969), script (Peckham 1968: 42–63), politics, and belief, but they shared some religious traditions with

Israel. The kings of Byblos expected long life *(ʾrk ymm)* and blessing *(brk)* from their gods, things that the Dtr historian promised to Israel (e.g., Deut 6:2–3; 22:7) and, exceptionally, to Solomon (Deut 17:20; 1 Kgs 3:10–14). They and their subjects looked to the gods for life *(ḥwh)* and based this hope on their justice and observance of the laws *(ṣdq, mšpṭ, yšr)*, in substantial agreement with the correlations established by the Dtr historian between life, justice, and obedience to Yahweh (e.g., Deut 6:24–25; 8:1; 9:4–6; 30:15–20). From the 5th century onward, at Byblos, at Lapethos in Cyprus and at Pyrgi in Italy, kings were concerned with their physical appearance in the tomb, people were eager to make living likenesses of themselves before they died, and kings and commoners alike celebrated the annual death and resurrection of the gods. Hosea, Ezekiel, the Dtr history and 2 Isaiah were familiar with the rituals of death and resurrection (Hos 6:1–4; Ezek 28:1–10; 37:1–14; 1 Sam 28:3–19; 1 Kgs 18:20–29; Isa 14:12–21), but the principles of physical representation that they entailed were excluded by the biblical tradition (e.g., Deut 4:15–24).

Sidon was most active in international trade and established colonies all around the Mediterranean. Its earliest permanent settlement was at Kition in Cyprus in the wake of Mycenaean and Achaean colonists (Karageorghis 1976). From this seaport its power radiated NW across the island: the earliest Phoenician inscription from Cyprus, the Honeyman tomb text, is probably from one of its domains in the interior (Masson and Sznycer 1972: 13–20); another inscription just like it from the early 7th century was found at Chytroi to the NW (Masson and Sznycer 1972: 104–7); in the 5th century Kition extended its boundaries to include Idalion, and in the 4th century it took control of the kingdom of Tamassos (Peckham 1968: 18–20). But the settlers lived among Cypriots and Greeks, maintained their own traditions in symbiosis with the native population, and had little influence on the cultural or political history of the island (Moscati 1968: 103–10). Typically, the Sidonians in Cyprus were merchants and seafarers who exported Cypriot products rather than their own goods to the rest of the Mediterranean world (Coldstream 1979).

Sidon's Anatolian interests are represented by its settlement in the region of Zinjirli. It began at least in the early 9th century with the installation of a local Phoenician dynasty (*TSSI* 3: 30–41). At the end of the century it could still produce a literary Phoenician inscription (Fales 1979), but its king Kilamuwa had an Anatolian name. In the 8th century the whole region was Aramean, and the dynasty became a Phoenician-Aramean hybrid (*TSSI* 2: 60–93). The inscriptions record the difficulty the kings encountered in maintaining their authority and the Kilamuwa inscription in particular mentions internal conflicts between the natives and the Phoenician settlers and external pressures from the surrounding Danunians (*KAI* 24.5–8). The king makes no territorial claims, but describes the benefits that trade has brought to the region—the wealth, fine clothing, and good food. His description anticipates the fuller catalogue in Ezekiel's lamentation over Tyre by mentioning an excess of silver and gold (cf. Ezek 28:4) and the fine linen *(bṣ)* that Ezekiel says was imported from the Arameans (Ezek 27:16). It also makes the king the benefactor of the people, much as Yahweh was to Israel (cf. Deut 8:3–4; 10:18) and attributes to him the sort of fatherly role that the Dtr historian assigned to Yahweh (Deut 8:5; cf. Hos 11:1–4; Jer 3:4).

In the neighboring kingdom of Karatepe in Cilicia the inscription of Azitawada evinces a similar settlement pattern in the 8th century (*KAI* 26; *TSSI* 3: 41–64). Azitawada, as his father before him, was the ruler of Adana in the Cilician plains, the territory that had belonged to the Greek house of Mopsos and that he held as an ally of Urikki of Que, king of the Danunians. In his inscription he is accommodating to both indigeneous population groups, explaining how he enlarged the borders of the Danunians, and how he subdued the brigands that the house of Mopsos could not control. He was a foreigner, in an area traditionally aligned with Sidon, whose scribes wrote elegant and contrived Phoenician, but he had assimilated to the region, his name was Luwian, his subjects were natives, and his inscription was translated into Hieroglyphic Luwian. He was a merchant prince who claims to have secured the trade routes and rid the country of bandits. His region's exports were horses, weapons, and mercenaries; Ezekiel and the Dtr historian mentions such exports from this area (Ezek 27:10–11, 13–14; 1 Kgs 10:26–29). He was a king in the Sidonian tradition, attributing to himself qualities that the Dtr historian ascribed to Yahweh and the people or, exceptionally, to Solomon: he was wise and just (*ḥkm, ṣdq;* cf. Deut 4:6–8; 1 Kgs 5:9–14; Ezek 28:1–5), a father to kings (*ʾb;* cf. 2 Sam 7:14), the benefactor of his people (*śbʿ;* cf.

Deut 8:1–20; 10:18; 11:15), the enlarger of their land (*rḥb;* cf. Exod 34:24; Deut 12:20), the source of rest and tranquillity (*nwḥ,* cf. Deut 12:9), the inaugurator of the annual and seasonal festivals (*zbḥ ymm, bʿt ḥrš, bʿt qṣr;* cf. Exod 23:14–17; 34:18–22; Deut 16:1–17, 1 Kgs 9:25). He is representative of the Sidonian spirit of cooperation that brought cohesion, stability, and prosperity to the Mediterranean world.

The Phoenicians who traveled the Aegean to Greece and the West were mostly from Sidon, from Kition and its colonies in Cyprus, or from Arvad and other Sidonian satellites in N Syria (*KAI* 53–60; Röllig 1972). They traveled with foreign wares and adapted thoroughly to the culture of strange places, but they brought with them settlers and skilled artisans trained in the artistic traditions of their own cities (Moscati 1968: 42–81, 145–74). They arrived in Sardinia by the end of the 9th century (Cross 1972), in Italy and in Spain by the early 8th century (Buchner, *PhönWes,* 277–306; Niemeyer, *PhönWes,* 185–206; Schubart, *PhönWes,* 207–34). They maintained relations with their home cities and preserved the religious traditions of the mainland that are known from other Phoenician and from Hebrew sources. An 8th-century inscription from Spain was dedicated to the Astarte worshipped in Sidon (Cross 1971). A 7th-century text from Kition preserves a ritual in her honor that resembles the ritual of the nazirite vow (Num 6:1–20; Dupont-Sommer 1972). An early 5th-century inscription from the same place has details of a celebration in her honor that is also mentioned in contemporary biblical texts (*TSSI* 3: 123–31; Jer 7:16–34; 44:15–30). Fifth-century inscriptions from Sidon confirm her veneration as queen of heaven and tutelary goddess of the city and substantiate the Dtr contention that Astarte was the goddess of the Sidonians (*TSSI* 3: 101–18; 1 Kgs 11:5; 2 Kgs 23:13).

The Phoenicians of Tyre were influential in the S countries and voyaged later than the Sidonians to the western Mediterranean (Bunnens, *StudPhoen* I–II: 7–21). They had separate jurisdiction in Cyprus and founded a new city, Carthage, at Limassol on the SE coast (Lipiński, *StudPhoen* I–II: 209–34). In the latter part of the 8th century Cypriot Carthage was still governed by a viceroy and was under the protection of Baʿal Lebanon, the god of Carmel (*KAI* 31; 1 Kgs 18:20–40); in the 5th century it was an independent city with its own royal house (Masson and Sznycer 1972: 91–94). They founded another Carthage in North Africa from this base in Cyprus and an early 7th-century dedication to Astarte and Pygmalion still attests the Cyprian origin of the colony (Ferron 1958–59). There are ivories in the S Phoenician style from 8th and 7th-century sites in Cyprus, Palestine, North Africa, Etruria, and Spain, and exceptionally from Khorsabad and Arslan Tash (Winter 1976). In the 7th and 6th centuries Phoenicians from Tyre settled at Sarepta and ʿAkzib (Prausnitz, *PhönWes,* 34–44; Pritchard, *PhönWes,* 83–92; Peckham 1968: 130), with Judeans at ʾAzor and ʿArad (Peckham 1968: 125–27; Cross 1979c), in Egypt at Daphne and Abu-Simbel (*KAI* 48–52; Peckham 1968: 127–29), and in Malta (*KAI* 61–62; Ciasca, *PhönWes,* 133–54). In the 5th and 4th centuries they could still be located on the coast of Palestine at Shiqmona, Nebi Yunus and Bat Yam, with Edomites at Elath, and with Judeans in the colony at Elephantine (Peckham 1966; Cross 1968; Delavault and Lemaire 1976).

The Tyrians were more cosmopolitan than the Sidonians and in religious matters remarkably eclectic. Their artistic inspiration was Egyptian (Gubel, *StudPhoen* I–II: 23–52) and at Tyre until the end of the 1st millennium they worshipped Egyptian gods (Dunand and Duru 1962: 181–96). At Arslan Tash, if the texts are genuine (Teixidor 1983), they invoked indigeneous gods like ʿAtaʾ, a provincial antecedent of Atargatis (Pope 1970), and the genius Sasam, whom they identified as the son of a local god, or they worshipped their own chthonic gods like Baal the lord of the earth and Horon the lord of death, or they appealed to the great god Asshur of Assyria and included him in their pantheon with all the sons of El and the assembly of the holy gods (Cross and Saley 1970; Cross 1974). At Carthage they venerated Astarte's Greek consort Pygmalion, at Daphne they worshipped both Baʿal Saphon and the local pantheon (*wkl ʾl tḥpnḥs; KAI* 50.3), and elsewhere in Egypt they paid reverence to Harpocrates (*KAI* 52; Röllig 1969). On the mainland they had particular devotion to derivative gods like *Mlkʿštrt* and Tanit (Yadin 1970; *CMHE* 28–35) but persisted as well in the worship of ancient gods like El and Baalshamem. Tyrians in Malta in the 2d-century thought of Melqart or Heracles as their tutelary god *(bʿl ṣr; KAI* 47.1), and the god is mentioned in contemporary texts from Tyre (Bordreuil 1986a), their own names reveal them to be worshippers of the Egyptian Osiris.

3. Egyptian. The Egyptian sources mark the transition from Canaanite to Phoenician times in the coastal cities. The Amarna letters (EA) depict relations between Canaan and Egypt in the early 14th century and indicate the various political alignments of Tyre, Sidon, and Byblos. The Report of Wen-Amon from the early 11th century (Albright 1975; Goedicke 1975) portrays the new regimes that prevailed in these cities after the Philistines had settled along the coast. Together they suggest continuity rather than great change (Sasson 1966) and anticipate the characteristic features of the principal Phoenician cities in the 1st millennium.

In the Amarna letters Sidon is mentioned mainly in complaints to the Pharaoh from the kings of Tyre and Byblos. The king of Sidon in one of his own letters agreed to give the Pharaoh all the information that he received about Amurru, but the contemporary king of Byblos regularly complained that Sidon was allied with Amurru and Arvad. In his other letter he mentioned problems with the local insurgents, but at the same time the king of Tyre protested that Sidon was interfering in his territory and restricting his essential supplies from the mainland. Tyre considered itself a great city (Akk *ālu rabītu*) and was effusive in its declarations of loyalty to Egypt. It sent ships to transport Egyptian troops and informed on Sidon and its allies in the N: it reported that the king of the Danunians had died but had been succeeded by his brother, that Ugarit had been partly destroyed by fire, that Amurru was encouraging rebellion, that Sidon and Arvad had gathered ships and chariots against Tyre. A cosmopolitan city, Tyre demonstrated its eclectic taste in religion by adopting the new Egyptian devotion to Aton and assimilating it to the local cult of Baalshamem. Byblos was equally loyal to Egypt and, as a buffer against Amurru, more dependent on her military aid. It was isolated from the other cities, under attack by Sidon, and rebuffed by Tyre when it offered assistance against the local insurgents. Byblian territory along the coast and dependent cities in the mountains and in the interior were gradually lost to the incessant attacks of Amurru. Byblos was bound by a tradition of good relations with Egypt. It was tenacious in its fidelity to religious tradition, acceding to the divine pretensions of the Pharaoh, but simultaneously invoking in all its correspondence with Egypt the protection of the Mistress of Byblos *(bʿlt gbl)*.

The Report of Wen-Amon gives the impressions of an emissary from Egypt, confirms the relative autonomy of Tyre, Sidon and Byblos, and alludes to their separate dealings with the Sea Peoples. Tyre was in alliance with the Tjekker of Dor. Sidon was conspicuous for its large fleet and had formed a syndicate with the Sea Peoples from Cilicia and Anatolia. Byblos was a small independent port that maintained friendly relations with Egypt but could not compete either with Sidon or with Dor and the Tyrians. Coastal Canaan was no longer an Egyptian province but a conglomerate of maritime powers on the verge of discovering a new world.

4. Greek. The Greek writings confirm or elaborate what is known from other sources and are often derivative. In Linear B texts the word "Phoenician" *(po-ni-ki-yo)* may mean purple or crimson. Homer sometimes mentions Phoenicians, but means the Sidonian merchants and craftsmen who had traveled N and W through the Aegean and were still renowned in his own time (Muhly 1970). Herodotus in his history of the Babylonian and Persian periods was more familiar with Tyre and almost ignored Sidon, although he knew the geography of Phoenicia and was aware that Phoenicians had sailed in search of Europe (3.44, 49; 5.58) before they settled in Egypt and along the Libyan coast (2.32, 112).

Josephus elaborated on the biblical text with information from other historians of the Hellenistic era and naturally ascribed to Tyre preeminence among the Phoenician cities (Katzenstein 1973). He embellished the biblical account of the building of the temple with a parallel account of the reign of Hiram and a chronology of Tyrian kings up to the founding of Carthage (*AgAp* 1.112–27; *Ant* 8.141–47). He retold the story of Ahab and Jezebel (*Ant* 8.316–24; 9.132–39) but used the Tyrian king-list to correct the Dtr historian (1 Kgs 16:31) and called Jezebel's father ʾIttôbaʿal king of the Tyrians, or king of the Tyrians and Sidonians, rather than simply king of the Sidonians. He recounted the fall of Samaria and related it to Shalmaneser V's invasion of Phoenicia in the reign of Elulaios (*Ant* 9.283–87). He elaborated on the destruction of the temple with an account of Nebuchadnezzar's contemporary siege of Tyre and another excerpt from the Tyrian king-list (*AgAp* 1.156–60). He followed the biblical precedent that situated Israel

in world history by magnifying the significance of its association with Tyre, but he neglected the other cities and was a partial witness to the history of Phoenicia.

Although Josephus duplicates the biblical narrative, his synchronisms and system of parallel accounts preserve items of interest for the history of Tyre. His Tyrian king-list is fairly accurate and has been corrected and completed by Phoenician and Assyrian sources (Cross 1972: 17; Katzenstein 1973: 349). His story of Hiram's religious reforms includes an oblique reference to the famous pillars of Tyre (*AgAp* 1.118) that are mentioned by Ezekiel (26:11) and Herodotus (2.44) and depicted on Assyrian reliefs (Barnett 1969). The invasion of Phoenicia in the time of Elulaios (ʾIluʾili) is also recorded in the Assyrian annals but is assigned by them to the reign of Sennacherib rather than Shalmaneser V (Pritchard *ANET* 287–88) and is described as an attack on Sidon rather than Tyre (Katzenstein 1973: 220–58). The Babylonian siege of Tyre lasted thirteen years (*Ant* 10.228), and the city's resistance, combined with the earlier Assyrian conquest of Sidon, seems to have inspired Ezekiel's eulogy of the island fastness and lamentation for the Mediterranean world (Ezekiel 27).

Herodotus had heard of early contacts between the Phoenicians and Greece. He knew of Phoenicians particularly as sailors and mercenaries in the service of Egypt and Persia. He recalled that Phoenicians in the time of Cadmus had brought the alphabet to Boeotia and Attica, where it was learned and adapted by Ionian residents (2.57–59). He recorded that Phoenicians in the service of Pharaoh Necho (610–595 B.C.) sailed around Africa from the Red Sea to the Mediterranean, anticipating and partly duplicating Hanno's circumnavigation of the continent in the opposite direction (Harden 1962: 170–77). Among the exploits of Pharaoh Apries (589–570 B.C.) he included an expedition against Tyre and Sidon (2.161) that was meant to deter them from cooperating with the Babylonians in the siege of Jerusalem (Freedy and Redford 1970: 481–84). He knew that the Phoenician fleet gave the Persians naval supremacy (1.143) and he noted that they refused to obey Cambyses' orders to attack their own colony in North African Carthage (3.19; Elayi 1981). He observed that the Phoenician ships, and especially those of Sidon, were the best in the Persian navy and that their kings sailed with the fleet, notably Tetramnestos the son of Anysos of Sidon, Mattan the son of Hiram of Tyre, and Maharbaal the son of ʾAbîbaal of Arvad (7.96–98).

In the Persian and Hellenistic periods, the coastal cities were drawn progressively further into the Greek world and their political history is known almost exclusively from Greek literary and epigraphic sources (Bengston 1962; Peckham 1968; Katzenstein 1973; Elayi 1980; 1982; 1987). But in the 5th century, under Persian administration, they also acquired territory in Palestine and showed some interest in Judean affairs (Ezra 3:7; Neh 13:16; Barag 1966; Peckham 1968: 78–87; Müller 1971; Stern 1982a; 1982b). Sidon, in particular, seems to have profited from the exchange and its inscriptions from the middle of the century demonstrate familiarity with Hebrew literature and religious practice (Greenfield 1971: 258–65). A similar but more developed familiarity with biblical traditions is evident in the later work of Philo of Byblos (Attridge and Oden 1981) who synthesized the religious practice of the coastal cities in an eclectic system derived from Greek theogony and oriental, specifically biblical, cosmology. The speculation of the *Phoenician History* is in striking contrast to Lucian's descriptive account of practices in Tyre, Sidon, Byblos, and Hierapolis (Oden 1977) but shares with it, despite his use of Phoenician sources, a disparagement of native Semitic elements and a naive exaltation of their Greek equivalents.

5. Assyrian and Babylonian. Assyrian intervention on the Phoenician coast followed the era of Sidonian expansion to the N and W and coincided with the beginning of Tyrian predominance in the S states. This period of greatness lasted as long as Tyre could rely on Egyptian support but dwindled after the Babylonian siege of the city and ended with the Persian conquest of Egypt (525 B.C.).

Sidonian expansion N did not go unnoticed by the world powers. In the years just before the voyage of Wen-Amon, Tiglath-pileser I (1114–1076 B.C.) went to Mount Lebanon where he erected a stele and received tribute from Sidon and Byblos, then marched against Amurru where he received tribute from Arvad and sailed in an Arvadian ship (*ANET*, 275; Katzenstein 1973: 175). In the 9th century, Asshurnasirpal II (883–859 B.C.) made a similar expedition to Mount Lebanon and the seacoast, but he also listed the merchandise that he received as tribute and was the first to include Tyre among the tributary cities (*ANET*, 276). Shalmaneser III (858–824 B.C.) also mentioned Tyre among the coastal cities

that brought him tribute, but his campaigns were directed mainly against the Arameans and the N coalition on whom Sidon depended for trade (Pritchard *ANET* 276–81; Katzenstein 1973: 173–82). Hayanu (*ḥy*› [*KAI* 24.1]), the father of Kilamuwa, was among the rulers of northern Syria, Cilicia, and Anatolia defeated in his first campaign; at the battle of Qarqar (853 B.C.) his opponents included Arvad, ‹Arqa, and Siyannu, the Phoenician cities in Amurru mentioned by the Dtr historian (Gen 10:17–18), as well as Damascus, Arabia, and the other regions that Ezekiel included in his catalogue of Phoenician trade centers (Ezekiel 27).

From the early 8th century Palestine was included among the regions subject to Assyria (*ANET*, 281; Katzenstein 1973: 200) and in the second half of the century the Assyrian kings began their policy of total conquest. Tiglath-pileser III (744–727 B.C.) conquered ‹Arqa, Siyannu, and the northern coastal towns and incorporated them, and a few years later Arvad, into the Assyrian province of Ṣimirra (= Ṣumur [Gen 10:18]; Kessler 1975–76). This ended the era of Sidonian supremacy and allowed Tiglath-pileser to concentrate on Tyre and its Philistine allies. He received tribute from ›Ittôba‹al of Tyre before 738 B.C. (Levine 1972; Cogan 1973) and defeated Hiram of Tyre a few years later (734–732 B.C.). Although Philistia was defeated at the same time and eventually became the province of Dor, Tyre retained its independence and continued to pay tribute (Oded 1974). This contravened Assyrian policy in the West (Weippert 1982) and, with Sidon's isolation from its northern resources, it assured Tyre's supremacy in the E Mediterranean (Oded 1974). Tyre became the leading city of Phoenicia, and its kings, earlier entitled "King of the Tyrians" (*mlk ṣrm;* Bordreuil 1986b: 298–305) assumed the title "King of the Sidonians" (*mlk ṣdnm* [*KAI* 31.1]).

At the end of the 8th century ›Ilu›ili (Gk *Elulaios* Akk *Luli*) of Sidon attempted to restore the city's control of Kition in Cyprus and regain its former stature in Mediterranean affairs, but he was defeated by Sennacherib and (704–681 B.C.) escaped to Cyprus, where he was assassinated (Elayi 1985). He was succeeded by ›Ittôba‹al (Katzenstein 1973: 220–58). In the reign of Esarhaddon (680–669 B.C.) ‹Abdimilkut of Sidon made another attempt to escape Assyrian domination but he and his Cilician allies were defeated, the kings of Cyprus submitted to Assyria, and Sidon was destroyed (*ANET*, 290–91). Tyre remained the only naval power in the East, and the treaty with Esarhaddon that gave it access to harbors in Philistia and Phoenicia invoked all the gods of the coast including the seafaring Baals of Tyre, Eshmun of Sidon, and Melqart. The treaty gave Esarhaddon control of Mediterranean trade and restricted Tyre's local autonomy. Tyre rebelled, was besieged, captured, and put under Assyrian administration; Egypt, on which it had relied for support, was invaded and conquered (671 B.C.; Spalinger 1974). In its expansion southward Tyre cooperated with Phoenician kings in the coastal cities of Philistia, but all of these cities paid tribute to Ashurbanipal (668–633 B.C.) and were forced to accompany him on his first campaign against Egypt (*ANET*, 294). Tyre revolted again but was reconquered and incorporated into the Assyrian provincial system (Katzenstein 1973: 288–94). It may have prospered in the lull before the Babylonian invasions, but Tyre was besieged again by Nebuchadnezzar (605–562 B.C.) and its king, with the kings of Gaza and Ashdod, of Sidon and Arvad, was taken captive to Babylon (Katzenstein 1973: 319). When the Phoenician cities were restored and regained their power in the Persian period, the Mediterranean world they helped create had fallen to the emerging world powers.

B. Chronology

The king-lists of the principal Phoenician cities are reconstructed from Hebrew (*), Greek (+), Assyrian (-), Egyptian (=) and Phoenician sources (Albright 1947; Cross 1972: 17; Katzenstein 1973: 349; Mullen 1974). The dates are approximate and often conjectural.

PHOENICIAN LANGUAGE. See LANGUAGES (PHOENICIAN).

PHOENICIAN RELIGION. The eastern littoral of the Mediterranean sea S of the Amanus mountains and N of Mt. Carmel was occupied in historic times by people whose language and culture were sufficiently uniform in antiquity to be recognized as distinct. The land was called CANAAN by its inhabitants, *fnḫw* by Egyptians (see Vandersleyen 1987), *phoinikē* by Greeks. The name "Phoenicia" is properly applied to this area, and "Phoenician" to its inhabitants, from about 1200 B.C.E. onward. See PHOENICIA, HISTORY OF. The beliefs and activities of the ancient Phoenicians that can be designated "religion" in modern usage are of interest to readers of the Bible principally with respect to the religion of ancient Israel and Judah as depicted in the Hebrew canon. Less readily perceived is the contribution of Phoenician mythology to Jewish thought as set down in the Apocrypha of the Greek canon and in the writings known as Pseudepigrapha (on Phoenician traditions of secret writings, see Ribichini 1987b). Even more obscure is the degree to which elements of early Christian theology incorporated motifs associated with Phoenician religion (for an example, see HERAKLES).

A. Sources

1. Textual. Literary and epigraphic texts are the written sources of information about Phoenician religion. Literary texts include the Hebrew Bible; portions of the Apocrypha and Pseudepigrapha; Greek texts by classical, Hellenistic, and Christian writers; and Latin works. Epigraphic texts include cuneiform texts in the Akkadian language and inscriptions in the Phoenician language; the form of Phoenician used at Carthage and elsewhere in the W Mediterranean is called Punic (Lat *Poenus*, "Phoenician"), and the form used after the fall of Carthage is known as Neo-Punic. See LANGUAGES (PHOENICIAN).

Evidence derived from the biblical traditions will be discussed separately. Among Greek writers, Homer provides no substantive information about Phoenician religion, though the Phoenicians figure in the verse epics attributed to him. Herodotus, whose history explores relations between Greek and Phoenician societies, nonetheless provides no sustained discussion of religious beliefs and practices among the latter. Works of the Greek historians Ephorus and Timaeus survive only in the fragments cited by other Greek writers. Details of the military and political history of Carthage, founded as a Phoenician colony in N Africa, were preserved with these fragments, chiefly in the *Library of History* compiled by Diodorus Siculus (Pearson 1984); but Phoenician and Punic religion is represented only episodically, and with tendentious hostility (Simonetti 1983).

The text of a treaty concluded in 215 B.C.E. between Hannibal of Carthage and Philip V of Macedon is preserved in the history written by Polybius (7.9). See HISTORIOGRAPHY (GRECO-ROMAN). It has been plausibly argued (most recently and thoroughly in Barré 1983) that the divine witnesses listed in the text of the treaty, in spite of their Greek names, are to be understood as their Phoenician or Punic "equivalents," and that the list represents the pantheon of Carthage at the time of Hannibal. (For a different perspective, see Huss 1986.) The historian Pausanias and the geographer Strabo preserve details of Phoenician religion as observed by Greeks.

A narrative description of religious practices of Phoenician derivation is found in the Greek work *Concerning the Syrian Goddess* attributed to Lucian of Samosata, a satirist who wrote in the 2d century C.E. (Oden 1977). The 4th-century Christian historiographer Eusebius presented Phoenician mythology as an example of the sort of nonsense from which his own church had liberated the theological intellect. Eusebius cited generous portions of a work entitled *Phoenician History*, said to be translated by PHILO OF BYBLOS from an older work in the Phoenician language compiled by Sanchuniaton (*Hist. Eccl.* 1.10.23–1.10.53; see Attridge and Oden 1981; Baumgarten 1981; Schiffmann 1986).

Among texts in the Latin language, the epitome or summary compiled by Justin from the (now lost) world history of Pompeius Trogus includes a section on the history of Carthage (chaps. 18 and 19 of Justin; the standard edition of the text is by Seel [1972]). The accurate historical details of Trogus' compilation can be traced to Timaeus; of Phoenician religion there is nothing of substance.

The principal epigraphic sources are those in cuneiform and others in the linear Phoenician alphabet. A vassal treaty imposed by the Neo-Assyrian ruler Esarhaddon on Baal, king of Tyre about 675 B.C.E. (*ANET*, 533–34) lists among its divine witnesses deities that must be Tyrian (on the list, Barré 1983: 45–50). See also BETHEL. Other documents in cuneiform provide incidental details pertinent to a reconstruction of Phoenician religion.

A small corpus of inscriptions in the Phoenician language has survived (CIS I 1–121; *KAI* 1–60; additional texts published in a variety of journals remain uncollected); a larger corpus of Punic and Neo-Punic inscriptions (CIS I 122–6068; *KAI* 61–173, 277) is comprised almost entirely of votive texts which repeat stereotyped formulas. Less than half a percent of the surviving corpus is non-dedicatory, and again these offer only glimpses of Phoenician religious thought and practice.

2. Artifactual. Architecture, sculpture, glyptics (including coins), and other craft products constitute a fragmentary record of the social manifestations of Phoenician religion. See LEBANON; PALESTINE, ARCHAEOLOGY OF.

3. Condition and Utility of Sources. With the exception of Phoenician inscriptions, all sources of information about the religion of Phoenicia are secondary. Any information derived from them must

become part of a modern narrative whose major components are deduction, inference, and speculation. The quality of the resulting reconstruction is inherently dependent on the organizing scheme according to which fragments of fact have been related to one another. Any reconstruction of Phoenician religion must necessarily be tentative.

B. Scope

1. Geographical. "Phoenicia" was spatially dispersed. A series of coastal cities and villages from Myriandos in Cilicia (modern Turkey) to Gaza were Phoenician in language and religion. Cyprus supported a Phoenician population in its E and S portion. Phoenician was written in W Cilicia, and Phoenicians settled on the Aegean islands, on the Italian peninsula, on Sardinia, in N Africa, in W Sicily, on other islands of the W Mediterranean, and extensively in Spain. See PHOENICIA, HISTORY OF.

2. Historical. While it has been argued (Garbini 1980) that the term "Phoenician" is appropriate to the Bronze Age culture of the E Mediterranean littoral, most scholars accept the chronological constraints for which Moscati (1968: xxii) has made a case, and reserve the word "Phoenician" for the Iron Age, i.e., the period following the invasions of "Sea Peoples," and later.

C. Cult

1. Sacrifice. The Phoenician words for sacrifice and related activity derive in large part from the common Semitic lexical stock (Fronzaroli 1965: 252–56) traceable to a very early period. From this and other evidence it can be deduced that sacrifice is a practice of great antiquity among Semitic-speaking societies. The procedures and perceived significance of particular sacrificial types, however, undoubtedly changed and varied over time.

Both faunal and floral sacrifices were made by Phoenicians. Mammalian victims were oxen, bulls, sheep, goats, and varieties of deer. Among birds, columbine species (doves and pigeons) seem to have been preferred as victims. Pools of sacred fish are mentioned by classical writers, but there is no evidence of piscatory sacrifice.

Faunal sacrifices necessitated the death and (in cases involving larger animals) partial consumption of the victim. Nothing is known about the method of dispatching the victim, although it is reasonable to suppose that a variety of procedures were employed. In certain categories of sacrifices all or part of the victim was incinerated on an altar. Other sacrifices may have involved suspending the victim from a sacred tree or post.

Floral sacrifices included offerings of cereal grains and plant derivatives such as oil. There is no evidence that floral offerings were consumed.

The most detailed documentary evidence concerning sacrifice of Phoenician derivation is late (after 350 B.C.E.) and Western. The Carthage tariffs (among which is included the Marseilles Tariff [*KAI* 69]) were temple documents regulating payments due priests for a variety of sacrifices and (in cases of faunal sacrifices) specifying the distribution of portions of the victim not destroyed in the sacrificial procedure. A limited continuity can be traced in the names of sacrifices found in Ugaritic ritual texts (see UGARITIC LITERATURE), biblical legislation (see SACRIFICE), and the Carthage tariffs (Guzzo Amadasi 1967: 169–82).

The most vivid biblical narrative concerning a sacrifice performed by Phoenicians is legendary and highly polemical (1 Kgs 18:20–40). It concerns a sacrificial contest staged by the Israelite prophet Elijah at Mt. Carmel, a site that, according to one writer, was "sacred above all mountains" to the Phoenicians and of restricted access (Iamb. *Vit. Pyth.* 3:15). The sacrifice is performed by "prophets of Baal" convened for the purpose by Elijah (1 Kgs 18:25); the victim is a bull, which is killed, butchered, and arranged in pieces on wood placed on an altar. Fire to consume the sacrifice is sought (unsuccessfully) from "Baal" in shouted invocations while the sacrificers dance around the altar and lacerate themselves (1 Kgs 18:26–28).

One of the goals of this story is to make Phoenician sacrifice appear ridiculous, and it is possible that in such a distorting context the details of sacrificial procedure are not accurately representative. But the implicit assumption of the narrative that identical sacrificial procedures are appropriate for both "Baal" and Yahweh may be an indication of a perceived common derivation of Israelite and Phoenician sacrifice.

The narrative of Jehu's bloody suppression of a Phoenician cult in Samaria (2 Kgs 10:18–27) indicates that the "great sacrifice" which Jehu convened consisted in part of holocausts (vv 24–25; Heb *ʿolôt*). Jehu himself, as king, may have performed the sacrifices (the pronominal reference of these sentences is ambiguous).

As a social institution, sacrifice in Phoenicia probably shared structural features with Israelite sacrifice. Presumably it operated in a system of male bonding and genealogical legitimation (Jay 1988) in which women were marginal participants (Winter 1983: 1–69). Phoenician and Punic texts commemorating sacrifices generally include a genealogy of the offerer which lists male ancestors; this is true in the case of women as well as men (Amadasi Guzzo 1988).

The Phoenician inscription from Karatepe in Anatolia (*ANET*, 653–55; *TSSI* 3: 41–64) claims for its author Azatiwata. Significant military and diplomatic achievements which culminate in the refoundation of the city bear his name. The climax of Azatiwata's narrative is the establishment of the cult of the god *bʿl krntryš* (the second half of the name is not Phoenician) with seasonal sacrifices of oxen and sheep (*KAI* 26 A ii 19–A iii 2). It is apparent from the benedictions which follow the narrative that not only Azatiwata himself but the entire city anticipated life, health, political prowess, reliable food supplies, and reproductive success to follow from their assiduous maintenance of the sacrificial cult.

Insofar as the sacrificial cult in Phoenician cities operated within a centralized palatine economy exploiting outlying villages for agricultural produce and redistributing goods and services within a stratified urban social structure, expectations such as those expressed in the Karatepe inscription may have been more than wishful thinking (Liverani 1974). In the Persian period the construction of cultic installations remains among the chief accomplishments of kings (*ANET*, 656 [Yehawmilk of Byblos]; *ANET*, 662 [Eshmunazar of Sidon]).

The inscribed base of a statue erected by Yatonbaal, a local official in the Ptolemaic administration of Cyprus (see Parmentier 1987), records the building of altars and the institution of daily sacrifices on behalf of the dedicator's immediate family in conjunction with monthly sacrifices for the reigning Ptolemy and dependents (*TSSI* 3: 133–41).

2. Gifts. In common with the practices of other Semitic cultures, Phoenician religion included offerings of objects specially dedicated to a deity. Agricultural and industrial products were equally presentable gifts. Carved work (such as the ivory casket dedicated to Astarte by a Phoenician woman [*TSSI* 3: 71–74]); metal objects (of which an elegant silver bowl found in 1876 at Praeneste, Italy, is a fine example [*TSSI* 3: 71]), sculpture, ceramics, and terra-cottas were all offered in dedication. Spoils of war were frequently dedicated, and the presentation of gifts in temples was an important element of interstate relations linking colonies (or former colonies) to their mother cities (Diod. 13.108.4; 17.41.8) and vassals to their suzerains.

Dedications were commonly made in fulfillment of a vow (Phoen *ndr*). Phoenician and Punic inscriptions on steles set up to record the fulfillment of a vow *(ndr)* by means of a gift (Phoen *mtt*, Pun *mtnt*) comprise more than 95 percent of the textual remains of these languages. The relative abundance of votive texts witnesses to the importance of vows and their fulfillment in Phoenician religion.

Certain categories of vows may have been fulfilled by the immolation of neonatal or prepubescent children of either sex. Evidence for human sacrifice as an institution of Phoenician religion is, however, limited and ambiguous. A few passages from the Hebrew Bible have been understood as referring to the sacrifice of children in connection with the cult of a divinity called Molech (a god whose very existence has been doubted; see Heider 1985). Archaeological evidence of human sacrifice among Levantine Phoenicians is lacking (a point stressed by Ribichini 1987a; 1988). Sites of Phoenician origin in the W Mediterranean have provided considerably more artifactual and osteological evidence, but the interpretation of these remains is controversial. Excavations of the topheth at Carthage have led certain archaeologists and historians to conclude that an institution of ritual infanticide was maintained for at least five centuries (ca. 700–200 B.C.E.) among the Carthaginians (Stager 1980; 1982; Stager and Wolff 1984; Lipiński 1982; 1988; Heider 1985; S. Brown 1987). Moscati (1987) has denied the existence of such an institution. Other scholars have remained agnostic on the subject (Benichou-Safar 1988). But an

analysis of the osteological remains from the *tophet* of Tharros in Sardinia, where controlled excavation and interpretation have been possible, indicates that neonatal and prepubescent humans probably were sacrificial victims (Fedele and Foster 1988).

Certain passages from Greek and Latin writers purport to describe the sacrifice of children as carried out at Carthage and other Punic sites. These are all highly polemical, histrionic, and perhaps interdependent. They thus invite proper scepticism in their interpretation (as Simonetti 1983 as shown).

3. Prayer. Prayer is intimately related to the taking and fulfillment of vows. Numerous Phoenician and Punic inscriptions make the association explicit. Most votive texts end with a formulaic statement that the divinity or divinities to whom the dedication has been made "heard the sound" of the voice of the dedicator. Presumably vows were most often made in the context of prayer, and the necessity of their fulfillment was communicated through revelation to the vower (biblical parallels have been drawn out by O'Brien 1987).

Phoenician and Punic inscriptions provide examples of prayerful dedication. Here can be seen truly touching examples of marital devotion (*KAI* 48) and filial piety (*KAI* 34). The benedictory section of the Karatepe inscription (*KAI* 26 A iii 2–11) has the characteristics of prayer in spite of its rhetorical origins and propagandistic purpose.

A Punic prayer is incorporated in a soliloquy spoken in Punic by the character Hanno at the beginning of the fifth act of the *Poenulus*, a play in Latin by the playwright Plautus (d. 184 B.C.E.). The Punic text is genuine but corrupt. The opening line can be translated "I invoke the gods and goddesses … of this city" (1. 930), but the remainder of the text is replete with difficulty (see Sznycer 1967; Krahmalkov 1970; 1988: 55–62). Also, the Carthaginian general Hannibal prayed for his troops before battle (Polyb. 3.44.13).

Maledictions are amply attested in Phoenician sources (Gevirtz 1961; *IDB* 1: 749–50). Blasphemy was attached to a famous Carthaginian commander: Himilco, returning in shame from defeat in Sicily, is said by Trogus to have accused his gods of perfidy before finally committing suicide (Justin 19.3.3 [Seel 1972: 166]).

4. Purity. Systems of sacrifice and ritual express conceptual analyses of the world in related taxonomies of purity and impurity, benefit, and danger (Douglas 1966). The conceptualization of purity in Phoenician religion and the rules according to which Phoenicians maintained ritual purity have been largely lost. Surviving details do not imply any particular system.

Classical writers mention Phoenician abstention from pork (Herodian 5.6.9; Porph. *Abst.* 1.14); archaeological confirmation has been inferred from the absence of pig bones from the earliest levels of Phoenician settlements in the W Mediterranean, even at sites where pig bones are found in pre-Phoenician levels (Whittaker 1974: 71).

Endogamy also knew exceptions among the Phoenicians. The notorious Jezebel was a daughter of the Phoenician Ethbaal, "king of the Sidonians" (1 Kgs 16:31), given in marriage to Ahab, king of Israel. Psalm 45 envisions such a royal wedding between an Israelite king and a Phoenician princess. Sallust (*Iug.* 78.4) says that Tyrians intermarried with Libyans at Lepcis Magna in N Africa. Intermarriage of Phoenicians with Judeans took place near Larnaca, Cyprus (ancient Kition) early in the Persian period, to judge from Judean names in the genealogies on Phoenician gravestones there (Hadjisavvas, Dupont-Sommer, and Lozachmeur 1984; Hadjisavvas 1986). Hamilcar, a 5th-century Carthaginian general (d. 480 B.C.E.), was the son of a Carthaginian father and a Syracusan Greek mother (Herod. 7.167).

A late and fragmentary Punic inscription (*KAI* 76) appears to be a calendar of purificatory rituals. The word *qdš* "holy" occurs three times, and there is mention of fruit, bread, incense, and (perhaps) naphtha. The text gives directions for the cultic manipulation of these items on specified days. Also associated with Carthage is a legend that a sacred oil-spring in a Carthaginian sanctuary would not flow except for persons who were ceremonially pure (Pseud. Arist. *Mir. Ausc.* 113).

The violation of a deity's prerogatives with respect to purity or custom might result in death, illness, or madness. A case of sacrilege is the subject of a recently discovered Akkadian letter from the king of Sidon to the king of Ugarit (Arnaud 1986–87: 189–90; the date appears to be ca. 1225 B.C.E.). Plague

resulting from sacrilege is a motif seized upon by Greek historians recounting Carthaginian military losses (e.g., Diod. 13.85–86). It is in the context of sacrilege, plague, and military defeat that narratives of human sacrifice are to be found (Diod. 13.86.3; 20.13.5–6).

D. Cult Sites

1. Natural. Any distinctive feature of the topography might be a sacred site among the Phoenicians, as among Mediterranean peoples generally. Caves, peaks, stone outcroppings, springs, rivers, and lakes were sacred, and frequently the sites of cults. Natural and cultivated groves of trees were centers of worship. The sacred grove and pool of Afqa at the source of the river Adonis (modern Nahr Ibrahim in Lebanon) was the most celebrated holy place in Phoenicia (Euseb. *Vita Const.* 3.55; Ribichini 1981: 159–65).

2. Constructed. Altars, chapels, images, and temples were constructed at sacred sites. See HIGH PLACE. The foundation or refurbishing of cultic installations is a recurring subject of Phoenician and Punic inscriptions (e.g., *KAI* 19; 277). Maintenance of temples was an obligation of kings in the E Phoenician cities; among colonies of Phoenicians in the W, such obligations might fall to private individuals (as did *leiturgia* among the Greeks). Private expenditures on cultic service could be lavishly rewarded (*KAI* 60).

The temple of Yahweh in Jerusalem, which was built for Solomon by Tyrian architects and laborers (1 Kings 5–6), was an elegant example of Phoenician temple design. See TEMPLE, JERUSALEM. A Phoenician temple of Astarte in Kition, Cyprus, datable to the 8th century B.C.E., provides a parallel.

E. Cult Personnel

1. Priesthoods. Two priesthoods, *khn* and *kmr*, existed among the Phoenicians. The former is the only class of priesthood recognized as legitimate in the Hebrew Bible, where it is restricted to men and, at least in the divided monarchy, not a royal prerogative. The Phoenicians, in contrast, admitted male *khnm* and female *khnt*, who might also be king and queen, or queen mother (*DISO*, 116). As in Israelite religion, Phoenician *khn* priests were organized in colleges presided over by a *rb khnm* "high priest."

The *kmr* priesthood is little known either in the Hebrew Bible (BDB, 485) or in Phoenicia (*DISO*, 122). Both in the Bible (2 Kgs 23:5) and at Carthage (*KAI* 76.6 [restored]), *kmr* priests are associated with the offering of incense in rituals of Tyrian origin. (Aramaic inscriptions mention *kmrt* "*kmr*-priestesses.")

2. Other Functionaries. The names of extra-priestly cultic offices are known, but little can be said about the specifics of these. The *ʿzr* (CIS I 6000bis.3) was probably a temple administrator; the *zbḥ* presided over bloody sacrifices. Specific to the cult of Melqart were the offices *mqm ʾlm* "waker of the god" and (probably) *mtrḥ ʿštrny*, variously interpreted (see Lipiński 1970). The record of expenditures of a Phoenician temple in Kition (*TSSI*, 123–31) lists payments to builders, assistants, bakers, and barbers. Another term listed there—*klbm* "dogs"—has been interpreted as a variety of male sex worker (*TWAT* 4: 163; Margalith 1983; Brunet 1985).

Among biblical scholars it has unfortunately become a truism that male and female sex workers were cultic functionaries in the religions of Canaan, and that considerable polemic was exerted against this practice by the classical prophets. The marriage of Hosea, for example, is regularly interpreted against the background of a fertility cult in which unrestricted sex is the religious obligation (or privilege) of certain women (Wolff *Hosea* Hermeneia; Andersen and Freedman *Hosea* AB). Partial illumination of the modern fascination with sacred prostitution is to be had from the sociology of biblical studies as a discipline (Schüssler Fiorenza 1988). Cross-cultural studies of the prostitution calumny itself and of the economics of ancient religions have raised new questions.

All of the classical accounts of ritual sex among Semites appear to derive from Herodotus (Oden 1987: 140–47). The words in all Semitic languages alleged to be designations of ritual sex workers are euphemistic and polyvalent. And the very existence of a "fertility cult" has never been convincingly demonstrated, although fertility, both human and agricultural, was certainly a concern of all ancient societies. Incidents of female prostitution in ancient Israel and elsewhere are perhaps better accounted for in terms of economic marginalization (see PROSTITUTION, CULTIC; van der Toorn 1989).

F. Festivals

1. Seasonal Celebrations. It is reasonable to assume that religious festivals marked the New Year, the vernal equinox, the summer solstice, and the autumnal equinox in Phoenicia, but evidence of festivals tied to the solar cycle is tenuous. Such evidence as is available suggests that seasonal festivals combined elements of agricultural and mythopoeic origin. A Tyrian celebration of the resurrection of the god Melqart may have coincided with the vernal equinox (Lipiński 1970). The festival of Adonis in Byblos, known from Greek sources, probably was held in early summer (Ribichini 1981: 150–51). Other festivals are known only as names. The *ym qbr ʾlm* lit. "day of the god's burial" is mentioned in the Phoenician inscription from Pyrgi in Italy (lines 8–9; see *TSSI* 3: 151–59). The phrase *zbḥ šmš* "sun sacrifices" designated a month, perhaps the month of the winter solstice (*TSSI* 3:156; cf. *KAI* 43.4).

2. Sports. Athletic contests and paramilitary maneuvers were part of the ritual activities of Phoenicians. The former has been linked to the origins of the Olympic games (Boutros 1981).

G. Revelatory Institutions

1. Prophecy. The Elijah narrative refers to "the four hundred and fifty prophets of Baal and the four hundred and fifty prophets of Asherah who eat at Jezebel's table" (1 Kgs 18:20). In this biblical narrative, the prophets of Baal perform the priestly function of animal sacrifice. Priests and prophets were bearers of religious tradition according to one source of Phoenician origin. The *Phoenician History* of Philo of Byblos relates that the first Phoenician hierophant, a certain Thabion, transmitted his allegorical interpretations of myths and of natural and cosmic phenomena "to the priests and to the prophets who led the rites" (Euseb. *Praep. Evang.* 1.10.39 [Attridge and Oden 1981: 61]).

Traces of prophetic activities remain in the epigraphic record, as well. An Etruscan ruler declares in the Phoenician-Etruscan bilingual text he commissioned at Pyrgi in Italy that he built a sanctuary for Astarte because she requested it of him (*TSSI* 3: 157). Presumably the request was made through prophets or oracles. Responsibility for the erection of an Astarte shrine at Hammon, S of Tyre, is attributed jointly to the *mlʾk* (traditionally "angel") of the god Milk-Astarot (*KAI* 19.2) and the citizens of the city. It can be inferred from the rhetoric of the inscription that prophetic agency may have been involved in the decision to undertake the project.

2. Other Mantic Activities. In recounting the Carthaginian siege of Akragas in Sicily, Diodorus (13.86.2) alleges that soothsayers (Gk *manteis*) warned the Carthaginian general against dismantling Greek tombs for the siegeworks. The *Periplus* attributed to Hanno the Navigator, probably a Greek translation of a 5th-century Punic document, describes a fearful night passed by a shore crew on an island in a lake near the W African coast. Soothsayers (Gk *manteis*) commanded them to leave the dreadful place (line 77; Oikonomides 1977: 29).

H. Divinities

1. Phoenician Polytheism. The very concept of divinity in NW Semitic religion is fuzzy. Divinities achieve definition relatively: in relation to one another and in relation to human beings. The mutual relations of divinities are expressed in the schematic associations called pantheons. The organizing principles of pantheons are analogical. Human structures organizing power, generative and coercive, provide the lines of analogy. Thus divinities may associate in triadic nuclear families (father/mother/son); or as conjugal pairs; or as kin groups spanning several generations. Alternatively they rank in power strata like the population of a city-state. Minor groupings of deities are iconic and thereby mutable.

The pantheons of Phoenician city-states have been described as incorporating a divine triad consisting of a god and goddess with a divine male child begotten by them (Teixidor 1977: 35–39; van den Branden [1981: 36] extends the triad beyond the nuclear family of parents and child). But the triad is imagistic rather than structural (a point missed by van den Branden 1981, argued in essence by Xella 1981: 14–15). The iconography of Astarte, for example, includes erotic groupings of three female deities (Delcor 1986: 1080 and pl. 20). The motif of a dying-rising god, traditionally linked with the triadic arrangement of divine families, need not be coupled with triadism.

Paired deities are a more enduring element of Phoenician religion (Servais-Soyez 1986). The pair Elyon and Baalat have been associated with Byblos on the basis of combined epigraphic and literary evidence (Moscati 1968: 31–32). At Tyre, Astarte is coupled with Melqart (Herakles) in texts (Moscati 1968: 34–

35) and iconography (Delcor 1986: 1081). At Carthage the god Baal Hammon is paired with the goddess Tinnit from the early 5th century onward (CIS I 5510 is probably the earliest textual evidence).

The phylogeny of divine beings was expressed in theogonic myths. Apart from Ugaritic texts with theogonic interests (see CANAAN, RELIGION OF), the only extant Phoenician theogony is from the *Phoenician History* of PHILO OF BYBLOS (the detailed investigation of this text by Movers [1848] still repays close reading; the most extensive recent analysis is by Schiffmann 1986).

2. Dynamics of Pantheons. It is a commonplace that the ranking and grouping of divinities in pantheons mirrors the social and political relations of human society. The occupational specializations of urban society are likewise represented in the restricted ambit of any single deity. The pantheons of Phoenician cities were dynamic: new deities were assimilated or invested; old deities waxed or waned in prominence; some became senescent.

The dynamism of Phoenician polytheism accounts for the considerable discontinuity between Bronze Age and Iron Age pantheons of the same regions (noted by Xella 1981: 12–13). The historical development of Phoenician religion involved innovation, openness to elements of non-Phoenician origin, and periodic divestment of innovative elements (Garbini 1981). First-millennium Phoenician pantheons, for example, show the emergence of guardian deities, such as Shadrapa, Horon, Sid, and Bes, to a new prominence (Garbini 1981: 33–36). Two-element divine names are widely diffused in the 1st millennium: Milk-Astarot (see Pardee 1988 on this name), Tinnit-Astarot, and Baal Hammon are examples; "double-gods," e.g., Eshmun-Milqart, also show a renewed prominence in the late Iron Age.

PHILIP C. SCHMITZ

PHOENIX (BIRD AND POEM). In the ancient world, the phoenix was a bird whose symbolic power proved international and durable. Although its long history, including occurrences in Egypt, Greece, and Rome, exhibits significant and interesting variety, several constant factors define the boundaries and establish the identity of the phoenix: bird of the sun, an immensely long life, the capacity for self-renewal or self-regeneration after its death, and a sign of the human soul and its destiny.

In Egypt, the phoenix is early (2500 B.C.E.) attested in the Heliopolitan mythology of Atum/Re. The creation account portrays the emergence of land and life from the primeval waters, with Atum a self-generating deity whose shape became definite as a mound or hill in the waters and whose spirit was a light sending the rays of the sun into the world from the temple in Heliopolis. In the very beginning, the Phoenix perched on the Benben stone, located in the temple of Atum, marking the origin of the inhabited world and the reign of Atum:

O Atum! When you came into being you rose up as a High Hill.
You shone as the Benben Stone in the temple of the phoenix in Helopolis
(*Pyramid Text* 600, in Rundle-Clark 37)

The self-emergent Atum and the self-emergent phoenix received the adoration befitting their status:

Hail to you, O Atum!
Hail to you, O Becoming One who came into being of himself!
You rose up in this your name of High Hill,
You came into being in this your name of "Becoming One."
(*Pyramid Text* 587, in Rundle-Clark 38)

Creating the world was not the only time when the phoenix was active, for the daily and monthly ritual were performed in the temple of the Benben stone, suggesting that important moments in social life were assimilated to the activity of Atum and the bird and noted in the liturgical calendar. The *Book of the Dead* 17 extends the influence of the phoenix to the journey of the soul from the underworld to the sun. As the bird was a manifestation of Atum at the beginning, so it aids the dead who return to Atum at the end. The pervasive character of the phoenix is underscored in the words of Atum:

The Word came into being.
All things were mine when I was alone.
I was Re in his manifestations:
I was the great one who came into being of himself … I was that great Phoenix who is in Heliopolis, who looks after the decision of all that is
(Rundle-Clark 79)

Yet another feature of the phoenix is seen in the ancient Egyptian view of time as cyclical and composed of segments of the day, the week of ten days, the year, and longer periods of 400 and 1,460 years. Since the bird was present when the world emerged from the waters, it initiated the cycles as well as the world; it also began each new period in the flux and flow of the world. The recurring appearance of the phoenix is a corollary of the meaning the bird occupied in ancient Egypt: the presence of Atum/Re and his word which became the destiny of the world and humans.

When we move from the Egyptian to the Greco-Roman world, we meet new developments in the symbol of the phoenix. The earliest reference is found in a fragment of Hesiod (ca. 700 B.C.E.), preserved in Plutarch (*De def. or.* 415), from which we learn that Hesiod thought that time is divided into periods or cycles which are the lives of nine ravens. Even in ancient times, Hesiod's statement was enigmatic, but van den Broek (76–97) has demonstrated that the life of the bird was 540 years and that it appeared at the end of one and the beginning of another historical cycle. Herodotus, in the 5th century B.C.E., gives an extensive description and interpretation based on pictures and Egyptian myths:

Another bird also is sacred; it is called the phoenix. I myself have never seen it, but only pictures of it; for the bird comes but seldom into Egypt, once in five hundred years, as the people of Heliopolis says. It is said that the phoenix comes when his father dies. If the picture truly shows his size and appearance, his plumage is partly golden but mostly red. He is most like an eagle in shape and bigness. The Egyptians tell a tale of this bird's devices which I do not believe. He comes, they say, from Arabia bringing his father to the Sun's temple enclosed in myrrh, and there buries him. His manner of bringing is this: first he moulds an egg of myrrh as heavy as he can carry, and when he has proved its weight by lifting it he then hollows out the egg and puts his father in it, covering over with more myrrh the hollow in which the body lies; so the egg being with his father in it of the same weight as before, the phoenix, after enclosing him, carries him to the temple of the Sun in Egypt. Such is the tale of what is done by this bird.
(Histories 2.73, trans. Godley 359–61)

Here we have considerable information which was to become standard for much Greek and Roman thought about the bird: its origin in Arabia and appearances in Heliopolis and its burial of its dead father in the temple of the Sun in Egypt. A fragment of the 4th century B.C.E. poet Antiphanes, preserved in Athenaeus (*Deipnosophists* 14.655) also connects the Greek phoenix with Egypt. Another fragment, from

the 2d-century-B.C.E. Hellenistic Jewish writer Ezekiel the Dramatist and preserved in Eusebius (*P.E.* 9.29.16), says that this bird, king of all birds, sang beautifully. And from a fragment of Aenesidemus, preserved by Diogenes Laerteius (9.79) we learn that the phoenix reproduces asexually, a theme that Christians will develop into a symbol for life after death. But the most complete account of the phoenix comes from a Roman senator, Manilius, who indicates that a new bird is reborn from the decaying remains of its own body, with each death-birth occurring every 540 years to mark political, social, and religious renewals (Pliny 10.4–5), with which Ovid (*Met.* 1.108–10 and 15.392–407) and Seneca (*Ep.* 42.1) agree. Tacitus provides an account with several characteristic themes belonging to the symbolism of the phoenix:

> … the bird known as the phoenix visited Egypt … I propose to state the points on which they [the tales] coincide, together with the larger number that are dubious … That the creature is sacred to the sun and distinguished from other birds by its head and the variegation of its plumage, is agreed by those who have depicted its form: as to its terms of years, the tradition varies. The generally received number is five hundred … phoenixes flew to … Heliopolis … When its sum of years is complete and death is drawing on, it builds a nest in its own country and sheds on it a procreative influence, from which springs a young one, whose first care on reaching maturity is to bury his sire … he lifts up his father's corpse, conveys him to the Altar of the Sun, and consigns him to the flames.
> (*Ann.* 6.28, trans. Jackson 201–3)

Several Christian texts contain copious references to the phoenix. Two invite discussion, for they demonstrate how Christians adopted and utilized a pagan symbol as a vehicle for expressing new religious content. The first is the 3d-century C.E. poem of Lactantius, *De ave phoenices.* Here we are told that the bird dwells in a far-off land from which the Sun sends its spring rays, a place higher than any known mountaintop and where vegetation is always green, water from a fresh spring ever sweet, and life is eternal. Indeed, the bird dwells in Paradise where the sun shines with eternal brightness as the place to which the soul ascends and where it is nourished by food reminiscent of the sacraments. Lactantius exhibits continuity between Christian and pagan culture, and thus shows that his conversion to Christianity did not prevent him from using a Greco-Roman symbol as a means to express Christian ideals and beliefs. The phoenix became a symbol of life after death, of "gaining eternal life by the boon of death" (trans. in Duff and Duff 665).

A Coptic Christian text dating to the first half of the 6th century C.E., the *Sermon on Maria*, is among the symbolically richest descriptions of the phoenix (van den Broek 33–47 for translation and discussion). According to this sermon, the bird appeared at crucial junctures in the divine efforts to redeem humans—at Abel's sacrifice, when God delivered the Israelites from Egypt, and for the tenth and last time, when the Virgin sacrificed in the temple at the birth of Jesus. In addition to mentioning the death and rebirth of the phoenix, the preacher alludes to the resurrection of Jesus and explicitly refers to the bird as a symbol of the general resurrection and of life after death.

The phoenix was an unusually powerful symbol in the ancient world. Because the myth moved across cultures, it could gain or lose a particular meaning. Whereas in Egypt it served as a manifestation of deity, in the Greco-Roman world it came to express a view of history as periodical and, in Christianity as well, as a symbol for existence in a paradisal state presaged by living as a Christian.

LARRY J. ALDERINK

PHOENIX (PLACE) [Gk *Phoinix* (Φοινιξ)]. A harbor of Crete near the W end of its S shore (Acts 27:12). The Greek designates both the date palm (from which the harbor name probably arose) and the

mythical bird of Egypt (see van den Broek [1972: 51–66] for the common origin of these). The harbor and nearby town were W of Fair Havens (Strabo 10.4.3; Ptolemy *Geog.* 3.17.3.) and offered a secure winter haven for the grain ship from Alexandria on which Paul was traveling to Rome (Acts 27). The deep harbor of modern Loutro E of Cape Mouros would fit the classical references but the description in Acts that the harbor faced SW and NW *(bleponta kata liba kai kata chōron)* has caused some debate since the Loutro harbor faces E. Three main theories exist: (1) Since Luke had not visited Phoenix and his knowledge of the discussion in vv 9–12 was secondhand, he mistakenly identified the orientation of the harbor; (2) the Gk phrase may mean "looking down the SW and NW wind" (Smith 1880: 87–89; 251–53) so that the harbor actually "looked NE and SE" as in the RSV; (3) a shallow open bay just to the W of Cape Mouros called locally Phineka was the harbor of Acts 27:12 not Loutro harbor. Ogilvie (1958: 308–14) argues that the classical references actually favor the E facing harbor of Cape Mouros which was deeper and well protected in Paul's day. He suggests earthquakes in the 6th century A.D. raised the ocean floor, closed an inlet facing NW, and caused the remaining SW inlet and W facing bay to be abandoned in favor of the E bay of Loutro.

PHRYGIA (PLACE) [Gk *Phrygia* (Φρυγια)]. The land of the Phrygians, a territory of W central Asia Minor, between the N Aegean and the river Halys (modern Kizil Irmak).

———

A. History of Phrygia
B. Phrygia in the Bible
C. Phrygia and Early Christianity

———

A. History of Phrygia

1. The Early Period. The Phrygians migrated to Asia Minor in the 12th century B.C. Herodotus (6.45; 7.73) refers to an ethnic group in Thrace and Macedonia called *Brygoi* or *Briges* (Macedonian *b* replaces common Gk *ph*, as in Berenice/Pherenice). What is known of the Phrygian and Thracian languages indicates that they belong to the same Indo-European group, called Thraco-Phrygian. A legend recorded by Herodotus (2.2) makes the Phrygians the most ancient of all nations—a claim with no substance to it.

In Homer (*Il.* 2.862, etc.) the Phrygians are closely associated with the Trojans. They displaced the Hittites as the dominant power in central Asia Minor. Their kings bore the alternate dynastic names Midas and Gordios, the latter being linked with the name of the capital of Phrygia, Gordion (about 50 miles WSW of Ankara). The situation of Gordion, commanding the trade routes between the Hellespont and the Cilician gates, was symbolized in the Gordian knot: whoever untied it would control all Asia Minor.

The Phrygian kings were proverbial for their wealth, derived perhaps from gold mines and commemorated in the legend of Midas and the golden touch. Midas' name appears (in the form "Mita") in Assyrian records of 710 B.C. The power of Phrygia was broken by the Cimmerian invaders from the Russian steppes; during their invasion Midas, the last Phrygian king, committed suicide (693 B.C.).

When the Cimmerian invasion receded, Lydia, with its capital at Sardis, emerged as the leading Anatolian power, extending its dominion over Phrygia as far east as the Halys. From then on Phrygia was subject to one imperial power after another—to the Persians after Cyrus' overthrow of the Lydian Croesus in 546 B.C. and to the Macedonians after Alexander's conquest of Asia Minor in 333 B.C.

Under the Persian Empire Phrygia was divided into two satrapies, Greater Phrygia and Lesser or Hellespontine Phrygia, which were separated from each other by the Mysians, Bithynians, and other immigrants from Europe. With Hellespontine Phrygia may be associated the traditional Phrygian thalassocracy from 905 to 880 B.C. (Diod. Sic. 7.11; cf. Hom. *Il.* 24.545).

On his westward march against Greece in 480 B.C. (Hdt. 7.27) Xerxes traversed Phrygia, after crossing the Halys, until he reached the city of Celaenae (the later Apamea, modern Dinar in the Maeander valley). A Phrygian contingent marched in his army (Hdt. 7.73). Other Phrygian cities through which the army passed were Anaua and Colossae in the Lycus valley. On the Phrygian-Lydian border it came to Cydrara (Hdt. 7.30), later known as Hierapolis.

When Cyrus the younger led his army of Greeks east from Sardis in his bid to seize the Persian throne from his brother Artaxerxes II (401 B.C.), they crossed the Maeander from Lydia into Phrygia; then one day's march of 24 miles took them through Phrygia to Colossae, "a large and prosperous city." From there a three days' march of 60 miles took them to Celaenae, where Cyrus was joined by reinforcements from other parts of the Greek world. From there they advanced to Peltae (a two days' march of 30 miles) and then on to Potters' Market (a two days' march of 36 miles) and then again to Caster plain (a three days' march of 60 miles). Two days' march from there (30 miles) took them to Thymbrion, where there was a fountain named after Midas. Another two days' march of 30 miles took them to Tyriaion, from which a three days' march of 60 miles took them to "Iconium, the last city of Phrygia." On leaving Iconium they crossed from Phrygia into Lycaonia (Xen. *An.* 1.2.6–19).

2. After Alexander. Alexander the Great also passed through Phrygia on his way from the Granicus (which flows into the Sea of Marmara) to Issus in SW Cilicia (334–333 B.C.); it was at Gordion, the former Phrygian capital, that he is said to have ensured his mastery of Asia by "cutting the Gordian knot."

After Alexander's death (323 B.C.), Antigonus, his governor of Phrygia, was proclaimed king by his army; but Ptolemy and Seleucus, with Lysimachus of Thrace and Cassander of Macedonia, combined against him and killed him at the battle of Ipsus in central Phrygia (301 B.C.). Lysimachus then gained control of Asia Minor, but soon lost most of it, including Phrygia, to Seleucus.

Seleucus I is said to have granted citizenship to Jewish settlers in cities which he founded in "Asia and Lower Syria" (*Ant* 12.119); among these Antioch-near-Pisidia is probably to be included.

In 278/277 B.C. three tribes of migrant Celts or Galatians crossed the Hellespont into Asia Minor at the instance of the king of Bithynia, who hoped to use them as mercenaries against his enemies. For a generation and more the Galatians menaced their neighbors in Asia Minor, until a series of defeats at the hands of Attalus I, king of Pergamum, confined them within strict limits, in territory which had formerly been NE Phrygia (232 B.C.). This territory became the kingdom of Galatia, which expanded until by the reign of its last king, Amyntas, it bordered on Cappadocia to the E, Pamphylia to the S, and the Roman province of Asia (formerly the kingdom of Pergamum) to the W. When Amyntas fell in battle in 25 B.C., his expanded kingdom became the Roman province of Galatia.

When Antiochus III succeeded to the Seleucid throne in 221 B.C., he had to win back Lydia and Phrygia from his rebellious kinsman Achaeus, who seized those regions and had himself crowned king at Laodicea (220 B.C.). When Antiochus recovered those regions, he settled two thousand Jewish families from Babylonia in them to ensure their continued allegiance (*Ant* 12.149). The Jewish population flourished in the Lycus valley and other parts of Phrygia: in 62 B.C., for example, the annual half-shekel tax for the maintenance of the Jerusalem temple amounted to nearly 100 gold *librae* ("pounds") at Apamea and just over 20 at Laodicea, which points to a population of well over 50,000 male Jews between 20 and 60 years of age in the areas of which these cities were the centers (Cic. *Flac.* 68). An often-quoted Talmudic saying to the effect that "the baths and wines of Prugitha separated the ten tribes from their brethren" (*b. Šab.* 147b) has been thought to refer to the assimilationist tendencies of Phrygian Jews; but Prugitha may not be Phrygia.

In 204 B.C., during the Hannibalian war, the Romans sent a deputation to Pessinus in Phrygia to acquire, by the good offices of Attalus I of Pergamum, the black stone in which the ancient Anatolian mother goddess *(Mater Deum Magna Idaea)* was believed to reside (Livy 29.10); her cult—so unlike any traditional Roman cult—was from then on established in Rome. Other Phrygian divinities whose worship persisted into Roman times were the moon god Mēn, who had important cult centers at Pisidian Antioch (Mēn Askainos) and near Laodicea (Mēn Karou), and the nature god Sebazios (identified with Dionysus).

Later in the reign of Antiochus III the Romans compelled him to hand over southwestern Phrygia to their ally the king of Pergamum. (Attalus I of Pergamum had already annexed part of northwestern Phrygia, called thenceforth Phrygia Epiktētos, "Acquired Phrygia.") When in 133 B.C. the last king of Pergamum bequeathed his kingdom to the senate and people of Rome, it was reconstituted as the Roman province of Asia, which included a good part of Phrygian territory. Over a century later, when the Romans reconstituted the kingdom of Galatia in turn as an imperial province, the remainder of Phrygia came under their direct control.

Phrygia was thus divided between the provinces of Asia and Galatia, its western part being known as Asian Phrygia (Gal. *De aliment. facultat.* 1.13.10), and its E part probably as Galatic Phrygia (cf. Calder 1956). The territory between Emir Dağ and Sultan Dağ was called Phrygia Paroreios, "Phrygia near the mountain(s)"; the extreme SE part of Phrygia was called Phrygia-near-Pisidia (Strab. 12.8.13), having Pisidian Antioch as its chief city (cf. Acts 13:14).

In A.D. 295 the provincial system in central Asia Minor was reorganized: a new, enlarged province of Pisidia was created with Pisidian Antioch as its capital—a situation reflected in the later texts of Acts 13:14, which change "Pisidian Antioch," i.e., Antioch-near-Pisidia (Strab. 12.3.31, etc.), to "Antioch of Pisidia" (cf. KJV). At the same time Phrygia became a provincial title for the first time under the Roman Empire: two new provinces were called Phrygia Prima (Phrygia Pacatiana), to the W, with its capital at Laodicea (cf. the appended note to 1 Timothy, KJV), and Phrygia Secunda (Phrygia Salutaris), to the E, with its capital at Synnada.

The Phrygians were apparently an unwarlike people, subject for centuries to other races; hence perhaps the disparaging use of "Phrygian" (Gk *Phryx*) as a slave name (e.g., Ar. *Vesp.* 433); cf. the proverb "as timid as a Phrygian hare" quoted by Strabo (1.2.30).

In ancient Greek music the Phrygian scale (Pl. *Resp.* 3.399A; Arist. *Pol.* 4.3.4; 8.7.89; cf. Eur. *Or.* 1426; *Tro.* 545), commonly associated with the flute, was a mode of two tetrachords with a semitone in the middle of each and a whole tone between the two.

B. Phrygia in the Bible

1. In the Greek OT. There is no reference to Phrygia in the Hebrew Bible, although the Moschi (Assyrian *Muški*), who occupied part of the Phrygian territory, appear as "Meshech" in Gen 10:2 = 1 Chr 1:5; Ezek 27:13; 32:26; 38:2, 3; 39:1. In the Greek OT the only relevant instance is the mention of "Philip, by birth a Phrygian (Gk *Phryx*)," whom Antiochus IV appointed governor of Jerusalem in 168 B.C. (2 Macc 5:22).

2. In the NT. According to Acts 2:10, a contingent of Phrygian Jews was present in Jerusalem at the first Christian Pentecost; they are possibly mentioned because the evangelization of Phrygia is to be related later in the book.

Pisidian Antioch and Iconium, cities of Phrygia, were evangelized by Paul and Barnabas during their missionary tour of central Asia Minor (Acts 13:14–14:4). Pisidian Antioch lay in "Phrygia near Pisidia." While Iconium is referred to as a city of Lycaonia by Cicero (*Fam.* 15.4.2) and the elder Pliny (*HN* 5.25), Phrygian was spoken there from Xenophon's time to the end of the 2d century A.D., as inscriptions show (Calder 1911: 188–94). In A.D. 165 Hierax, an associate of Justin Martyr, when put on trial with him at Rome, tells the examining magistrate that he was "dragged away from Iconium in Phrygia" (*M. Just.* 4). Indeed, as late as 232 a Church council is described as being held at "Iconium, a place in Phrygia" (Cyprian *Ep.* 75.7). That Iconium was reckoned to be in Phrygia and not in Lycaonia is implied in Acts 14:6, where Paul and Barnabas are said to have fled from Iconium "to Lystra and Derbe, cities of Lycaonia."

In Acts 16:6 (RSV) Paul, with Silas and Timothy, is said to have gone "through the region of Phrygia and Galatia" on a westward journey through Asia Minor. The phrase is best translated "through the Phrygian and Galatic region" (Gk *dia tēs Phrygias kai Galatikēs chōras*). For the high probability that the genitive *Phrygias* is an adjective here and not a noun see Hemer (1976; 1977). The region traversed was that which was both Phrygian and Galatic, i.e., that conveniently called Phrygia Galatica (the part of Phrygia included in the province of Galatia).

When in Acts 18:23 Paul is described as going "from place to place through the region of Galatia and Phrygia" (Gk *tēn Galatikēn chōran kai Phrygian*), the wording is different and may denote the Galatic region of Lycaonia (in which Lystra and Derbe lay) together with Phrygia, both Galatic and Asian (Ramsay 1896).

The churches of Colossae, Laodicea, and Hierapolis, in the Lycus valley in the SW part of Asian Phrygia, were planted evidently by Epaphras during Paul's Ephesian ministry, A.D. 52–55 (Col 1:7; 4:12–13). The church of Laodicea is the only Phrygian one included in the seven churches of Asia addressed in Rev 1:11; 3:14–22.

C. Phrygia and Early Christianity

Phrygia was one of the most important centers of Christian life and activity in the generations following the apostolic age. This may have been partly due, but was by no means entirely due, to the immigration of outstanding Palestinian Christians in the later part of the 1st century, such as "John the disciple of the Lord" and Philip of Caesarea and his family. From Phrygia comes a greater concentration of Christian inscriptions in the 2d and 3d centuries than from any other place except Rome. Three main lines of Christian penetration have been traced: (1) up the Lycus and Maeander valleys and radiating out to Eumeneia and Akmonia, (2) southeastern Phrygia and Lycaonia, (3) NW Phrygia, especially the Tembris valley (Ramsay 1897: 511, 715).

Among outstanding Phrygian bishops were Papias and Claudius Apollinaris of Hierapolis and (toward the end of the 2d century) Abercius (Avircius) Marcellus of Hierapolis in Phrygia Salutaris. In Phrygia the Montanist movement arose in the middle of the 2d century; it was sometimes referred to as the Cataphrygian heresy. The 60 canons traditionally promulgated by the Council of Laodicea (ca. 363) were treated by later Church councils as a basis of canon law.

Phrygian Christianity suffered severely during the last imperial persecution. One Phrygian city, said to have been entirely Christian (possibly Eumeneia), was destroyed by fire with its inhabitants (Eus. *Hist. Eccl.* 8.11.1).

PHRYGIAN LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

PHYGELUS (PERSON) [Gk *Phygelos* (Φυγελος)]. Phygelus, along with Hermogenes, is named in 2 Tim 1:15 as being one of those from Asia who had "turned away" from Paul during his imprisonment in Rome. Unlike Hermogenes, who appears also in the apocryphal *Acts of Paul*, Phygelus is not known apart from his mention in 2 Timothy. On the basis of what can be pieced together about Hermogenes, it is reasonable to conjecture that he and Phygelus were at odds with Paul due to their understanding of the resurrection. See the fuller discussion and bibliography under HERMOGENES.

FLORENCE MORGAN GILLMAN

PHYLACTERIES [Gk *phylaktērion* (φυλακτηριον)]. This term appears once in the NT in Matt 25:3, where Jesus is said to accuse the scribes and Pharisees of ostentatiousness for "they do all their deeds to

be seen by men; for they make their phylacteries broad and their fringes long." The Greek word passed to the Vulgate and entered English Bibles through the Geneva Bible, 1557. It is universally accepted that by "phylactery" Matthew meant the Aramaic word *tĕpillîn*, the name given in rabbinic sources to two black leather boxes containing scriptural passages which are worn by Jews on the forehead and left arm.

The Mishnah, *Šebu.* 3.8, 11, requires Jewish males thirteen years and older to wear *tĕpillîn* each day. Women are explicitly exempt from this religious obligation (*m. Ber.* 3.3). The basis for wearing phylacteries was derived by the rabbis from four biblical verses: Exod 13:9, 16; Deut 6:8; 11:18. These four verses require the Jew to put "these words" as "a sign upon your hand and a frontlet (Heb *ṭôṭāpōt*) between your eyes" (Exod 13:9 has *zikkārôn*, "memorial," instead of "frontlets"). Thus both the head and hand phylacteries contain four passages from Scripture which include these verses: Exod 13:1–10, 11–16; Deut 6:4–9; 11:13–21. The head phylactery worn on the head consists of four compartments, each containing one section of Scripture, while the hand phylactery has one compartment containing all four passages on one parchment. The boxes of the phylacteries must be exactly square, and both the boxes and the straps which hold them firm must be painted black. The head phylactery is imprinted twice with the Hebrew letter *šin:* once on the side which is to the left of the wearer, and once on the opposite side. The *šin* on the right has four rather than the usual three prongs, as a reminder of the four scriptural passages contained in the phylacteries (*b. Menaḥ.* 35a). Each box is sewn to a base of thick leather with twelve stitches, one for each of the twelve tribes of Israel (*b. Šabb.* 8b). The phylacteries are not worn at night, nor on festivals or the Sabbath (*b. Menaḥ.* 36a–b). The hand phylactery is donned first: the box is placed on the inner side of the upper arm (facing the heart) and the strap is wound seven times around the arm. The head phylactery is placed in the middle of the forehead, with the two ends of the strap hanging over the shoulders. The placing of each phylactery is accompanied by certain blessings and by the recitation of Hos 3:21–22. They are worn during the morning prayer and removed in the reverse order in which they were placed on the body.

While the classical Jewish commentators on the Bible take the verses in Exodus and Deuteronomy as literally commanding the wearing of the phylacteries (see, however, Samuel ben Meir on Exod 13:19), the rabbis of the Talmud were aware that the Bible gives absolutely no description of the phylacteries or the laws concerning them. These laws were understood as the classic example of a biblical precept whose details are elaborated only in the oral law (*m. Sanh.* 11:3), and almost all of the details of their construction are attributed to those oral laws which God purportedly taught Moses at Sinai (*b. Menaḥ.* 34b–37a). Given the tenuous relationship between the laws of phylacteries described in the Talmud and the alleged scriptural basis for them, it is far from apparent at exactly what point in the history of the Israelite religion phylacteries were introduced.

The first question is thus whether the "signs" and "frontlets" of Exodus and Deuteronomy were intended to describe objects in some way similar to phylacteries, or if they were figurative terms. Some interpreters have taken the Exodus passage literally, based on the facts that the word for "memorial" almost always has a literal reference and that Exodus 13 consists primarily of ritual injunctions which were obviously intended to be performed as commanded (*IDB* 3: 809). However, the referent of Exod 13:9, "it shall be for a sign unto you on your hand and for a memorial between your eyes," is the Feast of Unleavened Bread, and the "it" of Exod 13:16 which was to serve as a "sign" and "frontlet" is the dedication of the firstborn. Neither of these two ceremonies can be understood to be literally bound upon the body of the Israelite; rather, they are to serve as perpetual reminders of how God redeemed Israel from the hands of the Egyptians. The passage in Deuteronomy also must be read figuratively, because "these words" (Deut 6:6 and 11:8) must refer at least to Deuteronomy chaps. 5–11, if not to the entire book (Kennedy *HDB* 3: 871). Thus it would seem likely that originally the expressions "sign," "frontlet," and "memorial" were intended figuratively, as were other expressions in these same passages ("The Law of the Lord shall be in your mouth," Exod 13:9; "You shall place My words in your heart and in your soul," Deut 11:18).

One reason for supposing the literal intention of the passages in question is alleged evidence for a widespread custom among ANE religions of tattooing or branding various parts of the body with the

name of a deity, particularly the forehead and hands, as a prophylactic measure. Hints of such a practice can be found in the Bible, such as the sign *(ʿôt)* on Cain's forehead (Gen 4:15) which placed him under divine protection (see also Ezekiel's cross, Ezek 9:4, 6; cf. Rev 7:3; 14:1). Thus while arguing that the intention of the scriptural passages in question is figurative, it is important to note that the language chosen is borrowed from actual customs familiar to the author of these passages (*HDB* 3: 871).

At what date, then, did Jews begin to wear phylacteries and to interpret the passages from Scripture literally? Hirsch (*JEnc* 10: 26) claimed that phylacteries were used as early as the 4th century B.C.E., but there is no support for this view. Josephus (*Ant* 4.213) regards the phylacteries as dating from the time of Moses, though he makes this claim of all of the daily customs that he mentions which revolve around prayer, many of which are known to be later innovations. The LXX translates the word *ṭôṭāpōt* as *asaleuton*, "that which is fixed, immovable." This implies that in Egypt in the middle of the 3d century B.C.E. the institution of phylacteries was not yet known. Rather, the four scriptural passages were interpreted as meaning that the laws and rituals of Exodus 13 and Deuteronomy 6 and 11 should remain the unchanging subjects of one's thoughts. The earliest explicit reference to phylacteries in a literary work is the *Letter of Aristeas*, sec. 159, where only the phylactery of the hand is mentioned. Scholars differ as to the dating of this text. Most place it in the 2d century B.C.E. (Shutt *OTP* 2: 9–10), though some claim that parts of it, including secs. 128–71, date from the 1st century C.E. (Andrews *APOT* 2: 87). See also ARISTEAS, LETTER OF. It therefore seems prudent to attribute the introduction of the phylacteries to the period between 250 and 100 B.C.E.

Yet the literary evidence can only suggest the existence of some object worn on the head and the arm: it cannot tell us to what extent these objects were similar to the *tĕpillîn* as they are described in rabbinic sources. All statements as to the nature of phylacteries in pre-Mishnaic times were mere conjecture until the discovery forty years ago of the remains of phylacteries at the caves of Murabbaʿat, which were occupied by refugees at the time of the Bar Kokhba revolt (135 C.E.), and at the caves at Qumran. While the exact dating of the material from Qumran remains uncertain, all agree that it reflects the late Second Temple period, and thus provides us with evidence on the nature of phylacteries which predates the earliest material in the Mishnah by one if not two centuries (see *DJD* 2: 80–85).

Prior to 1967, the only fragments discovered came from the hand phylacteries, and while some of the boxes which housed the biblical passages were found, all the parchments were without their original containers. Then, on January 31, 1968, Y. Yadin acquired the only known capsule of head phylacteries, together with four parchments. Scientific examination revealed that three of the four scriptural passages were still in their original compartments (Yadin 1969: 9), thus providing new evidence for the manner in which the passages had been folded and tied. The form of the phylacteries, the material used for the parchment and the tying, all conform to the regulations given in the Talmud. Most surprisingly, the difference of opinion between two 12th-century Talmudists as to the proper order of arranging the four scriptural passages in the head compartments is reflected in the Qumran fragments. Thus we know that the dispute did not originate during the medieval period, as some scholars had previously thought, but rather reflected divergent traditions which go back at least to the 1st century.

Another stage in the development of phylacteries was revealed when it was discovered that the Qumran phylacteries contained the Decalog. According to *m. Tamid* 5:1, the Decalog was recited daily in the temple along with Deut 6:4–9 and 11:13–21. A statement in *y. Ber.* 3c implies that these same texts were also recited outside the temple. The custom of reciting the Decalog along with Deut 6:4–9 is reflected in the Nash Papyrus, a 2d-century-B.C.E. papyrus allegedly from the Fayyum region of Egypt. Therefore it appears that the Decalog was at one time part of the daily liturgy in both Palestine and Egypt (Vermes 1959: 69). According to both Palestinian and Babylonian traditions, the practice of daily recital of the Decalog was suspended because the sectarians claimed "these alone were given to Moses at Sinai" (*y. Ber.* 3c; *b. Ber.* 12a).

As early as 1927, Mann (291) claimed that pre-rabbinic *tĕpillîn* contained the Decalog. This would explain the comments of Jerome on Ezek 24:16 that the Babylonian magistrates who observe the law surround their heads with the Decalog written on leather. Mann also points out that *m. Sanh.* 11.3

expressly forbids the use of five rather than four passages in the phylacteries. Since *Sipre* to Deuteronomy, secs. 34–35, uses two exegetical interpretations to justify the exclusion of the Decalog from phylacteries, it seemed logical to Mann that the fifth forbidden passage is the Decalog. Mann's hypothesis was confirmed by the evidence at Qumran. Since those phylacteries found at Qumran contain the Decalog while those at Murabba‹at do not, it is clear that the Mishnaic reform mentioned above had taken effect by 135 C.E. Thus we see that while the physical elements of the phylacteries, i.e., the case, the parchment, the ties, etc., were already fixed by the 1st century, the final uniformity of the text was not established until the 2d century, and even then, two traditions remained as to the ordering of the four passages.

While the laws concerning phylacteries were fixed by the middle of the 2d century, it is not clear how widespread the custom of wearing phylacteries was in the first two centuries of the Common Era. The majority of those who wore phylacteries did not wear them all day; to do so was seen as a special act of piety (*b. Sukk.* 28a; *b. Ta‹an.* 20b). According to *b. Ber.* 47b and *b. Soṭa* 22a, the wearing of phylacteries was seen as one of the criteria distinguishing a *ḥābēr* (member of the rabbinic "society") from an *‹am hā›āreṣ* (one not observing rabbinic customs). Possibly the requirement of ritual purity while wearing phylacteries (*y. Ber.* 4c) prevented many from wearing them. A tannaitic statement found in the Babylonian Talmud suggests another reason why the masses did not embrace this custom. During the Hadrianic persecutions the wearing of phylacteries was banned on pain of death (*y. Ber.* 4c; *m. ‹Erub.* 10.1; *m. Meg.* 4.8). According to *b. Šabb.* 130b, because the people were not willing to martyr themselves for the wearing of phylacteries, this precept remained "weak in their hands" even after the persecution.

Most scholars assume that the origin of the custom of wearing phylacteries was connected with their use as amulets or charms. The Greek word *phylactērion* means "safeguard," "that which protects"; hence, an amulet. However since the term "phylactery" is never attested in Jewish sources even as a foreign word, this etymology (underlying the word's use in Matt 25:3) at best reflects the view of the Christian community in 70 to 90 C.E., and sheds no light on the origin of the institution. As mentioned above, the biblical verses undoubtedly adopted the language of contemporaneous magical and apotropaic charms.

The meaning of the MT's Heb *ṭôṭāpōt* is unclear. It probably should be vocalized as a singular noun, *ṭôṭepet.* Some scholars derive it from the root *ṭpp*, meaning "to tap or strike," "make an incision," with implicit reference to an actual sign or mark made in the flesh. Others prefer the root *ṭûp*, from Akk *ṭaṭâpu*, meaning "to encircle," "surround," thus "headband" for *ṭôṭepet* (BDB, 377). However, this does not fit the descriptive expression "between your eyes." Most scholars prefer to connect the word with *neṭipōt* (Judg 8:26; Isa 3:19) meaning "round jewel." This opinion is supported by *m. Šabb.* 6:1, where *ṭôṭāpōt* is used to describe a jewel worn by a woman on her forehead. Thus the word *ṭôṭāpōt* does not necessarily indicate a sign with magical properties. (See also the discussion in *TDOT* 5: 320, with additional bibliography.)

The derivation of the nonbiblical Hebrew word *tĕpillîn* is likewise unclear (see *TWAT* 6: 608–9). The singular *tĕpillâ* is identical with the Hebrew word for "prayer," but it may be a homonym, deriving not from *pll*, "to intercede," but from *plh*, "to separate, distinguish," indicating that which distinguishes the Jew from the non-Jew. The word *tĕpillîn* appears a number of times in lists with *qāmêa‹*, "an amulet" (*m. Miqw.* 10.2; *m. Kelim* 23.1; *m. Šabb.* 6.2), but no connection is suggested between them. While there is no evidence in rabbinic literature that phylacteries were ever regarded as amulets, it is possible that at the time they were first adopted, the masses regarded them as possessing magical properties similar to those of the *qāmêa‹*, which were also written on parchment by a professional scribe or exorcist and worn on one's body. Indeed, the very custom of wearing phylacteries might have emerged as a popular superstition, one which was then made normative by the leaders of the Jewish community, who stripped the symbol of its original magical overtones and infused it with a more "legitimate" religious significance. The choice of the term *tĕpillîn*, seen as the plural of "prayer," would thus be part of the rabbinic polemic to replace the original prophylactic nature of phylacteries with the liturgical nature of *tĕpillîn*.

PI-BESETH (PLACE) [Heb *pî-beset* (פִּי־בֶסֶת)]. One of the Egyptian cities mentioned in Ezekiel's oracle of doom against Egypt (Ezek 30:17). The Hebrew represents Egyptian *Pr-b€ stt*, "house of Baste," which was rendered "Bubastis" in Greek. The city is associated with extensive ruins of Tel Basta on the SE limits of modern Zagazig in the E Delta, 39 miles NNE of Cairo. The ancient city lay on the right bank of the easternmost of the three major Nile branches, in the Delta. Undoubtedly of prehistoric foundation, Bubastis was originally a metropolis of the thirteenth township of Lower Egypt and came to prominence during the Old Kingdom due to its strategic location at the junction between the river route to the NE frontier and the land route through the Wâdī Tumilat into Sinai. Old Kingdom pharaohs built extensively at the site, and blocks have been found of Khufu and Khafre (Dyn. 4) (Naville 1891: pl. 32); both Tety (Dyn. 5) and Pepy I (Dyn. 6) built chapels there (Bietak 1975: 99 n. 365; Habachi 1957: 11–43). The Middle Kingdom kings lavished building projects on the site, refurbishing older buildings and adding new ones, including palaces (Gomaà 1987: 2–8, 215).

While the fate of the site under the Hyksos is unknown (although blocks of Khiyan and Apophis have been found there; Naville 1981: pl. 35), the 18th Dynasty renewed its interest in Bubastis, and the temples were rebuilt under Thutmose III and Amenhotep II (Urk. IV: 1443; Naville 1891: pl. 35). Thutmose IV left an important historical inscription at the site (ibid.), and Amenhotep III built a new temple (Habachi 1957: 102–7). After the vandalism attendant upon the Amarna heresy, Sety I restored inscriptions (cf. Naville 1891: pl. 35), and his son Rameses II contributed extensively to rebuilding an expansion of all structures and temples.

Bubastis enjoyed its greatest prosperity from about 900–711 B.C., when it was closely associated with the Libyan 22d and 23d dynasties, the latter in fact using it as a residence (Gomaà 1974: 126–37). It is from this period (ca. 850 B.C.) that the great festival hall of Osarkon II dates (Naville 1892). Bubastis, which under the Libyans had been the chief principality of the district Ranofer (stretching from the Nile to the NE frontier), was, at the end of the 23d Dynasty, made into the metropolis of a new nome, the Eighteenth of Lower Egypt (Helck 1974: 196). Though deprived of its political primacy, the city remained prosperous and favored, and one of the prominent cities of the kingdom (cf. Ezek 30:17). Herodotus describes its breathtaking temples in glowing terms (ii. 137–38), and claims that in his day the local festival was the largest in Egypt (ii. 67–69). Bubastis was the site of a decisive battle in the attempt of Artaxerxes III to recapture Egypt (343 B.C.; Diod. xvi. 49–51), but retained its prominence throughout Ptolemaic times (Strabo xvii, 1. 27; Sauneron 1957), and its cults continued to operate in the 3d century A.D. (Aelian xii. 29).

The principal deity at the site was the lioness goddess Bast, later associated with the cat (*KG*, 373 n. 3; te Velde 1982), a feline type of deity associated variously with Sekhmet, the Eye of Re (Habachi 1957: 118), Hathor, Isis, and others (*RÄR* 80–82). Bast's son was Miusis, the "fierce-eyed lion," and she herself was identified by the Greeks with Artemis.

PI-HAHIROTH (PLACE) [Heb *pî haḥîrōt* (פִּי הַחִירֹת)]. A stopping place on the itinerary of the Israelites from Goshen to the wilderness (Exod 14:2, 9; Num 33:7–8). In Exod 14:2 the place is reached after "turning back" from Ethan, and in v 9 and Num 33:7 it is said to be "in front of" or E of Baal-zephon. Neither of these passages, however, is of much assistance in locating the place, and they seem to betray a flawed knowledge of delta geography. As transcribed the word resembles a Hebraized form of Akkadian origin, *Pi-hiriti*, "the mouth of the canal," which would be an appropriate toponym for the E edge of the heavily canalized E delta.

No Egyptian toponym of this form has yet been found, the closest approximation being *Pa-Kherta*, a town dedicated to the goddess Tefnut, somewhere on the E edge of the delta (El Arish naos, rev., 6: 5th–4th centuries B.C.), or (the variant of the letter) "the Pond of *Ta-Kherta*" (P. Dem. Cairo 31169 iii, no. 18: Ptolemaic). It is conceivable that these could be garblings of the earlier Akkadian geographical terms postulated above. Other candidates, such as Per-Hathor ("House [of the Goddess] Hathor"), between Tanis and Bubastis ("Hyksos" to post-Saite attestations), or Pa-Hiret (Ramesside), near Qantir, are disqualified for both linguistic and geographical reasons.

PILATE, ACTS OF. An ancient and extended account of the trial, crucifixion, and resurrection of Jesus. The initial episode of the narrative, which is dependent in part upon the canonical Gospels, centers around the activities of Pontius Pilate during the trial. It is this episode that provides the inspiration for the title of the work.

In many medieval manuscripts a text that is known as "Christ's Descent into Hell" has been appended to the Acts. The two writings often were circulated together in this form under the title of the "Gospel of Nicodemus." The Descent itself is a report upon the activities and the ministry of Christ while in hell, after the crucifixion and before the resurrection. It embodies a purportedly firsthand account of Christ's activities, as they are told by the aged Symeon and his two sons.

A firm date for the original composition of the Acts cannot be established with certainty. The canonical Gospels already reveal a concern among the authors of late-1st-century Christianity for the participation of Pilate in the judgment and execution of Jesus. This general concern for Pilate's role was not resolved by the gospel accounts, however, as is evident from the reappearance of the Pilate theme in the 2d-century *Gospel of Peter.* See PETER, GOSPEL OF.

The first possible reference to the Acts comes through Justin Martyr, who twice makes a specific appeal to a writing that he calls the "Acts of Pontius Pilate" (*Apol.* 1.35, 48). He cites this document as evidence for his own interpretation of the passion episode, but, unfortunately, he does not quote directly from the text. This silence concerning the specific wording of the Acts may suggest either that Justin lacked any intimate familiarity with the writing or perhaps that he only presumed that such a text existed (*NTApocr.* 1: 444).

Though probably a separate document and therefore not a reference to our Acts, Tertullian (*Apol.* 5 and 21) knows of a tradition in which Pilate was believed to have sent letters to Tiberius that contained detailed accounts of the wonderful deeds which were performed by Jesus. Tertullian is convinced by the tone of this correspondence that Pilate himself could be regarded as a Christian based upon the strength of his personal conviction. Additional support for the tradition that is attested by Tertullian is offered by Eusebius (*Hist. Eccl.* 2.2.1–2). But Eusebius also records that a "forgery" of the Acts text itself was circulated during the reign of Daia Maximinus (ca. 311–12) with the intent of engendering animosity against the Christians (*Hist. Eccl.* 1.9.3; 9.5.1). Despite the attestation of Eusebius, it is impossible to know with certainty whether any extant copies of the Acts actually reflect a text that predated the late 3d

century. While it is possible that the forgery to which Eusebius refers was in fact a perversion of some earlier form of the Acts, the prevailing scholarly view is that the "Christian Acts" were written only subsequently to any such forgery and that they were considered in order to diffuse the effect of its damage.

Two basic editions of the Acts have been identified among the many copies of the text that are available. The older edition (Recension A), which is attested in Greek, Latin, Coptic, Syriac, Armenian, and Arabic translations, also appears as the basis of a 12th-century Greek manuscript which stands as the oldest copy of the Acts that is known to modern scholars. A second edition of the Acts (Recension B), which has been preserved only in Greek, reveals numerous alterations from the first edition. These obvious additions and expansions indicate that this edition is a secondary construction of the Acts. Included among the changes in Recension B are the introduction of additional biblical materials and the insertion of lamentations over Jesus by his mother, Mary Magdalene, and Joseph of Arimathaea. A pronounced concern for the mother of Jesus as *theotokos* suggests that the earliest form of this second and more recent edition probably should not be dated prior to the Council of Ephesus.

Many versions of the Acts contain a prologue that is attributed to a certain Ananias (Coptic: Aeneas; Latin: Emaus), who claims to have received the text in Hebrew and to have copied it into Greek during the 5th century (425). This prologue specifies that the passion of Christ occurred on the eighth day before the calends of April. Epiphanius (*Haer.* 50.1.5) observes that the heretical Quartodecimans claimed a knowledge of this date which was based upon information that could be found in the Acts. It therefore is probable that the Quartodecimans already had some form of the Acts, with this prologue attached, by the time of Epiphanius in the late 4th century.

The narrative of the Acts is ordered according to the passion sequence of Jesus as it is preserved within the canonical gospel record. The author, however, has added substantial detail to the accounts in order to complete the panorama of events. At the insistence of the Jewish authorities, Pilate summons Jesus for examination, but upon the entrance of Jesus, the Roman standards bow to the amazement of all those who are present (chap. 1). After testimony is offered by twelve men that he was not "born of fornication" (chap. 2), Jesus is examined and released to the will of the Jews, who assume the responsibility for his death (chaps. 3–4). Further testimony on behalf of Jesus then is offered by Nicodemus, by numerous persons whom Jesus healed (including the woman with the "issue of blood," who here is named Bernice [Latin text: Veronica]; Mark 5:25–34), and by another unspecified group of persons who witnessed the teachings and miracles that were performed during his ministry (chaps. 5–8). After the crucifixion and the burial by Joseph of Arimathaea (chaps. 9–11), a series of miracles and proofs of the resurrection are provided as evidence that the deeds of the Jewish authorities were undertaken in error (chaps. 12–16).

PILATE, PONTIUS. See PONTIUS PILATE.

PILDASH (PERSON) [Heb *pildāš* (פִּלְדָּשׁ)]. The sixth son borne by Milcah to her husband Nahor, Abraham's brother (Gen 22:22). The name Pildash seems to be used here as a personal one. If it is also a tribal name, the location is unknown but is perhaps to be sought in N Arabia with other Nahorites. Some surmise that all the Aramaean tribes descended from Nahor and his twelve sons (vv 20–24). The Israelites knew that they were related to this other people, and links uniting the ancestors of Israel to other groups of people were always expressed genealogically (*EHI*, 212, 240). The etymology and meaning of the name are uncertain. The first of two leading candidates would have it originate from an animal term, *piddāš* (Ar *fuds*, "spider"). The second main view proposes a relationship to Ar *fandaš*, "to conquer," and a comparison with the Nabataean personal name *pndšw.* Moritz (1926: 93) supplies evidence for the

permissible interchange of the letters *l* and *n*—viz., in Nabataean *tntnw* parallels *tntlw.* A couple of other equally valid speculations could be, similar to the first, a connection with Ar *faddâš*, "shatterer" (from the base *fadaš*), and, similar to the second, one with *fandas*, "to run."

EDWIN C. HOSTETTER

PILHA (PERSON) [Heb *pilḥā*› (פִּלְחָא)]. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:24). The name means "millstone," but nothing else is known about Pilha, who is mentioned only here.

FREDERICK W. SCHMIDT

PILLAR OF FIRE AND CLOUD. The theophany of cloud and glory that guided Israel during the wilderness journey. The phrase "pillar of fire and cloud" only occurs once (Exod 14:24), but there are a number of instances when the separate phrases "pillar of fire" (Exod 13:21, 22; Num 14:14; Neh 9:12, 19) and "pillar of cloud" (Exod 13:21, 22; 14:19; Num 14:14; Neh 9:12, 19; Ps 99:7) occur. Each phrase describes the same manifestation of divine presence.

The Exodus text does not introduce the theophany by description. The title itself became the description. When Israel left the bonds of Pharaoh, departing from Succoth (Tell el-Mashkutah), and reached the edge of the wilderness, the divine presence went before them as a pillar of cloud by day and a pillar of fire by night (Exod 13:21). God's presence not only guided them, but protected them; for the cloud moved to the rear of the Israelite host when the Egyptians approached. The pillar of cloud also represented divine presence when Moses entered the tent of the Lord and conversed with God (Exod 33:7–9), again when the authority and leadership of Moses was confirmed after Aaron and Miriam murmured against him (Numbers 12:5 ff.), and a third time when Joshua was appointed successor to Moses (Deut 31:15).

God is often represented in the OT by fire and cloud. The symbol of the cloud both reveals and conceals the divine presence (Mendenhall 1973: 32–66). The cloud would indeed reveal truth but, at the same time, would limit that revelation. On the other hand, fire symbolized the power of the one leading them.

Any natural explanation of these phenomena seems to be strained. Some have suggested that a large fire on a pole was placed at the head of the host. Though this practice was common in festivals (1 Kgs 7:15) and military campaigns, it does not appear the case here. Others have proposed the cloud and fire to be the embers of an active volcano in the area. This theory is difficult to prove geologically.

The pillar of fire and cloud according to OT tradition represented God's miraculous provision and protection for the Hebrews during a time marked by many supernatural phenomena.

PILLARS, HALL OF (PLACE) [Heb *›ûlām hā‹ammûdîm* (אוּלָם הָעַמּוּדִים)]. See JUDGMENT, HALL OF.

PILTAI (PERSON) [Heb *pilṭāy* (פִּלְטָי)]. The head of the priestly family of Moadiah in the time of the high priest Joiakim (Neh 12:17). The name is an abbreviated form (KB; cf. Pelatiah, Heb *pĕlaṭyāhû*, "Yahweh has saved").

NORA A. WILLIAMS

PIN. See DRESS AND ORNAMENTATION.

PINE TREE. See FLORA.

PINNACLE. See TEMPLE, JERUSALEM.

PINON (PERSON) [Heb *pînōn* (פִּינֹן)]. One of the persons mentioned among the eleven names in the list of Edomite "tribal chiefs" *(ʿallūpîm)* in Gen 36:40–43, an addition probably originating from the Priestly Source. The name also recurs in 1 Chr 1:51b–54, an addition which represents a shortened version of Gen 36:40–43. Although some of the names cannot be classified with any certainty, "Pinon" and "Mibzar" are likely place names. The original (?) place name was obviously understood as a tribal or a district name. The name Pinon/Punon (Num 33:42–43)—Greek *Phinan, Phinō, Phainō*—is identical with Arabic *Fênān* and probably with Egyptian *pwnw*, the mining colony Kh. Fênān (M.R. 197004) in the Wâdī ʿAraba. See also FEINAN, WADI.

ULRICH HÜBNER

PIPE. See MUSIC AND MUSICAL INSTRUMENTS.

PIRAM (PERSON) [Heb *pirʿām* (פִּרְאָם)]. The Amorite king of Jarmuth at the time of Joshua, according to biblical tradition (Josh 10:3). His name, which occurs only once, appears to be a form of the Hebrew term *pereʾ*, "wild ass," with the ending *-ām.* A similar construction may be attested in the name Balaam (Heb *bilʿām = belaʿ* ["confusion," "slander"] + *-ām*). Piram joined with Adoni-zedek of Jerusalem, Hoham of Hebron, Debir of Eglon, and Japhni of Lachish to oppose Joshua and the Gibeonites. This coalition was defeated by Joshua and its five kings fled to the cave of Makkedah, from which Joshua took them and hanged them on five trees nearby.

D. G. SCHLEY

PIRATHON (PLACE) [Heb *pirʿātôn* (פִּרְעָתוֹן)]. Var. PHARATHON. PIRATHONITE. A town in the central hill country of Ephraim that was controlled by Amalekites prior to Israelite domination (Judg 12:15). It was the home of Abdon, the judge who led Israel for eight years (Judg 12:13–14), and of Benaiah, one of David's thirty mighty men (2 Sam 23:30; 1 Chr 11:31; 27:14). A location bearing the same name along with other sites in Judea was later reportedly fortified by the Seleucid general Bacchides ca. 160 B.C. as a means of controlling the rebellious forces of Jonathan and Simon Maccabeus (Josephus *Ant* 13.1.3 (§14–16); 1 Macc 9:50). The Pharathon (RSV var. of "Pirathon") reported by the author of Maccabees may not be the same as that attested earlier in the OT. Goldstein (*1 Maccabees* AB) contends that the author of Maccabees purposely attempted to compare the exploits of the Maccabees with the venerated heroes of the conquest under Joshua. The reference to Pharathon could then be a case where the name was used as an allusion to places that had been captured by the Jews in antiquity. Textual difficulties in the account of 1 Maccabees have caused some to believe that "Pharathon" was the second half of a compound name, Timnath-pharathon, rather than the name of separate fortified towns. Some doubt concerning the equation of the town in Ephraim mentioned in Judges and Samuel with that fortified by Bacchides has arisen because 1 Macc 9:50 and Josephus *Ant* 13.1.3 (§14–16) locate the town in Judea as opposed to Ephraim. Clearly the author of Maccabees understood Judea as Jewish-occupied territories, including land N of Jerusalem in the ancient tribal allotment of Ephraim. The sites of Bethel and Beth-horon which were listed along with Pharathon as being fortified by Bacchides were also located in the traditional territory of Ephraim.

The location of Pirathon is widely accepted as modern Farata (M.R. 165177), which is six miles SW of Shechem. Attempts to locate the site in the territory of Benjamin are based upon the mistaken identification of the judge Abdon with other Abdons, one who was a Benjaminite tribal chief (1 Chr 8:23) and another who was an ancestor of King Saul (1 Chr 8:30; 9:36).

ROBERT W. SMITH

PISGAH (PLACE) [Heb *pisgâ* (פִּסְגָּה)]. A mountain in the Abarim range of NW Moab, close to Mt. Nebo. The "mountains" in this region are actually narrow extensions of the Transjordanian tableland that has been deeply eroded by scarp streams, mostly running E-W. These plateau remnants tower above the

floor of the Jordan Rift valley, but they are no higher than the tableland to which the mountains are attached on the W.

Both Mt. Nebo and Mt. Pisgah are in this region (cf. Deut 34:1). Whereas Nebo is mentioned only twice in the Bible, Pisgah is named eight times, always with the definite article and always in combination with one of two terms that highlight features of the mountain. In four passages, "the top of Pisgah" occurs: (1) Num 21:20, where it is mentioned as a station on the Hebrew migration through Moab and as a peak "which looks down upon the desert"; (2) Num 23:14, where it is named as one of the peaks on which Balak made sacrifices in an effort to induce Balaam's curse on Israel; (3) Deut 3:27, where it is identified as a peak from which Moses viewed the promised land; and (4) Deut 34:1, where it is named as the point from which Moses again saw the territory which the Hebrews would occupy and on which Moses died.

In four OT passages, "the slopes of Pisgah" are named: (1) Deut 3:17, in which they are referred to as being E of the Salt Sea, one of the boundaries of Reuben and Gad; (2) Deut 4:49, in which they are named again as towering above the Sea of the Arabah, a boundary of Israel's conquests; (3) Josh 12:3, in which they are identified as a border of Sihon's kingdom; and (4) Josh 13:20, in which they are mentioned again as one of the borders of Sihon's realm and of the tribe of Reuben. Contrary to these RSV uses of the phrase "slopes of Pisgah," the KJV has "springs of Pisgah" in Deut 4:49 and "Ashdoth-pisgah" in Deut 3:17; Josh 12:3; 13:20.

Eusebius located Phasgo (Pisgah) along the way from Livias in the Arabah to Esbus on the tableland, in the same vicinity as Mt. Peor. Most interesting is Jerome's translation of "Fasge" (Pisgah) by the Lat *abscisum*, meaning "steep" or "broken off." This corresponds to the LXX's translation of Heb *pisgâ* with Gk *laxeuō.* Thus, LaSor (*ISBE* 3: 873) notes that the name Pisgah, which derives from Heb *pāsag* ("split," "cut off"), means "cleft." It is suggested that Pisgah's projection from the plateau had this appearance when viewed from the E.

Most scholars identify Mt. Nebo and Mt. Pisgah as the two peaks on Jebel Shayhan, with Pisgah (M.R. 218130) located ca. 1.5 miles W-NW of Nebo, beyond a small saddle. Jebel en-Nebu (2,739 feet above sea level) is located ca. 4 miles NW of Medeba, and Ras es-Siyagha (2,329 feet above sea level) is located ca. 5.5 miles NW of Medeba. Though this widely accepted location of Pisgah is slightly lower than Jebel en-Nebu, Siyagha's projection from the tableland affords magnificent views of the Rift valley and points beyond.

GERALD L. MATTINGLY

PISHON (PLACE) [Heb *pîšôn* (פִּישׁוֹן)]. The first of the four rivers into which the stream that springs from the Garden of Eden is divided (Gen 2:11). The Pishon surrounds the land of Havilah, where there is gold. Several proposals have been made to identify this country and its river. If, however, Havilah is to be equated with the large and old tribal federation of Ḫaulān in SW Arabia, the Pishon likewise is to be localized in that region. See HAVILAH (PLACE). A second biblical reference is found in Sir 24:25, where a parallel is drawn between wisdom, of which the divine law is full, and the plenteous waters of the Pishon river.

A. Sprenger (1875: 49) was the first one who compared the biblical *pîšôn* with the Wâdī Baiš in the SW of the Arabian peninsula. Al-Hamdānī (1884: 73) nevertheless writes that the Wâdī Baiš is fed from tributaries from the N of the land of Ḫaulān before it flows into the Red Sea. As was probable already in antiquity, in the 10th century the Wâdī Baiš, abounding in water, formed the N boundary of the densely populated and terraced mountainous region of Ḫaulān (and until 1934 it was the border between the kingdom of Yemen and Saudi Arabia). Moreover, it is quite possible that the names of the rivers Baiš and Bīša are contained in the name "Pishon," since both rise not far from each other in the mountains of ʿAsīr. However, while the Wâdī Baiš flows SW toward the coastal plain, the Wâdī Bīša flows N into the Wâdī Dawāsir, which discharges itself into the central Arabian desert. For another southern tributary of the Wâdī Dawāsir, al-Hamdānī (1884: 141) furthermore records the name Faišān. Since the Wâdī Baiš offers the best access to the upper course of the Wâdī Bīsa, the two valleys were possibly regarded to be one single river, ignoring the real geographic facts. Ptolemaios, too, fell into the same error when he

designated not only the small Wâdī Baiḍ to the N of Wâdī Baiš but also the Wâdī Bīša as *Baitios potamos* (*Geog.* 6.7.5).

However, one must admit that neither the name Baiš, Bīša, nor Faišān corresponds correctly to the Heb *pîšôn;* one would rather expect a form **Fīsān.* Sprenger (1875: 49) wanted to see in the ending *-ôn* the rendering of the Arabic nunation *-un* suffixed to the name *Baiš.* Hommel (1926: 564ff.) believed that the first element of the name was the Hebrew word *pī*, "mouth (of a river)." M. Görg (1977) derived the name from the Egyptian because the initial *pī-* corresponds to the Egyptian masculine article; according to him, *pîšôn* designates simply "the river," i.e., the Nile. The name Pishon has also been repeatedly combined with the Heb root *pūš*, "to jump, skip," and it is quite possible that the vocalization of the form *pîšôn* resulted from an assimilation to the name of the river mentioned in the following verse (Gen 2:13): Gihon.

W. W. MÜLLER

PISIDIA (PLACE) [Gk *Pisidia* (Πισιδια)]. A mountainous area in the southernmost part of the Roman province of Galatia, bordered by Phrygia to the N, Lycaonia to the E, Pamphylia to the S, and Lycia to the W. Pisidia is mentioned twice in the Acts of the Apostles (13:14 and 14:24), where Paul passes through the area on his way to and from his mission in S Galatia.

Although the majority textual reading in Acts 13:14 is "Antioch of Pisidia" (Gk *Antiocheian tés Pisidias*, genitive case), "Pisidian Antioch" (Gk *Antiocheian tén Pisidian*, accusative case; supported by numerous manuscripts) is probably the best reading (Metzger *TCGNT*, 404–5; Hemer 1989: 228). In the first instance, the reading would suggest that Antioch was in Pisidia; in the second, "Pisidia" functions as an adjective, meaning "Antioch [of Phrygia] toward [sc. facing or near] Pisidia" (Strabo has the more complete phrase, 12.6.4; cf. Bruce *Galatians* NIGTC, 6, n. 17). At the time of Paul and earlier, only the latter would be correct. Thus the majority mss tradition reflects the situation following the reorganization of the E provinces under Diocletian when this Antioch was assigned to the extended province of Pisidia and made its capital (A.D. 295). This descriptive title served to distinguish it from the many other cities of the same name founded by the Seleucids throughout Asia Minor.

There were three possible routes for Paul as he journeyed from Perga, in Pamphylia near the coast, through Pisidia to Pisidian Antioch (Finegan 1981: 90). There was a Roman road that traversed the W side of the region. Another route would have been to go straight N up the Kestros river and past Lake Limnae (modern Egridir), following the SE shore to the Anthios valley and on to Pisidian Antioch (Broughton 1937: 131–33). It is possible that Paul would have chosen this second route, but it is more likely that he would have followed the Roman road to Side and from there traveled N along the E shore of Lake Beysehir. It would have involved a steep climb over very rugged mountains to the inner plateau of some 3,000 feet or more and a distance of at least 80 miles. The time required would have been about 6 days. It would have taken much longer if Ramsay is correct in his speculative suggestion (1920: 94–97; followed, apparently, by Finegan 1981: 90), on the basis of Gal 4:13, that Paul moved from the hot, mosquito-infested coastal region to recover from malaria.

It was not merely the rugged terrain of Pisidia that was treacherous, but its native people also had a fierce reputation. Alexander the Great had great difficulty in subduing Pisidia, and throughout the Hellenistic and Roman periods the area is described as the home of marauding bandits. It has been frequently observed that the words of 2 Cor 11:26 ("on frequent journeys, in danger from rivers, in danger from robbers") would have been especially appropriate to his trip across Pisidia. To secure the region, Augustus had established a series of military colonies, including the garrisons of Lystra (Acts 14:8–21) and Pisidian Antioch (Acts 13:14–50; 14:21) visited by Paul. The latter was the chief colony and the

center of the military administration of the region. An inscription indicates that P. Sulpicius Quirinius, mentioned in Luke 2:2 as governor of Syria in the year of Christ's birth, was an honorary magistrate of Antioch during the time of his campaign (ca. 8 B.C.) against the Homonades (Frend *ISBE* 3: 874).

Pisidia continued to be a part of the province of Galatia until A.D. 74, when the S part was assigned to the newly created province of Lycia-Pamphylia. The N part continued to be a part of Galatia until the end of the 3d century, when the province of Pisidia was formed and Antioch named the capital. The whole of the S part of the province of Galatia, including the region of the four cities visited by Paul (Pisidian Antioch, Iconium, Lystra, and Derbe [Acts 13 and 14], probably home of the churches addressed in Paul's letter to the Galatians), was co-opted into the new province. From this time onward it became technically correct to speak of "Antioch of Pisidia," though because of the close link of the city with the region, the designation may have been in use at an earlier period.

Like the N part of the province of Galatia, the interior of Pisidia was little affected by either Hellenic or Roman culture. The Roman presence was primarily military, and the countryside was largely rural. There are few evidences that Christianity made very deep inroads into Pisidia until it was legally recognized under Constantine. There is also little evidence for the presence of Jews, except at Antioch, which, as has been noted, was not strictly in Pisidia.

W. WARD GASQUE

PISPA (PERSON) [Heb *pispâ* (פִּסְפָּה)]. A descendant of Asher, listed in 1 Chr 7:38. Pispa is recorded as the son of Jether, who perhaps is to be identified with Ithran (7:37). If this identification is correct, then Pispa stands within the last listed generation of Asher. Nothing is known of this figure: he is not mentioned elsewhere in the Hebrew Bible, and none of his descendants are given. According to Johnson (1969: 64–66) and others, the Chronicler's unique genealogies may draw from military census lists, themselves arranged in genealogical form.

JULIA M. O'BRIEN

PISTACHIO. See FLORA.

PISTIS SOPHIA (CODEX ASKEWIANUS). Coptic (Sahidic) parchment codex of 178 leaves inscribed in double columns on both sides. This codex contains gnostic treatises known by the title given in a later hand in the manuscript, *Pistis Sophia.* The original title, which appears at the end of books 2 and 3, appears to have been *Books of the Savior.* The provenance of this codex is unknown. It was acquired by a London doctor, named Askew, around 1772 and purchased by the British Museum in 1785. The first editions of the complete text and translations did not appear until the mid–19th century. The standard edition was published by C. Schmidt for the *Griechischen christlichen Schriftsteller* series in 1905 with a second edition in 1925; that edition was revised by W. Till in 1954 and 1959 (see this publication history in Schmidt 1981, the 4th edition edited by H. M. Schenke). It forms the basis for the text, notes, and English translation by V. MacDermot in the *Nag Hammadi Studies* series (Schmidt and MacDermot 1978). Modern editors have divided the codex into a continuous series of chapters.

In its present form, *Pistis Sophia* is divided into four books. Books 2 and 3 conclude with a title in the original hand. A later scribe separated books 1 and 2 by introducing a title, "The Second Book of the Pistis Sophia." Book 4 is clearly a different work from the earlier books. It contains a new setting, on Easter rather than after eleven years of instruction by the risen Jesus as in Book 1. The disciples are shown the zodiac as they stand in the "Midst." They receive revelations about the punishment of the evil

archons, who are bound by the zodiac in the regions of fate and the various punishments there. They are promised forgiveness and access to the divine mysteries by which they can escape judgment. These mysteries include magical words recited by Jesus and rituals of offering wine, water, and loaves while sacred words are pronounced (chap. 142).

Book 1 and Book 2 through chap. 82 are primarily concerned with the repentance of the fallen Sophia, Pistis Sophia. She is the mother of the gnostic seed. Chaps. 30–58 detail her wanderings in darkness and her lamentation. Jesus, acting in the power of light, serves as Savior to bring her out of chaos, and she sings hymns of gratitude to the "First Mystery" (chaps. 58–62). These hymns are then interpreted by the disciples with reference to the Sophia story (chaps. 63–82). The rest of Book 2 (chaps. 83–101) details the mysteries of various ranks and types of souls, including the origins of the passions which destroy the soul. It concludes with the promise that the person who discovers the truth of these mysteries will be equal to the "First One" (God), having gained knowledge (gnosis) of the Ineffable.

Book 3 elaborates on the standard conclusion of gnostic revelation dialogues, the command to the disciples to preach gnosis either to the world (as here) or to the elect. Humanity is to be summoned to renounce sin, to be saved from the various regions of punishment and become worthy of the mysteries (chap. 102). Dialogue between Jesus and the disciples concerning the mysteries of repentance and the punishments of those who do not receive them includes application of Matthew 10 to the gnostic missionary (chap. 107).

Pistis Sophia is a late compendium of gnostic lore complied from earlier writings. It contains Coptic versions of five *Odes of Solomon* and refers by name to the two *Books of Jeu* found in the Bruce Codex. Elaborate exposition of the Psalms, the hymns of Pistis Sophia, magical formulas, variants of the Sophia story, and various allusions to sacred formulas and ritual suggest that the work has drawn on extensive gnostic lore. Therefore most would suggest that it was composed sometime in the late 3d or early 4th century. For *Pistis Sophia*, gnosis is clearly an extensive body of esoteric Christian wisdom, not a dynamic system of speculation.

PIT. See DEAD, ABODE OF THE.

PITHOM (PLACE) [Heb *pītōm* (פִּתֹם)]. One of the two storage cities built by the Hebrews while in Egypt (Exod 1:11) laboring under an oppressive pharaoh. The city also served as a fortress to help guard Egypt from invasion from the east.

The Hebrew *pītōm* has been shown to be a transcription of the Egyptian phrase *pr ʾitm* (see Redford 1963: 403). The Egyptian expression means "house of Atum." The word *pr* means "abode," "temple," or "house," while *ʾitm* is the name of the god Atum, personifying the sun. From Egyptian texts such as the Abu Simbel stele (*AEL* 2: 57–78), Papyrus Harris, and Wadjhoresne's inscription, it is evident that *pr ʾitm* was also used in reference to temple estates. From the end of the Saite period (that is, after 525 B.C.E.), the phrase appears to name a city.

The city is only once directly mentioned as "Pithom" in the Bible (Exod 1:11). However, some scholars suggest that Gen 46:28 may also refer to the same place. Although the MT reads "Goshen," the LXX reads *hērōōn polin*, which has been linked to Pithom through the equivalency of Atum to the god Ero. Moreover, the Bohairic Coptic Version reads "Pithom" in place of *hērōōn polin.*

The question which continues to linger concerning Pithom is: where is the location of the city? One may ascertain certain clues from the biblical account in Exod 1:11, such as (1) Pithom is probably located close to the city of Rameses, a city which is located in the Wâdī Tumilat, historically renowned as a route between Egypt and the East, and (2) Egyptian architecture should remain from the time of the Exodus in the LB Age. The evidence from archaeology is consequently of utmost significance in the identification of this site.

Excavations in Egypt have resulted in three major assessments of the archaeological evidence for the location of Pithom. The first location was proposed by Edouard Naville in 1888. After excavating Tell el-Maskhuta in the E delta, he concluded that the site was biblical Pithom. Alan Gardiner, later challenging Naville's theory in 1918, proposed another site at Tell el-Ratabah. Finally, in 1968 E. P. Uphill suggested a third location at the site of the ancient capital city Heliopolis (Egyptian Innu) just one mile north of Matariyeh.

Édouard Naville's proposal has received the most attention by subsequent scholars. See MASKHUTA, TELL EL-. After his archaeological expedition began in 1883, he reported his findings which led him to conclude that Tell el-Maskhuta ("mound of idols/images") was Pithom. First, he found the toponym *pr ›itm* used of this site, along with *ṯkw (t)* (identified also with Succoth). He argued that *pr ›itm* was the religious name given to the site, while *ṯkw (t)* was the civil name. Second, Naville concludes that the remains of the tell evidence a construction which was both a fortress and a storage building. Third, a Latin inscription found at the site mentions Ero (or Gk Hero), commonly associated with *hērōōn polis.* Hero is the Greek equivalent for Atum (see Gardiner 1918: 267–69), hence making *hērōōn polis* connected with *pr ›itm.* Finally, a parallel is drawn between bricks found at Tell el-Maskhuta without straw and the bricks of Exod 5:6–10, which were made by the Hebrews without straw.

Alan Gardiner disagreed with Naville's finds and conclusions. In particular, he translated one of the Latin markers differently, concluding that the message identified the present site (Tell el-Maskhuta) as nine miles away from Ero. Consequently, Tell el-Maskhuta could not be Pithom. A site identified as Tell el-Ratabah was his choice for the city of Pithom.

The third option appeared as E. Uphill, disagreeing with Naville, proposed the site of Heliopolis as Pithom. Uphill's approach posed the question of how the Egyptians would have understood *pr ›itm.* His assumption was that the Egyptians' understanding of *pr ›itm* would also be the Hebrew writer's understanding. He observed that contemporaries would view the phrase as designating the national shrine located at Heliopolis. In support of his view, Uphill observed that Sir Flinders Petrie discovered a temple, possibly for the god Atum, at Heliopolis. Gardiner objects to this proposal, as no definite proof exists that the temple was so dedicated (the temple has been typically viewed as dedicated to the diety *Rē‹-Harakhti*). However, Uphill points out that Innu was closely related to Atum. Hence the possibility of the temple for Atum cannot be ruled out absolutely.

An important addition to the three ideas proposed is the evidence given by John S. Holladay in 1983. Speaking on the ongoing excavations concerning the Wâdī Tumilat, he remarks that many statues of Rameses II have been discovered since Naville (1883) at Maskhuta, but the pottery and the habitation found are not pre–7th century.

With three different assessments of the archaeological evidence available, scholars find no unanimity in identifying the location of Pithom. While some scholars view Pithom as probably Tell el-Maskhuta, others view the tell as Succoth (*ṯkw (t).* While some see Tell el-Ratabah as probably Pithom, others claim that Tell el-Ratabah was the city Rameses. About the only existing consensus among scholars is that more archaeological evidence is needed to make a definite conclusion.

TOM F. WEI

PITHON (PERSON) [Heb *pîtôn* (פִּיתוֹן)]. A Benjaminite, son of Micah, great-great-grandson of King Saul (1 Chr 8:35; 9:41). The etymology of the name is unclear, but it might be related to Hebrew *peten*, "an adder" (Noth *IPN*, 254). The section that lists Micah's children is segmented, listing four children; it is unclear why this segmented section appears in what is a generally linear genealogy. Pithon's line is not the main line, which derives instead from his brother Ahaz. The name appears in the two nearly identical genealogies of Saul's family in 1 Chr 8:33–40 and 1 Chr 9:39–44. This list is from the end of the First Temple period (Demsky 1971: 20), and was preserved by Benjaminite families that survived the Babylonian Exile (Williamson 1979: 356). The existence and preservation of the Saulide genealogy probably reflects the continued prominence of Saul's family, and perhaps even their hope that they would return to power (Ackroyd *Chronicles, Ezra, Nehemiah* TBC, 42; Flanagan 1982: 25). See MELECH.

On the repetition of the genealogy in 1 Chronicles 8 and 9, and its structure within the genealogies in Chronicles, see AHAZ.

PLAGUES. See SICKNESS AND DISEASE; EGYPT, PLAGUES IN.

PLANE TREE. See FLORA.

PLANK [Heb *lûaḥ* (לוּחַ)]. A construction term designating the planking of a Tyrian ship (Ezek 27:2; cf. Acts 27:44). This Hebrew term is sometimes rendered "board," as in the tabernacle text of Exodus in reference to wooden (acacia) "boards" used for the altar (Exod 27:8; 38:7; cf. Cant 8:9). The Heb *ṣĕdērôt* is translated "planks" in the temple texts in 1 Kings, where it designates, together with "beams," the components of the cedar ceiling of the Jerusalem temple (1 Kgs 7:9). These words are part of a nuanced terminology for building materials with the distinctions among the various terms being difficult to ascertain.

PLANTS. See FLORA.

PLATO: REPUBLIC 588B–589B (NHC VI,5). This brief fragment is a very poor translation of a section from Plato's *Republic* (588B–589B) on the theme of justice. The poor quality of the translation reveals that the Coptic author had no knowledge of classical Greek nor of Plato's writings. The Coptic dialect of the fragment is Sahidic with Subachmimic influence. See LANGUAGES (COPTIC). The Greek original was most likely circulated in a school handbook of similar quotations because the fragment is either alluded to or cited by a number of ancient authors. In the context of the Nag Hammadi Library, the fragment is included in a codex containing several hermetic writings: *The Discourse on the Eighth and the Ninth* (NHC VI,*6*); *The Prayer of Thanksgiving* (NHC VI,*7*); *Asclepius* 21–29 (NHC VI,*8*). The belief among hermeticists that Hermes was the teacher of Plato best explains its inclusion among these particular texts. However, the fragment was not identified as a quotation from Plato for some twenty years after its discovery because of the distorted nature of the translation. Some scholars argue that the fragment

is not gnostic in any special sense, but that it was included in the Nag Hammadi Library because of its strong ethical appeal. Others argue, however, that the Coptic text has been consciously reworked by its author and is thus a true redaction and not simply a paraphrase or bad translation. A final point of view opts for a middle position, viz. the author is a bad translator who has interpreted the text in a gnostic direction but is not a true redactor. To date, there is no scholarly consensus on these various opinions.

In general, the text deals with the problem of justice in relation to three "images" within the individual: a many-headed beast, a lion, and an inner human. The just person tramples the beast and lion, the unjust or weak person does not. In a Platonic context, the three images relate to the tripartite nature of the soul: appetitive, spirited, rational. In a gnostic context, however, the three images would allude to the three races of humankind: hylics, psychics, pneumatics. Additional gnostic themes would be a probable allusion to the archontic creation of the world (49,4–50,19) as well as an implied reference to the eschatological choice the psychic race must make between a just life and one of archontic or "beastly" domination (50,4–51,23). Jackson (1985: 204–13) now cites logion 7 of *The Gospel of Thomas* (NHC II,*2*) as another example of gnostic usage of this Platonic parable and, in doing so, explores in detail numerous examples of leonine imagery in a variety of gnostic sources. In gnostic circles, the lion becomes a powerful symbol of sexual passion or the "beastly" dimension of human existence that the ascetic gnostic strives to subdue and control. If *Plato Rep.* has been consciously shaped with these various gnostic concerns in mind, then the Coptic author can be viewed as a probable Christian gnostic in touch with Sethian cosmogonic notions and Valentinian ideas of salvation. Otherwise, the gnostic affinities of the author, if any, cannot be determined.

The date of the Coptic translation is toward the middle of the 4th century C.E., or the approximate date of the copying of Codex VI. The Greek original can be dated in either the 2d or 3d century C.E. The locale cannot be determined, but Alexandria is a reasonable hypothesis because the author is clearly an Egyptian living in an eclectic milieu with only superficial Greek contacts (Poirer and Painchaud 1983: 122–23).

RUTH MAJERCIK

PLATONISM. Platonism, as understood here, is to be distinguished from the philosophizing of Plato himself, although it is very largely a formalization of his teachings. Ever since the beginning of the last century (Schleiermacher), it has been customary to distinguish the philosophy of Plato's dialogues from the later Platonic tradition, and that procedure is a sound one. Platonism marks its rise from Plato, certainly, but it was a lively philosophic tradition in its own right, which developed in various ways over the 800 years or so which are the subject of this survey. Historically, Platonism may be regarded as progressing through four chief periods in ancient times: the Old Academy (347–267 B.C.E.), the "New" (Skeptical) Academy (267–ca. 80 B.C.E.), Middle Platonism (ca. 80 B.C.E.–250 C.E.), and Neoplatonism (ca. 250 B.C.E.).

A. The Old Academy

After Plato's death in 347 B.C.E., the school was taken over by his nephew Speusippus (ca. 407–339), an idiosyncratic thinker but not one who had much influence on later Platonism. Platonism as a formalized philosophical movement is best seen as beginning with his successor, Xenocrates (396–314). He put out a

comprehensive series of works covering all areas of philosophy (the three branches of which, physics, ethics, and logic, he is credited with being the first to distinguish formally). He is also probably responsible for the "official" edition of Plato's works. Xenocrates' successor, Polemon (ca. 350–267), was chiefly concerned with ethics (indeed, with practical morality), and seems to have been prepared to accept the ethical theories of Aristotle and Theophrastus back into the school, thus completing what later came to be seen as the Old Academic synthesis of Plato's doctrines.

The chief features of this are the following: (1) a strong distinction between two levels of reality, the intelligible world (God, and the Ideas—transcendent models, mathematical in form, of which the things of this world are images and constitute the contents of the Divine Mind), and the sense-perceptible world. In the former, all is eternal, unchanging, perfect. Its first principles are the Monad (which for Xenocrates is God, and an Intellect), and the Dyad, a principle of plurality, on which the Monad acts to produce first the Ideas and the World-Soul, and then the physical world; (2) a belief in the immortality of the soul (or at least of the rational part; what became of the irrational is less than clear), and in reincarnation (possibly into animals as well as other human bodies, though that is never quite settled in the tradition); (3) a moderately ascetic ethics, which had the aim of separating the soul as far as possible from the influences of the body (though Aristotelian ethics was generally accepted by the end of the period, as has been said); (4) in epistemology, a prejudice against the evidence of the senses, in favor of the processes of pure reason (*epistēmē, noēsis*); (5) in logic, an acceptance of the substance of Aristotle's great discoveries (though some traces of a more primitive "Old Academic" system of *diaeresis* ["division"], based more closely on Plato, can still be discerned). It is this system that constitutes the basis of the philosophical *koinē* with which Christianity was later confronted.

B. The New Academy

Before that, however, much was to happen. After Polemon, the headship of the school passed to Arcesilaus, who inaugurated a period of Skepticism, the so-called New Academy, where the academy, in opposition to the new dogmatism of the Stoics, returned to what Arcesilaus saw as its "Socratic" roots, the position of challenging all assumptions without necessarily asserting anything positive. Arcesilaus denied that there was any sure criterion of knowledge, and exercised himself largely in demolishing the claims of the Stoics in this area. About a century after his time, the school found another distinguished leader in Carneades (head ca. 160–128 B.C.E.), who appears to have entertained slightly more positive views in that he distinguished levels of "probability" in our perceptions, his highest level being in the nature of a Skeptical "answer" to the Stoic doctrine of certainty. Under a successor of his, Philo of Larissa, (fl. ca. 110–80 B.C.E.), the Skeptical position was undermined still further, leading to a return to dogmatism under Antiochus of Ascalon.

C. Middle Platonism

Antiochus, who established a Platonic school in Athens in the 70s B.C.E., was actually too much influenced by Stoic materialism to be the true founder of the later "Middle Platonic" synthesis of doctrine, but he turned the Platonic movement back from Skepticism to a belief in the possibility of certain knowledge, paving the way for further developments. He also gave the movement a view of its own history, which proved influential (though controversial), taking Aristotle and his followers back into the fold and designating the Stoics as the true heirs of the Old Academy, thus rejecting the New Academy as an aberration. Only with Eudorus of Alexandria (fl. ca. 25 B.C.E.), however, do we find a clear reinstatement of belief in a transcendent first principle, and the beginnings of a hierarchy of levels of being, together with an interest in Pythagoreanism and number theory, which are characteristic of the renewed Platonist movement.

In the generation after Eudorus, we find the same type of Middle Platonism represented by the Jewish philosopher Philo of Alexandria (ca. 30 B.C.E.–45 C.E.). For Philo, the (previously Stoic) concept of the Logos as the active, immanent aspect of God in the world, the unifying principle and transmitter of the Forms (seen as *logoi*), comes to be of central importance, as does a creative adaptation of the Pythagorean-Platonic dyad to the late Jewish concept of God's Wisdom (Sophia).

Both these developments, together with a pronounced dualism (belief in a disorderly, "evil" World Soul) are characteristic of Plutarch in the next century (ca. 45–120 C.E.). Plutarch, though not a great philosopher, is well known as an essayist and biographer. More obscure Platonists of the age are Albinus (fl. 150), author of a handbook of Platonism, the *Didaskalikos*, on the "Peripatetic" wing of the movement, and Atticus (fl. 175), who was hostile to Aristotle, maintaining a "purified" Platonism and agreeing with Plutarch on the creation of the world. A distinct movement within Middle Platonism is constituted by the Neo-Pythagoreans, notably Moderatus of Gades (fl. ca. 100), Nichomachus of Gerasa (fl. ca. 145), and Numenius, who even more than Plutarch is a strong dualist. He had considerable influence on Neoplatonism, through Plotinus and Porphyry, but they modified his dualism.

A number of basic themes of Middle Platonism should be given special mention, as they are of concern to Christianity.

1. A basic tenet of ethical theory was the so-called "end of goods," the *telos* or *summum bonum*, at which all rational activity should aim. Antiochus of Ascalon seems to be the first Platonist to formulate this as such. He was under Stoic influence and adopted the Stoic *telos* of "Life in agreement with Nature," though he attributed this back to the Old Academy and specifically to Polemon. When we turn to Alexandrian Platonism in the next generation, however, with Eudorus, we find the ideal of "Likeness to God" (taken from Plato's *Theaetetus*, 176a) propounded as the *telos*, and so it remained for the rest of antiquity. This ideal was taken in a "strong" sense—in Plotinus' striking phrase, "Our concern is not to be free of sin, but to be god (*Enn.* 1.2.6)." A certain degree of asceticism, though not necessarily of a world-negating type, is inseparable from Platonist ethics, ranging from Plutarch's genial Peripateticism to the dualistic pessimism of Numenius.

2. A subject of major concern in later Platonism, arising out of the challenge posed by Stoic determinism and thus not a concern for Plato himself (in its starker form, at least), is that of free will and necessity, and thus of God's providence. If one accepted, as Platonists generally did, the Stoic argument that nothing takes place without an antecedent cause, and indeed as the culmination of a chain of causes running back to the beginning of the world, it became difficult to maintain another tenet which Platonists held dear (and felt they had a text for in the myth of Plato's *Resp.* 10), the autonomy of the rational soul. It was also difficult to see how God's knowledge of the totality of causes was reconcilable with the concept of our free will, and thus of an element of contingency. These problems were wrestled with by Platonists (Albinus *Didask*, 26; Ps.-Plutarch *On Fate*; Plotinus *Enneads* 3.2–3 "On Providence") without any very satisfactory solutions and bequeathed by them to contemporary Christianity.

3. A further issue of concern to Christianity, on which there were differing views among the Platonists of the first two Christian centuries, was that of the creation of the world. The Greek philosophical tradition in general rejected the concept of creation from nothing, but creation of an ordered world *(kosmos)* from preexistent chaotic matter was a recognized possibility. Here, for Platonists, the interpretation of Plato's *Timaeus* (a dialogue of great significance throughout our period) becomes crucial. On the whole, from Speusippus and Xenocrates on, the tendency was to deny that the account of creation presented there (and therefore the Creator God, or Demiurge, who figures in it) was to be taken literally. The creation is an eternal process and the Demiurge is the incessantly active cosmic Mind. In later times, an elaborate list of senses in which the world could be said to be "created" was drawn up (the most favored being "dependent upon a cause outside itself"), but two influential Platonists of the 2d century C.E., Plutarch and Atticus, maintained the literal interpretation of the *Timaeus*, and held that the world was created from precosmic disorderly matter. Plutarch, at least, saw this matter animated by a disorderly, "evil" soul (which he saw described by Plato in *Laws* X), and thus introduced a strongly dualist element into Platonism, also shared by the Neo-Pythagorean Numenius, but decisively rejected by mainstream Platonism after Plotinus.

4. Of concern to Christians also, since it bears on the vexed question of the relation of the Father to the Son, and later, the mutual relations of all three persons of the Trinity, is the gradual development of a hierarchy of being, arising out of the ambiguity of the relationship between the Good of Plato's *Republic* and the Demiurge of the *Timaeus.* Eudorus postulated a supreme One above a pair of Monad and Dyad;

Plutarch seems to envisage a supreme God, a Logos, and an essentially irrational World Soul; Albinus, a supreme God, and a Mind and Soul of the World. On the Pythagorean wing, Moderatus postulated a sequence of three "Ones," derived from a metaphysical interpretation of the *Parmenides* and of a passage in the *Second Letter*, (312 E), while Numenius recognized a sequence of God the Father (the Good), Demiurge, and World Soul. Gradually a triadic sequence emerged, which became formalized (and further elaborated) in the philosophy of Plotinus and his successors.

D. Neoplatonism

This is a term coined in modern times to denote the type of Platonism inaugurated by Plotinus (204–70 C.E.) and continued by his successors Porphyry (ca. 232–305) and Iamblichus (ca. 245–320), and later by the Athenian and Alexandrian schools of the 5th and 6th centuries. The term has sometimes even been used to characterize the whole Platonist movement after Plato. Plotinus would have indignantly repudiated any such name. He saw himself (*Enn.* V I) as, if anything, restoring the true teachings of Plato after centuries of distortion. But, in fact, a number of new elements enter at this stage. Most notable is the demoting of Intellect *(nous)* from the position of first principle: Plotinus argued that the concept of Intellect involves a certain duality—of thinking element and object of thought—which the first principle should not include. His principle, the One, is therefore prior to Intellect, though Plotinus allows it a certain self-awareness. It produces by "overflowing," and thus all subsequent entities, Intellect, Soul, Nature, World, even Matter, are generated by a constant dynamic tension of procession and return (this latter process producing consciousness and self-definition in the entities concerned). Matter and Evil are simply negativities, the dark at the edges of the light radiated by the One. All other Neoplatonic elaborations (and, beginning with Iamblichus and continuing with Syrianus [d. 437 C.E.], Proclus [412–485], and Damascius [fl. 520], these became increasingly complex) stem from Plotinus' new vision of reality, though his successors' views were very different from his.

E. Christian Platonism

A word should be said of the phenomenon, which can be divided broadly into two phrases, that dependent on Philo and Middle Platonism, and that dependent on Neoplatonism. All Christian theology is dependent, to an extent at least, on contemporary Greek philosophy, primarily Platonism, but some Christian thinkers fall particularly strongly under Platonic influence, and properly merit the title of Christian Platonists.

Earlier Christian Platonism is represented, in a rudimentary way, by Justin Martyr (fl. ca. 150 C.E.), but in a developed form by the Alexandrians Clement (ca. 150–215) and Origen (ca. 176–254). Clement is overtly hospitable to Platonism, Origen covertly, though he is the more deeply influenced of the two. Doctrines that especially got him into trouble were his view of the Son as a Logos or Demiurge figure, his belief in a sequence of incarnations and worlds, and his denial of eternal punishment, all profoundly non-Christian ideas, arising from a creative interpretation of both Stoicism and Platonism.

In the next century, the Cappadocian Fathers, Basil of Caesarea (ca. 330–379 C.E.), Gregory of Nazianzus (329–ca. 390), and Gregory of Nyssa (d. 394), are influenced, despite their overt hostility, by the Platonism of Plotinus and Porphyry (though also, even more, by Origen) and later again, in the 6th century, the mysterious figure of "Dionysius the Areopagite" is deeply influenced by Proclus and Damascius. In the Latin West, Marius Victorinus (fl. 350 C.E.) is a thoroughgoing Platonist, deeply influenced by Porphyry, and of course Augustine is profoundly, though not slavishly, under the spell of Platonism. Later again, Boethius (490–525) shows he is knowledgeable about contemporary Platonism.

Platonism is thus the single greatest outside intellectual influence on Christianity in its formative stages. This influence continues through the Middle Ages (the School of Chartres) and the Renaissance (the Florentine Academy) to the Cambridge Platonists of the 17th century (chiefly More and Cudworth) and modern times, but that is beyond the scope of the present article. Unlike Aristotelianism, Platonism was fated always, despite its influence, to be in opposition to Christianity, since Platonism was always something more than a philosophical system; it was, like Christianity, a religion, and religions tend to brook no rivals.

JOHN M. DILLON

PLEDGE. See DEBTS.

PLINY THE YOUNGER. Born Publius Caecilius Secundus in A.D. 61 or 62, Pliny the Younger belonged to a prosperous landowning family of northern Italy. In Rome, he attended the lectures of the illustrious Quintilian, who had been appointed professor of Latin rhetoric by Vespasian. The most influential member of the family was his mother's brother, Gaius Plinius Secundus (Pliny the Elder), whose monumental *Naturalis Historia*, a type of ancient encyclopedia surviving in 37 books, was dedicated to Titus; he had served in the army with Titus and had been appointed by Vespasian to various senior equestrian posts, including the command of the fleet at Misenum, from where he sailed to observe and inspect the eruption of Mt. Vesuvius and perished in the fumes (August 29, 79). Under the terms of his will, his nephew inherited his property, was posthumously adopted, and thereby acquired the name Gaius Plinius Caecilius Secundus.

In Titus' reign, Pliny the Younger (as he now was) began a legal career, specializing in inheritance cases. He prospered under Domitian, holding a number of official posts, including the praetorship (93) and the prefecture of the military treasury (ca. 94–96). Later, however, he asserted that his life had been in danger at the time: "I stood amidst the flames of thunderbolts dropping all round me and there were certain clear indications that a like end was awaiting me" (*Ep.* 3.11.3). This was untrue, and, despite his friendship with members of the "Stoic Opposition," his political and legal career proceeded unhindered. With the accession of Nerva and Trajan (96 and 98), he continued to flourish, being appointed to a second treasury post (the prefecture of the treasury of Saturn) and then to a consulship (100). He maintained his legal work and was best known, early in Trajan's reign, for his defense of Julius Bassus and Varenus Rufus, two governors of Pontus-Bithynia. In 104, he accepted a senior position in Rome involving flood and drainage control and, in this period, was invited to join Trajan's cabinet on a number of occasions as a judicial adviser. Finally, ca. 110, he was appointed special commissioner to settle the financial and political problems of Pontus-Bithynia, when he died prematurely, about 51 years old.

Thanks to his letters and to four inscriptions, Pliny's is one of the best documented careers of the early empire. It was remarkable in many ways. The legal minimum age for the consulship was 42 and very few were appointed at that age; yet, with imperial favor, Pliny gained the honor at 39, while his consular colleague was almost 60 on his appointment. Again, it was almost unparalleled for an ex-consul to govern a province when he had not had similar experience at a lower level. Equally unusual was his appointment to a second treasury post. Thus he emerges as a highly competent administrator and lawyer, trusted by every regime. He was also extremely wealthy, investing most of his funds in property (*Ep.* 3.29.8), with a house in Rome on the Esquiline, another near Ostia, at least three on the shores of Lake Como, and a villa on his estates at Tifernum.

His fame, however, is based on his letters. Unlike those of Cicero, written a century and a half previously, Pliny's were intended for publication, carefully composed and subsequently edited. The first nine books, consisting of 247 personal letters, were published at intervals between ca. 100 and 109, while the tenth appeared posthumously and contained 121 official letters written during his term in Pontus-Bithynia. The former are polished essays, providing an elegant portrait of contemporary upper-class activities and attitudes both in the capital and elsewhere, particularly in northern Italy. The topics are varied: domestic and social issues (treatment of slaves, public entertainment), events in politics and the law courts, descriptions of a villa, scenery, interpretation of a dream, eulogies of famous writers (Silius Italicus and Martial), a murder, ghost stories, and letters of recommendation or advice. Some are addressed to literary friends such as Suetonius and Tacitus (perhaps the most famous is 6.16, written to Tacitus and describing the death of Pliny the Elder following the eruption of Vesuvius), others to young men undertaking a political career, others to people from the area of Lake Como, his birthplace, others to eminent senators (Arrius Antoninus, Vestricius Spurinna), generals (Sosius Senecio, Licinius Sura), and equestrians (Septicius Clarus, later Hadrian's Praetorian Prefect).

The tenth book is different. Written in a simpler and less mannered style, it is a unique record of a Roman province's administrative problems and the solutions proposed or implemented. Pliny is revealed as a thorough, painstaking administrator with an apparent tendency to refer to the emperor even the most mundane of problems. But Pliny's was not an ordinary province. Pontus-Bithynia faced a political and financial crisis, and it is impossible to assess the extent to which strict imperial guidelines limited Pliny's freedom of action. Trajan's replies are briefer and more concise, revealing his concern for consistency and equity. Of particular interest is Pliny's request to Trajan for guidance on the treatment of Christians (*Ep.* 10.96) and Trajan's reply (*Ep.* 10.97). Pliny had, so he told the emperor, executed those who had admitted that they were Christians but had freed any who denied the charge and who were prepared to sacrifice to the gods (and to an image of the emperor). Pliny's problem, however, was twofold: anonymous accusations and lapsed Christians. Trajan indignantly rejected the former as being "out of keeping with the spirit of the age" and, perhaps inconsistently, pardoned the latter "however suspect their past conduct (might have been)." What the letters do not make clear is precisely why those who confessed to being Christians were executed, a point still debated by scholars. However, they do provide crucial evidence on the problem of Christianity's legal status at the end of the 1st century and until the time of Decius' persecution (ca. 250). For further discussion see *ANRW* 2/2.

BRIAN W. JONES

PLOW, PLOUGH. See ZOOLOGY.

PLUTARCH. Greek biographer, essayist, Platonist, priest of Apollo, and Roman citizen (ca. A.D. 50–120). He was born into a well-to-do family of the Boeotian town of Chaeronea, located approximately eighty miles NW of Athens, during the reign of the Roman emperor Claudius. At the time of Nero's visit to Greece in 66/67, Plutarch was in Athens studying philosophy under Ammonius, then head of the Platonic Academy. After completing his studies he returned to Chaeronea, where he continued to live until his death in the time of Hadrian, taking a leading part in the public life of his city and directing a philosophical academy of his own.

What we know of Plutarch and his family is derived principally from his own writings, a very personal example of which is the *Consolatio ad uxorem* ("Consolation to my wife"), the letter he wrote to his wife, Timoxena, after the death of their two-year-old daughter. Timoxena also bore Plutarch four sons, only two of whom survived into manhood. Both she and her husband were at some time initiated into the Dionysiac mysteries. The experiences of Plutarch's own happy marriage are perhaps reflected in the *Conjugalia praecepta* ("Advice about marriage"), which he sent to a bride and groom, and in the respect for the moral and intellectual qualities of women he evinces in the *Mulierum virtutes* ("Courage of women"), the *Amatorius* ("Conversation about Eros"), and elsewhere.

Plutarch himself, his teacher Ammonius, his friends, and members of his family regularly appear as speakers in his dialogues, among which the nine books of *Quaestiones convivales* ("Table talk") constitute a mine of incidental information about the concerns and habits of Plutarch and his circle. As a man of wealth and political influence and of literary and philosophical prominence, Plutarch enjoyed the society of a large number of important individuals throughout the Greek world and in Rome, those in the latter category including the consulars L. Mestrius Florus, whose gens name, Mestrius, he bore as a Roman citizen and who was probably responsible for his receiving the citizenship, and Q. Sosius Senecio, to whom Plutarch dedicated the *Parallel Lives*, the *Quaestiones convivales* ("Table talk"), and an anti-Stoic essay on making progress in virtue. It may be, though the evidence is disputable, that Plutarch attained equestrian rank, was awarded consular dignities by Trajan, and was appointed procurator of Greece by Hadrian.

Plutarch's social and intellectual life as well as his diplomatic and religious duties took him abroad frequently. He was often in Athens, where he was honored with Athenian citizenship, and at Delphi, the oracular center near Chaeronea where he served for many years as priest of Apollo and the scene of his four theological dialogues. In addition, Plutarch traveled throughout the Greek mainland, to Alexandria in Egypt (his treatise on Isis and Osiris is an important source for our knowledge of Egyptian religion), probably to Asia Minor—and at least twice to Italy, where in Rome he was sought out as a teacher and delivered lectures, presumably in Greek.

Plutarch was a polymath and undoubtedly one of the most learned men of his day. His general education would have included the standard training in rhetoric, and mathematics was a significant component in his philosophical studies. He was, moreover, steeped in the literature of his Hellenic past, its poets as well as its prose writers, and his reading included virtually every genre. He also kept *hypomnēmata*, notebooks of a sort in which he recorded material suitable for incorporation into his own writings. Beyond this, there is every indication that he worked quickly and composed with ease. All of these factors are reflected in the large and varied corpus of his surviving works, fifty biographies and over seventy miscellaneous pieces traditionally grouped under the heading *Moralia*, and even in the mere titles of the many additional works listed in the so-called Lamprias Catalogue, an ancient compilation of 227 works attributed to Plutarch. Many of Plutarch's writings, including the *Lives*, appear to belong to a later part of his life, but their order of composition is generally impossible to determine. Plutarch's Greek is a literary Attic, his style learned yet relaxed, and his vocabulary, developed from the entire sweep of a literature extending seven centuries into the past, immense.

The *Moralia*, traditionally cited by Latin translations of their Greek titles, with rare exception take the form of essays, dialogues, and collections, although many of the essays were originally delivered as lectures; the dialogues frequently have the tone and purpose of essays, and their historicity appears to be generally limited to a reflection of the interests and conduct of Plutarch and his society. In total substance, the *Moralia* offer a survey of virtually every topic that was subjected to inquiry and discussion in classical antiquity. Extant treatises concern, among other subjects, ethics (*De cupiditate divitiarum* ["On love of wealth"]), psychology (*De tranquillitate animi* ["On peace of mind"]), medicine (*De tuenda sanitate praecepta* ["Advice about keeping well"]), politics (*Praecepta gerendae reipublicae* ["Advice about public life"]), religion (*De genio Socratis* ["On the sign of Socrates"], *De sera numinis vindicta* ["On the slowness of divine punishment"]), animal psychology (*De sollertia animalium* ["On the intelligence of animals"]), natural science (*De facie quae in orbe lunae apparet* ["On the face that appears in the orb of the moon"]), and literary criticism (*De Herodoti malignitate* ["On the malice of Herodotus"]). Rhetorical features permeate the *Moralia*, as does the influence of Aristotle and the Peripatetics the ethical and psychological treatises, which are usually popular and practical in purpose and approach. Nevertheless, Plutarch was fundamentally a Platonist, as is evident both in numerous treatises and from two technical works, the *Platonicae quaestiones* ("Platonic questions") and the commentary on a section of Plato's *Timaeus* entitled *De animae procreatione in Timaeo* ("On the creation of the soul in the *Timaeus*"); he was also firm in his opposition to the Epicureans (in *Adversus Colotem* ["Against Colotes"]) and the Stoics (in *De Stoicorum repugnantiis* ["On the contradictions of the Stoics"]), though he sometimes

treated the latter as *adversaires privilégiés.* (The titles of all the surviving *Moralia* are listed in both Latin and Greek at the beginning of each of the 15 *Moralia* volumes in the Loeb Classical Library.)

The extant *Lives* are of political and military personages and, with four exceptions, are "parallel" in that they are arranged in pairs consisting of a Greek and a Roman biography; the pairing is based on similarities of character and career, and all but four of the pairs are followed by a *syncrisis,* a short comparison, primarily ethical, in which Plutarch tends to emphasize the differences between the two individuals. Several of the *Lives* take us in varying degrees into the realm of myth and legend (most notably, those of the pairs Theseus and Romulus and Lycurgus and Numa, and that of Coriolanus, who is paired with the historical Alcibiades), but the large majority are of men who were fully historical (Pericles and Fabius Maximus, Nicias and Crassus, Alexander and Caesar). Plutarch is not, however, oblivious to a distinction between myth and history (*Theseus* 1), although he makes abundant use of anecdote and does not hesitate to include material he judges possibly apocryphal, especially when it is useful for illustrating character (*Solon* 27.1). While Plutarchan biography is grounded in Peripatetic ethics, it is, nevertheless, without precise literary antecedents. The evidence, moreover, is substantial that Plutarch himself, not some hypothetical intermediary, is mainly responsible for the collection and synthesis of the biographical and historical information on which each *Life* is based; nor did Plutarch's imperfect knowledge of Latin (*Demosthenes* 2) prevent him from making an ample use of Latin sources in the Roman *Lives.*

Plutarch insists that he is writing "lives," not "histories" (*Alexander* 1), and that he is doing so for the moral edification of himself as well as others (*Aemilius Paulus* 1). He has, therefore, chosen as his subjects personages whose life and character merit and inspire emulation, and whose moral failures are entirely attributable to humanity's incapacity for absolute virtue (*Cimon* 2); the only clear exception is the pair Demetrius and Antony, who serve expressly as negative examples and a foil to the subjects of the other *Lives* (*Demetrius* 1). But Plutarch the moralist and biographer is also Plutarch the storyteller, and the *Lives* contain many narrative passages which go beyond what is required merely for the illustration of character. The *Demosthenes-Cicero* gives full and exact expression to Plutarch's biographical concepts and purposes.

Plutarch's grand literary achievement is that the *Lives* and *Moralia* together constitute a synthesis and interpretation of the thought and events of all antecedent classical antiquity. In the Greek East, he continued to be read throughout later antiquity and the Middle Ages; and when Greek literature was restored to the West with the Renaissance, Plutarch came to occupy a central place in Western letters, particularly in France and England, which he held until the 19th century, when changing literary, historical, and educational values began their steady erosion of his influence and popularity. The last prominent literary figure to be significantly influenced by Plutarch was Emerson, but he was preceded by a host of major and minor authors that included Erasmus, Rabelais, Montaigne, Corneille, Rousseau, Shakespeare, Bacon, Dryden, and Schiller. Impetus was given to Plutarch's growing literary and educational influence by Jacques Amyot, who translated both the *Lives* (1559) and *Moralia* (1572) into French, and by Sir Thomas North, who rendered Amyot's version of the *Lives* into English (1579). It was principally through the agency of Amyot's translations that Plutarch had such a profound effect on Montaigne, and it was North's version of the *Lives* that Shakespeare used as the source for his Roman plays. Since World War II, there has been a resurgence of scholarly interest in Plutarch, which led to the establishment of the International Plutarch Society in 1983.

POCHERETH-HAZZEBAIM (PERSON) [Heb *pōkeret haṣṣĕbāyîm* (פֹּכֶרֶת הַצְּבָיִים)]. Head of a family belonging to Solomon's servants who had returned from the Babylonian Exile (Ezra 2:57 [= Neh 7:59; 1 Esdr 5:34]). The list in Ezra-Nehemiah implies that this return took place immediately in response to Cyrus' declaration in 538 B.C.E. But 1 Esdras places this return in its more probable date at the time of King Darius (ca. 522).

Some have used 1 Kgs 9:20 to conclude that Solomon's servants were originally enslaved foreigners. Levine, however, suggests that the term denotes Israelite officials supervising foreigners (1963). In the postexilic era, when the family of Pochereth-hazzebaim appears, the term "servant" typically refers to officials. Like the temple servants (Nethinim), Solomon's servants are temple functionaries. They are members of the congregation of Israel and separated thereby from slaves (Ezra 2).

The feminine form of the name Pochereth-hazzebaim has been taken to refer to an occupation (cf. Qohelet, the so-called "Preacher" of Ecclesiastes). The name has been translated as "gazelle hunter" (e.g., Blenkinsopp *Ezra-Nehemiah* OTL, 91) or "gazelle binder," since the word *ṣĕbāyim* can mean "gazelles." It is plausible, however, that the word here means "beauty" or "decorations," a usage frequently found in the singular in Ezekiel (20:6) and Daniel (11:45). Hence, the name could suggest a guild of temple functionaries, which Solomon's servants clearly were, whose specific task centered on beautification or decoration. The feminine form may also suggest that either the founder of the guild or its members were females. The designation of a clan by the name of its mother is attested in Ezra 2:61 (and the parallels in Nehemiah 7 and 1 Esdras) where the Barzillai family is specifically named after the wife because the man has taken her name. Possibly a similar process has shaped this professional guild or family of Solomon's servants. See Williamson *Ezra, Nehemiah* OTL.

POETRY, HEBREW. See PSALMS, BOOK OF; PARALLELISM; BUDDE HYPOTHESIS.

POLIS. See CITIES (GRECO-ROMAN).

POLITARCHS. The politarchate was a senior, annual magistracy attested predominantly in cities of Macedonia after Roman intervention in the 2d century B.C. The geographical spread of attestations of the word "politarch" includes Egypt, Bithynia, the Bosporan Kingdom, Thrace, Illyria, and (in a dialectically distinct form) Thessaly, as well as Macedonia. Chronological witness to the office stretches from the late 3d century B.C. to the last quarter of the 3d century A.D. While they are best known from the reference to them at Thessalonike in Acts (17:6–8), most of our information about politarchs comes from documentary texts.

Much of the writing on this subject from the late 19th and early 20th centuries is now superseded. Dimitsas' edition of Macedonian inscriptions (1896) is still of some use, and is now accessible again as a reprint; but a considerable number of his texts either have been improved or are in need of reediting. Burton's article was a particular landmark for NT studies, and is still often referred to in modern discussion; but his research was published in 1898, and our knowledge of the subject has advanced considerably since then. The score of texts he examines as evidence for politarchs has more than tripled. Nevertheless, his article continues to provide the most accessible, complete (if not most reliable) version of some of the inscriptions. Ferguson's dissertation has only a couple of pages on politarchs (1913: 65–66), and hence contributes little. Greek scholars have continued to show an interest in this subject: reference should be made particularly to Pelekides (1934) and Kanatzoulis (1956). In fact, it is Schuler's 1960 article, which, although focusing upon the Macedonian evidence alone, has provided the benchmark for subsequent research because of his valuable tabulation of known inscriptions from there (note, however, that his no. 16 must now be deleted because it does not refer to a politarch; the latest version of this text is published as *IG* 10/2: 1.181). Schuler's list of politarchs is now superseded by Hatzopoulos (1984: 147–49), whose tabulation includes 50 items from Macedonia (49 inscriptions and the reference in the book of Acts). The tally in the present article is somewhat higher, reflecting both new discoveries and the decision to incorporate evidence from a broader geographical area. Since 1970, the number of significant contributions which focus on the office of politarch has increased markedly: Gschnitzer (PWSup 13: 483–500); Helly (1977); Koukouli-Chrysanthaki (1981); Hatzopoulos (1984); and Papazoglou (1986). Edson's publication of the *IG* volume (10/2) covering Thessalonike has made many of the texts far more accessible, although the *IG* volumes covering Beroia and certain other Macedonian cities are yet to appear.

By 1988 there were possibly as many as 64 known nonliterary references to the politarchate, all but one occurring in inscriptions. Over three quarters of them are from Macedonia, and nearly half of all the attestations are from Thessalonike alone. Literary attestation is rarer: apart from the two occurrences in Acts 17, Chrysostom mentions politarchs five times in allusions to the Acts incident (*PG* 60.263.26, 34; 60.677.41; 62.394.26; 62.395.35). The epitome to the 5th-century *Acts of Philip* mentions a politarch named Irōn (Lipsius and Bonnet 1903: 2.1. 46–50). The word occurs once in one of the works attributed to Macarius, the late 4th-century ascetic from Egypt. Finally, a politarch is referred to in the 7th-century *vita Cyri et Joannis* by Sophronios (*PG* 87.3401D). The only other mention in literary texts is much earlier: the 4th-century-B.C. writer Aeneas Tacticus uses the form *politarchos* (26.12).

The known documentary references to politarchs are listed in Table 1. Each item includes the provenance, date, details of the most accessible/reliable complete text, and, where appropriate, brief remarks. Not included in this list are texts with wording like *prōtos archōn*, although such terminology has been suggested as indicating politarchs in Macedonian inscriptions (Hatzopoulos 1984: 139). Very little information is known about no. 64.

64. Paros	?	———	cf. Burton 1898: 625–26

Until the 1970s, the dominant view of the politarchate—most clearly formulated by Schuler (1960)—was that it was introduced into Macedonia by the Romans, either after 167 B.C., when democratic institutions were imposed by L. Aemilius Paullus after the Third Macedonian War (171–168 B.C.), or after 146 B.C., when Macedonia was accorded provincial status. Certainly, the great bulk of attestations of politarchs from Macedonia belong to the 2d century B.C.–2d century A.D. Yet Schuler did not exclude absolutely the possibility of pre-Roman politarchs in Macedonia. Pointing to an inscription of 243/42 B.C., the last year of the reign of Antigonos II Gonatas, in which *archontes* are mentioned (*SEG* 12.373, line 32), he raises the possibility (1960: 93) that politarchs may have been among the magistrates alluded to in this more general term. Hatzopoulos, too, has suggested (1984: 139) that the politarchate is reflected in phraseology such as *prōtos archōn, prōtarchōn, and tēn arxas prōtēn archēn*, occurring in inscriptions from Thracian Philippopolis. Such terminology is indubitably attested once of a politarch at Thessalonike (see Table 1, no. 50). Acceptance of this argument leads to the consequential one (Hatzopoulos 1984: 144, n. 39) that the politarchate is attested in a larger number of Thracian cities than merely Philippopolis, where alone the actual word occurs (Table 1, nos. 57–58).

Contrary to Schuler, Gschnitzer (PWSup 13: 493) and Hatzopoulos (1984: 139) have more recently advanced different strands of the same argument which now place beyond doubt the pre-Roman institution of the politarchate. Studying the presence of the magistracy in separate regions (Table 1, no. 9 in Macedonia, nos. 57–58 in Thrace, respectively), they have demonstrated that the politarchate existed in the Roman period in areas which had been under the Antigonids but which were still not subsumed by the Romans before mid–2d century B.C. Papazoglou has clinched this with her argument (1986: 448) concerning the sole instance from Illyria (Table 1, no. 1), that the institution of the politarchate in this lone polis among the Illyrian cities can be accounted for only by an alliance or dependent state relationship having been established between Olympe and Macedonia under Philip V before the Second Macedonian War (200–197 B.C.). This most recently published of the attestations is thus also the earliest (3d century B.C. fin.). Another attestation (no. 3) originally was held to be pre-Roman, being dated to 179–171 B.C., during the reign of Perseus (Koukouli-Chrysanthaki 1981), but doubt has been raised

subsequently whether that stone may actually carry two separately inscribed texts of different date (Papazoglou 1986: 442–43, n. 19).

The fact that the politarchate can now be shown to predate 167 B.C. does not resolve the issue whether this office underwent changes of function over time. It would not be surprising if there were alterations; and some of these may well have been introduced by the Romans. Combining the evidence from the inscriptions, certain of the functions of the Macedonian politarchate in the Roman period emerge clearly. It was an annual magistracy (*ton kata etos geinomenon poleitarchēn*, Table 1, no. 9) which could be held more than once (no. 35). That politarchs had an administrative/executive function is attested by no. 16, where they are responsible for introducing motions to the *boulē*, and for effecting its decisions (nos. 9, 10). That politarchs possessed judicial authority is clearest from the incident at Thessalonike (Acts 17): they were responsible for maintaining the peace in their city (Gschnitzer, PWSup 13: 491). Although the magistrates at Beroia are not mentioned in the following section of Acts (17:10–14), the analogous situation there to what occurred at Thessalonike, together with the firm attestation of the politarchate at Beroia (Table 1, nos. 6–8), suggests that it may have been these officials who had to quell the disturbances in that city as well (*NDIEC* 2: 35).

There are only two certain instances of a community having a single politarch per year (Table 1, nos. 9, 59). Where the evidence is clear elsewhere, a collegial arrangement was used. Sometimes one of the politarchs in such a group is specified (or at least implied) as the eponymous magistrate by the phrase *politarchōn tōn peri* NN, *vel sim.* (nos. 10, 12, 19, 53; cf. *architoliarchentos* in no. 56). He may be inferred to have functioned as president of the council and of the citizen assembly. The number forming a college varied both from city to city and from time to time. Two Thessalonikan inscriptions of similar date (nos. 24 and 25) attest five and two politarchs respectively. The regular number of politarchs in the late 1st century B.C. was five (nos. 26–29). In the mid–2d century A.D. the size of the college appears to vary from three to perhaps seven (nos. 35–38). By the early 3d century A.D. their number had reached nine (no. 44). The three Amphipolitan inscriptions attest five, two, and perhaps three politarchs respectively (nos. 2–4). No convincing reason for such fluctuation can be suggested on the basis of the present evidence. To the extent that we can infer the size of the college in Illyria (no. 1), Thessaly (nos. 55–56), and Macedonian Beroia (nos. 7, 8), five is again the regular number.

This range of information leads to the legitimate inference that the politarchs were the chief magistrates in their cities. Yet it is possible that by about the mid-3d century the title was becoming merely honorific (nos. 45 and 48, though these two texts do not indicate such a change as certainly as has sometimes been supposed; cf. Schuler 1960: 99, n. 14; Gschnitzer, PWSup 13 489). Another reasonable conclusion to draw from the evidence is that the politarchs came from the wealthier families (Schuler 1960: 90, cf. 98, n. 9), who will also have comprised the social elite of their city.

Two caveats should be mentioned. First, it is not only within urban centers that politarchs exercise their position. Hammond and Griffith note (1972 1: 87) that in Table 1, no. 10, Derriopos is not a city but a district inhabited by the Derripes, and the politarchs of Derriopus are officials of the tribal state *hē polis tōn Derriopōn.* In this inscription the politarchs convene the *boulē* which decides to honor a Roman citizen. Again, in no. 9 we see the politarch convening the *ekklēsia* not of a city but of a tribal community in the SW Macedonian canton of Orestis (Hammond and Griffith 1972 1: 114–15). The resolution concerning a land dispute is passed by the politarch and citizens together.

The second qualification to be made is that most of our evidence relates to Macedonia; whether the functions of politarchs elsewhere were identical is unclear. There is a natural presumption in favor of a similar role in those regions which came under Macedonian influence (Table 1, nos. 1, 57–58). In the sole papyrological example (no. 63), however, it is quite uncertain what duties the politarch Theophilos performs, from the passing comment included in this private letter. In fact, this is our only instance from Egypt where the term may be used in a technical sense. The usage in the metrical epitaph for Abramos from Leontopolis (no. 62) is clearly more fluid, probably to indicate his leadership of two Jewish communities *(dissōn gar te topōn politarchōn autos eteimō).* The sole text from Bithynia which mentions a politarch (no. 61) similarly does not clarify the function for that city. Accordingly, the politarch at Kios

has been seen as both a minor official (Schuler 1960: 99, n. 21; Hatzopoulos 1984: 143, n. 20) and also as one holding a post similar to that of *censor/timētēs* (Vidman 1960: 70; Ameling 1984: 27–28, and n. 70).

This possibility of the term being employed for officials exercising different responsibilities in different locations leads to the question whether the Macedonian politarchs and the Thessalian politarchs are in fact to be identified. Generally, they have been differentiated (Schuler 1960: 92; Gschnitzer, PWSup 11: esp. 1112; PWSup 13:483–500); but Helly (1977) has shown that these and related terms are essentially the same. The difference is one of dialect. No. 32 in Table 1 may help to reinforce this conclusion: it is a metrical text from Thessalonike, but with the spelling *ptoliarchos*, one of the forms which occurs in the Thessalian inscriptions (for three Classical and Hellenistic literary verse occurrences of *poliarchos*—all nontechnical uses—see Gschnitzer, PWSup 11: 1112).

POLITICAL IDENTITY. See NATIONALITY AND POLITICAL IDENTITY.

POLYCARP (PERSON). Bishop of Smyrna in Asia Minor, born ca. 70 C.E. and martyred in Smyrna ca. 156 C.E. Our sources for the life of Polycarp include Ignatius' letter to Polycarp, Irenaeus' *Adversus Haereses*, Eusebius' *Historia Ecclesiastica*, and most importantly, the anonymous *Martyrdom of Polycarp.* Irenaeus, quoted by Eusebius (*Hist. Eccl.* 5:20:6), states that Polycarp was a disciple of John the Apostle. Some scholars doubt the accuracy of this assertion, especially considering Eusebius' preoccupation with demonstrating apostolic succession. Neither Ignatius nor Polycarp himself mentions any connection with John. According to a scribal addition to the *Martyrdom of Polycarp* (22:2), Irenaeus was a disciple of Polycarp.

Polycarp was the author of one extant writing, a letter to the Philippians. Harrison (1936) has argued persuasively that Polycarp's *Philippians* is actually two letters (1–12 and 13–14). Chief evidence for this theory is the presupposition in 1–12 that Ignatius of Antioch has already died (9:1), whereas in 13–14 Ignatius clearly is still living (13:2). Since Ignatius was martyred ca. 108–15, the two letters were probably written shortly after and shortly before this time.

Moral exhortation dominates Polycarp's *Philippians.* He exhorts the Philippians to the highest standards of personal morality in forgiveness (2:2–3), righteousness (3:1–2), avoidance of love of money (4:1, 3;

11:1–2), chastity (4:2), compassion (6:1), and endurance under persecution (8:2–9:2). The predominant theological emphasis of the letter is anti-Docetism (7:1; 8:1). Polycarp's writing is thoroughly infused with brief quotations and allusions to lst-century Christian writings, indicating his familiarity with Matthew, Acts, Romans, 1 and 2 Corinthians, Galatians, Ephesians, Philippians, 1 and 2 Timothy, 1 Peter, 1 John, and 1 Clement. The thought and literary style of Polycarp's *Philippians* so closely resembles that of the Pastoral Epistles in the NT that von Campenhausen (1963) has even proposed Polycarp as the author of the Pastorals, although this hypothesis has not gained widespread scholarly acceptance.

The *Martyrdom of Polycarp* was written not long after the time of the event (ca. 156) and was known to Irenaeus around 180. It describes the events of Polycarp's martyrdom as follows. During a persecution at Smyrna he was found, arrested, and brought to the stadium by a police chief named Herod (6:1–2). When asked by the proconsul to "swear by the Genius of Caesar" (9:2), Polycarp replied, "For eighty-six years I have served [Christ], and he has done me no wrong. How can I blaspheme my king who saved me?" (9:3). He was soon afterward executed by burning, but when the flames would not consume his body, the executioner plunged a dagger into him. A mass of blood spurted forth from the wound, quenching the fire and amazing the crowd (16:1).

The *Martyrdom of Polycarp* holds a special place in Christian literature as the first example of the literary genre, acts of Christian martyrs. Scores of such acts of martyrs would be written in subsequent centuries. Although some of the miraculous elements in the *Martyrdom of Polycarp* appear to be legendary (15:2; 16:1), the work claims to have been written by an eyewitness (15:1). See also POLYCARP, EPISTLE OF; POLYCARP, MARTYRDOM OF.

J. CHRISTIAN WILSON

POLYCARP, EPISTLE OF. The primary source of our knowledge of Polycarp of Smyrna (traditionally ca. A.D. 69–155) is a letter which he wrote to the Church at Philippi early in the 2d century. See also POLYCARP, MARTYRDOM OF. The letter is not a distinguished document from a literary or theological point of view, but it reveals a man who could be relied on for a sane and cautious approach to religious and administrative problems. The importance of the letter is enhanced by the fact that Polycarp's career intersected that of others who left a deeper impression on the early Church than Polycarp himself.

A. Polycarp and Ignatius

Of first importance in this regard is Ignatius of Antioch, who was allowed by his guards to meet with the Christians of Smyrna while en route to Rome and who subsequently dispatched two letters to the Smyrnaeans and their leader, Polycarp, from Troas (Eus. *Hist. Eccl.* 3.36). Polycarp was evidently stirred by the intense spirituality of his visitor from Antioch and proved to be his most enthusiastic advocate. In the end, he agreed to help organize the flow of representatives and congratulatory notes to Antioch requested by Ignatius (Ign. *Phld* 10; *Smyrn* 11; *Pol.* 7–8; Pol. *Phil.* 13.1). He also indicates that he had made a collection of Ignatius' letters at the request of the Philippians (*Phil.* 13.2), perhaps on the model of a corpus of Pauline letters.

Ignatius is mentioned again along with two other Christian martyrs in *Phil.* 9. These same "patterns of true love" are alluded to at the beginning of the letter in a statement that seems to presuppose their presence in Philippi not long before (*Phil.* 1.1). Polycarp's references to Ignatius do not, however, harmonize easily: in *Phil.* 9 our author seems to speak of Ignatius' martyrdom, presumably in Rome, as a past event, whereas in *Phil.* 13 he asks to be informed if the Philippians have learned "anything more

certain" about Ignatius and those with him. This apparent contradiction led P. N. Harrison (1936) to suggest that *Phil.* 13–14 (or 13 alone) was written as a covering letter for the Ignatian corpus soon after Ignatius had passed through Philippi, whereas *Phil.* 1–12 (or 1–12 + 14) was composed later (ca. 135 A.D.) to meet other problems. Among these, according to Harrison, was the desire to combat the Marcionite heresy implied by the polemics of *Phil.* 7 and by the identification there of the docetic opponent of the truth as "the firstborn of Satan" (*Phil.* 7.2). For according to Irenaeus, precisely this phrase was applied to Marcion by Polycarp during a famous encounter between them (*Adv. haer.* 3.3.4; Eus. *Hist. Eccl.* 4.14.7). It remains very doubtful, however, that *Phil.* 7 has Marcion's teaching in view (Schoedel 1967: 23–26); and it is surely possible that Polycarp used the expression "firstborn of Satan" on more than one occasion or that the story reported by Irenaeus grew up around Polycarp's bon mot later. In any event, the allusion to the martyrs in *Phil.* 1, suggesting as it does a fresh memory of the martyrs, indicates that the divergence between *Phil.* 13–14 and *Phil.* 1–12 cannot be pressed. Either the two letters were close to one another in time, or there was in fact but one letter. To be sure, those who regard the references to Ignatius in Polycarp as interpolations point to a grammatical inconsistency in *Phil.* 1 that they take as evidence of the inauthenticity of the reference to the martyrs in that passage. There are indications, however, that the peculiarities of the text arise from an unusual manipulation of a standard transitional device (a "joy expression") often found at the beginning of the body of ancient letters (Schoedel 1987).

It should be noted that those who regard Polycarp's references to Ignatius as interpolations are primarily concerned to deny the authenticity of the letters of Ignatius (i.e., the "middle recension" generally considered authentic since the research of Zahn [1873] and Lightfoot [1885]). A form of the argument presented by Joly (1979: 17–37) has it that the interpolator built on an authentic reference to an otherwise unknown Ignatius in *Phil.* 9, added *Phil.* 13 to turn the communication into a covering letter for the Ignatian corpus, and inserted the allusion to the martyrs in *Phil.* 1 to set the stage for the new picture of Ignatius that was being created. Here, however, too much depends on the prior conviction that the middle recension of Ignatius is inauthentic; and again too much is probably made of the grammatical inconsistency in *Phil.* 1.

B. Polycarp and Apostolic Tradition

Our assessment of the place of Polycarp in the early church is further complicated by the fact that he was soon appealed to by Irenaeus (and Eusebius after him) as an important link in a line of orthodox tradition stretching back to the apostles, especially John. In one passage Irenaeus claims to have known Polycarp personally "in my early youth" (*Adv. haer.* 3.3.4; Eus. *Hist. Eccl.* 4.14); and he goes on to make the following points about him: Polycarp visited Rome in the time of Anicetus, whose accession to the episcopal office took place perhaps no earlier than A.D. 155, and Polycarp opposed heresy there; Polycarp related a story about John, the disciple of the Lord, who "going to bathe at Ephesus and seeing Cerinthus within, rushed out of the bathhouse without bathing, saying, 'Let us flee lest the bathhouse fall down because Cerinthus the enemy of the truth is within' "; and when Polycarp encountered Marcion, he identified him as "the firstborn of Satan." In this connection, Irenaeus also refers to Polycarp's "very able" letter to the Philippians. But when he speaks elsewhere of Polycarp's letters in the plural (Eus. *Hist. Eccl.* 5.20.8), he was probably going on much less. In yet another passage, Irenaeus links Polycarp and Papias, calling the latter "the hearer of John, and a companion of Polycarp" (*Adv. haer.* 5.33.4). The importance of Polycarp to Irenaeus also emerges from a fragment of his letter to Florinus: "When I was still a boy," says Irenaeus, "I saw you [Florinus] in lower Asia in the company of Polycarp, faring brilliantly in the imperial court and endeavoring to secure his favor." Irenaeus also claims to have remembered what Polycarp did and said and "how he would tell of his intercourse with John and with the others who had seen the Lord" (Eus. *Hist. Eccl.* 5.20. 4–8). Finally, a letter of Polycrates of Ephesus (ca. A.D. 190) to Victor, bishop of Rome (A.D. 189–98), on the paschal controversy names Polycarp, among others, as preserving Quartodeciman practice from the time of the apostle John (Eus. *Hist. Eccl.* 5.24.2–7). Irenaeus also wrote to the Roman bishop on this matter, reminding him that when Polycarp visited

Anicetus in Rome, there was mutual respect in spite of disagreement on the date of the celebration of Easter (Eus. *Hist. Eccl.* 5.24.14–17).

In spite of all this, a link between Polycarp and John is not assured. Irenaeus was young when he heard Polycarp and may well have taken references to John the elder (Eus. *Hist. Eccl.* 3.39.3–7) as references to John the apostle. Polycarp himself certainly makes no appeal to having known any of the disciples of the Lord, and he does not claim to have been appointed by one of them over the Church in Smyrna. He does not even lay claim to the title of bishop. And although it was no doubt appropriate for Ignatius to refer to Polycarp as bishop in Smyrna (Ign. *Magn* 15; *Pol.* 6.1), it is also evident that the title meant more to Ignatius than to his host. Yet even Ignatius makes no use of the idea of apostolic succession in this connection. And when he writes against Docetism on Polycarp's behalf (Ign. *Smyrn.* 1–9), he never appeals to the special authority of John. A link between Polycarp and John, then, seems just about as unlikely as a link between Papias and John. In any event, Irenaeus evidently remembered very little of what Polycarp may have said concerning his mentor John. For it is significant that he presents the story of the encounter between the apostle and Cerinthus—a high point of his account of the bishop of Smyrna—as derived from others.

C. Polycarp and the Philippians

The authority that Polycarp exercised beyond the Smyrnaean Christian community can be judged by the task that he was asked to assume by the Philippians. They requested that he give his opinion on what should be done about the elder Valens and his wife in the Philippian congregation, who had misused funds of the Church. Polycarp's advice was to "bring them back as weak and erring members" (Pol. *Phil.* 11.4). The incident serves to illustrate the informal authority enjoyed by prestigious outsiders who could be trusted to give an unbiased judgment. The situation is comparable to that presupposed in *1 Clement*, which was written by a leader of the Roman Church in response to an appeal from Corinth to help deal with internal difficulties there.

Polycarp's references to the martyrs (*Phil.* 1; 9; 13), to Docetism (*Phil.* 7), and to Valens' love of money (*Phil.* 11) are embedded in a theology that emphasizes the preservation of the blessings of salvation (especially the resurrection) through a faith that bears fruit in sober living and a forgiving attitude (*Phil.* 1–2; 8; 10; 12) and that recognizes responsibilities articulated in tables of duties for wives, children, widows, deacons, young men, virgins, and elders (*Phil.* 4–6). Again, there is no mention of a bishop or bishops. Special attention to the Pauline theme of "righteousness" (*Phil.* 3) suggests that Polycarp was reacting to an exegesis of Romans and Galatians by gnosticizing enthusiasts for the apostle. Polycarp himself emphasizes the settled spiritual and ethical attitudes that the term implies. Similarly, he works with a moralized version of the eschatological outlook of the early Christian movement (Bovon-Thurneyson 1973). Indeed, the theology of the letter is so close to that of the Pastorals that von Campenhausen (1951) argued for Polycarp's authorship of them as well. The theory is not fully persuasive, but the affinities are striking.

Although the letter to the Philippians to all appearance consists of a collection of disconnected points, it is likely that Polycarp saw a relation between them (Meinhold PW 21/2: 1662–93; Schoedel 1967; Steinmetz 1972). Thus it may be said that Polycarp opposes Docetism and the misinterpretation of righteousness by appealing to the witness that martyrdom gives to a life of endurance and love and to the reality of the cross of Christ. And it seems that he deals with Valens' love of money as a symptom of hidden impulses at work in the congregation as a whole and that he deepens its significance for the Philippians by treating greed as the moral corollary of heresy.

D. Polycarp and the New Testament

An extraordinary feature of the letter is the extent to which Polycarp pieces together words, phrases, and sentences from the Christian literature of the 1st century to say what he does. There are strong echoes of Matthew along with hints of Luke. And there may also be dependence on Acts in one passage (*Phil.* 1.2). As regards Paul, language reminiscent especially of Romans, 1–2 Corinthians, Galatians, Philippians, and Ephesians is found. Similarities with the Pastorals may depend on the use of traditional themes in pagan and Christian moralists. At the same time, there is the possibility that 1 Tim 6:7, 10 was before Polycarp

in *Phil.* 4.1 and 2 Tim 4:10 in *Phil.* 9.2. There seem to be numerous clear reflections of 1 Peter in the letter. But the fact that Polycarp and the First Letter of John have anti-Docetic themes in common (*Phil.* 7) does not necessarily point to a literary relation between them. In view of the presumed connection between Polycarp and "John," it is striking that echoes of neither the gospel of John nor of the Apocalypse are to be found. On the other hand, Polycarp appears to have known *1 Clement* fairly well. And the allusions to Synoptic materials seem clearly to presuppose the use of written documents—perhaps atypically for the Apostolic Fathers (Koester 1957)—with the exception of a collection of items in *Phil.* 2.3 that apparently depends on *1 Clem.* 13.2 or on traditional materials somehow related to *1 Clem.* 13.2 (Hagner 1973: 279). None of the material discussed above seems to have been regarded as Scripture by Polycarp, though there is a problematic passage in *Phil.* 12.1. Yet Polycarp makes relatively little use of the OT and professes inferiority to the Philippians in the knowledge of Scripture (*Phil.* 12.1). Nevertheless, traces of language derived directly or indirectly from the Psalms, Proverbs, Isaiah, Jeremiah, Ezekiel, Tobit, and other biblical books are found.

WILLIAM R. SCHOEDEL

POLYCARP, MARTYRDOM OF. The account of the martyrdom of Polycarp *(MPol)* is contained in a letter written by the Church in Smyrna to the Church in Philomelium (a small but reasonably important city in Phrygia) and beyond that "to all the communities of the holy and catholic church sojourning in every place." The conclusion indicates that a certain Marcion was responsible for the composition of the letter (*MPol* 20.1) and that a person named Evarestus served as scribe (*MPol* 20.2), although the text may also be taken to mean that Marcion was "the authoritative witness" and Evaristus the author (Dehandschutter 1979: 280). The connection between the epistolary framework and the account of the martyrdom is purely ad hoc, however, and does not justify the identification of a separate category for Christian martyria in epistolary form (Dehandschutter 1979: 157–89). Thus *MPol* is the first of the narrative martyria from the early Church.

The contents of the document may be outlined as follows: an introduction concerning "martyrdom in accord with the gospel" (*MPol* 1); an account of the martyrdom of those who preceded Polycarp (2–4), including especially the description of the courage of "the most noble Germanicus" in *MPol* 3 and the rueful reflections on Quintus the Phrygian in *MPol* 4 (who at first forced himself and some others to come forward and then lost his nerve); a lengthy recital of the martyrdom of Polycarp himself (5–18); and a conclusion (19–20). There follows a number of appendixes: a chronological note that may or may not be part of the original letter (*MPol* 21); a conclusion that echoes vocabulary and themes from the beginning of the letter and that also may or may not be part of the original letter (22.1); a note on the transmission of the manuscript of *MPol,* quite possibly reformulated by the same copyist who identifies himself in the last section (22.2); and the last section, a note by Pionius—probably a 4th-century writer masquerading as the 3d-century martyr Pionius—who explains the circumstances under which he copied *MPol* and who suggests that *MPol* was to be part of a collection of materials devoted to Polycarp (22.3). Also note that

the Moscow ms of *MPol* breaks off before the doxology at the end of *MPol* 21 and adds at that point its own elaborate version of *MPol* 22.2–3. The recital of Polycarp's martyrdom is the heart of the document and includes the following elements: Polycarp's preliminary withdrawal to safety (*MPol* 5); his arrest (6–8); his summary trial before the proconsul in the stadium (9–11); the martyrdom itself (12–18). The martyrdom itself recounts the reactions of the crowd (12–13), Polycarp's prayer of thanksgiving, modeled to a certain extent on early eucharistic materials (14), the burning of Polycarp (15–16), and the treatment of his remains (17–18).

The authenticity of the letter was proved to the satisfaction of most by Lightfoot. Skepticism on this point has not been entirely banished (Schwartz 1972), but far more significant has been the challenge of Grégoire and Orgels (1951) to the long-accepted dating of *MPol* and the questions raised by von Campenhausen (1957) about the integrity of the document. To understand the debate it is necessary to recall that *MPol* is known to us not only in an independent form from Greek mss and early versions but also from Eusebius' discussion of it (*Hist. Eccl.* 4.15). The historian represents *MPol* by quoting the address, paraphrasing *MPol* 1–6, and then returning to the text itself of *MPol* 7–19. To be more precise, he breaks off shortly after the beginning of *MPol* 19 (at the words "so that he is spoken of in every place even by the heathen"); and thus Eusebius either did not know the chronological note in *MPol* 21 or did not see fit to deal with it. Eusebius' paraphrase of *MPol* 1–6 is noteworthy for the absence of the theme of the imitation of Christ prominent in the mss of *MPol.* And his form of the text of *MPol* 7–19 stands out for its omission of the reference to the dove in *MPol* 16.1 which was said to fly from the wound inflicted on the martyr by the executioner.

The older scholarship is dominated by the date of A.D. February 23, 155, or A.D. February 22, 156, for the martyrdom of Polycarp. These suggestions rest on complex arguments brought to bear on the chronological note in *MPol* 21. The surprisingly late date of A.D. 177 for the martyrdom of Polycarp proposed by Grégoire and Orgels (1951) depends on regarding the chronological note in *MPol* 21 as a late addition to the text, offering a fresh analysis of the data provided by Eusebius, both in his Church history and his chronicle, and treating the discussion of Quintus in *MPol* 4 as a response to Montanism. The arguments against this interpretation of the evidence are strong, however, and it is likely that an earlier date should be preferred. Some have defended A.D. 167 (the date that Eusebius actually gives in his chronicle) or thereabouts (Marrou 1953; Brind'Amour 1980). Others have been willing to give greater credit to the chronological note in *MPol* 21 (partially supported by the reference to the Asiarch Philip in *MPol* 12.2) and to suggest a date of ca. A.D. 155–60 (Schoedel 1967: 58, 68, 78–79; Barnes 1967; 1968; Dehandschutter 1979: 191–219). This approach to the data supplied by the chronological note involves setting aside the mention of "a great Sabbath" (the day on which Polycarp was martyred) as helpful in being any more precise. The uncertainty about the meaning of this much-discussed expression is well illustrated by the effort of Rordorf (1980) to take it as a reference to a celebration of the pagan Terminalia that happened to coincide with a Sabbath. Rordorf notes that *MPol* pictures pagans and Jews as equally free to attend the festivities. Any earlier date for the martyrdom of Polycarp than those suggested above is ruled out by the fact that Polycarp is said by Irenaeus (Eus. *Hist. Eccl.* 5.24.16) to have visited Anicetus in Rome; for it is generally thought that Anicetus became bishop of Rome about A.D. 155 (perhaps A.D. 155 at the earliest).

Another approach to the problems presented by *MPol* has led to theories of interpolation. This line of argument was pursued most persuasively by von Campenhausen (1957). He called into question not only elements absent from Eusebius' paraphrase of *MPol* 1–6 (notably the theme of the imitation of Christ), but also certain materials already present in the text known to Eusebius. Among the latter are the discussion about Quintus in *MPol* 4, elements of the miraculous in the account, and the points in *MPol* 17–18 that seem to reflect a veneration of martyrs and a theological assessment of such veneration too highly developed for the 2d century. The chronological note in *MPol* 21 is regarded as a later addition, and the conclusion in *MPol* 22.1 is seen as the work of the same redactor who developed the theme of "martyrdom in accord with the gospel" (*MPol* 1.1) and who presumably drew out the parallels between the death of the martyrs and the passion of Jesus.

Von Campenhausen's view of the matter has been developed and refined by Conzelmann (1978), significantly modified by Schoedel (1967: 47–82), and now more or less abandoned by Barnard (1970), Dehandschutter (1979: 131–55), and Saxer (1982). A fundamental error of von Campenhausen was his failure to examine more carefully how Eusebius dealt with his sources. Moreover, most of the parallels drawn in *MPol* between the death of the martyrs and the passion of Jesus are, as Barnard observed, also found in Eusebius' report. And von Campenhausen's reasons for judging certain items as anachronistic were not always clear. But it is perhaps not yet certain that he was mistaken on every point, including especially the highly developed martyrological themes in *MPol* 17–18. In any event, one general result of recent criticism of *MPol* is the virtual elimination from scholarship of the notion that originally the letter would naturally have contained a more or less factual account devoid of elements of the miraculous and of explicit theological reflection. Indeed, we now have a theory of the textual transmission of *MPol* that calls into question any tendency to favor the evidence of Eusebius and that also sees no reason to follow him in eliminating the reference to the dove which is said to fly from the wound inflicted on Polycarp by the executioner in *MPol* 16.1 (Dehandschutter 1979: 27–129).

It has not proved easy to describe with clarity the idea of martyrdom that comes to expression in the letter. *MPol* naturally shares with postbiblical Judaism and early Christianity an emphasis on the importance of affirming a way of life in obedience to the will of God and of being committed to it, if need be, to the point of death. *MPol* also naturally shares with Judaism and early Christianity the confidence that God will reward those who endure to the end with a "crown of incorruption" (*MPol* 17.1). In the early Church, however, new horizons were opened up by the fact that the requirement of loyalty to the law was replaced by the experience of communion with Jesus Christ. In working out the implications of this difference, it is still useful to view the martyr as the antecedent of the saint in the later technical sense of the term. Thus in *MPol*, martyrs show themselves, by their endurance in suffering, to be people who are no longer human but already "angelic" (2.3), and the martyrdom of Polycarp is marked by a display of miracles (5.2; 9.1; 15.2; 16.1). Moreover, the faithful, who had treated Polycarp when alive with such reverence that they constantly sought to "touch his flesh" (13.2), also attempt to recover his body "to have fellowship with his holy flesh" (17.1). When that is denied them, they gather up his bones, set them in a "suitable" place (18.2), and plan to celebrate "the birthday of his martyrdom" on the anniversary of his death (18.3). Such acts seem to presuppose an established cultic pattern (Rordorf 1972); and though the careful distinction here between the "worship" due Christ and the "love" due martyrs (17.3) evidently reflects a developing debate concerning the veneration of martyrs, the author is prepared to come to terms with popular attitudes on this point (Saxer 1982: 992–99). Some scholars, however, deal with such elements in *MPol* merely as naive anticipations of later developments and stress the extent to which the annual celebration was intended, as *MPol* 18.3 itself says, "in memory of those who have already contested and for the training and preparation of those whose lot it will be." Dehandschutter (1982), for example, presents *MPol* as focused on obedience to the will of God (2.1; 7.1) and concerned about the salvation of "all the brethren" rather than of "oneself alone" (1.2). From this point of view, the rule to withdraw and not to thrust oneself forward for martyrdom (1.2; 4) not only reflects an awareness of the dangers of enthusiasm for institutional stability and social respectability, it also suggests that the theological center of *MPol* is to be found less in an emphasis on individual salvation and the achievement of a special sanctity than in a call to obey God and to attend to the Church's mission.

The problem of the theological outlook of *MPol* comes to a head in the interpretation of the theme of the "imitation of Christ" (1.1; 17.3; 19.1) and the assessment of the role of the parallels drawn between the martyr's lot and the passion of Christ. These features of *MPol* have been regarded as too highly developed for the 2d century by those who see them as setting the martyr apart from other Christians and establishing him as an independent focus for piety alongside of Christ (von Campenhausen 1957). More particularly, a distinction has been drawn between *Nachfolge* in the NT (a following after Christ in terms of obedience and faith) and *Nachahmung* in *MPol* (an imitation of Christ that implies an emphasis on the martyr's special sanctity). The imitation theme in *MPol*, however, is not carried through with great consistency and, in the opinion of many, is compatible with the treatment of Stephen in Acts 7 (Irenaeus,

Adv. haer. 3.12.10–13) or with James in Hegesippus (Eus. *Hist. Eccl.* 2.23.4–18). Thus it may be correct to say that *MPol* does not intend so much to imitate the passion as to show that Polycarp's behavior was in harmony with the will of God and in conformity with the gospel (Schoedel 1967: 51–82; Dehandschutter 1982).

The effort of Kretschmar (1972) to read *MPol* from a quite different angle against the background of a popular Christian Passover tradition and to see martyrdom as a quasi-Eucharistic event (*MPol* 14) is both highly suggestive and highly problematic.

The theology of *MPol* is clearly directed against a misunderstanding of martyrdom. A number of scholars have thought that Montanism, with its home in Phrygia and its special enthusiasm for martyrdom, is represented by Quintus (*MPol* 4). This interpretation is connected with the problems of dating and the possibility of interpolations outlined above. Another suggestion is that *MPol* represents a response to Gnosticism which in some forms opposed martyrdom and in other forms (notably in the *Apocryphon of James*) encouraged self-willed martyrdom (Dehandschutter 1982: 665–67). It seems more likely, however, that *MPol* is confronting difficulties that could arise in any Christian community from inordinate caution or excessive zeal in meeting hostile challenges from the social environment of the churches. Thus *MPol* provides a balanced outlook that would presumably have helped to preserve the stability of the group and to have made measured responses to outside pressure possible. At the same time, it seems likely that *MPol* was also taking into account an incipient tendency within the churches to honor the martyr too highly. For if the distinction between the worship of Christ and the love of martyrs in *MPol* 17.3 does not serve as evidence of interpolation, the author of the document is surely reacting against what he regarded as an exaggerated veneration of these figures.

The foundation for such an exaggerated veneration was likely to have been laid in the popular culture of the Greco-Roman world with the piety that surrounded heroes and their relics. Even Klauser (1974), who had contested such influence, withdrew his arguments for the purely Jewish roots of the Christian idea of martyrdom in a note appended to the reprinting of his much-cited essay on the subject. In this connection, it may be relevant to note that the cult of martyrs and the common cult of the dead are not sharply distinguished from each other (Saxer 1982: 995), and that consequently the normal treatment of the dead may have paved the way in some communities for more highly developed practices. Influences from Hellenism are also to be found, however, at another level in *MPol*. It may be recalled that Jewish ideas of martyrdom had an impact on Christianity in the 2d century and beyond, primarily through 2 Maccabees (6–7) and *4 Maccabees*, and that *4 Maccabees* in particular presents the Jewish martyrs as spiritual "athletes" who embody the traditional Greek virtues. Echoes of this literature are frequent in *MPol* (Baumeister 1980: 295–99), and this background partly accounts for the emphasis here on the spiritual qualities of those who contend for Christ in the arena. New dimensions are added to the conception of such qualities in the Christian context where there is the possibility of "becoming a partaker of Christ" (*MPol* 6.2; cf. Phil 3:10) and of being "no longer people but already angels" (*MPol* 2.3; cf. John 17). Such a heightening of the virtues of the martyr seems likely to be linked with a growing enthusiasm for miracles inspired by popular conceptions of the preternaturally endowed "divine man" (Baumeister 1980: 302–6). *MPol*, however, still stands at the beginning of this transformation of the martyr into a saint. The theology and spirituality of the document belong fundamentally to the world of postbiblical Judaism and NT Christianity.

WILLIAM R. SCHOEDEL

POMEGRANATE. See FLORA.

POMPEY (PERSON). Gnaeus Pompeius, later surnamed Magnus, or "Pompey the Great," is mentioned mainly in Plutarch's *Life* of Pompey, though he is frequently mentioned in other ancient sources, especially the contemporary speeches and letters of Cicero, and the relevant books of Appian's *Civil Wars* and Cassius Dio's *History of Rome.* Born in 106 B.C., Pompey developed his early career through abnormal military commands, first in the service of the dictator Sulla from 83–80, and subsequently as the senate's commander against Lepidus in Italy in 78 and the rebel Sertorius in Spain from 76–71. In 71 he assisted in mopping up the slave insurrection led by Spartacus, and in 70 pressured the senate into allowing him to become consul (with Crassus as his colleague), even though he was too young and had held none of the necessary prior magistracies. Then followed extensive commands to clear the Mediterranean of pirates in 67 and to complete the campaign against Mithridates in the east from 66–62.

Toward the end of this campaign (63), Pompey intervened in a civil war in Judea between Hyrcanus and Aristobulus; his brief campaign against the latter culminated in a three-month siege of the temple in Jerusalem and its capture. Though he entered the holy of holies, Pompey did not take any temple treasure; he installed Hyrcanus as high priest and made Judea tributary to Rome, but did not annex the country, placing it instead under the supervision of the Roman governor of Syria. He returned to Rome soon after, taking Aristobulus and his children with him as hostages.

On returning to Italy, Pompey found that his opponents in the senate were able to refuse grants of land to reward his veterans and to block ratification of the massive reorganization which he had carried out in the east. This unexpected opposition led Pompey to form a private political alliance with Crassus and Caesar, known as the "First Triumvirate," to push through the legislation which each desired. To cement the alliance Pompey married Caesar's daughter Julia (all of Pompey's five marriages were made for political purposes).

In the following years, with Caesar away campaigning in Gaul, Pompey appeared to be losing political ground gradually: the senators were suspicious of him, and the people deserted their military hero for others. As Caesar's reputation increased with his victories, Pompey grew more jealous. The breach was widened by the death of Julia in childbirth in 54, and increased by the death of Crassus, fighting against the Parthians in 53. To regain his standing, Pompey aligned himself with the conservatives in the senate, who were happy to use him to quell the increasing political chaos and against the rising power of Caesar (whom they feared more). This alignment culminated in Pompey being made sole consul in 52, which made him now the acknowledged leader of the conservative senators.

Civil war now appeared inevitable. When Caesar invaded in 49, Pompey sacrificed the advantages he had in Italy by leaving for Greece. Though he outmaneuvered Caesar on a number of occasions in the subsequent campaign and had a numerical superiority, he lost the final battle at Pharsalus in August 48. Pompey fled to Egypt, but was murdered on landing by the local ruling dynasty. Pompey's sons and supporters carried on the republican cause, but they were eventually overcome by Caesar.

Pompey does not appear to have been cultured or affable; he had spent most of his life on military campaigns. These had given him enormous wealth, which was the basis of his great popularity and later political influence. His success as a general resulted more from his ability to organize and to ensure numerical superiority. He had a tendency to take over command of campaigns when the hard work had already been done by others, to abandon those who had previously helped him, and to change sides frequently to suit his own political purposes. He also tended not to make his wishes clear, leading to the view that he was not politically astute, but it may have been a deliberate policy to foment uncertainty, which he could then be called upon to sort out. Despite his abnormal and extensive military powers and commissions, Pompey was essentially a constitutionalist and never used them to take over the state.

BRUCE A. MARSHALL

PONTIUS PILATE (PERSON) [Gk *Pontios Pilatos* (Ποντιος Πιλατος)]. The fifth Roman governor of Judea, during whose tenure Jesus of Nazareth was executed. Pilate is known primarily from Josephus and the Gospels. Philo reports in some detail an incident during Pilate's service in Judea, Tacitus mentions him in passing in connection with Christian origins, some of Pilate's coins have survived, and an inscription discovered in Caesarea Maritima in 1961 completes the primary evidence. This dossier is larger and more detailed than that of any other Roman governor of Judea, a circumstance which is probably to be explained by the special Christian interest in him. Such an interest explains not only the data in the Gospels and Tacitus' reference, but also the availability to Josephus, in Rome, of so much information about this governor. Nevertheless, we are totally in the dark about Pilate's life before and after his Judean governorship, and much remains unclear about that period as well.

A. Chronology

The year of Pilate's appointment to office is commonly given as 26 or 27 C.E. This results without difficulty from Josephus' statements that Pilate's predecessor, Valerius Gratus, was appointed after the death of Augustus (August of 14 C.E.) and served eleven years before being replaced by Pilate (*Ant* 18.2.2 §§33, 35). One should probably suppose that a few months passed, perhaps until the spring of 15 C.E., before Gratus was dispatched to Judea. Similarly, an appointment of Pilate in 26 or 27 C.E. is corroborated by Josephus' notice (*Ant* 18.4.2 §89) that Pilate served for ten years before being suspended from office shortly before the death of Tiberius, which came in March of 37 C.E.

Over against this usual dating of Pilate's term, to ca. 26–37 C.E., there has been some major argumentation about its beginning and some minor uncertainties about its end. The difficulties associated with the end of his term result from the data Josephus supplies in *Ant* 18.4.2–3 §§89–90, on the one hand, and in 18.5.3 §§122–24, on the other. According to §§89–90, after L. Vitellius, the Roman governor of Syria, suspended Pilate from office the latter hurried to Rome but arrived only after Tiberius died; Vitellius, in the meantime, went on to visit Jerusalem during a Passover festival. Given Tiberius' death in

mid-March of 37 C.E. and Passover in April, these data clearly indicate that Pilate was suspended from office ca. March of 37 C.E. However, in §§122–24 we read of a visit by Vitellius to Jerusalem during a Jewish festival, at which time news reached him of Tiberius' death. It seems most likely that this news would have reached Judea within a month, and that this account is therefore referring to Passover of 37 C.E. However, such a conclusion would seem to push the visit mentioned in §90 back to Passover of 36 C.E., but it seems most unlikely that Pilate, if suspended prior to April of 36 C.E. would not have reached Rome (to which he is said to have hurried; §89) until March of 37 C.E.

To resolve this conundrum, some would move the first visit (§90) to Tabernacles in the fall of 36 C.E. (Holzmeister 1932: 228–32) or even ignore Josephus' reference to a festival and place it between December of 36 C.E. and January of 37 C.E. (Smallwood 1954: 12–21). Others (Blinzler 1959: 180, n. 8) would move the second visit (§§122–24) back to Pentecost (ca. May–June) of 37 C.E., leaving the first one, as Josephus says, on Passover. It seems preferable, however, to assume with Otto (1913: 192–94, n. *) that both accounts in Josephus in fact refer to one and the same visit, during Passover of 37 C.E. The fact that each account focuses on different events reflects the fact that they are based on sources which were interested, respectively, in the high priesthood and in Herodian affairs (Schwartz 1981–82: 383–98). Thus, we may maintain the plain implication of §§89–90, namely that Pilate was suspended and sent to Rome ca. March of 37.

The issue concerning the beginning of his term is much more complicated. As we have noted, Josephus clearly states (*Ant* 18.2.2 §§33–35) that Pilate's predecessor (Gratus) was appointed after Augustus' death (14 C.E.) and served eleven years. It is odd, however, that these two, Gratus and Pilate, are the only governors of Judea for whom Josephus states the duration of their tenure (eleven and ten years, respectively). This oddity may become suspicious in light of a number of indications that Gratus' term was in fact much shorter, and Pilate's correspondingly longer. The following are the main indications that this was the case.

Josephus reports the end of Gratus' term and Pilate's appointment in his stead (*Ant* 19.2.2 §35) just before the founding of the city of Tiberias in ca. 19–21 C.E. (18.2.3 §§36–38), and the latter is followed by a long account of eastern events culminating (18.2.5 §§53–54) in Germanicus' mission to the East and his death there in 19 C.E. Only thereafter does Josephus begin his account of Pilate's term (18.3.1 §35). The implication is that the latter began ca. 19 C.E.

Similarly, Josephus interrupts his account of Pilate's term in Judea with an account of scandals concerned with Jews and Isis worshipers in Rome, which occurred, he says, "about the same time" (18.3.4–5 §§65–84); thereafter, he reverts to Pilate and Judea. The events in Rome are also recounted by Tacitus, who clearly dates them to 19 C.E. (*Ann.* 2.85). Here too, then, as in the preceding paragraph, the implication is that Pilate's term had begun by ca. 19 C.E.

All that Josephus recounts of Gratus' term as governor of Judea (18.2.2 §§33–35) is the removal and appointment of high priests. Gratus is said to have deposed one and appointed another, "not long thereafter" appointed a third, and "after a year" a fourth, who also served "for not more than a year" before he was replaced by a fifth, Joseph Caiaphas. At this point Josephus concludes his account of Gratus by saying that "having done these things Gratus returned to Rome." While Josephus goes on to say that Gratus had spent eleven years in Judea, the impression given by his narrative is of a term lasting more like four or five years.

According to Eusebius (*Hist. Eccl.* 1.9), anti-Christian *Acta Pilati* circulated in the early 4th century were obviously false since they were dated to 21 C.E., several years before Pilate was appointed, according to Josephus' chronological data. As Eisler (1931: 13–20) has argued, however, it is unlikely that falsifiers would have been so stupid as to have misdated Pilate, and it could well be that their copies of Josephus did not contain the data regarding his and Gratus' lengths of service.

It seems that coins were minted in Judea for 15, 16, 17, and 18 C.E., but thereafter only in 24 C.E. (Meshorer 1982: 177). An obvious explanation is that there was some administrative change in ca. 19 C.E., and such might well have been accompanied by a change of governors.

Moreover, while it is often argued, in this connection, that Josephus' account is in chronological disorder (and that little weight, therefore, may be ascribed to arguments from context and order), such a generalization should be applied with caution in any particular case. Furthermore, it seems that Josephus in fact ordered his material quite well. One need only realize that he generally brings events of marginal importance to his story (such as affairs in Parthia and in Rome) *after* the narration of events in Judea during the same period. This procedure at times results in Josephus placing such "marginal" events—which actually occurred *earlier* than the "main" events of a given period (e.g., term of a governor of Judea)—after his narration of the "main events," which actually occurred *later* (for a detailed analysis of *Ant* 18–20 which demonstrates Josephus' practice, see Schwartz 1982–83). In our case, Josephus' narrative seems to indicate the following: the fact that the account of the "main events" in *Ant* 18.2.2 (Judean governors and their administration of the province) is followed by accounts of "marginal events" in Galilee ca. 19–21 C.E. and in Parthia and Commagene ca. 2 B.C.E.–19 C.E. (i.e., before the beginning of Pilate's affairs) indicates that Josephus viewed the period before Pilate as one covering the years up to ca. 19 C.E. Similarly, the fact that Josephus narrates events in Rome in 19 C.E. after his central narrative on Pilate's affairs in Judea (18.3.4–5 §65–84), before returning to relate Pilate's final adventure, which led to his suspension from office (18.4.1–2 §§85–89), again indicates that Josephus viewed Pilate's term as one which began ca. 19 C.E.

That Pilate was appointed in that year is all the more likely in view of the fact that the years 17–19 C.E. saw Germanicus' mission to the East, a mission inspired, in part, by complaints from Syria and Judea over the tax burden (Tac. *Ann.* 2.42.5). It is not difficult to imagine Germanicus' efforts to appease the overburdened population including the replacement of Gratus with Pilate. In this connection we may note, finally, that Gratus' frequent firing and appointment of high priests contrasts sharply with Pilate's retention of Joseph Caiaphas, Gratus' last appointee, throughout his entire term. It may well be that Germanicus, as part of an attempt to assuage irate Judeans whose religious sensitivities had surely been wounded by Gratus' high-handed approach to their highest religious authority, denied Pilate the power to exercise further such control of the high priesthood.

B. Title and Responsibilities

While Josephus and Philo call Pilate *epitropos* (*JW* 2.9.2 §169; *Gaium* 299) and Tacitus uses its Latin equivalent, *procurator* (*Ann.* 15.44), various scholars early on suggested, on the basis of various comparable data from elsewhere in the empire, that pre-Claudian provincial governors were in fact known as "prefects," the later term "procurator" thus being anachronistic with regard to Pilate (Hirschfeld 1905: 382–85; Jones 1960: 115–25). Indeed, alongside *epitropos* Josephus uses *eparchos,* the Greek equivalent of "prefect," for several of Pilate's predecessors and successors (Lémonon 1981: 46–47), thus indicating that his usage of the latter for Pilate is probably not to be pressed. And the building inscription discovered in Caesarea in 1961 (Lémonon 1981: 23–32), which refers to him as "Pontius Pilatus Praefectus Iudaeae," would seem to settle the question. See Fig. PON.01. The NT uses only the nontechnical term *hēgemōn* (ruler) for him as for others, a usage paralleled in Josephus both with regard to Pilate (*Ant* 18.3.1 §55) and others (Lémonon 1981: 43–44). A similar popular insouciance concerning the fine points of titulary lies behind Luke's willingness (Acts 4: 26–27) to identify Pilate as an "archon" referred to in Ps 2:2 (LXX).

However, while "prefect" is a term with connotations more military than those of the administrative "procurator," it does not seem that this should guide our characterization of Pilate's responsibilities. While there certainly were troops at Pilate's disposal—auxiliary units of infantry and cavalry (*Ant* 18.4.2 §87)—they functioned more as police than as military forces. For more serious military endeavors responsibility rested with the legate of Syria, who had four legions at his disposal. In 37 C.E. we find one of those legates assisting Herod Antipas, and in 39–41 C.E. another was charged with enforcing Gaius' order to erect a statue in the temple of Jerusalem. But we hear of no involvement of the legate of Syria in Palestine during Pilate's tenure, a fact which might indicate that the period was generally quiet.

As governor of Judea, Pilate was responsible for all aspects of the Roman administration of the province. First of all, this meant he was at the head of its judicial system: note that when Josephus uses a shorthand phrase to indicate the governor's authority, that phrase is "with power even to execute" (*JW*

2.8.1 §117; in the parallel *Ant* 18.1.11 §2, he says simply "with full power"). The only details regarding Pilate as judge come from the NT with regard to the trial of Jesus. Pilate's other main responsibilities were fiscal: he was responsible for the collection of tributes and taxes, for the proper disbursement of funds for provincial needs, and for the forwarding to Rome of revenues and reports. However, we have no evidence regarding Pilate's activities in these fields, apart from his construction of an aqueduct—for which he is said to have used Jewish sacred monies (*Ant* 18.3.2 §2). Similarly, among the hundreds of Roman milestones testifying to Roman road building in Palestine, none so far indicates any such activity by Pilate. At best, one might note his coins (Meshorer 1982: 177–80) as evidence of care for the proper functioning of the marketplace.

C. Pilate and Rome

We have no information about any special background for Pilate's appointment to office. The governorship of Judea was not a very prestigious post and all of Pilate's predecessors in the position, as most of his successors as well, are otherwise unknown. While it has been speculated that Pilate may have had close ties to L. Aelius Seianus, the praetorian prefect who came to be the real ruler of Rome until his execution in 31 C.E. due to Tiberius' retirement to Capir, this hypothesis seems to lack any reasonable basis. Its main prop, Philo's claim that Seianus plotted against the Jews (*Gaium* 159–60), is unsupported and so difficult to square with the other known data that is better attributed to Philonian rhetoric, namely the need to have a dark backdrop against which Tiberius' benevolence to the Jews—which Philo presents before Gaius as an example—can shine out clearly (Hennig 1975: 160–79). On the other hand, John 19:12 need not mean that Pilate had specifically been awarded the title *philos tou kaisaros* ("friend of Caesar"). John's use of the title might only reflect his knowledge, or that of the Jews he "quotes," that such a title existed, a fact which they could have learned, for example, from the titulary of Agrippa I and II.

Pilate seems to have been given a free hand in governing his province. It is true, however, that on two occasions Pilate's Jewish subjects exerted pressure upon him by threatening to complain to Rome about him, and in one instance, we are told, they actually did so. But neither case appears to be historical. Namely, John 19:12 is part of that gospel's attempt (similar to that of other gospels) to portray a Pilate desirous of freeing Jesus; the Jewish threat to appeal to Caesar is therefore introduced in order to explain why the governor yielded to Jewish pressure. And Philo's claim (*Gaium* 301–5) that the Jews threatened to send an embassy to Tiberius, and in fact sent a letter which brought Tiberius' wrath down upon Pilate, is all only a part of this apologetic historian's attempt to portray Tiberius as beneficent to the Jews and therefore a proper model for Gaius. Only at the end of Pilate's governorship do we see imperial intervention, and it is interesting to note that this was in response to complaints not of Jews but rather of Samaritans (although some witnesses incongruously read "Jews" instead of "Samaritans" in *Ant* 18.4.2 §89). After Pilate had used violence to stop an armed demonstration by Samaritans near Mt. Gerizim, and had executed a number of their leaders, a Samaritan delegation complained to Vitellius, the legate of Syria. As we have already seen in our discussion of Pilate's chronology, Vitellius responded by suspending Pilate from office and sending him off to the emperor Tiberius (who died before Pilate arrived). This is a good example of the ambiguous relationship between the Roman governors of Judea and the legates of Syria: while the former were responsible to Rome and not to Antioch (for which reason Vitellius could neither remove Pilate from office nor appoint his successor), it was nevertheless clear that when a nearby representative of Rome was needed, Rome's senior official in the East and governor of the large province adjacent to Judea, headquartered at Antioch, was the natural address for both the governor of Judea and its population (Lémonon 1981: 59–71).

D. Pilate and the Jews

Apart from the Samaritan episode mentioned in the preceding paragraph, wherein everything but the unfortunate bloody end is unclear, all of the known episodes of Pilate's term of office concern his clashes with his Jewish subjects. The result is an impression of a very turbulent period characterized by hostility and violence between the governor and his subjects. Josephus created this impression by using *thorybos*, "tumult," as the leitmotiv of his pages on Pilate (*Ant* 18 §§58, 62, 65, 85, 88; Norden 1913: 638–44). Similarly, Philo generally describes Pilate's administration as one characterized by "his venality, his

violence, his thefts, his assaults, his abusive behavior, his frequent executions of untried prisoners, and his endless savage ferocity" (*Gaium* 302, trans. Smallwood 1954).

However, both of these Jewish historians should be taken here with more than a grain of salt. Philo's characterization of Pilate is part of his exaltation of Tiberius, and we may now add that it is so reminiscent of his general characterization of corrupt governors (*Flac* 105), even to the point of several cases of verbal identity, that it cannot be taken as being particularly applicable to Pilate (Schwartz 1987: 213–14). Josephus' implication that the word *ethorybei*, "outrage" (*Ant* 18.3.5 §65) properly characterizes the execution of Jesus and the scandal in Rome (18.3.5 §§81–84) is misleading. Neither event in fact seems to have been associated with a "tumult," although there has been much speculation about the original text of the *Testimonium Flavianum.* Moreover, the Roman affair had nothing to do with Pilate. Josephus' narrative thus leaves us with only two clashes between Pilate and the Jews: the issues of the military ensigns (18.3.1 §§55–59) and the aqueduct (18.3.2 §§60–62). Of these, only the latter (perhaps to be identified with the enigmatic episode mentioned in Luke 13:1) ended with bloodshed. This is not a bad record for a term as long as Pilate's; later governors, who served for much shorter periods, would do much worse. Similarly, we may recall here the fact that Pilate, as opposed to his predecessor, left the same high priest in office throughout his term, something which probably contributed to maintaining Jewish acceptance of Roman rule. And while it is true that some of Pilate's coins included Roman cultic symbols, we hear of no opposition on this ground. Indeed, only a few years after Pilate's suspension Agrippa I, a Jewish king, was minting coins showing human figures and cultic scenes potentially more abrasive to Jewish religious sensitivities than Pilate's (Burnett 1987: 35–37). Apparently most Jews, being practical with regard to Roman and Herodian rule, were willing to let Caesarea be Caesarea as long as Jerusalem—where Agrippa minted only aniconic coins (Burnett 1987: 25; Meshorer 1982: 57–60)—could remain Jerusalem. Just as Pilate learned this lesson through the episode of the military ensigns, he may well have applied it with regard to his coins as well.

Thus, the impression that Pilate's tenure was stormy is probably misleading. This impression, cultivated by Josephus, should be viewed as part of his general apologetic attempt to portray Roman governors as incompetent and cruel, thereby helping to explain the eventual rebellion against Rome. Pilate's tenure was probably one of continued underlying friction between governor and governed, now and then breaking out in brief incidents (note "the riot" of Mark 15:7), but not so much as to stop him from becoming, apparently, the longest-serving Roman governor of Judea. While Rome would be happy to seek a form of government for Judea which, after Pilate, would insert a Jewish, not Roman, middleman between Rome and the Jews, we need not assume that the grounds for the friction were to be found in the particular characteristics of Pilate's personality, policies, or administration. Rather, the friction was inherent in the very phenomenon of Roman rule in the land many Jews considered to be God's.

E. The Events of Pilate's Governorship

We read of several discrete incidents during Pilate's term of office, but in a few cases it is difficult to decide whether different references allude to the same events. Such is especially the case for two of the events mentioned in the NT: "the Galileans whose blood Pilate had mixed with their sacrifices" (Luke 13:1) and the "riot" (Mark 15:7; Luke 23:19). It may well be that these two references refer to the same event, and it may be that one or both of them allude to the event reported in *Ant* 18.3.2 §§60–62, but there still appears to be no way of proving or eliminating any of these possibilities.

This type of question can be considered, however, with regard to an incident described by Josephus (*JW* 2.9.2 §§169–74 and *Ant* 18.3.1 §§55–59) and one reported by Philo (*Gaium* 299–305). The incidents reported are strikingly similar: both report that Pilate introduced into Jerusalem items in honor of Tiberius which aroused Jewish protests on religious grounds; eventually, Pilate removed the offending items to Caesarea. So great is the similarity of the two accounts that it was formerly common to assume that both refer to the same event. Since the 19th century, however, it has become much more common to emphasize the differences between the two accounts. These are, especially, the fact that Philo refers to aniconic shields while Josephus refers to busts of Tiberius, and the fact that Josephus portrays Pilate backing down in the face of the Jews' obdurate willingness to suffer martyrdom rather than tolerate the iconic ensigns

while Philo describes how the Jews brought Tiberius into the picture, and it is only at his orders that Pilate removes the offending shields from Jerusalem.

It seems that the earlier view (that the two authors describe the same event) is to be preferred (Schwartz 1983). Both of the above-mentioned differences in Philo's account must be seen as part of his attempt to portray Tiberius as a role model for Gaius. Namely, such a motive explains not only the introduction of Tiberius into the story, but also the transformation of the offending object into something aniconic. This allows for a striking *argumentum a minori ad maius*, which Philo makes quite explicit (§306): if Tiberius was upset over the attempt to bring something aniconic into Jerusalem, how much the more so should Gaius refrain from bringing in a statue. And, similarly, if Tiberius defended the sanctity of Jerusalem, how much more should Gaius respect the sanctity of the very Holy of Holies of the temple. In any case, it is quite difficult to understand why the Jews protested Pilate's act if, as Philo claims, the shields were aniconic; for other cases of Philonic denials which patently contradict the rest of his story, see *Gaium* 261, *Flac* 27–28 (Schwartz 1987: 86–87, n. 37). As for the discrepancy between Philo's shields and Josephus' standards, note that in *Ant* 18.3.1 §§55–56 (as in 18.5.3 §121) Josephus refers to the offending objects as images *attached to* the military standards and not as the standards themselves. There is ample evidence for such attached images being embossed upon shields (Schwartz 1983: 33). It is thus easier to assume that the two historians are referring to the same event.

After reporting the incident associated with the military standards, Josephus, in both of his works, goes on to report that Pilate used Jewish sacred funds to construct an aqueduct and that he encountered Jewish opposition which his troops put down bloodily. While it may be that the Jewish protestors were upset by the use of sacred funds for secular purposes (Feldman, *Josephus IX* LCL, 46–47 N.B.), insufficient attention has been paid to Josephus' statement that the Jews' complaint had to do with "what was done regarding *the water*" (not "the money," *Ant* 18.3.2 §60). This being the case, and given the fact that one of the aqueducts which brought water to Jerusalem in the Roman period ran through a cemetery (a fact which aroused the opposition of some if not all Jews; Patrich 1982: 25–39), it may be that the issue was not so much the use of sacred funds as a lack of concern for the water's ritual purity. As for the precise identification of Pilate's aqueduct, the matter is complicated by the conflict between Josephus' works regarding its length: 400 furlongs according to *Jewish War*, but only 200 according to *Antiquities* (corresponding to approximately 46 and 23 miles, respectively; for the remnants of aqueducts to the S of Jerusalem and their possible attribution to Pilate, see Lémonon 1981: 168–70).

Apart from the clash with the Samaritans, about which little may be said with certainty except that it led directly to Pilate's suspension from office (*Ant* 18.4.1–2 §§85–89), the only other notable event was the trial and execution of Jesus of Nazareth. See TRIAL OF JESUS. Here we are concerned only with Pilate's role. Tacitus simply states that Pilate had Jesus executed (*Ann.* 15.44), and Josephus, in the *Testimonium Flavianum* as we have it (*Ant* 18.3.3 §§63–64), adds only that Pilate did so upon Jesus' being accused by prominent Jews. See also JOSEPHUS (PERSON). Neither historian tells us what charge(s), if any, was brought against Jesus. Nevertheless, the Gospels make it abundantly clear that the charge was one of rebellion, one which was eminently in the domain of the Roman prefect. As for the Gospels' claim that Pilate was in fact unconvinced of Jesus' guilt and was forced by the Jewish mob to execute Jesus against his own better judgment, this appears to be part of the apologetics of the early Church. The Gospels' portrayal of a Jesus who posed no threat to Roman order is to be classed along with Josephus' many portrayals of lst-century charismatics who were, it would seem, uninvolved in anything political but nevertheless executed by the Romans. They all reflect the situation of apologists for religious groups which had learned how to get along in the Roman Empire: by worshipping deities whose kingship was not of this world, and therefore did not compete with the emperor's kingship. Indeed, we may well believe Luke's report (23:12) that after Jesus' trial Pilate and Herod Antipas became friends, since only recently Herod too had executed someone very similar to Jesus, John the Baptist, whose teachings had won him popularity. We may assume that the reasoning Josephus gives for Antipas' move—"it would be much better to strike first and be rid of him before his (John's) work led to an uprising, than to wait for an upheaval, get involved in a difficult situation and see his mistake" (*Ant* 18.5.2 §118, trans. Feldman)—

was good enough for Pilate vis-à-vis Jesus; for a similar "nipping in the bud," see *JW* 2.13.4 §260. As for the "prior enmity" between Pilate and Antipas which Luke mentions, one may only speculate (Otto 1913: 182–83; Hoehner 1972: 175–83).

F. Aftermath and Afterlife

After Vitellius suspended Pilate from his post in the spring of 37, we hear of no governors in Judea until the appointment of Cuspius Fadus in ca. 44 C.E., after the death of Agrippa I (*Ant* 19.9.2 §363). Fadus was appointed, according to Josephus, in order to avoid the attachment of Judea to the province of Syria, whose governor at the time had been hostile to Agrippa. The obvious implication of this explanation is that the province of Judea had been abolished, so that the end of the Jewish monarchy would lead to the land being part of Syria. This makes sense only if Judea had been attached to Syria during the years 37–41, that is, between Pilate's suspension from office and Agrippa's enthronement as king of Judea; indeed, the same is implied not only by Philo's designation of Petronius, the Syrian legate in 39/40 C.E., as "the governor of *all* Syria" (*Gaium* 207), but also by other considerations as well (Schwartz 1987: 72–77). In other words, after Pilate was suspended Caligula seems to have annexed Judea temporarily to Syria, just as Tiberius had done a few years previously with regard to Philip's territories (*Ant* 18.4.6 §108). And just as the latter were passed on to Agrippa in 37 C.E. (*Ant* 18.6.10 §237), so too was he to be given Judea as well. The move probably reflects, apart from Caligula's friendship with Agrippa, a basic underlying dissatisfaction with the system of direct rule, which all too frequently resulted in friction between the governor and the governed. Thus, Pilate's term of service played an important role in paving the way for the establishment of the last attempt at Jewish rule of Judea under Roman auspices.

Virtually nothing is known about Pilate's personal later life. Claiming a basis in ancient historical sources, Eusebius reports that Pilate came to be afflicted with such calamities that he committed suicide in 39 C.E. (*Chron.*, Helm, 178; *Hist. Eccl.* 2.7.1). The reliability of this notice has been doubted (Lémonon 1981: 268), due to its lateness and due to a certain vacillation in the way in which Eusebius refers to his sources. Nevertheless, the insistence that the notice was transmitted by ancient historians should not be lightly dismissed. Moreover, Eusebius' claim represents such a pointed deviation from the thrust of prior Church tradition that it is reasonable to assume that he wrote of Pilate's suicide precisely because he had uncovered material to that effect. Of course, we have no reason to assume that Pilate's troubles were due to his execution of Jesus or to remorse over that act; the complaints which brought about his suspension from office could well have resulted in proceedings in Rome which became unbearable (Brunt 1961).

The general thrust of Church tradition about Pilate consisted of a continuation of the Gospels' tendency to exonerate Pilate and put all the onus for the death of Jesus upon the Jews. In various *Acta Pilati* and related early Christian literature we find the repeated emphasis that Pilate had recognized Jesus' innocence and that Jesus was in fact executed by the Jews; and from portraying Pilate as recognizing Jesus' innocence it was a short step to present Pilate actually recognizing Jesus' divinity as well. See PILATE, ACTS OF. Thus, already Tertullian (ca. 200) could state that Pilate was a believer in the truth of Christianity. This was a very necessary and functional procedure, given the threatened status of the missionary religion in the empire: its spokesmen had to be able to argue that the empire's representative who had actually had the closest contact with Jesus, far from considering him a criminal worthy of condemnation, in fact thought him innocent or even more. Thus, what Paul could not do to Agrippa (Acts 26:28), the Church in fact did do to Pilate (Lémonon 1981: 249–71). As Winter points out (1974: 88–89), it was only the Christianization of the empire which removed the need for such apologetics: "Constantine eventually became converted—and Pilate missed canonization." But not totally—in the Ethiopic and Coptic churches he is indeed counted among the saints (Volkoff 1969–70).

DANIEL R. SCHWARTZ

PONTUS (PLACE) [Gk *Pontos* (Ποντος)]. The name of a kingdom which occupied much of the S seaboard of the Black Sea (Gk *Pontus*), after which it was named. Residents of this region are referred to in several NT passages (Acts 2:9; 18:2; 1 Pet 1:1). The S part of this region contained a series of mountain ranges running E–W which collectively constituted the Paryadres range. Two large river systems (Halys and Iris) ran N through the mountains and provided both water and routes for communication. The kingdom's large Iranian population constructed relatively few cities, in this resembling its S neighbor, Cappadocia. Settlement remained mainly rural throughout antiquity, the principal pursuit being the growing of widely varying crops, including grains, fruits, and nuts. Rich pasturelands and an ample supply of timber, metals, and salt added to the considerable wealth of Pontus.

Pontus displayed the typical Iranian pattern of a powerful nobility with rich estates, controlling society under the suzerainty of a monarch who normally descended from a single royal family. The Hellenistic practice of intermarriage with other dynasties also prevailed in Pontus; Seleucids, Cappadocians, and Ptolemies appeared prominently in various marriages. The ruling house of Pontus prided itself on descent from the Achaemenid Persian Darius the Great.

The dominant figure in Pontic history of the late 2d and early 1st centuries before Christ was Mithradates VI, known to the Greeks as Mithradates Eupator. Soon after his accession in 120 B.C., he revealed his ambitions by murdering his mother, Queen Laodice (a Seleucid), and then his brother. Early on he determined to expand his ancestral kingdom into an empire, gradually extending his power over the Black Sea coast, Colchis, and northward into the Crimea. Then he turned S and conquered Paphlagonia, Phrygia Major, Armenia Minor, and subsequently Cappadocia.

This led him toward conflict with Rome, which regarded Cappadocia as an essential constituent of its own nascent empire in Asia Minor. To prepare himself for the inevitable struggle, Mithradates sought alliance with Parthia and with Armenia, marrying his daughter to Tigranes the Great of Armenia.

The hereditary claims of Mithradates to portions of his new holdings did not offset in Roman eyes their treaties, especially with Paphlagonia and Cappadocia. Nicomedes III of Bithynia at first cooperated with Mithradates, but soon perceived his danger. After marrying Laodice, the daughter of Mithradates who had

entered the Cappadocian royal line, Nicomedes III boldly invaded Cappadocia himself. This failed, but Mithradates had to abandon plans to control Cappadocia through his sister, instead installing there his son as King Ariarathes IX.

The Cappadocians preferred to avoid rule by Pontus, however disguised, and appealed to Rome. The famous election of a new dynasty under Ariobarzanes I merely shifted the strategy of Mithradates to a series of invasions, expelling the new king five or six times in the following 30 years. This policy led Mithradates into three wars with Rome, precipitated in 89/88 B.C. by his slaughter of thousands of Romans then resident in Asia Minor and adjacent islands.

The dynastic policy of holding territory through the installation of relatives as rulers helped Mithradates during this long period of warfare. In this way, he held a considerable block of territory. His armies ranged throughout Asia Minor and parts of the Balkan peninsula, penetrating as far S as Athens. Control of these forces usually lay in the hands of close relatives of Mithradates.

Though regarded initially as a savior, Mithradates gradually lost favor among the Greeks. His measures seldom accorded with the aspirations of free cities; his Persian satrapal system entailed, rather, a governor for most cities, directly responsible to himself, and the Greek cities came to resent this. For example, Ephesus openly turned from support for him to an alliance with Rome.

As the years of warfare wore on, his commanders increasingly defected. The rise of a Pontic empire to take its place alongside those of Armenia, Parthia, and Rome began to lose momentum by 69 B.C., when Lucullus won a great victory for Rome at Tigranocerta. Tigranes retired to his own kingdom of Armenia, and Mithradates spent six largely fruitless years trying to hold his own empire together. At the end of his life, in 63 B.C., he succumbed to the treachery of a faithless son.

This man, Pharnaces II, now succeeded, but found it necessary to submit to Pompey. In return for recognition as king of Bosporus, he watched while Rome began to subdue Pontus and convert it into a province.

The mixture of royal precincts, temple estates, Greek states on the coast, and a rural hinterland made it difficult for Romans to organize. In any case, a large part of the former kingdom of Pontus lay outside the new province; these regions were held by neighboring kings.

About a dozen years after the death of Mithradates, Pharnaces II felt strong enough to begin recovering portions of the ancestral kingdom. The civil war between Pompey and Caesar seemed to him an opportunity to accelerate this movement, and he regained much of Pontus. The arrival of Caesar in 47, who "came, saw, and conquered" Pharnaces, ended this phase.

A branch of the family now took up rule in the Bosporus, and from it descended a long line of rulers there.

A son of Pharnaces II named Darius reigned in Pontus from 39 to 37 B.C., but this ended rule by the ancient royal line. In his arrangements for the East, Antony put forward several new kings, loyal to himself, including Archelaus of Cappadocia. He found as well a new king for Pontus.

Polemo I, the son of an aristocrat from the Greek city of Laodiceia on the Lycus in Asia Minor, proceeded to the rule of Pontus in 37. He bore no relation to any royal family in Asia Minor, so far as presently known. If that was his situation, Antony chose him to ensure that his loyalty would remain undivided.

Polemo served vigorously, soon gaining full control of Pontus and then assisting Antony against Parthia. He extended his control into Colchis and later into Armenia Minor.

At Actium, Polemo was represented by an army, but did not attend in person. At least by 26 B.C., he received the recognition of Augustus, and became a "friend and ally" of the Roman people. Polemo moved to reestablish the claims of Pontus to Bosporus, where he married its queen Dynamis, granddaughter of Mithradates Eupator.

The marriage may not have lasted: she is later recorded ruling apparently alone, and he eventually had another wife, Queen Pythodoris, probably a granddaughter of Marc Antony by an eastern woman (*ANRW* 2/7: 913–30). She, like Polemo, came from W Asia Minor, in her case the town of Tralles near the Maeander river, lying some 60 miles W of his ancestral town, Laodiceia.

From this marriage, Polemo had three children, one of whom later served as queen of Thrace and one as king of Armenia. His five grandchildren included another queen of Thrace and a king of Thrace, a king of Armenia Minor, a queen of Bosporus, and King Polemo II of Pontus.

Polemo met his death fighting in the Bosporus, perhaps about 8 B.C. Queen Pythodoris succeeded to the throne of Pontus, where her coins mount to "Year 60." Estimates of her regal span run as high as A.D. 35. She survived a second husband, King Archelaus of Cappadocia; he died in Rome in A.D. 17.

The last king of Pontus, Polemo II, the grandson of Pythodoris and Polemo I, came to the throne in A.D. 38, recognized by Caligula, with whom he had been "raised together." Polemo ruled during the demanding times when the Julio-Claudians sought to solve "the Armenian question" by force; under Nero, he occupied a portion of Armenia. He also ruled part of Cilicia.

Polemo attended an important meeting of allied kings held by Agrippa I, grandson of Herod the Great, in A.D. 44. Josephus (*Ant* 19 §338–42) records this assembly of six kings and notes that it alarmed the Roman governor of Syria.

Polemo's marriage to Julia Bernice of Judea, a great-granddaughter of Herod the Great, failed early. However, he apparently married a princess from Emesa who became Queen Julia Mamaea; a joint coinage with her calls him "Great King," possibly referring to his brief rule in a part of Armenia.

The Parthians took over Armenia in A.D. 66, but by then Polemo had lost Pontus. He was said to have abdicated voluntarily, about A.D. 63 (Suetonius, *Nero* 18). He apparently retained his responsibilities in Cilicia and issued coins there for several years more. One type can be dated to the reign of Galba in A.D. 68 (Sullivan 1979: 6–20).

Pontus earned its prominence in NT times. Two dynasties, the ancient house to which Mithradates Eupator belonged and the "Zenonid" house from which both Polemos arose, conferred stability on Pontus during the 1st century B.C. and most of the 1st century after. After 63, the land entered the Roman system of provinces. For centuries longer, ecclesiastical lists and the general Church councils continued to note some of its cities under the descriptive rubric, "Pontus Polemoniacus" (Jones 1971: Appendix IV, Table xxiii).

POOR, POVERTY. This entry consists of two articles, one surveying how the subjects of poverty and poor people are treated in the Hebrew Bible, and the other surveying how these subjects are handled in the New Testament.

OLD TESTAMENT

Poverty in the Hebrew Bible denotes (1) a lack of economic resources and material goods; and (2) political and legal powerlessness and oppression. Neither a social class nor a political party in ancient Israel, the poor constituted a diverse body of social actors: small farmers, day laborers, construction workers, beggars, debt slaves, village dwellers.

Various strands of the biblical text discuss the plight of the poor, offering diverging analyses of their situation. *Legal texts* regulate the treatment of the poor; in particular, the legal codes seek to ensure the social well-being of the poor through the redistribution of goods and food, and through the establishment of restrictions regarding slave ownership (i.e., the system of debt servitude) and the treatment of wage laborers. *Prophetic texts* concern themselves with the poor who are economically exploited by the large

landowners and ruling members of ancient Israelite society. The *wisdom tradition* divides over the question of poverty: Proverbs, in a somewhat condescending and possibly censorious tone, promotes the traditional wisdom view that poverty is the undesirable consequence of laziness, whereas Job, and to a lesser extent Ecclesiastes, understand poverty to be the result of political and economic exploitation. The *Psalms* display a rich language for poverty and many texts discuss God's concern for the poor at least in general terms. However, though much scholarly work has been devoted to characterizing the ideas of poverty found in the Psalter, it is difficult to determine to what extent the language has moved away from concrete cases of poverty to a more spiritualized level of worship discourse. Outside of these blocks of literature, the topic of poverty is treated only occasionally. The *narrative literature* of the Pentateuch is unconcerned with the issue; likewise, the Deuteronomistic History does not take up the topic. Ruth (3:10), Esther (9:22), and Daniel (4:24—Eng 27) only touch on poverty in an ancillary way. More significantly, the question of poverty emerges as an issue in the reforms of Nehemiah (5:1–13).

When investigating the meaning of these words, it is important to keep in mind that context and usage, *not* etymology, are decisive in determining the meaning of a word. While this observation may seem obvious, too many of the studies of the Hebrew terms for "poor," particularly of the vocabulary in the Psalms (e.g., Rahlfs 1892; Birkeland 1932), have mistakenly become enmeshed in a discussion of Hebrew verbal roots or the Semitic cognate background of the term, rather than on a word's actual usage. It is far more important to explicate the semantic field of these words as they actually appear in the biblical text (cf. Wittenberg 1986).

It is also important to note the distribution of the vocabulary throughout the Hebrew Bible: no one biblical writer or text uses all the Hebrew terms for "poor"/"poverty." In fact, the distribution reveals a selectivity on the part of the biblical authors: *rāš*, for example, is a wisdom word and not a prophetic word. This selectivity should also alert us to the fact that even when the various blocks of the biblical text make use of the same Hebrew term, the writers may not mean the same thing by that term: in Proverbs, for example, the *dal* is a lazy person; whereas for the prophets, the *dal* is an object of exploitation. By way of a contemporary illustration, we would say that a future historian investigating religious and political movements of the late 20th century would need to be aware that groups using the word "liberty" and groups using the word "liberation" diverge from one another in terms of their social analysis and often in terms of their sociological background. This is the case, even though the terms "liberty" and "liberation" share a common etymology. The same considerations apply where these political movements make use of the same term, such as "poor," since they mean radically different things by this word.

There are a number of Hebrew words for "poor"/"poverty": *ʾebyôn, dal, dallâ, maḥsôr, miskēn, miskĕnût, ʿānî, ʿănāwîm*, and *rāš*. (The reader may wish to note that these words are treated in Hebrew alphabetical order, with the exception of *raš*, which has been moved forward to highlight its connection with other wisdom words for "poor.")

A. The Beggarly Poor: *ʾebyôn*
B. The Poor Peasant Farmer: dal
C. The Lazy Poor: *maḥsôr*
D. Poverty Is Better: *miskēn*
E. Political and Economic Inferiority: *rāš*
F. The Injustice of Oppression: *ʿānî*
G. A Political Movement of the Pious Poor?: *ʿănāwîm*
H. Conclusion

A. The Beggarly Poor: *ʾebyôn*

The term *ʾebyôn* ("economically or legally distressed; destitute; beggar") occurs 61 times in the Hebrew Bible.

1. In the Prophetic Corpus. The word appears 17 times in the prophetic literature, where it can connote (1) general physical insecurity and homelessness (Isa 14:30; 25:4; Amos 8:4); (2) hunger and

thirst (Isa 32:6–7; 41:7; Ezek 16:49); (3) mistreatment by the rulers of society and other evildoers (Isa 29:19; Jer 2:34; 20:13; Ezek 18:12; 22:29; Amos 4:1); (4) unfair handling of legal cases (Isa 32:7; Jer 5:28; 22:16; Amos 5:12); and (5) economic exploitation (Amos 2:6; 8:6). Humbert characterizes the occurrences of this term in the prophetic literature as "sporadic" (1952: 3). However, it seems more correct to suggest that *ʾebyôn* appears in a particular strain of the prophetic material, and, when used in tandem with *ʿānî* and *dal*, represents a stylized mode of expression for speaking of poverty (cf. van Leeuwen 1955: 16; see further under F.1 below). It is noteworthy that Micah chose not to use *ʾebyôn* or any of the other terms for "poor," even though his oracles addressed the subject of poverty in stark detail. (The divergence in word choice may lend additional support to Wolff's thesis that Micah stems from a rural background; 1978; 1981: 17–25).

2. In the Psalms. The word *ʾebyôn* appears 23 times in the Psalms, most often in Psalms of Lament. The situation of the *ʾebyôn* is described rather vaguely by such terms as "robbed" (Ps 35:10; Heb *gzl*) or "suffering" (107:41; Heb *ʿônî*). They are the victims of the "wicked" (Heb *rāšāʿ*), an otherwise undefined group (109:16). Only two psalms give more specific data. In one (Ps 37:14), the poor are depicted as the victims of the swords and bows of the wicked; perhaps the writer intends us to understand this concretely, though it is also possible that it is metaphorical for any kind of suffering. From the other text (Ps 132:15)—with its statement that God gives food to the *ʾebyôn*—we can infer that the poor are those who lack nourishment, a concrete understanding of the term that is consistent with the word's usage in the prophetic (see above) and legal materials (described below). The notion that God assists the poor *(ʾebyôn)* is expressed in a number of psalms: some portray God as the one who rescues the poor (Pss 35:10; 40:18—Eng 17; 69:34—Eng 33; 70:6—Eng 5; 72:12, 13; 109:31; 113:7; 140:13—Eng 12), while others are prayers calling on God to help the *ʾebyôn* (Pss 72:4; 82:4; 86:1; 109: 22).

Humbert maintains that since the Psalms were cultic texts, they were infused with royal ideology and governed by foreign influence (1952: 3). However, the high proportion of instances of *ʾebyôn* in the Psalter contrasts markedly with the rarity of the term in Proverbs and the complete absence of *ʾebyôn* in the narrative literature of the Pentateuch and Deuteronomistic History (DH)—texts that certainly reflect royal literary traditions. The Psalms' diverse vocabulary for poverty requires an explanation other than Humbert's view that they are imbued with royal ideology. The diverging vocabulary distribution between the Psalter and the narrative literature would seem to favor the view that the Psalms embody a variety of cultural influences, not simply royal tradition, and reflect a diverse set of ideas regarding matters of social justice, though with a less sharply defined agenda than the prophets.

3. In Wisdom Texts. The term *ʾebyôn* occurs in the wisdom texts of Proverbs (4 times) and Job (6 times). In Proverbs, the word only occurs once in all of the sentential literature of Proverbs 10–29, and there it is linked with the word *dal*; the text states that helping the *ʾebyôn* is one way to honor God (Prov 14:31). (When discussing poverty, Proverbs 10–29 typically uses *dal*, *maḥsôr*, and *rāš;* see below.) The other three occurrences of the term are found in chaps. 30–31 of Proverbs, and there it is always paired with *ʿānî*. In the words of Agur (Prov 30:1–33), it is said that there are some who devour the poor (Prov 30:14), though the precise meaning of this statement is not specified. In the sayings of Lemuel's mother, the hearer is enjoined to assist the poor (Prov 31:20) and speak out for them in their legal cases (Prov 31:9). The rarity of the term *ʾebyôn* in Proverbs is significant: it was definitely a prophetic (see above) and legal term (see below) and not the preferred word for Israel's "wise" to describe poverty (for wisdom terms, see *dal, maḥsôr, miskēn*, and *rāš* below).

In Job, the *ʾebyôn* are victims, whether of economic injustice (Job 24:4) or murder (Job 24:14). The book explores Job's relation to the poor, tracing Job's efforts to assist and defend them: he assisted them as a father would (Job 29:16); he grieved for them in their misfortune (Job 30:25); and he clothed them (Job 31:19). The book emphasizes these concrete deeds as the basis of Job's innocence before his friends (and to God). Job's actions match those of the God who saves the poor *(ʾebyôn)* from the strong (Heb *ḥāzāq*), a theme set out early in the book (5:15) and to which the book inexorably works as it seeks a solution to the problem of the suffering of the innocent.

The term *ʾebyôn* occurs more times in Job than it does in Proverbs, and while it is difficult to know precisely what significance to accord such a small sampling, this slightly larger number of instances in Job does seem to fit a curious distribution pattern for the words for "poor" in the Hebrew Bible: the terms for "poor" in Job (*ʾebyôn, dal, ʿānî*) are those also found in the prophetic writings, while the most distinctive wisdom words for "poor" *(maḥsôr, miskēn, rāš)* are conspicuously absent from Job. This gives the book of Job its "prophetic" character. Likewise, the book's defense of the poor and its concrete understanding of their situation mirrors the prophetic analysis of poverty (see Pleins 1987).

4. In Historical Narratives. It is striking that the term *ʾebyôn* is missing from the narrative materials of the DH and of the Pentateuch. Indeed, the overall scarcity of any of the terms for "poor" in these extensive bodies of narrative material is noteworthy, suggesting that ancient Israel's historians were reluctant to take up the topic of poverty (see further E.3 below). For the DH, this means a rejection (or at least an avoidance) of the prophetic contention that both Israel and Judah were destroyed in part because they mistreated the poor. This historian instead attributed the collapse of the kingdoms to the failure of kingship and to cultic abuses.

In the course of the DH, the word *ʾebyôn* occurs only in the Song of Hannah (1 Sam 2:8), a poetic text inserted into the larger block of narrative materials. This solitary appearance casts in sharp relief the historian's preference to avoid the topic of poverty. Clearly, the radical sentiments regarding poverty expressed in the Song of Hannah have little to do with the overall agenda of the Deuteronomistic Historian, who has selected the poetic text mainly because it enhanced the writer's support of the establishment of the rule of David through the agency of Samuel.

The only other occurrence of *ʾebyôn* in historical narratives is in the later text of Esther (9:22), where the term appears to refer to those to whom alms are given, that is, to beggars (cf. *BLe*, 500; Humbert 1952: 6). This reference lends support to the view that *ʾebyôn* refers to the beggarly poor.

5. In the Legal Materials. When *ʾebyôn* does appear in the Pentateuch, it occurs (9 times) only in restricted sections of the legal materials in Exodus and Deuteronomy (Exodus 23; Deuteronomy 15; 24). In Exodus, one is enjoined not to subvert the legal judgments made on behalf of the *ʾebyôn* (Exod 23:6); elsewhere they are permitted to eat the food that grows on land that has been left fallow (23:11). Humbert's observation that the legal material envisions the *ʾebyônîm* (plural) as those who are deprived of a proper diet (1952: 4–5; cf. Exod 23:11) is consistent with other instances of *ʾebyôn* in the Hebrew Bible (Isa 32:6–7, 41:7; Ezek 16:49; Ps 132:15). Deuteronomy 15 picks up on this latter Exodus text and expands on the topic of the fallow year by taking up the knotty issue of lending to the poor as the Sabbatical Year approaches, which is repeatedly encouraged throughout the passage (vv 4, 7, 9, 11). The term occurs only one other time in Deuteronomy, where it is legislated that poor laborers, whether natives or foreigners, must receive their wages (Deut 24:14). From these legal texts we obtain the picture that the *ʾebyôn* are landless wage laborers living on the edge of existence. Certainly this is consistent with the notion that this level of poverty includes begging as a way of life.

6. Meaning, History, and Etymology. There seems to be no evidence for the view that the term *ʾebyôn* has a religious connotation of patient, pious endurance amid misery as some have maintained (Kuschke 1939: 53; *GesB*, 4; van Leeuwen 1955: 16). The term simply points out severe economic deprivation. This condition may evoke the concern of God and the community, but the poverty of the *ʾebyôn* in and of itself is not considered a virtue or a way of life to be pursued for religious reasons.

On the basis of the use of *ʾebyôn* in Exodus 23 and in Amos, Humbert argues that the word came into play during the royal period; he further maintains that it did so under foreign influence, as evidenced by its appearance in such literature as the Psalms and the wisdom writings—texts which have "royal" connections (Humbert 1952: 3–4). However, it is terribly difficult to date the psalmic and wisdom materials; furthermore, the Covenant Code of Exodus 23 doubtless reflects premonarchic (not royal) legal traditions. Likewise, it is very difficult to agree with Humbert that the word *ʾebyôn* held a more important place in the time of the monarchy but fell into disuse in later periods (Humbert 1952: 3). The term is found throughout the Psalms—texts that are difficult to date, but which surely stem from both preexilic

and postexilic times. Finally, it is hard to know how to assess the possible effects of foreign influence on Israel's literature as mediated through monarchic institutions.

As an adjective, the word *ʾebyôn* has been commonly linked with and derived from the verb *ʾābâ*, "be willing, consent" (*BDB*, 2) and its Semitic counterparts (cf. Birkeland 1932: 21; *TDOT* 1: 27–41; *THAT* 1: 20–25; Kuschke 1939: 53; van Leeuwen 1955: 15; von Soden 1969). One problem with the linkage between *ʾebyôn* and *ʾābâ* is that many of the analyses tend to confuse English "want" in the popular and active sense of "to be willing" with "want" in the older and passive sense of "to be lacking something"; *ʾābâ* appears only to mean "to be willing; to desire" and not "to be in need" (von Soden 1969: 324). This interpretation finds support in the Old Aramaic Barrakab inscription from Zinjirli (THAT 1: 20; Barrakab line 14; KAI no. 216; cf. *TSSI* 2: 90), which reads: "And my brothers, the kings, desired [*htnʾbw*] all the richness of my house." Yet, this would argue in favor of linking *ʾebyôn* with the verb *yʾb/tʾb,* "long for," attested only in Psalm 119 and possibly representing Aramaic influence (Ps 119:40, 131, 174; cf. *THAT* 1: 21; Honeyman 1944: 81). This suggestion finds some support from *Leviticus Rabbah*, which states, "He is called *'ebyon'* because he longs [*mtʾb*] for everything" (*Lev. Rab.* 34:6, Soncino edition). On the whole, however, the precise relation between *ʾebyôn* and *ʾābâ* remains difficult to specify, and in any event does not clarify the meaning of *ʾebyôn.* The problems associated with the search for a Semitic background for *ʾebyôn* have led some to postulate an Egyptian origin for the term in the Coptic *EBIHN* "a poor, wretched person" (Crum 1939: 53; cf. *TDOT* 1: 28–29; Lambdin 1953: 146). However, since counterparts to *ʾebyôn* crop up in Ugaritic (*ʾabynt*; Aqhat I:17) and Amorite (von Soden 1969), there seems to be no need to seek a Coptic derivation for the term. Ward, in fact, suggests that the Coptic was borrowed from a Semitic original (1960: 32).

B. The Poor Peasant Farmer: *dal*

The term *dal* ("poor; weak, inferior; lacking") is used 48 times in the Hebrew Bible, and half of these occur in prophetic and proverbial texts. In many cases it seems to allude to the plight of the beleaguered peasant farmer.

1. In the Prophetic Corpus. The term *dal* appears 12 times in the prophetic literature, less frequently than the words *ʾebyôn* or *ʿānî.* It can connote (1) unfair treatment in legal cases (Isa 10:2; 11:4); (2) unfair grain taxes paid to the large landowners (Amos 5:11); (3) abuses in the debt-slavery system (Amos 8:6); and (4) a lack of grazing land (Isa 14:30). Elsewhere, the term is used of those who suffer exploitation and oppression of an undefined character (Isa 26:6; Amos 2:7; 4:1). On two occasions God is depicted as the protector of the *dal* (Isa 25:4; Zeph 3:12). For Isaiah, God's liberation of the poor will lead to their trampling those who are in power (Isa 26:5–6). For Jeremiah, the *dal* stand in contrast to society's political and religious authorities (Jer 5:4–5; Heb *gĕdōlîm*). One text in Jeremiah explicitly defines *dal* as one "who has nothing" (Jer 39:10), meaning people who lack vineyards and fields. In the prophetic texts, therefore, the term *dal* depicts the politically and economically marginalized elements of society. The mention of severe grain taxes (Amos 5:11) and lack of sufficient grazing and farmland (Isa 14:30; Jer 39:10) suggests an agricultural background for this word—a background that is confirmed by uses of the word *dal* elsewhere in the Hebrew Bible (see below).

2. In Narrative and Legal Texts. The term *dal* appears only 5 times in the Pentateuch. It is found twice in legal contexts where the exhortation is made not to show favoritism toward persons, whether rich or poor, when making legal decisions (Exod 23:3; Lev 19:15). The word appears twice in ritual contexts, once where the *dal* is enjoined to pay the same census tax as the "rich" (Heb *ʿāšîr*), and once where the poor are permitted to bring less costly offerings because of their status as people of lesser means (Exod 30:15; Lev 14:21). It is difficult to know why in the one case the rich and poor are not distinguished, whereas in the other, the poor are treated according to their financial circumstances (cf. Lev 5:11; 12:8). It may be that the principle of not showing favoritism to the poor had its limits, or it may be that the *dal* was not the poorest of the poor, that is, a person entirely without property, but was someone of modest means who stood somewhat above the *ʾebyôn* on the social ladder (cf. *TDOT* 3: 219; Kennedy 1898: 84–86). Because of the agricultural nature of the passages (*TDOT* 3: 219), the texts may have in mind the "small farmer" (cf. the discussion on *dallâ* below). The only other occurrence of *dal* in the Pentateuch is in a

narrative context where the subject is not poverty but a description of the emaciated condition of the cows in Pharaoh's dreams (Gen 41:19). This most vividly captures something of the image that must have come to mind when an Israelite thought of the condition of the *dal*. Note that the distribution of the word *dal* follows the same pattern as other words for "poor" in the Pentateuch: it occurs almost exclusively in legal texts and is only rarely found in the narrative materials, and when found in the narrative materials, the terms are rarely used to discuss poverty per se.

The term appears incidentally three times in the DH, not surprisingly in contexts focusing on issues other than poverty. Twice the word is used to indicate the political weakness of one group in relation to another (Judg 6:15; 2 Sam 3:1), and once it is used to speak of Amnon's dejected and haggard appearance—the result of his frustrated sexual desires for Tamar (2 Sam 13:4). Thus, though rare in the DH, the use of the word in this narrative material gives us two layers of meaning that illuminate the notion of *dal* elsewhere in the Hebrew Bible: (1) political weakness; (2) physically worn out. However, none of the occurrences of the term *dal* in the DH carries with it the notion of "poverty," which does set its usage apart from usage elsewhere in the Hebrew Bible. Finally, we may note that in the course of the DH, the word *dal* also turns up in a poetic context (1 Sam 2:8), the Song of Hannah (see A.4).

Elsewhere in the narrative texts, *dal* appears only in Ruth (3:10), where it stands opposite *ʿāšîr*, "rich," and means simply "poor": Boaz praises Ruth for not turning to younger men, whether poor or rich. Considering the agricultural context of the book of Ruth, it is perhaps no coincidence that the narrator chose to use a word for "poor" that applies to poor peasant farmers.

3. In the Psalms. Notably, the word *dal* is quite rare in the Psalter, occurring only 5 times in 4 psalms. Most of the occurrences concern God's care of the poor (Pss 72:13; 82:3, 4; 113:7), though the situations are largely left undefined. One text alludes to injustices in matters of law, for God calls on the divine assembly to judge the poor justly (Ps 82:3). While most of the texts concern God's attitude toward the *dal*, only one text deals with a person's relation to the poor, where a blessing is pronounced on those who are considerate toward them (Ps 41:2). The Psalms are thus even more vague about the *dal* than they are about the *ʾebyôn*, making it difficult to know how explicit these texts intend to be about physical poverty.

4. In Wisdom Texts. In contrast with these rather sporadic occurrences throughout the biblical corpus, the frequent use of *dal* in Proverbs (15 times) and in Job (16 times) suggests at least in part that this was a wisdom term. This is particularly the case for Proverbs: when one considers the statistics for those words for "poor"/"poverty" that Proverbs shares with other blocks of biblical material—namely *ʾebyôn*, *dal*, and *ʿānî*—the word *dal* is definitely the preferred proverbial word for expressing the wisdom tradition's understanding of poverty. The statistical difference between the frequent use of *dal* in Proverbs and its rare occurrence in the Psalms is thus primarily a synchronic matter of conscious word choice (reflecting diverging ideological perspectives) rather than a diachronic matter of the Psalms being later than Proverbs (when *dal* supposedly fell into disuse in the postexilic period, as Fabry [*TDOT* 3: 215] suggests; cf. Donald 1964: 29). The fact that *dal* appears 11 times in Sirach confirms the notion that *dal* is a favorite word of wisdom writers, even in very late periods.

In Proverbs, the term *dal*, like *maḥsôr* and *rāš* (see C. and E. below), is used only in chaps. 10–29, i.e. the sentential literature (contrast *ʾebyôn* above). This type of poverty is contrasted with wealth: it shatters the poor (10:15); it is a friendless circumstance (19:4); however, it may produce insight that the rich can fail to grasp (28:11). Charity toward the poor is elevated as a virtue of the wise person, though the motivation for such benevolence is to reap the rewards that come from having a reputation for magnanimity (19:17; 22:9; 29:9). Although the life of poverty is certainly no virtue to the proverbial writers, the pursuit of wealth should not involve mistreating the poor. Frequently wisdom warns of the dangers inherent in attempting to profit off the *dal* (14:31; 21:13; 22:16; 28:3, 8, 15).

In Job, the word *dal*, like *ʾebyôn*, becomes the measure of Job's innocence. However, unlike *ʾebyôn*, which is nearly always on the lips of Job, the word *dal* is almost always used by one of Job's accusers. This is appropriate if we consider that Job's friends are caricatures of wisdom teachers—the word *dal* is supposed to be on their lips. In the first instance (5:16), Eliphaz uses the term *dal* (along with *ʾebyôn*) to frame the book's challenge against Job concerning his treatment of the poor—a theme that is pursued in

greater detail after chap. 20. Zophar speaks of the *dal*, and in true proverbial fashion he notes that the wicked who profit off the poor will lose their wealth (Job 20:10, 19). Zophar's use of the word *dal* is the first use of a term for "poor" since Eliphaz's challenge in chap. 5; we should see in this a conscious effort on the writer's part to reassert the accusation against Job regarding his treatment of the poor. In so doing, the writer uses this word to mark a significant turning point in the discussion: from this chapter on, the treatment of the poor becomes a major motif in the book and for Job's friends it is a central issue in assessing Job's integrity. Twice Elihu mentions the *dal* and speaks of God's attitude toward the poor. On the one hand, God is impartial toward both poor and nobles (Heb *śārîm;* 34:19); on the other hand, God is said to strike down the wicked, and thus the cry of the poor comes to God (34:28; the statements of Elihu have notable counterparts in the Pentateuch, see above; cf. the later Sir 35:12–14, also in the wisdom tradition). All of these uses of *dal* in accusatory contexts render Job's own use of *dal* most poignant: he claims to have met the needs of the poor (31:16). In each occurrence, it is clear that the writer has in mind the very concrete suffering of the poor—suffering that is not experienced by the well-to-do. Unfortunately, the text does not seek to further specify the nature of the deprivation experienced by the *dal*.

5. A Ugaritic Text. The ancient and widespread concern for the *dal* is strikingly confirmed in the Keret Epic (14th century B.C.E.). In one passage, King Keret is denounced by his son Yassib, who accuses his father of failing to execute the duties of the royal office, blaming this failure on his father's weakness and illness. In the course of his diatribe, Yassib sustains his critique of the king by pointing out how the poor, specifically the *dl*, have been treated: "You do not banish the extortioners of the poor [*dl*]" (Gibson 1977: 102). Interestingly, this passage groups together the mistreatment of the *dl* with the failure to feed the orphan *(ytm)* and the widow *(ʿalmnt)*—a word grouping that directly parallels the biblical vocabulary concerning the disenfranchised (cf. Isa 10:2; Ps 82:3–4; Job 31:16–17).

6. *dallâ*, pl. *dallôt*. A related term, *dallâ*, occurs twice in 2 Kings and three times in Jeremiah. In all these passages, the term refers to a social grouping or class at the time of the Exile, a group generally thought to represent the lowest orders of society (2 Kgs 24:14; 25:12; Jer 40:7; 52:15, 16). The *dallat ʿam hāʾāreṣ*, "poor of the people of the land," *dallat/dallôt hāʾāreṣ*, "poor of the land," and the *dallôt hāʿām*, "poor of the people," are those who remained in Judah after the Babylonian invasion of 587 B.C.E. They are explicitly depicted as people who were forced to work for the Babylonian conquerors as agricultural laborers, suggesting that this phrase may refer to "poor farm laborers" (cf. CAD 3: 173). Curiously, the narrative in Jeremiah (39:10) diverges significantly from its counterpart in 2 Kings (25:12). Whereas in 2 Kings the Babylonian commander is said to force the *dallâ* to be vineyard workers and field laborers for the conqueror, the reading in Jeremiah is altered to produce a radically different picture: there the *dal* are not forced laborers, but simply people to whom vineyards and fields are given. It would seem that the writer of Jeremiah has toned down the depiction of the Babylonians to cast the conqueror in the best possible light—a view that is consistent with other sections of Jeremiah (e.g., chaps. 27 and 29). In any case, these passages link the terms *dallâ* and *dal* to agricultural vocations, and their usage in 2 Kings and Jeremiah lends support to the view developed in this section that these terms refer to poor peasant farmers.

C. The Lazy Poor: *maḥsôr*

The word *maḥsôr* ("lack of, or need for, material goods") occurs 13 times in the Hebrew Bible, mainly in Proverbs. Its rarity throughout the rest of the Hebrew Bible would seem to mark off *maḥsôr* as a wisdom term.

1. In Wisdom Texts. Of the 8 occurrences in Proverbs, only one (6:11) is outside chaps. 10–29. Similarly, *dal* and *rāš* only occur in Proverbs 10–29. This vocabulary distribution serves to bind together chaps. 10–29 and isolate them from chaps. 1–9 and 30–31. Proverbs 1–9 is instruction that is largely unconcerned with the topic of poverty; chaps. 30–31 use a different terminology, namely the combination *ʿānî* and *ʾebyôn* (see A.3). In Proverbs, *maḥsôr* connotes (1) poverty that results from laziness (6:11; 14:23; 21:5; 24:34), and (2) poverty that results from excessive living (21:17). Since the ethic of Proverbs is the ethic of the bureaucratic elite (cf. Pleins 1987), the text tends to stress hard work and moderation.

As a result, the wise are terribly concerned about the dangers of laziness. And yet, the wisdom teachers do not completely denigrate those who are poor: generosity toward the poor is a virtue in the wisdom tradition, and the wise warn that a lack of generosity can lead one into poverty (11:24; 22:16; 24:34).

Significantly, the word does not appear at all in Job or Ecclesiastes. The absence of this term and several others from Job is one line of argument for separating the social agenda of Job from that of Proverbs.

2. In Legal Texts. The term appears only once in the Pentateuch in the legal materials of Deuteronomy, where the community is enjoined to lend to the poor what they lack in material goods *(maḥsôr)* as the Sabbatical Year approaches (Deut 15:8). The context implies concrete items, though they are not specified. The rarity of the term in the Pentateuch is one indication that the *maḥsôr* had particular importance in the wisdom sphere.

3. In the Psalms. The word *maḥsôr* appears only once in the Psalter, in a supposed Thanksgiving Hymn (Psalm 34). However, the particular verse in question (v 10) is part of a section that looks more like a Wisdom Psalm (viz. 34:9–15). The text states that those who fear God lack *(maḥsôr)* nothing, and by implication appears to mean they do not lack food (cf. 34:11), though this may be metaphorical.

4. In Historical Narrative. Elsewhere, the word is found only in Judges (3 times). One occurrence is in the story of the Danite spies (Judg 18:1–31), who investigate the town of Laish and find it a prosperous place like Sidon (cf. Judg 18:7), a town where nothing is lacking (*maḥsôr;* Judg 18:10). Clearly, material goods are meant here. Twice the term *maḥsôr* occurs in the story of the Levite's concubine (Judg 19:1–30). The Levite and his concubine report that they do not lack *(maḥsôr)* any necessary supplies, listing in their possession such items as animal fodder, bread, and wine (Judg 19:19). And in reply the Ephraimite man tells them that "all you need [*maḥsôr*] I will take care of" (Judg 19:20). In both cases, *maḥsôr* denotes a lack of material goods.

D. Poverty Is Better: *miskēn*

The word *miskēn*, "poor," is a late Hebrew term for "poor," appearing only in the wisdom text of Ecclesiastes (4 times).

One text in Ecclesiastes (4:13) advises that it is better to be a poor *(miskēn)* youth than an old, foolish king who fails to heed warnings. The youth can rise out of the prison of poverty (Heb *bēt hāsûrîm*), but the king is in danger of collapsing into poverty *(rāš).* Another text (9:14–16), elevates the wisdom of a poor but wise man, who could have saved the town in time of siege if only the people would have heeded the poor man's advice. Such comparative statements about wisdom amid poverty are also found in Proverbs (19:1, 22; 28:6). While Ecclesiastes reflects the typical wisdom teaching on this point, the writer also acknowledges the systemic nature of poverty (see E.1 below).

A related term denoting scarcity of material goods, *miskĕnût*, appears once in Deuteronomy (8:9).

E. Political and Economic Inferiority: *rāš*

The word *rāš* ("economically poor, of modest means; beggar, bum") occurs 22 times in the Hebrew Bible, mainly in wisdom texts, and should be viewed as a wisdom term (it does not appear at all in the Pentateuch or the prophetic writings); the word *rāš* refers to someone who is politically and economically inferior, frequently referring to someone who is lazy.

1. In Wisdom Texts. The majority of occurrences are in Proverbs (15 times), all restricted to the sentential literature of chaps. 10–29 (cf. the usage of *dal* and *maḥsôr* in this regard). In Proverbs, this term connotes (1) poverty that results from laziness (10:4); and (2) want that arises from disordered living (13:23). This type of poverty is seen to be a friendless condition (14:20; 19:7; 28:3). The wisdom analysis of the origins of poverty in personal laziness diverges radically from other streams of biblical tradition, such as the prophetic and legal, which see the problem of poverty in terms of social structures and power arrangements. The wisdom analysis is to be explained by the fact that sociologically it finds its home in the educational circles of the social elite of ancient Israel (see Pleins 1987). Thus the term *rāš* often stands in contrast to "rich" (Heb *ʿāšîr* in 13:8; 14:20; 18:23; 22:7; 28:6; verb *ʿāšār* in 10:4). In one of these texts (18:23), the word *rāš* would seem to be best translated as "beggar" or "bum," for the text depicts this person imploring the rich for assistance. Consistent with the proverbial philosophy, this type of poor

person is not to be mocked because God creates all people (17:5; 22:2; 28:27; 29:13). The term *rāš* is used on several occasions to teach that there are worse things than poverty, namely perverse speech and stupidity (19:1), lying (19:22), and evil deeds (28:6). Obviously, the use of this teaching device does not mean that the wise cultivated poverty as a virtue; rather, they drew on these proverbs to help their students grasp how one acts if one embodies wisdom. Wisdom is more than knowing how to respect wealth and poverty.

The word *rāš* is used twice in Ecclesiastes. One text (4:14) concerns the contrast between the poor but wise youth and an old, foolish king who does not heed warnings and collapses into poverty (see D. above). In another passage, the word *rāš* is used in the context of structural economic exploitation, a usage that is unusual for *rāš.* The writer says that one must not be surprised by the "exploitation of the poor [*rāš*]" in a province, for society is structured in such a way that those above exploit those who are below them on the social ladder (Eccl 5:7). Though the writer's sentiment is rather cynical about the situation of the poor, the author turns the meaning of the word *rāš* on its head by suggesting that *rāš* is *not* a poverty that results from laziness as the writers of Proverbs maintained; this inversion of categories moves Ecclesiastes in the direction of Job and the prophets, who also emphasize the structural origins of poverty.

The word *rāš* does not appear at all in Job; this lack is yet another factor that sets Job apart from Proverbs, even though both are generally regarded as wisdom texts (see C.1 above). That the book of Job avoids the term *rāš* strengthens the view we have argued for above that the book of Job is more akin to the prophetic materials in terms of language and social analysis than it is to the wisdom tradition, at least insofar as Proverbs is a typical representative of this tradition (a comparison with Egyptian wisdom materials shows Proverbs to be quite typical of the international wisdom tradition with regard to its understanding of poverty; see Pleins 1987).

2. In the Psalms. The word *rāš* appears only once in the Psalter, in a so-called prophetic oracle, where God calls on the divine assembly to bring about just legal decisions for the poor (Ps 82:3). This passage is rich in its use of terms for the "poor" (*dal, ʿānî, rāš, ʾebyôn*, and *yātôm* ["fatherless"] all occur in 82:3–4). All are victims of the ill-defined *rĕsāʿîm*, "wicked, guilty" (cf. Baudissin 1912: 216–17; Munch 1936: 19).

3. In Historical Narrative. Like the word *dal*, the word *rāš* is unusual among the words for "poor" in that it crops up at least a few times (4 times) in the course of the DH. The first instance concerns the rising figure of David in the court of Saul; David sees himself as an insignificant individual when compared to the importance of the ruling king, Saul (1 Sam 18:23). This use of *rāš* is comparable to DH's use of the term *dal:* the word is not used to bring up the topic of poverty; rather, it specifies political inferiority. The other uses of *rāš* in 2 Samuel all occur in the context of Nathan's parable addressed against the adulterous affair and murder perpetrated by King David. In the immediate context of the parable, the *rāš* is depicted as one who owns only one small sheep in contrast to the rich person who owns many flocks and herds (2 Sam 12:1–4). Clearly the term has a strong economic flavor to it, and the text tacitly recognizes the cruelty of the rich when they steal what little the poor possess. However, the purpose of the text is not to critique economic relations in the manner of the prophetic texts or the book of Job (the term *rāš* is not prophetic and is the wrong word to put in the mouth of a prophet); rather, the text seeks to make explicit the political miscalculations of King David. In this way, the Deuteronomistic writers are actually quite consistent in their use of *rāš* and *dal:* these words are used to stress political weakness and are not drawn on to analyze or critique the situation of the poor in their society. The topic of poverty is not on the agenda of DH.

F. The Injustice of Oppression: *ʿānî*

The term *ʿānî* ("economically poor; oppressed, exploited; suffering") is the most common term in the Hebrew Bible for "poverty," occurring 80 times in the biblical corpus.

1. In the Prophetic Literature. The word *ʿānî* is the most prominent of the terms for "poor" in the prophetic literature, where it appears 25 times and connotes (1) economic oppression (Isa 3:15; Ezek 18:12; cf. Deut 24:12; Ezek 22:29; Amos 8:4); (2) unjust treatment in legal decisions (Isa 10:2); and (3)

victimization through deception (Isa 32:7). Concretely, the society's leaders are said to have robbed the poor of their possessions (Isa 3:14; cf. Second Isaiah below). In another case, Ezekiel actually transforms the story of the destruction of Sodom by applying an economic interpretation: Sodom was destroyed because it withheld food from the poor (Ezek 16:49; cf. Gen 18:16–19:29). For First Isaiah and Jeremiah, the liberator of the poor is the king (Isa 14:32; Jer 22:16). In other prophetic texts, Yahweh alone is portrayed as the champion of the oppressed (Hab 3:14; Zeph 3:12; cf. Second Isaiah below).

The term *ʿānî* is used in two characteristic ways in the prophetic literature. First, it is frequently paired with *ʾebyôn* (Isa 14:30–32; 32:7; 41:17; Jer 22:16; Ezek 18:12; 22:29; Amos 8:4), a grouping found frequently in the Psalms (15 times), and to a lesser extent in Proverbs 30–31 (3 times), Job (3 times), and Deuteronomy (2 times). The pair represents a somewhat stylized rhetorical device for speaking of poverty, and is the product of either prophetic or cultic influence, though which is difficult to determine. If the pair represents prophetic influence, this would lend further weight to the thesis that Job is adapting prophetic rhetoric. Secondly, on several occasions in the prophetic literature, the term *ʿānî* is linked with the word "people" (Heb *ʿam;* Isa 3:15; 10:2; 14:32; Zeph 3:12). Curiously, the only other uses of *ʿānî* with "people" occur in Exodus (22:24) and in two psalms (18; 72). The Exodus text represents premonarchic legal traditions and is probably the precursor to the other uses of *ʿānî* plus "people." This may put into context Micah's appeals on behalf of the "my people" (Mic 3:3, et al.), indicating that the prophet is in touch with ancient, possibly village, legal traditions. However, the Psalms use the combination of *ʿānî* and "people" in royal contexts (18:28; 72:12), which indicates a shift from a village to an urban context. It seems, therefore, appropriate that Isaiah, whose teachings are preoccupied with a royal ideology, should use this combination as well.

Perhaps the most significant use of *ʿānî* in the prophets occurs in Isaiah 40–66. The writer(s) of these chapters makes exclusive use of *ʿānî* in all but one passage, and even there *ʿānî* is combined with *ʾebyôn* (41:17). This nearly exclusive emphasis on *ʿānî* represents a deliberate word choice as the writer reshapes the prophetic notion of the "oppressed poor" to apply it to the sufferings of the exiles in Babylon. According to the earlier prophets, Israel and Judah were judged for their exploitation of others, i.e., for making others *ʿānî.* With Second Isaiah, the entire nation has endured divine judgment, and through its captivity in Babylon, Israel as a whole has become *ʿānî.* The prophet seeks to explain the implications of this new phase in the community's historical experience. To this end, the prophet develops two main themes around the term *ʿānî.* The first theme is that the wrath of God against Jerusalem is temporary (51:21; 54:11; cf. 48:9–10). The community will not remain in captivity forever as if abandoned by God. Judgment will give way to a new exodus and liberation (cf., e.g., 43:16–20; 63:9–13). The prophet's second theme is that the people should, therefore, continue to hope amid the debilitating circumstances of exile, standing firm in the face of the oppressor, namely Babylon (49:17; cf. 51:12–14, 22–23). Second Isaiah's view is that God takes note of and will assist the nation that has suffered political and economic oppression at the hands of one of the major political powers of the day. God is particularly concerned about this kind of suffering (66:2); and it would seem that the traditional translation of this text, that God looks to the "humble," seriously weakens the creative force of Second Isaiah's understanding of Israel as *ʿānî*, "politically oppressed."

This prophet's notion of *ʿānî,* while somewhat more abstract than previous prophetic usage, continues to contain concrete aspects. The *ʿānî* are those who search for water, but have none (41:17), though this may be a somewhat metaphorical statement concerning the general yearnings of the exiles for liberation. The *ʿānî* are also depicted as homeless (58:7), though this passage is more in the spirit of the earlier prophets since it seems to apply to a portion of the people and not the people as a whole. Admittedly, the prophet has expanded the concrete character of the term in most instances; nevertheless, the general and terribly concrete situation of political and economic oppression indelibly stamps Second Isaiah's concept of poverty. This is not a theology of humility in the more detached or spiritualized sense.

2. In the Psalms. The word *ʿānî* occurs 31 times in the Psalter (30 Kethib; 1 Qere) and represents the preferred term for "poor" among the cultic writers. The term appears most often in Psalms of Lament. As with the Major Prophets and Amos, the Psalms frequently pair up *ʾebyôn* and *ʿānî* (15 times; see A.1 and

F.1 above). The poets utilize the term *ʿānî* when characterizing God's relation to the poor: they call on God not to ignore or forget the *ʿānî* (9:13—Eng 12; 9:19; 10:12 [= 9:33]; 70:6—Eng 5; 74:19). In many cases, this is a self-reference to the one who sings the Psalms (25:16; 40:18—Eng 17; 69:30; 86:1; 88:16; 102:1; 109:22). It is God who rescues or provides for the *ʿānî* (12:6—Eng 5; 18:28; 22:25; 34:7; 35:10; 68:11; 82:3; 140:13—Eng 12).

Rarely do the Psalms give specific details about the sufferings of the *ʿānî*. The poor are depicted generally as being hounded and seized by the wicked and strong (10:2, 9; 14:6; 35:10; 37:14; 106:16) or being plundered (12:6—Eng 5). Most concretely, the *ʿānî* are homeless (25:16; Heb *yaḥîd*); murdered with bows and swords (37:14; unless this is metaphorical); and in physical pain (69:30).

Only one royal psalm expressly depicts the king to be the champion of the poor (Psalm 72). The poet calls on God to give the king the ability to judge justly (72:2), which translates into upholding the legal claims of the poor (72:4, 12). The rarity of the connection between the king and the poor in the Psalms would seem to indicate that the Psalms do not intend to work out a theology detailing the state's responsibilities toward the poor or one that challenges the rulers for their failure to face societal injustices; this contrasts sharply with the social burden of the prophets.

3. In Wisdom Texts. The word *ʿānî* finds frequent usage (16 times) throughout the wisdom literature, appearing 8 times in Proverbs, 7 times in Job, and once in Ecclesiastes.

In Proverbs, the word is scattered through the major blocks of the text. The term appears once in the instructional texts of Proverbs 1–9. This is unusual since none of the other words for poverty except *maḥsôr* (6:11) occur in this part of the book. The passage (3:34) relates the attitude of God who scorns the scoffer but favors the righteous and the *ʿānî*. In the sentential literature of Proverbs 10–22, the term *ʿānî* occurs four times. Three of these occurrences reflect themes that are developed in greater detail through the use of other words for "poor" in Proverbs: (1) showing favor to the *ʿānî* brings fortune to the giver (14:21); (2) the lot of the *ʿānî* is terrible (15:15); and (3) it is better to be among the poor than to share the plunder of the arrogant (16:19). The most unique use of *ʿānî* in the sentential literature occurs in a section that is known as the "Sayings of the Wise" (Prov 22:17–24:34), a text which has clear connections to the Egyptian instruction of Amenemope (Bryce 1979: chaps. 1–3). The writer exhorts the student not to rob the *dal* or "crush the afflicted [*ʿānî*] at the gate" (22:22). While it is true that the wise often oppose the abuse of the poor, this is the only text that speaks of the gate, i.e., the mistreatment of the poor in legal cases. The atypical nature of the text must be taken as a sign that there is legal or prophetic influence at work here, strongly suggesting that the wise exerted little direct influence on the direction of the legal system in ancient Israel. The only other points where the wisdom, prophetic, and legal traditions really meet concern false weights and measures (Prov 11:1; 16:11; 20:10, 23) and property lines (Prov 23:10–11). In any case, the Proverbial tradition lacks the comprehensive and rather concrete social justice vision for the *ʿānî* that we find in the legal and prophetic materials (contra Malchow 1982).

Chaps. 30–31 of Proverbs make use of the pair *ʾebyôn* and *ʿānî* (see A.1 and F.1 above)—one fact among several considerations that sets these chapters off from the rest of the text of Proverbs. All three occurrences in these chapters reveal an awareness of the concrete suffering of the *ʿānî* that is unique in Proverbs. The *ʿānî* are devoured by the power-holders of society (30:14). In chapter 31, King Lemuel is exhorted to defend the legal case of the *ʿānî* (31:9). The wise and capable wife shows her compassion by opening her hand to assist the *ʿānî* (31:20). The meaning of *ʿānî* that we gain from these texts is one of concrete suffering and exploitation, though it must be observed that the specific situations of the *ʿānî* are not detailed by the sages.

A comparison of the various terms for "poor" in the Psalms and Proverbs makes it clear that while both use the term *ʿānî*, the difference in the distribution of the terms reflects the differing social visions of the writers. On the one hand, for the psalmists, the term is of distinctive importance in the context of worship and liturgy. By contrast, the divergent social agenda of Proverbs is underscored by the fact that Proverbs proportionately uses the cultic/prophetic term *ʿānî* less and the wisdom-nuanced term *dal* more than the Psalter. To put this another way, the cultic social agenda, however ill-defined it may seem, did not exert great influence on wisdom views about poverty; likewise, whatever wisdom influence there may be in the

Psalms (especially the so-called "wisdom" Psalms), that influence did not extend to the shaping of the Psalter's understanding of the poor.

The book of Job again yields a vocabulary that diverges from Proverbs, a rhetorical feature that also serves to distance Job from the ideology of traditional wisdom thought. In the discussions between Job and his friends, it is only Job that uses the term *ʿānî*. The sufferings of the *ʿānî* are very concrete: they are forced into hiding (24:4); their children are seized as a pledge (24:9; cf. 2 Kgs 4:1–7); and they are murdered (24:14). Once again, the substance of Job's language is prophetic in character: he speaks quite concretely about the suffering of the *ʿānî*. Job's wise friends scrupulously avoid the term, as one would expect from the distribution in Proverbs. Job finds the solution to the question of suffering in his posture toward the poor: he rescued those who cried out (29:12). Curiously, the other uses of *ʿānî* in Job are on the lips of Elihu (who twice uses the term *dal*). This is rather anomalous and may lend support to the view that the Elihu chapters are a later addition to the text. In many ways, Elihu speaks like a psalmist, for he stresses God's action in coming to the aid of the *ʿānî* (34:28; 36:6, 15). Perhaps then we should see Elihu not as a "wisdom character" but as a representative of the cultic community.

For the writer of Ecclesiastes, the *ʿānî* find no benefit in this world, even when they may acquire the ability to manage their own affairs. Pondering the fact that God gives wealth only to deny its enjoyment (Eccl 6:1–7), the writer asks, "What advantage then has the wise man over the fool, what advantage has the pauper [*ʿānî*] who knows how to get on in life" (Eccl 6:8, *JPS*). The writer focuses on the negative side of the ancient wisdom view that the gods or fate bring both prosperity and misfortune (cf. Ptahhotep #10; Amenemope VII:1–6, XXI:15–16; Aksheshonq 12:3; 22:25; 26:8; 26:14; P. Insinger 7:18; 17:2; 28:4; 30:15).

4. In Legal Texts. The term *ʿānî* finds its way only into restricted sections of the Pentateuch 7 times: 5 times in the legal materials (Exodus 22; Deuteronomy 15; 24) and twice in the priestly writings of Leviticus. The legal texts are keyed to the Covenant Code's (Exodus 21–23) concern for lending to "my people," i.e., the *ʿānî* among the people. One cannot exact interest when lending to the poor. Statements concerning the *ʿānî* in Deuteronomy 15 and 24 simply represent a later commentary on the text in Exodus. Both chapters elaborate on lending to the poor. In one passage, provision is made to ensure that the poor continue to receive loans even as the time of loan suspension, the Sabbatical Year, approaches (15:11). In the other passage, lending is likewise the topic, but here the concern is to forbid the lender from keeping and sleeping in the garment a poor person has given in pledge (24:12). The use of the term *ʿānî* in this passage causes the editor to mention another law related to the *ʿānî*, in this case the poor laborer. Such laborers, whether foreigners or nationals, are not to be mistreated; they should receive their wages the same day (24:14–15). The priestly material on the *ʿānî* is likewise very concrete: these poor are reduced to gleaning the edges of harvest fields and vineyards for food (19:9–10; 23:22). The *ʿānî* is someone who has no real estate (cf. Rahlfs 1892: 74–75) and little to eat. All the legal and priestly texts clearly focus on the economic deprivation of the *ʿānî*, as do the prophetic texts. Yet, unlike the prophetic texts, the pentateuchal materials try to spell out the specifics of society's obligations toward those who are economically deprived.

5. In Historical Narrative. As with other terms for poverty, the word *ʿānî* does not appear in the narrative portions of the Pentateuch or the DH. In fact, the only appearance of the term in the DH is in the poetic text of 2 Samuel 22, which actually represents the transferral of a liturgical text (roughly parallel to Psalm 18) into the narrative material. The contrast between the overwhelming number of occurrences of this word throughout large tracts of the Hebrew Bible and its striking absence from the Pentateuchal narrative and DH shows us how relatively unimportant the issue of poverty was for Israel's early "historians." This has direct implications for our understanding of the contrast between the philosophies of history held by the prophets and by the "historians" (see further E.3 and H).

6. Semitic Cognates. Discussion of the word *ʿānî* cannot be entirely separated from a discussion of the related verbal form *ʿānâ*, often defined as "be bowed down, afflicted" (BDB, 776). The *Piʿel* or transitive form of the verb, which constitutes the bulk of the verb's occurrences (57 out of 80), has a very concrete sense, namely "to oppress, abuse, rape." In a major study of the terms for oppression in the Hebrew Bible,

Pons (1981: 103) concluded that *ʿānâ* "never has as its object something inanimate, but always persons, and, in particular, the body" (cf. *THAT* 6: 247–70; *TDNT* 6:885–915; contrast Delekat 1964). A vivid cognate example appears in the famous Moabite stele: "Omri, the king of Israel, oppressed [*wyʿnw*] Moab for a long time because Chemosh was angry with his land. Then his [Omri's] son [Ahab] succeeded him and he also said, 'I will oppress [*ʾʿnw*] Moab' " (lines 4–6; cf. *TSSI* 1: 74; *KAI* no. 181). As in biblical Hebrew, the Moabite text confirms that the verb denotes political oppression. A possibly related example occurs in the Baal Cycle (14th century B.C.E.). Tsumura (1982) suggests that the text reads: "Give up Baal, and I will *humble* [*ʿnn*] him/ Dagan's son, that I may dispossess his gold" (*KTU* 1.2:I:35; cf. *OTA* 1983: 246–47). This interpretation of the passage, while not certain, is possible, and the pairing of *ʿnn* with the rather concrete phrase "dispossess his gold" suggests that "to humble" must also be understood as some sort of concrete suffering or deprivation, not simply as personal humiliation.

The experience of poverty is brought out in a related Aramaic example from the text of Ahiqar (line 105): "I have tasted even the bitter medlar and have eaten *endives* but there is nothing more bitter than poverty [*ʿnwh*]" (Lindenberger 1983: 89). Another cognate occurs in biblical Aramaic, where Daniel (Belteshazzar) calls on Nebuchadnezzar to "do away with your sins through righteousness and [get rid of] your offenses by showing kindness to the poor [*ʿnyn*]" (Dan 4:24—Eng 27).

Some treat *ʿānî* and *ʿānāw* as products of the same root with no differentiation in meaning (Hupfeld 1867; van den Berghe 1962; Aartun 1971). Rahlfs derives them both from the same root meaning, "the lower position that a servant takes toward a master," but he suggests that *ʿānî* denotes the condition of suffering, whereas *ʿānāw* bears a more religious sense, that of humbling oneself before God (1892: 70, 73–80). Rahlfs' view has tended to dominate the discussion. Some argue that the two terms have separate origins, but not necessarily distinct meanings: Birkeland (1932: 19–20) held that *ʿānāw* may not have existed in early biblical Hebrew but entered at a later point under the influence of Aramaic, a position advocated by George (*DBSup* 7: 387). Birkeland denied the view that *ʿānāw* is more religious or that *ʿānî* is more secular in tone (1932: 15), though by this he meant that *ʿānî* at times may mean "humble" (Birkeland 1932: 16)—a view that is difficult to sustain in light of its usage throughout the biblical corpus.

G. A Political Movement of the Pious Poor?: *ʿănāwîm*

The term *ʿănāwîm* ("poor; pious, humble[?]") is a plural form for a supposed singular *ʿānāw* and occurs 24 times in the Hebrew Bible. The word appears in the prophetic literature, in the Psalms, and in wisdom texts. Although this is not the most common word for "poor" in the Hebrew Bible, it is one of the most frequently discussed among scholars because many see in *ʿănāwîm* a merger between poverty and piety, possibly marking a political movement among the pious poor (see Lohfink 1986). A problematic singular form that appears in Num 12:3 is discussed below.

1. In the Psalms. The word *ʿănāwîm* appears 13 times in the Psalms, where it appears mainly in Psalms of Lament. As with the term *ʿānî*, the poets draw on *ʿănāwîm* to characterize God's relation to the poor. In the psalmists' vision, God actively relates to the *ʿănāwîm* by rescuing and guiding them, though precisely what this entails is difficult to determine from the texts (25:9; 34:3—Eng v 2; 69:33—Eng v 32; 76:10—Eng v 9; 147:6; 149:4). The poets observe that God does not forget the poor (9:13, 19—Eng vv 12, 18), and they call on God not to ignore the poor (10:12; 10:17—Eng v 16). As with the term *ʿānî*, few passages allude to the concrete circumstances of the *ʿănāwîm*, but what we do find is quite revealing. They lack food (22:27—Eng v 26); they are landless (37:11); and they are in pain (69:33—Eng v 32; cf. 69:30—Eng v 29). One text makes it clear that the opponents of the *ʿănāwîm* are the wicked (Heb *rĕšāʿîm;* 147:6), though again, as with so many of the Psalms texts, the precise sociological setting presupposed by "wicked" is difficult to determine. When we consider the usage of the term *ʿănāwîm* throughout the Psalms, it is striking to notice that this word matches *ʿānî* in its range of meaning and usage. This is one important piece of evidence for the theory pursued below that the term *ʿănāwîm*, is simply a plural form for *ʿānî*, and that the two actually should be treated together.

2. In the Prophetic Corpus. The word *ʿănāwîm* occurs in a few scattered places in the prophetic literature (7 times). The poor are victims of social injustice (Isa 32:7; Amos 2:7; 8:4). Several texts in

Isaiah lay emphasis on hope for the poor: they will find a just judge in a future king (11:4); they will rejoice before God when God topples the tyrants (29:19); and they are the exiles to whom the announcement of release is presented (61:1; on Second Isaiah see F.1 above). These texts all have a concrete socioeconomic or political flavor to them. This is less clear for Zephaniah, where the text treats the *ʿănāwîm* as those who follow God's laws and who seek *ʿănāwâ*, a word that in this context appears to mean "humility" (Zeph 2:3). This is the only passage in the entire Hebrew Bible where the term *ʿănāwîm* seems to have the less concrete meaning of "humble," although even here this is not altogether certain (see below).

3. In Wisdom Texts. The term *ʿănāwîm* occurs only 3 times in Proverbs and once in Job. The occurrences in Proverbs all represent the spoken form (Qere) for the written (Kethib) plural of *ʿānî* (3:34; 14:21; 16:19); as such, these are all discussed above under F.3. The only occurrence in Job is a Kethib form for the Qere plural for *ʿānî* and is likewise treated above.

4. Semantic Meaning. The word *ʿănāwîm* falls into the same general semantic field as other words for poverty, although there has been tremendous debate over the links between "poverty" and "humility" (another possible meaning of the term *ʿănāwîm*).

For Baudissin, the key issue is how the psalmists' more positive view of poverty (expressed in the *ʿănāwîm* passages) arose given the negative depiction of poverty in the rest of the Hebrew Bible, where poverty is an evil that has no inherent spiritual value and must be uprooted from the community of God (1912: 202, 209). Baudissin suggests that Israel's experience of the Exile brought about a reevaluation of the nature and value of poverty, and he credits Second Isaiah as the first to characterize Judah as God's "poor people" in a positive sense: through repeated invasions by the Babylonians, deportation, and plundered cities, Judah, as a nation, joined the ranks of the poor and came to understand the Exile as an act of humbling by God (1912: 211–12). Poverty and humility eventually dovetail as theological concepts: they are the precondition for experiencing the compassion of God, a more positive assessment of humble poverty that comes to fruition in the Psalms (Baudissin 1912: 213–14, 216).

Baudissin's view is open to several lines of criticism. His hypothesis rests in part on the probably faulty linguistic analysis that the word *ʿănāwîm*, "humble," came to color the meaning of *ʿānî*, which originally characterized the socioeconomic plight of one who is poor (Baudissin 1912: 195). Moreover, it is not clear that *ʿănāwîm* means "humble." Baudissin is correct in suspecting that Second Isaiah shifts prophetic thinking about poverty, but this development occurs along different lines than Baudissin outlines and involves the term *ʿānî* (see F.1 above).

Another issue in the interpretation of *ʿănāwîm* concerns the possible sociological background of the people who are characterized as *ʿănāwîm*. Loeb (1892) and Rahlfs (1892) held that especially in the Psalms they represented a party of the pious in ancient Israel. Munch (1936: 21), under the influence of Lurje's class analysis (1927), modified the notion of party from a spiritual movement to that of "the class of the oppressed," although Munch's analysis is, in part, dependent on a reassessment of the socioeconomic dimension of the term *ʿānî* and not on a reading of *ʿănāwîm* itself (Munch 1936: 26). Kittel (1914), Causse (1922; 1937), and Birkeland (1932) denied the party thesis, preferring instead to characterize the *ʿănāwîm* as a religious movement or tendency within the population (cf. van der Ploeg 1950: 237–40), though Birkeland was forced to revise his ideas in light of a reevaluation of the socioeconomic dimension behind the term *ʿānî* (1933: 317–20). A variant of this position goes back to Renan (1891: 37–50), who saw in the *ʿănāwîm* a religious movement of the preexilic period.

Bruppacher (1924) and van der Ploeg (1950) have sharply criticized the attempted link between "poverty" and "piety." In the first place, Bruppacher contends that there is no ideal of poverty in the Bible, nor is it the case that poverty is exalted (1924: xi). Secondly, he maintains that the evidence for a religious or political movement built around the pious poor is weak. In particular, he criticizes Loeb's view (1892: 147) that the poor of the Psalms are the pious Israelites of the postexilic period who had come together as "the party of the poor" (1924: xii, 89). Bruppacher denies the party thesis, contending that the biblical text provides no clear sociological picture for an organized movement of poor people in

ancient Israel; like the "wicked" of the Psalms, it is not certain who the "poor" of the Psalms actually are (1924: 90–91).

Van der Ploeg's critique (1950) seeks to separate the term *ʿănāwîm*, "religious humility," from the terms *ʿānî, ʾebyôn*, and *dal*, which mean "socioeconomic poverty." Working from the prophets, van der Ploeg maintains that the descriptions of the poor are so concrete that the poverty the prophets were concerned about was not some spiritual phenomenon; rather, it was social and economic oppression (1950: 244, 250). In the prophets and elsewhere in the Hebrew Bible, there is no positive evaluation of poverty; the poor are "just" only insofar as they are the innocent victims of injustice, and poverty does not translate automatically into piety, even if God displays a special concern for the situation of the poor (1950: 245–46). Nowhere does the Hebrew Bible romanticize poverty; it is not a voluntary condition but the product of oppressive practices in society. Having disconnected poverty from a religious ideal such as humility, van der Ploeg then suggests that the term *ʿănāwîm* must refer to plain humility (a character trait) and must not be confused with the poverty of the *ʿānî* (a socioeconomic condition). Van der Ploeg understands *ʿănāwîm* as the general attitude of submission before God on the part of believers no matter what their social status or economic condition may be, and poverty does not necessarily predispose one to this virtue (1950: 263–65).

5. *ʿānāw* and *ʿānî*. Since the analyses of van der Ploeg and Baudissin hinge in part on a particular understanding of the relationship between *ʿānî* and *ʿānāw*, it is necessary to sort out the issues behind this linguistic debate.

The word *ʿānāw* occurs in its plural form *(ʿănāwîm)* in all but one (problematic) case (Num 12:3); consequently, there is some question whether or not the word is simply a variant plural form for *ʿānî*. It is difficult to know how to settle this debate: on the one hand, the LXX renders *ʿănāwîm* as *praΰs* (Gk "mild, soft, gentle, meek") in 9 of its 24 occurrences, whereas it renders *ʿānî* as *praΰs* in only 4 instances, preferring instead to render it in numerous instances by *ptōchós* (Gk "one who crouches or cringes; a beggar"; cf. Hands 1968: 62–76; Martin-Achard 1965: 355; van den Berghe 1962: 275). On the basis of this evidence, it would seem reasonable to suggest that some sort of differentiation in meaning between *ʿānî* and *ʿănāwîm* is warranted, and hence to maintain that these are indeed two different words (Rahlfs 1892: 56–60; contrast Birkeland 1932: 20).

However, in no case does the plural form *ʿănāwîm* occur side by side with the plural of *ʿānî* in such a way that would lead us to think that specific authors used these as two different words (cf. Delekat 1964: 45). The only exceptions are in the Psalms (9–10; 22; 25; 34; 37; 69), where *ʿăniyyîm* and *ʿănāwîm* are mixed, though because these texts do represent the exceptions, we must remain open to the possibility of scribal error in these instances (Birkeland 1932: 14–15; cf. Gillingham 1988–89: 17). Furthermore, many of the plurals represent Kethib (written) and Qere (spoken) variations in the scribal editorial tradition of the Hebrew text (on 5 occasions the term *ʿănāwîm* is used as the Qere for a Kethib *ʿăniyyîm:* Pss 9:13; 10:12; Prov 3:34; 14:21; 16:19; while *ʿăniyyîm* on 4 occasions is the Qere for a Kethib *ʿănāwîm:* Isa 32:7; Amos 8:4; Ps 9:19; Job 24:4; cf. Orlinsky and Weinberg 1983).

Those who argue that *ʿănāwîm* and *ʿānî* are different words would have to see in this state of affairs scribal confusion over the two words. However, it is much more likely (from our knowledge of ancient scribal practices) that the variation simply reflects the differences between historic spellings and spoken dialect. It is preferable to see in *ʿānî* (whether singular or plural) and *ʿānāw* (almost exclusively plural) linguistic variants of the same word. It may be the case that by the time of the LXX, the translators thought that *ʿănāwîm* and *ʿăniyyîm* carried different meanings (a distinction maintained in postbiblical Hebrew), but a comparison of their usage in the Hebrew Bible shows this is not the case. We may finally note that since the plural forms *ʿăniyyîm* and *ʿănāwîm* go back to at least the 8th-century prophets (Isaiah uses *ʿăniyyîm;* Amos uses *ʿănāwîm*), this Hebrew dialectical and spelling variant is quite old and should not be explained as a product of Aramaic influence, as Birkeland seeks to do (1932: 15–16, 19–20).

A problematic singular form *ʿānāw* occurs in Num 12:3. The word is commonly translated "humble," pointing to Moses as the most humble person in the world. Rashi sustains this interpretation in his commentary on Numbers when he says that *ʿānāw* means "humble" *(šāpāl)* and "patient" *(sabělān).* If

this is true, this would be one case where *ʿānî* and *ʿānāw* clearly diverge from one another as separate words. However, while the Kethib is *ʿānāw*, the Qere is the unusual *anyw*. Gray explains the *yōd* in the Qere as "a *mater lectionis* to indicate that the last syllable is to be pronounced as in *dĕbārāw"* (*Numbers* ICC, 124; cf. Rahlfs 1892: 95–100). If this is the case, the Qere is comparable to that for *stw* (Cant 2:11), which has a *yōd* inserted before the *waw* in the Qere to indicate that the word is to be read *sĕtāw* (cf. Rahlfs 1892: 98–99). This reading for *ʿānāw* is known from Qumran and later rabbinic writings, although curiously it does not appear at all in the Mishnah, which knows only *ʿānî* and *ʿăniyyîm* (Kandler 1957). While this analysis is possible, there are other equally plausible interpretations for this scribal notation (cf. Birkeland 1932: 18–20). The consonantal form of the Qere appears to combine both *ʿānî* and *ʿānāw*, perhaps to indicate scribal uncertainty over this word, or to note dialectical variation, or to indicate that *ʿānāw* is to be read as *ʿānî*. This latter suggestion is supported by the Samaritan Pentateuch, which may read *ʿānî* in Num 12:3 and not *ʿānāw* (cf. *THAT* 6: 259). In light of the ambiguity of this situation, it is quite possible that the *ʿānāw* in Num 12:3 should be treated as *ʿānî* and translated: "Moses had suffered more/was more oppressed than any other person in the world."

If *ʿănāwîm*, then, is nothing more than a plural form of *ʿānî*, the meaning of *ʿănāwîm* must be sought in conjunction with all the *ʿānî* texts. Three things will follow from this. (1) The term *ʿănāwîm* will be understood to denote concrete socioeconomic forms of poverty: it cannot be viewed as a condition that occurs by chance or by not being upright; rather, it is the product of oppression (Kuschke 1939: 48–51). (2) The religious connotation of "humbleness" will be rejected, although it will not be necessary to lay aside the biblical idea that God is concerned for the oppressed, and we can still see that the poor are depicted as those who do call on God in their oppression (cf. *THAT* 2: 345); in other words, the relation between God and the poor is a matter of justice, not based on piety (*THAT* 2: 352–55). (3) The statistics for word distribution will be combined, making *ʿānî*/*ʿănāwîm* the predominant word for poverty in the Hebrew Bible.

For another noteworthy discussion of the semantic meaning of *ʿănāwîm*, see Kraus 1986: 150–54. Other important discussions on poverty in the Psalms include Bolkestein 1939: 23–32; and Stamm 1955: 55–60.

H. Conclusion

This survey of the various terms for "poor" in the Hebrew Bible vindicates the context-oriented method outlined at the beginning of this article. Close attention to the precise usage and statistical distribution of these terms makes us aware of the diverging notions about poverty that infuse the biblical text. The classic discussions of the etymologies of the terms, while certainly important exercises, are generally unhelpful as guides to the meaning of these terms. Furthermore, the etymological approach fails to grapple with the diverging ideologies that exist in the text, and that are brought to the surface in a contextual analysis of the terms for "poor."

Some streams of the biblical tradition are clearly concerned about poverty, although their theologies and analyses of poverty differ radically. Nevertheless, the legal, prophetic, wisdom, and liturgical traditions all see poverty as a matter of grave significance to the community. The philosophies that drive these streams of tradition, in part, derive and explain their social visions in light of their confrontation with the realities of poverty in ancient Israelite society. Poverty is a decisive issue in the prophetic and legal traditions. It is in these traditions that we are brought face-to-face with the harsh living conditions of the poor: hunger and thirst, homelessness, economic exploitation, legal injustices, lack of sufficient farmland. All these form the web of poverty in ancient Israel. The prophets protest what they see to be the oppression of the poor at the hands of the society's rulers, while the legal tradents offer some limited provisions to ease the burdens of those who suffer in this situation. The liturgical tradition, as represented in the Psalms, presents a God who assists the poor in their distress, and the psalmists offer many prayers on their behalf. However, as we have seen, the Psalter's use of terms for the poor tends to be rather vague with regard to their specific circumstances, causing us to wonder if the text is more metaphorical in its use of the terms and therefore more spiritualized in its approach to the topic. The wisdom tradition offers divergent positions. Proverbs, in part by drawing on a different vocabulary for poverty, develops a markedly different view of poverty: to the wise, poverty is either the result of laziness or represents the judgment of

God. By contrast, the book of Job moves in the direction of the language and analysis of the prophets. In this book, the poor are victims of economic and legal injustices. Furthermore, poverty becomes one of the book's major issues: Job has to defend himself against the charge that he has exploited the poor. One of the arguments for his innocence is built around the fact that he has defended the cause of the poor.

One unexpected conclusion we have arrived at through this study is that the plight of the poor was not a vital issue for ancient Israel's "historians," material that in this article has been termed the "narrative literature." A notable lack of poverty language distances the pentateuchal and Deuteronomistic historical writers from the issues of socioeconomic injustice; one must press the text to have these chroniclers address the topic of oppression. It is true that the narratives about Solomon's use of forced labor (1 Kgs 5:27–32; 9:15–22; 12:1–17), the text of Samuel's critique of kingship (1 Samuel 8), and the story of Ahab's taking of Naboth's vineyard (1 Kings 21) are potentially useful for developing sociological perspectives on the treatment of the poor in ancient Israelite society; likewise, one may choose to read the Exodus events as God's intervention on behalf of the poor (cf. Gutiérrez 1973: 155, 157). But in each case, the language of poverty is not present, and it would seem that this is deliberately the case, for in the few cases these "historians" do make use of the words for "poor," these terms either take on different nuances or are used to discuss matters that have nothing to do with the situation of the poor. It would seem, then, that the writers of the pentateuchal and Deuteronomistic narratives are not concerned with a critique of poverty and injustice, even in the case of the Exodus text. An alternative analysis of these texts would argue that the writers of Exodus and Samuel–Kings are concerned with developing a critique of kingship and foreign domination, but not with an analysis of the structures of poverty in their society. This latter conclusion, though somewhat negative, reveals an important insight into the diverse character of social thought in the Hebrew Bible.

A. Methodology

Despite much excellent work on countless individual texts (and even authors such as James and Luke), and innumerable general studies following the classical word-study methodology, we still lack a solid, thorough overview of NT teaching on the poor/poverty. The utter inadequacy of word-study approaches may be seen in the common omission of such theologically fundamental texts as Matt 25:31–46, where poverty is concretely described ("I was hungry … thirsty … naked") but without a general word for poor/poverty. Sweeping theological conclusions drawn from highly selective word studies have tended to be misleading. While much of homiletical value can be found in existing works, the common tendency to systematize (with forced ideological harmonization) makes clear the need for further interdisciplinary and integrative study. Continual disagreement about socioeconomic background, date, and authorship of many NT documents makes any effort at comprehensive overview tentative, but growing sensitivity to NT diversity, ideological pitfalls, and new anthropological perspectives are making possible considerable

advances on previous studies in an area that undoubtedly will involve much debate for years to come. In the Gospels, in addition to texts that refer explicitly to the poor, debate continues regarding the socioeconomic level of Jesus, his disciples, the author of each gospel, and the ecclesiastical situation addressed. Anthropological and feminist studies often broaden definitions and concerns to include groups socially weak, marginated, and despised: women, the sick and handicapped, tax collectors, sexual minorities, etc.

B. Terminology

Classic word-study approaches (*TDNT* 6:885–915; *NIDNTT* 2: 820–28) focused especially on *ptōchós* ("poor, oppressed," lit. "beggar"), by far the most common term for the utterly destitute in the NT (34 times). However, in ancient Greece the most common term was *pénēs*, describing one who has little and must live frugally (used only in 2 Cor 8:9 in the NT). Other terms include *penichrós* ("poor," Luke 21:2; cf. *hystérēmatos*, v 4, "want") and *endeḗs* ("needy," Acts 4:34). Terms for need and want tend to be neglected in vocabulary surveys (see *chreia* 49 times in the NT; Acts 2:45; 4:35; Phil 4:16, 19; Titus 3:14; 1 John 3:17). The words for "poor" cannot be "defined" exhaustively and statically, but generally designate persons and groups lacking (totally or in some degree) the necessitites of life: food, drink, clothing, shelter, health, land/employment, freedom, dignity and honor, etc. (cf. Job 24:1–12). While poverty may be concretely indicated by specific manifestations (hungry, thirsty, naked, homeless, unemployed, despised), the presence of specific manifestations cannot simply be equated with a socioeconomic condition of poverty (Peter became hungry, Acts 10:10). In addition, various texts speak of poor/poverty metaphorically (Rev 3:17), though in certain cases exegetes continue to debate whether the usage is literal or metaphorical (2 Cor 8:9; Stegemann 1984: 14–15).

Malina (1986: 156) has argued from anthropology that in biblical cultures (as in modern Latin America) economics, politics, and religion commonly are embedded in kinship institutions, with the result that "wealthy 'sonless' women whose husbands have died are referred to as 'poor widows.' " Poverty in such contexts refers to "the inadequacy of life without honor, with consequent social and personal inability to participate in the activities of the community, the inability to maintain self-respect as defined by community social standards." While this inclusion of dimensions of kinship and honor is helpful, the NT often is quite specific about the economic condition of "poor widows" (Luke 21:4–5) and those in need of healing (Hanks 1983: 111). The socioeconomic dimension of Pauline teaching on justification (as "good news to the poor") is best understood against the kind of background described by Malina (Rom 5:1–11; Hanks 1986a: 14–16), and the Pauline preoccupation with empowering the weak (2 Cor 12:9–10) is closely related to the Synoptic concern for healing the sick, empowering the poor, and accepting the marginated and "unclean" (Countryman 1988).

C. Epistle of James

James is the NT writing that stands closest to the OT prophets in its perspective on poverty and oppression (Hanks 1983: 45–50), not surprising if it be the earliest NT writing (45–50 A.D.?) and written by Jesus' brother (Davids, *James* NIGTC, 21–22; Maynard–Reid 1987: 8). The Jewish-Christian recipients are not for the most part destitute beggars (2:2), but neither are they wealthy (2:6; 5:1–6). As a minority group ("Diaspora," 1:1) they appear to consist mainly of small farmers and artisans—those who have little and must live frugally (Stegemann 1984: 40–41).

In addition to the term for the beggarly poor (4 times *ptōchós*, 2:2–5), related terms James employs include the "humble" (*tapeinós*, 1:9; cf. 4:6, 10); "orphans and widows" (1:27); "workers and harvesters … the just" (5:4, 6). The beggarly poor are characterized by shabby clothing (2:2); being naked or lacking in daily food (2:15–16); the weak, needy, and marginated also include women (2:15), sexual minorities (widows; the prostitute Rahab, 2:25), and the sick (5:14–15).

In continuity with the OT (Exodus paradigm; prophets) James never blames the victims (for sloth, vice, genetic inferiority, etc.); rather he focuses on oppression as the basic cause of poverty (cf. Luke 4:18–19; Hanks 1983: 38–39). The "affliction" *(thlipsis)* suffered by orphans and widows may refer explicitly to oppression (Hanks 1983: 47; Tamez 1989: 17).

The oppression of the poor and weak appears to function basically in three ways in James (Davids *James* NIGTC; Maynard-Reid 1987; Tamez 1989): (1) financial-legal mechanisms, especially against poor debtors (2:1–12); (2) greedy and boastful merchants (4:13–17; cf. "covet"); (3) wealthy landowners withholding wages, a common mechanism of oppression (5:4). The rich "oppress" (*katadynasteúo*, 2:6) James' recipients, dragging them to court. Such "injustice/oppression" *(adikía)* is basically what characterizes the entire worldly system (2:6; Pons 1971: 166; cf. 4:4; "trials," 1:2, 12).

James, like Jesus, seems not to know Paul's doctrine of the fall; rather he espouses a more typical Jewish doctrine of creation (3:9) and individual sin (1:13–15; everyone is "Adam"; *2 Bar.* 54:19). He appears to place little stress on evangelism as popularly defined. However, such limited categories may fail to recognize that the prophetic denunciation of oppression is an essential part of evangelism, conceived as the proclamation of good news—preferentially—to the poor (Luke 3:10–14; 4:18–19; 6:20–26; Hanks 1983: 109–19). James envisions a community of disciples whose new lifestyle (stressing above all a loving response to the destitute, weak, and marginated) embodies the "word" proclaimed in a "world" characterized by greed, domination, and oppression of the poor and weak (1:18, 21; 4:6; 5:19–20; Tamez 1989: 56–69).

James is concerned especially with the kinds of sins of the tongue that create a false sense of importance and security for the affluent, but which deny dignity, honor, and justice to the poor and weak (2:6–7). His understanding of justification (cf. "condemnation," 2:12–13; 3:8–9; 4:11–12; 5:6) dignifies the poor (Hanks 1986a: 14–16), focusing on the paired examples of Abraham, an immigrant (like James' recipients), and Rahab, the woman who showed hospitality to Israel's migrant ancestors. As elsewhere in the NT, becoming "doers of the word," the performance of "good works," involves above all responding in practical ways to the material needs of destitute brothers, sisters, and neighbors (1:22–25; 4:17; cf. "forgiveness" in 5:14–16). Failure to be a doer of the word in helping the poor, oppressed, and marginated is to become guilty of murdering the poor (5:6) and committing "adultery" with the world (4:4–6; cf. 1 John 3:17).

Although James commends the peaceful nonresistance of oppressed harvesters, he is not passive in the face of such injustice and oppression. Rather, he vigorously denounces the cruel oppression and violence that impoverish and kill (2:11; 3:8; 5:5–6). For his recipients he commends a wise response (cf. Q and wisdom; Adamson 1989: 363–90) of "militant patience" (Tamez 1989: 52–56; James 1:3–4, 19; 5:7–11), nonresistance (5:6), peace (4:17–18), and prayer (1:5–7; 5:13–17; Tamez 1989: 69–72). The Parousia hope continues to function vigorously as the focus of an expectation of direct divine intervention (5:7–9), which consummates the promise of a kingdom characterized by liberation, justice, peace, and love (1:12, "life"; 2:5, "kingdom"; Tamez 1989: 33–50).

Although closest to the OT, James already is at a distance from the earliest NT traditions about poverty (see D below): the Jewish Christians addressed are in exile (1:1), but are not itinerant prophets. They live in a settled community of "brothers" and "sisters" (2:6–7, 15; cf. 1:27; 2:25–26), but one which is racked with (class?) conflict (4:1–3). While James is one of the three NT authors explicitly said to be married (1 Cor 9:5; cf. Peter and Jude), his exaltation of a single woman and prostitute, and his neglect of specific family virtues and responsibilities, are closer to Q's ideal (see below) than to the teaching of some later NT writings (1 Peter, Deutero-Pauline letters and pastorals). See also HAUSTAFELN; HOUSEHOLD CODES. James prophetically denounces oppression and abuse of wealth, but does not advocate total abandonment of home, family, possessions, and trade.

D. Gospel Source "Q"

Scholarly studies suggest that the very earliest NT traditions, which are reflected in the Q source (non-Markan material common to Luke and Matthew), also provide us with the most radical presentation of NT teaching on the poor and poverty (Lührmann 1989: 70). Q materials reflect the teaching of charismatic itinerant prophets who still took the instruction of Jesus' mission discourse literally: homelessness (Luke 9:57–58 = Matt 8:19–20), and a radical separation from family (Luke 9:59–60 = Matt 8:21–22) and from property, possessions, and trade (Luke 10:2–12 = Matt 9:37–38; 10:7–16; Luke 12:33–34 = Matt 6:20–21; Luke 11:2–4 = Matt 6:9–14). This *Wanderradikalismus*, attributed by Gerd Thiessen to the Jesus

movement in general, is now more commonly understood to reflect the teaching of Jesus as preserved by the Q group. For the Q group, Jesus is viewed primarily as the prophet, and his homeless followers are also prophets (Lührmann 1989: 64, 71). The final redaction of Q is commonly dated around 60 A.D., while Mark, writing around 69 A.D., speaks not of homelessness as an inalterable condition of discipleship, but of settled communities of Christians who are incorporated into social structures (Mark 10:29–30; cf. Stegemann in Schottroff and Stegemann 1984: 158). In Q the priority attention given to the poor and evangelism of the poor is evident from the first beatitude (Luke 6:20 = Matt 5:3; cf. Luke 7:22 = Matt 11:55; Luke 4:18–19).

In the history of NT studies the apostle Paul repeatedly has been portrayed as a kind of "conservative" who betrayed Jesus' more radical teaching (on slavery, women, the poor, social outcasts, etc.). Surprisingly, however, Paul is "the only person really known to us from early Christianity who might be called a 'wandering radical' or a 'radical wanderer' " (Lührmann 1989: 70). Paul was a homeless prophet who wandered through the world without wife or family ties (1 Cor 9:5). Contrary to Jesus' mission instruction, Paul often earned his livelihood as a tentmaker (1 Cor 9:14–15). This need not be viewed, however, as "relativizing" Jesus' more radical teaching (pace Lührmann 1989: 70–71) but as an alternative expression of radical Christian freedom not so dependent upon the hospitality and donations—and ideological control—of established communities (1 Cor 9:1). For in fact, the homeless prophets portrayed in Q could only exist in dependence upon communities already existing or established by them. Paul, with his synagogue contacts and church planting, only applied to the gentile world the dialectic between homeless prophets and hospitable Palestinian Jewish communities implicit in Q's portrayal of the prophet Jesus and his homeless followers.

E. Mark

Mark employs *ptōchós* only five times in three contexts (10:21, the rich man; 12:42–43, the widow's mite; 14:5, 7, the anointing in Bethany), but a careful reading reveals abundant indirect references to poverty: the lifestyle of John the Baptist (1:6; 6:17, 27) and of Jesus (6:3; 11:12; 14:65; 15:15, 19; Pallares 1986: 176); the voluntary deprivations of the disciples (1:18, 20; 2:23–25; 6:8–9, 36–37; 9:41; 10:28–31); the socioeconomic level of the "crowds" (Myers 1988: 120) and their environment as reflected in Jesus' teaching (2:21, the use of old, mended clothes; 5:2–3, 5; 7:11–13; 8:1–2; 12:1–2).

Such evidence leads Stegemann (1984: 23) to conclude: "The movement within Judaism in Palestine associated with the name of Jesus was a movement *of the poor for the poor*." Jesus' identification as a "carpenter" (Mark 6:3) in an insignificant Galilean hamlet suggests the situation of a wage-earning day laborer: "Probably neither Jesus nor his first disciples were professed beggars, yet they shared the desperate situation of many of their fellow country folk—particularly in Galilee—barely avoiding utter poverty" (Stegemann 1984: 24; see Waetjen 1989: 10–11). Mark's gospel may be directed to a similarly poor church in Roman-occupied Syria (Waetjen 1989: 4, 15) at a time of persecution (A.D. 67–70) and before significant numbers of more affluent members were added. The paucity of explicit references to the beggarly poor *(ptōchós)* in Mark (5 times; cf. 10 times in Luke) is quite compatible with the indications of pervasive poverty (in the broader sense of the classical term *pénēs*). Numerous comments about water need not be expected from the fish that swim therein (pace Bammel in *TDNT* 6:903).

If tradition is correct in ascribing the gospel to the unmarried young rebel (from a well-to-do Jerusalem family) who agreed to share the deprivations and rigors of Paul's itinerant missionary lifestyle (Acts 12:13–14; 13:5, 13; 15:37–40; 2 Tim 4:11; 1 Pet 5:13), we can understand the proximity of his gospel to the Q source.

F. Matthew

Paradoxically, Matthew begins his account of Jesus' teaching with an apparent "spiritualizing" reference to the poor (5:3 = Luke 6:20); however, his version of Jesus' final discourse closes with what may be the most radical text on poverty in the NT (certainly, along with Luke 4:18–19 it has served as one of two pillar texts for liberation theology (Gutiérrez 1973: 254–65; Pikaza 1984). Probably, then, we should not understand Matt 5:3 as a species of Neoplatonic "spiritualizing" long dominant in church

tradition, but as a call to high-risk solidarity with poorer disciples at a time of persecution (Hanks 1986b; Pantelis 1989).

Despite the length of his gospel and his inclusion of five lengthy discourses of Jesus' teaching, Matthew contains no more explicit references to the poor *(ptōchós)* than Mark (5 times each). Three of Matthew's references (19:21; 26:9, 11) are taken from Mark (10:21; 14:5, 7); the other two (5:3; 11:5) are from Q (= Luke 6:20; 7:22). However, Matthew's option for the poor is also evident in the importance he attaches to almsgiving (6:1–4) and in his fierce denunciation of oppression (23:1–36; cf. Luke 6:24–26). In 25:31–46, writing in a conflictive situation, Matthew sets forth this option (good works) for the poor, weak, and oppressed as the *only* criterion for the final judgment—a truly radical conclusion (Miranda 1974: 118; *NIDNTT* 2: 826; Hanks 1986a: 18).

If "Matthew" was in fact the unmarried tax collector of tradition, his inclusion of sexual minorities in his genealogy is consistent with his praxis (9:9–11; cf. 19:11–12), the option he advocates not only for those poor economically, but also for despised, marginated classes (poor in terms of honor). His predominantly Jewish readership and the context of severe persecution may largely explain the necessity of his more subversive strategy (7:6).

G. Luke–Acts

Uncritical readings and word-study approaches easily established Luke's special concern for the beggarly poor (*ptōchós* 10 times plus *penichrós*, 21:2; cf. *ptōchós* 5 times each in Mark and Matthew); however, the total absence of these words in Acts has raised questions. Of the six uses of *ptōchós* in Luke which are not dependent on Mark or Q, five occur in the travel narrative of 9:51–19:27: 14:13, 21; 16:20, 22; 19:8. Also unique to Luke is 4:18, which stands as a programmatic introduction to Jesus' ministry (Ringe 1985; Hanks 1983: 97–119; cf. 6:20 = Matt 5:3).

Within Acts another problem posed is the relative concentration on the needs of the poor in the first half of the book: having all things in common (2:42–47; 4:32–37), with the poor described as those having "need" (*chreia*, 2:45; 4:35); the appointment of seven deacons to correct injustice in the church's ministry to Hellenistic widows; the exemplary ministries of Dorcas (9:36–43) and Cornelius (10:2, 4, 31) in providing alms, etc. (Moxnes 1988: 159–62). Such explicit concern for the poor, however, is almost totally lacking in the narrative of Paul's missionary travels in Acts 13–28. Paul is characterized as exemplary in his freedom from love of money (20:33–34), but his strategic gift to the poor saints in Jerusalem (which looms so important in his epistles) receives the barest mention in Acts (24:17). What recent studies have tended to overlook is the anthropological perspective, according to which the gentiles in Acts 13–28—although traditionally Israel's oppressors—were excluded and marginated from Jewish life and worship because of their uncleanness (Countryman 1988). Acts 13–28 may be criticized for concentrating too much on the quantitative aspect of church growth, but the kind and quality of community life had already been amply established in Luke and Acts 1–12, and the purpose in Acts 13–28 involves concentration on the miraculous incorporation of gentiles who are "cleansed by faith" without submission to circumcision and the law.

While older studies tended to view Luke as the "social radical" among the gospel writers, recent studies tend to view the Q source and/or Mark as reflecting more radical perspectives on the poor. Little attention has been paid to Luke's concern for the "immoral minorities" commonly marginated from society: tax collectors, prostitutes, etc. (7:2, 34, 37, 39; Hanks 1986a: 12; Countryman 1988: 66–74). Luke's heavy concentration on the economic dimension of the gospel (only partly reflected in word-study data; cf. 1:51–53; 3:10–14; 6:34–36; 9:58; 11:41; 12:33; 14:12–14, 33) is now commonly understood to respond to a situation of a relatively poor church (Caesaria/Antioch?) ca. A.D. 70–85 faced with an unprecedented influx of more affluent members and in danger of succumbing to the "love of money" characteristic of certain Pharisees (16:14; Moxnes 1988: 1–21). Luke addresses such an economically upwardly-mobile Christian community, drawing on an extensive store of Jesus' teaching appropriate to the crisis. W. Pilgrim (1981) analyzed Luke's teaching on wealth and poverty as involving three basic categories: (1) total renunciation of wealth; (2) warnings against the dangers of wealth; and (3) right use of wealth. Zaccheus' example ("I give half of my possessions to the poor," 19:8; cf. 3:10–14) is now commonly

viewed as Luke's preferred paradigm for the influx of recently converted "wealthy disciples" (a contradiction in terms for Q and Mark). Johnson (1977) argues that money in Luke often has a symbolic function linked to the acceptance or rejection of Jesus.

If the author of Luke–Acts is the traditional unmarried "beloved physician" and sometime companion of Paul in his apostolic deprivations, Luke's missionary praxis, culminating in his literary effort, undoubtedly has been correctly understood as an impressive testimony to solidarity with the poor, weak, and marginated—but perhaps a more moderate response than that epitomized by Jesus and his disciples according to Q and Mark.

H. The Pauline Letters

The seven unquestioned letters of Paul constitute documents that largely predate Q and the four Gospels. Paul's proximity to Jesus' praxis and teaching on poverty is best perceived by attention to the apostolic praxis as reflected in the "catalogs of affliction/oppression" in 1 Cor 4:10–13a; 2 Cor 4:8–10; 6:4b–10; 11:23b–29; 12:10; Rom 8:35; Phil 4:12 (Hodgson 1983).

Linguistically, all seven uses of the more explicit vocabulary for poor/poverty occur in the unquestioned Paulines. In Gal 2:10 "continuing to remember the destitute" *(ptōchós)* is viewed as a nonnegotiable element in Christian praxis common to both Petrine and Pauline circles; cf. the weak elements *(stoicheia)*, also metaphorically described as "beggarly" *(ptōchós)* in Gal 4:9. In 2 Cor 6:10 the apostle concludes the catalog of affliction, describing his own lifestyle as "poor [*ptōchós*] but enriching many; *having nothing*, and yet possessing all things." These seven "catalogs of affliction" might just as well be described as "catalogs of oppression" (Hanks 1983: 48–49). Concrete expressions of injustices suffered, with poverty and deprivation often consequent, dominate the lists.

The remaining four uses are to be found in Rom 15:26 *(ptōchós)* and 2 Corinthians 8–9, where Paul deals with the offering for the destitute among the saints in Jerusalem (Nickle 1966). The only NT use of *pénēs* (the more common word for "poor" in classical Greek) comes in 2 Cor 9:9 in the LXX-based citation of Ps 112:9 ("He scatters abroad, he gives to the poor; his justice endures forever"). Still greatly disputed is the interpretation of Paul's reference to the incarnational paradigm for the offering: "For you know the grace of our Lord Jesus Christ, that though he was rich, yet for your sake he *became poor* (verb *ptōchéo*, only here in NT), so that you through his *poverty (ptōcheia)* might become rich." Commentaries commonly have suggested Neoplatonic and metaphorical interpretations, but cf. Stegemann (1984: 15) and many liberation theologians; also the reference to the "poverty" *(ptōcheia)* of the Macedonian churches (2 Cor 8:2).

Much recent study has focused on the socioeconomic level of the Pauline churches (Theissen 1982; Meeks 1983). Stegemann (1984: 31–38) speaks of a new consensus according to which most of the early Christian communities were made up predominantly of "the little people" *(pénēs)*, including neither the destitute *(ptōchós)* nor the wealthy. However, the interpretation of texts such as 1 Cor 1:26–29 (stressing lack of honor) continue to be disputed (Stegemann 1984: 35–36). Since more spacious houses and leadership for house churches tended to come from the more affluent and educated sectors, situations arose (1 Cor 11:17–32) in which a kind of conflict could flare up between some who became drunk (11:21) and others who "hungered" and "had nothing" (11:22)—even in the Lord's Supper. Theological elements so basic as the Eucharist ("*For* I received …, 1 Cor 11:23–33; cf. 11:17–22), variations in spiritual gifts (1 Corinthians 12; 14) and the urgency of agape love (chap. 13) are best understood in the context of the socioeconomic conflict or "class struggle" between more affluent and poorer members.

However, despite such conflicts and Paul's deprivations, a degree of accumulated wealth (capital) was to be expected in the house churches he founded: more affluent churches are expected to save up and share with poorer ones, and parents are expected to save for their children (2 Cor 12:14). Such provisions provide continuity with the teaching in the Deutero-Pauline letters.

I. Deutero-Pauline Letters

Since 2 Thessalonians, Colossians, and Ephesians generally occupy a place between the seven unquestioned Pauline letters and the Pastorals (both stylistically and theologically), we may ask whether specifically this is true regarding their perspective on poverty.

Despite questions about authorship and date, 2 Thessalonians has much in common with 1 Thessalonians in perspectives on poverty. Both stress the Church's experience of oppression in the form of persecution, which inevitably impoverished the artisan class and manual laborers addressed (Hanks 1983: 49; Meeks 1983: 64–65). In 2 Thessalonians particularly, distorted eschatological speculation, resulting in idleness, only augmented the problem (2:1–12; 3:3–12; cf. 1 Thess 4:13–5:11; 4:11–12 ("need," *chreia*). Paul's apocalyptic gospel, however, created viable community (Meeks 1983: 174) and instilled a more sober hope. Elitist Greek prejudices against manual labor were aggressively corrected by strong exhortation to work and by Church discipline (2 Thess 4:10, 14–15).

In Colossians no explicit language for poverty occurs. However, as in the unquestioned Paulines, oppression … and persecution directed against Paul and certain churches may be viewed as the basic cause of suffering, imprisonment, and poverty (*thlîpsis*, 1:24; cf. 4:10, 18; Hanks 1983: 47–50; *adikia*, 3:25, Hanks 1983: 128).

In the *Haustafeln* (Col 3:18–4:1), the inclusion of husbands, fathers, and lords (3:19, 21; 4:1) may indicate an upward penetration of the gospel in the social structure (cf. 1 Peter), but the priority given to women (3:15) and children (3:20), plus the more detailed treatment of slaves (3:22–25) suggests that the weaker and poorer classes continue to dominate in the Church membership. Noteworthy is the explicit stress on "justice" for slaves, in the explicit sense of equality *(isótēs)*, demanded of converted lords (4:1)—especially radical if lords and slaves together are regarded as "brothers" with equal rights (4:7, 9), and if the lords were formerly characterized by covetousness rationalized by idolatrous religion (3:5) and particularly oppressive practices (1:21; 3:8; 3:25 *adikéō*, 2 times).

Colossians places special emphasis on a false philosophical teaching (proto-Gnosticism?) that "robs" the church, and on the true "riches" and "treasures" (2:2–3) of Christ's wisdom (undoubtedly metaphorical language), which may reflect certain literal economic effects of the authentic good news to the poor, contrasted with rapacious itinerant philosophers (2:8). Proper teaching on the positive goodness of creation (1:15–17) would counteract oppressive ideological tendencies in proto-Gnosticism.

In addition to authentic wisdom (2:2–3), which may reflect traditional Hebrew concerns for universal literacy, immediate solutions for poverty may be indicated in the kind of evangelization that implants a hope for radical social change (1:5, 12–13), in agape-love solidarity with the saints of all social classes (1:4; 2:2, 13; 3:12–14), forgiveness that probably includes debts (3:13), and good works to meet the needs of the more destitute members (1:6, 10; 4:10; cf. 1:7, 25; 4:2).

Analysis of Ephesians reveals a perspective that is similar to Colossians, but not identical. Direct reference to poorer classes may be seen in the former unemployed "thieves" and the one having "need" (*chreia*, 4:28) who is to be aided by "sharing" *(metadidōmi)*. "Good works" directed to the needy are seen (as in Titus) as the immediate goal of "salvation" (2:8–10). Paul suffers imprisonment (3:1; 4:1; 6:20), a result of oppression-persecution (*thlîpsis*, 3:13), producing deprivation. Slaves (6:5–8) precede lords (6:9) in the *Haustafeln*, but husbands (5:25–33a) now receive more attention than wives (5:22–24, 33b). The concern in the *Haustafeln* to strengthen the family structure (which included household servants) may reflect not only a shift in evangelistic strategy (husbands, lords) but an adaptation to bureaucratic realities in the churches' ministry to the poor (cf. 1 Timothy 5). Evangelism is now directed aggressively toward the oppressive ruling classes ("boldness … ambassador") and not just to the little people (6:19–20). Hence prophetic denunciation of oppression and injustice ("darkness," 5:11), fervent intercession, and the practice of liberating justice (6:14; cf. Job 29:11–17; Isa 59:17) are advocated in the face of demonic structures of evil (6:1–18). Many perspectives similar to Colossians are repeated (love, inheritance, covetousness, God's universal Fatherhood, deacon ministry, forgiveness).

J. The Pastoral Letters

The focus of the Pastorals on the poor must take into account the socioeconomic status of the purported author (Paul), the recipients (Timothy and Titus) and the churches in Ephesus (1 Tim 1:3) and Crete (Tit 1:5) where they minister, as well as their explicit teaching about wealth and poverty.

Basically we find "Paul" in the same conflictive, oppressed, impoverished status of the apostle in the "tribulation lists" of 1–2 Corinthians and Romans. He who once persecuted the infant Church, even

supporting violence (1 Tim 1:13) is now the victim of continual persecution and oppression (2 Tim 1:12; 4:14–15), unjust imprisonment (2 Tim 1:15–18; 2:9–13; 3:10–12), deserted by friends and colleagues (2 Tim 4:9–12, 16), facing the death penalty (though innocent of all wrongdoing; 2 Tim 4:6–8, 17–18), fearful of entering into a cold winter without his cloak (2 Tim 4:13, 21). Both Timothy and Titus are expected to continue the conflictive, impoverished apostolic lifestyle (1 Tim 1:18; 6:12; 2 Tim 1:6–8; 2:3–6; 3:10–14; 4:5) as originally exemplified by Jesus in the gospel (Tit 2:11–14; 1 Tim 1:11–12; 2:5–6; 2 Tim 1:10–12; 3:8–10, 13), who similarly suffered oppression and violence (2:5–6; 3:11–12), yet loved even his oppressors and persecutors (1 Tim 1:13–14, 16; 3:16–17), and was vindicated by his resurrection (3:16–17).

Analysis of the Pastorals' controverted teaching ("bourgeois"? see below) to the churches in Ephesus and Crete should not be carried out in isolation from the above-mentioned elements of continuity with the Jesus of the Gospels and the Paul of the seven unquestioned Pauline letters. Significant elements of discontinuity are discernible, but many studies oversimplify or exaggerate them.

The lowly socioeconomic status of the churches in Ephesus is reflected in 1 Timothy, especially in the detailed instructions given to counteract ecclesiastical bureaucratic paternalism in the care for "real" (impoverished) widows (5:3–16) and the maintenance of social responsibility in the extended family; in the qualifications for deacons (and deaconesses? 3:8–13) who minister primarily to the poor; and in the instructions to slaves (household servants, 6:1–2; cf. Tit 2:9–10; note the omission of parallel instructions for slave owners; cf. Philemon).

Women of means are frequent converts, but exhorted to minimize socioeconomic differences by their simple dress style (1 Tim 2:9; cf. 1 Pet 3:3). The good works, so central in Titus (1:6; 2:7, 14; 3:1, 13–14; cf. 1 Tim 2:10; 5:25; 2 Tim 2:21), represent the chief aim of redemption (Tit 2:14) and the second great purpose of inspired Scripture (2 Tim 3:14–17; Hanks 1986a: 19). These are works particularly defined as undertaken on behalf of those who lack the essentials of life (Tit 3:14; cf. Matt 25:31–46; Miranda 1974: 18).

Often cited without reference to the above contexts and teaching are two texts in 1 Timothy commonly said to represent a bourgeois adjustment—or contradiction—of Jesus' radical teaching in Luke. The first, 6:6–10, counsels those like Timothy, who have only the bare necessities of existence, to be content and avoid the love of money ("a root of all kinds of evil," 6:10). The second, 6:17–19, instructs Timothy how to reform the lives of the rich. Whereas Jesus in Luke often called for total renunciation of wealth, the "Paul" of the Pastorals would have his emissary in Ephesus simply advocate generosity and good works. Undoubtedly a certain diversity of historical contexts and teaching is found here. However, the generosity and good works that would be demanded of the rich in an impoverished church undoubtedly would involve something far more stringent than in a modern affluent neighborhood—especially when backed up by the radical examples of Jesus and Paul (cf. Zaccheus under Luke). The "generosity" to be demanded "(*koinōnikós,*" 6:18) may involve a kind of solidarity or pooling of resources and sharing that really has no limits (cf. Acts 2; 4). Another factor is that the Jesus of Luke's gospel often confronts the unconverted rich directly (6:20–23), while in the Pastorals, "Paul" speaks to wealthy converts—and then only indirectly through his emissary ("command them …," 6:18).

Factors that produce poverty indicated in the Pastorals include especially persecution, oppression, and injustice (2 Tim 2:19; 1 Tim 1:19); idolatry and the false teaching of the pseudoprophets (2 Tim 2:16); and coveting (2 Tim 2:22; 3:6; 4:3; 1 Tim 3:3–8; 6:9; Tit 1:7–11; 2:12). As in the early Paulines, the consummation of God's kingdom in the Parousia stands as the ultimate solution, but is no longer expected to occur within Paul's lifetime (cf. 1 Tim 6:14; 2 Tim 4:8; Tit 2:13).

The evangelization of the world with the gospel remains (at least implicitly) as good news that gives special hope to the poor, as evidenced by the ready response of widows and slaves. Salvation is never limited to a Platonic heavenly sphere (2 Tim 4:18), but includes material relief in this life (2 Tim 4:18).

The church is the "pillar and ground of truth," particularly because it represents the new alternative community where God's just and loving purpose for all humanity begins to be realized. Prophetic denunciation of persecution and oppression may be seen in the remarks on Alexander the coppersmith (2

Tim 4:14; cf. 1 Tim 6:13), but the false teachers condemned held numerous tenets that would be detrimental especially to the poorer members (see food prohibitions, 1 Tim 4:3). Thus, even proper church government (so central a concern in 1 Timothy and Titus) becomes a means for ensuring that the churches, like their apostle, "remember the poor" (Gal 2:10). It might even be argued that historically, these most "conservative" epistles have contributed most to economic development and the liberation of oppressed classes in those countries which early extended the Calvinistic interpretation of their teaching on church government to the national political level (López Michelson 1947).

K. 1–2 Peter, Jude

1 Peter, probably a baptismal homily/tract proceeding from the Petrine circle (1:1; 5:12–13) in Rome (ca. 80 A.D.?), addresses churches in five provinces of Asia Minor (1:1; modern Turkey). Although the general technical terms for poor/poverty are absent, the relatively impoverished situation of the churches is clearly represented in various ways.

First, the Jewish and gentile believers are described as homeless, either "visiting strangers" (1:1), "resident aliens" (1:17), or both (2:11), sharing the Diaspora exile experience of non-Christian Jews in Asia Minor (1:1). Whether these terms be limited to a literal sense (Elliott 1981), or begin to include the (neo)Platonic cosmology explicit in the book of Hebrews, a large measure of socioeconomic content is increasingly recognized.

Second, the paradigmatic and major subgroup within the churches addressed is that of "household servants" (2:18–25) working in mainly non-Christian manors. The second major subgroup is that of the wives of unbelieving husbands in households whose economic means (2:2) obviously exceed those of the house servants. Recent converts include especially younger men of uncertain economic means (5:7).

Analysis of the causes for poverty may begin by studying the socioeconomic situation of the five provinces, of Diaspora Jews in the area (Elliott), and of gentile converts (largely former God-fearing proselytes) in the new sect. Particularly, the Diaspora experience of homeless aliens and separation from official Judaism resulted in frequent oppression and persecution (1:6; 2:12, 18–21; 3:14–17; 4:1, 12–19; 5:8–10).

The suffering and deprivations of uprooted "homeless" is countered in 1 Peter by incorporation into the new community of the church as the "household of God" (2:5; 4:17). In this new home (cf. "heaven" in the book of Hebrews), God is the gracious Father (1:2–3). The few affluent male converts (3:7; 2:13–17) are encouraged not to withdraw from public life, but to set examples as public benefactors (2:14; cf. Rom 13:3), a function which often included political and structural economic measures in times of scarcity and famine (Winter 1988a; 1988b). The proclamation of the gospel as "good news to the homeless" (1:12, 25; 2:9–10) thus imparted to uprooted recipients a sense of dignity and status (1:5, 9; 2:9–10). Tendencies toward unhealthy paternalism (see 1 Timothy 5) were thus vigorously counteracted.

The identification of imperial Rome with the name "Babylon" (5:13) suggests not only the resort to pseudonymity common in times of persecution (cf. book of Daniel), but also the kind of prophetic denunciation against oppressors elaborated in Revelation and James. 1 Peter is realistic in recognizing that such oppression may continue to occur even within the household of God (5:2–3), where all such behavior is subjected to divine judgment (4:17).

The newly baptized converts were born again to a living hope (1:3, 21) that included life in the new people of God, which was to be consummated at the Parousia (2:12; 4:13), seen as the ultimate solution to all persecution, homelessness, oppression, poverty, and suffering.

Although Jude purports to be the brother of James (1), his undisguised fury against false teachers (4–19) seems far removed from James' indignation against the rich who oppress the poor. Conceivably Jude attacks the kind of ideology that evolves to rationalize injustice, oppression, and indifference to the material needs of the poor, whose needs should be ministered to in the "love feasts" (12, "feed themselves"; cf. "coveting" in 16, 18). The "impiety" (*asébeia* 6 times 4, 15, 18), which appears to be the keynote of the epistle (Bauckham, *Jude, 2 Peter* WBC, 37) commonly translates the Heb *ḥamas* ("violence") in the LXX (Pons 1971: 166), and may be understood as reflecting the kind of violence the poor suffer at the hands of the wealthy and powerful. Even the sexual excesses Jude so vigorously

condemns (*asélgeia*, 4; cf. 8, 10) may also involve oppression and force against the weaker elements in society.

While Jude made no reference to the common cause of poverty signified by *adikia* (injustice, oppression), 2 Peter makes this concept basic to the epistle (2:9, 13, 15) and juxtaposes the injustice-oppression of the world (1:4; 2:20) with the justice of the kingdom of God and the promised new heavens and earth (1:1, 11, 13; 2:5, 7–8, 21; 3:13). As in Jer 22:16, "knowing God" involves doing justice (1:2, 8; 2:20–21; 3:18; Miranda 1974: 44–53). The use of *asébeia* strengthens the case for a reference to the violence commonly suffered by the poorer and weaker sectors of society (2:5; cf. *ḥamas* in Gen 6:11, 13). Traditional elitist Greek virtues (1:5b–6) are placed in a radical Christian framework, beginning with faith (1:5a) and culminating in the brotherly friendship and agape love that characteristically maintained the solidarity of the socioeconomically diverse Christian communities (1:7; cf. 18; 3:1, 8, 14–15, 17; cf. 2:13).

L. Revelation

Word-study approaches on poverty gave rather meager results for the book of Revelation. The poverty *(ptocheia)* of the church in Smyrna is attributed to the oppression-persecution proceeding from certain "Jews" (2:9; Hanks 1983: 48). The reference (3:17) to the "poor" *(ptochós)* Laodicean church, although metaphorical, has been found particularly helpful in delineating the literal sense: having "need" *(chreia)* = wretched, pitiable … blind and naked … shame. Rich and "poor" alike succumb to the idolatrous economic demands of the second beast in 13:16 (*ptochós*, parallel to small and great … free and slaves; cf. the denunciation of the slave traffic in the "bodies and souls of men," 18:13; "slaves and small," 19:18). Such skimpy linguistic data, coupled with the current popular escapist eschatological "interpretations," ill prepare us to understand why F. Engels in 1883 should select Revelation as the subject of his only article on a biblical book (Engels 1974).

However, recent Latin American studies (Stamm 1978; Foulkes 1989) and sociological approaches (Schüssler Fiorenza 1985b) make clear the truly radical character of apocalyptic and utopian genres, which commonly proceed from poor, oppressed, and persecuted groups (see the exiled author's description of his situation, 1:9). Stamm called attention to the severe denunciation of imperial oppression and obscene luxury, rationalized by idolatrous religious claims (1978, chaps. 13, 17–18). Schüssler Fiorenza writes: "To those who are poor, harassed, and persecuted, the promises to the 'victor' pledge the essentials of life for the eschatological future: food, clothing, house, citizenship, security, honor …" (1985b: 196; cf. 124–25).

The perspective on sexual minorities in Revelation is paradoxical. Prostitutes undoubtedly would have felt much more comfortable sitting at Jesus' feet by the Sea of Galilee than in the seven churches in Asia Minor, listening to John's description of imperial idolatry with all the lurid references to the "Great Harlot" (chaps. 17–18). On the other hand, the seer's declaration that sexual relations with woman are "defiling" (14:4) brought unspeakable joy for centuries of medieval monks, who delighted to see themselves as the "virgins" espoused to the Lamb (Boswell 1980: 216–18). Post-Reformation heterosexist Protestant exegesis commonly confesses the text to be one of the most "difficult" in the NT (Schüssler Fiorenza 1985b: 181–92; Countryman 1988: 137–38).

M. Gospel and Letters of John

The gospel and letters of John may appear singularly deficient in specific ethical content. Jesus reveals only that he is the Revealer and in another apparent tautology commands a love, which keeps his commandment, which is to "love one another." The four references to the ever-present beggarly poor (*ptōchós*, John 12:5–6, 8; 13:29) hardly are such as to inspire great concern (*TDNT* 6:907). Hence First World Johannine scholarship has focused on other areas, largely ignoring significant questions raised by Miranda (1977; see below) and a few other liberation theologians (Herzog 1972) and Third World exegetes. However, a growing minority of theologians interpret the Johannine writings as representing a unique, radical perspective. Just as they have opposed traditional "feudalizing" of the kingdom in the Synoptics, so they reject the "Platonizing" of (eternal) life in the Johannine writings.

John's prologue speaks of the Word become "flesh," which if not explicitly designating an option for a humanity that is "intrinsically poor" (Pixley and Boff 1986: 69), at least points to characteristic weakness (6:63), of which human poverty was a dominant expression. The homelessness and margination of the incarnate Word (1:11, 46; cf. 14:2–3) is another Johannine motif that expresses a painful dimension of poverty (Pixley and Boff 1986: 72–74; Fraijo 1985: 62). Mainline scholarship stresses persecution and excommunication as dominant formative experiences in the history of the Johannine communities, but has not commonly recognized the deadly economic deprivation and violence involved. As in the Synoptics, Jesus' healing miracles are usually directed toward the poor (e.g., John 9:8, "beggar") and the weak (5:1–13; 4:43–54), and the same is true for the provision miracles (2:1–11; 6:1–15). The forward placement of the temple cleansing (2:13–22, following the provision of wine for an obviously poor family) gives prominence to John's critique of the oppressive Jewish oligarchy, for "it is precisely in the limits of the Temple where Jesus opts for the marginated: the sick, poor, publicans, women, children, foreigners" (Zorrilla 1988: 71).

Above all, the Johannine substitution of (eternal) life for the Synoptic stress on the kingdom must be understood dialectically (Barrett 1972) and polemically in the context of excommunication, persecution, and violence. Traditional Platonizing interpretations of John radically distort the original meaning and seek to elude the painful "bite" of the polemic. The "abundant life" John offers (10:10) avoids extremes of nondialectical Pentecostal-charismatic "prosperity theology," but is not limited to a Platonically spiritualized (nonmaterial) realm (3 John 2). Miranda (1977) may have erred by succumbing to Bultmann's elimination of futuristic eschatology, but not in delineating the radical character of the Johannine perspective on the poor, justice, injustice/oppression (*adikia,* 1 John 1:9; 5:17), sacrificial love, and life.

In synthesis the gospel of John may be viewed as outlining the causes of poverty in the persecution, oppression, and violence suffered by the community; 1 John points explicitly to the poverty commonly resulting (1 John 2:17, "need"; cf. 3 John 5–8), and the appropriate response of agape love in the context of Christian communities characterized by *koinōnia* sharing. "John's love is love of the deprived, the poor, the needy" (Miranda 1977: 95). Despised and marginated sexual minorities are treated with concern and given special honor (4:1–42; cf. 8:1–11).

N. Hebrews

Paradoxically, Hebrews makes unprecedented use of the OT (particularly in the radical Exodus-Wilderness-Conquest traditions), yet also is commonly believed to represent an extreme in the NT writings in the degree of (neo)-Platonizing evident in its language and theology. In its perception of poverty and its causes, Hebrews is basically continuous with the Exodus paradigm. The question still debated is whether the solution is conceived of in (neo)Platonic terms: an Exodus-type escape, but to a spiritualized, nonmaterial heaven; or whether the eschatology of Hebrews is basically consistent with the apocalyptic-utopian perspective common to the rest of the NT. The author obviously represents an educational elite and addresses well-educated readers who seem more impoverished from persecution than originally poor (ca. 67–70 A.D.?). The two leading candidates, Apollos and Barnabas, each shared Paul's itinerant lifestyle (cf. 13:2–3 on hospitality and imprisonment).

The key passages are few but eloquent and significant for the NT teaching on the poor. The most explicit text climaxes the great faith chapter, countering the militarism and political triumphalism of 11:32–34a with reference to "others … of whom the world was not worthy," whose poverty (v 37, *hysteréōmenoi*) is exemplified in their lack of adequate clothing (37a), and accompanied by brutal violence (35, 37a), ridicule and torture (36a), and unjust imprisonment (36b). Such impoverished, brutalized souls, like the elect in James (2:5), are particularly rich in faith (Heb 11:39–40). Related but less explicit references to impoverished saints may be observed in the mention of new converts whose possessions were plundered (10:32–34), and of the poor Israelite slaves in Egypt (11:24–26; cf. Exodus). Women and sexual minorities receive special attention (Rahab 11:31; Melchizedek 7:3 with Isa 56:3–5), but family integrity is defended against some who despised marriage (13:4).

Since Hebrews begins by stressing that God spoke through the prophets (1:1), it is not surprising that the prophetic emphasis on oppression and persecution as the fundamental cause of poverty dominates (10:33; 11:25, 37; Hanks 1983: 38–39). Such oppression impoverishes not only the original targets of persecution and discrimination but those who demonstrate solidarity with them as well (10:33, *koinōnia;* 11:25; cf. Matt 5:3; 25:31–46).

Hebrews shares with the rest of the NT an emphasis on the Church's ministry as a provisional and partial solution to the suffering of the poor. The "meeting together" is for providing for material needs as well as for spiritual edification (10:24–25). The Church's present ministry may be viewed theologically as the internalization of God's just law in the new covenant (8:8–12, note *adikia*, "oppression," v. 12; cf. 6:10; 10:17; Jer 22:16) or externally in the good works to the needy, agape solidarity, and ministry (*diakonéō*) to the saints (6:10). Brotherly love (*philadelphia*) is to be manifest in hospitality to homeless visitors (13:2, itinerant prophets and evangelists like Apollos?); ministry to those unjustly suffering imprisonment (13:3, 23), physical solidarity with the "excommunicated" (13:12–13), good works and sacrificial sharing (*koinōnia;* 13:15–16, 21). A life free from "the love of money" is prerequisite to such sacrificial external measures (13:5).

More "structural" approaches to the elimination of oppression and poverty may be seen in the new covenant provision (which internalizes Torah as a whole, not just its reformist and merciful elements; cf. the Exodus-Wilderness-Conquest traditions in 3:1–4:11) and in the military-political triumphalism of 11:32–35 (all of which are past, not contemporary realities). While not so explicit as Luke in presenting the gospel as good news to the poor, Hebrews does stress evangelism involving an integral salvation-liberation.

A more (neo)Platonist reading of the book would lead us to perceive a conflict between the utopian apocalyptic of other NT writings (Revelation 20–22; 2 Pet 3:13). However, despite some tendentious English translations, it is possible to read even the apparently (neo)Platonic texts in ways more consistent with materialist Hebrew thought and other NT books. Above all, "Mount Zion, the Heavenly Jerusalem" (12:22–24; cf. 11:10, 16) need not be interpreted as a nonmaterial realm eternally removed from the earthly scene, but as "coming" in space as well as time (13:14), like the new Jerusalem of Revelation, which finally descends to earth to consummate the kingdom of God (Heb 12:26–28 "receive"; Matt 6:10). Whichever reading is correct (neo-Platonic or materialist Hebrew), the consummation of the kingdom of God is viewed as elsewhere in the NT as the final glorious solution to the sufferings of the poor and oppressed. Certainly the book's teaching on creation (1:1–14) and resurrection (11:35; 13:20) is more consistent with a materialist reading. Even if an intermediate state and heavenly sphere receive more development and emphasis here than in other NT books, this reading need not contradict an ultimate apocalyptic, earthly-material resolution. The portrayal of Moses' decisive option for the poor and oppressed (11:24–26) is the most vivid and explicit NT paradigm of this element so basic to contemporary liberation theologies (strangely ignored by Boff and Pixley 1989, the Eng trans. of Pixley and Boff 1986). Hebrews' educated, eloquent author undoubtedly identifies with that picture.

O. Conclusion

Just as the OT presents considerable diversity of perspectives regarding the poor/poverty (see the 8th-century prophets and Proverbs), so considerable diversity must be recognized in the NT. Attempts to synthesize and harmonize biblical teaching and to draw general theological conclusions tend not to pay sufficient attention to this diversity. Heavily ideological and propagandistic works exalting the "Christian virtues of capitalism"—or socialism/communism—abound, usually highly selective in their use of "control texts" and often lacking in careful exegesis.

Liberation theology, with its emphasis on the Exodus paradigm of oppression and liberation, has planted fundamental challenges to traditional neo-Platonic interpretation of the NT. Certain liberation theologians and exegetes have made extreme statements regarding the poor/poverty in the NT. However, their perception that some kind of "option for the poor" is represented in most if not all the NT literature (far transcending occasional references to the "beggar poor") marks a major advance in NT interpretation, as is now widely recognized (*ISBE* 3: 609–11, 905–8, 921–26; Sugden 1988; cf. Adie 1984). Socioeconomic

and anthropological studies of the NT continue to debate and refine theological perceptions of the various documents regarding the poor.

However, Third World liberation theologians have only begun to take into account feminist perspectives, and feminist theology itself often has been somewhat elitist in its concerns. The socioeconomic polarization of women in the NT (poor widows or wealthy converts) has received little attention in studies on poverty and wealth. And liberation theologians have scarcely even raised any questions about NT perspectives on despised sexual minorities and uncleanness (Countryman 1988). Medieval monks assumed the NT to represent the perspective of continent bachelors; Protestantism has tended to assume that everyone except Paul must have had a wife and children. The failure to challenge sexual and family ideological assumptions has been a glaring weakness in theological efforts to delineate NT perspectives on oppression and poverty (Greenberg 1988).

Basic continuity between OT and NT perspectives on poverty and oppression is evident. However, for analysis of the factors in oppression, evaluation of the experience of poverty, and understanding of authentic liberation and integral salvation, the NT makes contributions of fundamental importance to biblical theology. Contemporary theological use of these perceptions, of course, must involve careful recourse to hermeneutics. The fact that poverty basically was caused by oppression at the time of the Exodus or in the NT does not prove that such is the case today, nor that biblical paradigms of liberation for the poor can now be slavishly imitated.

POPLAR. See FLORA.

PORATHA (PERSON) [Heb *pôrātā*› (**פּוֹרָתָא**)]. One of the ten sons of Haman (Esth 9:8). On problems surrounding this list of names, see ADALIA (PERSON). Poratha (LXX *pharadatha;* A *gagaphardatha*) perhaps renders the otherwise unattested Old Iranian name *Paru-raΘa, "having many chariots" (Zadok 1986: 109) or *Paurāta-, a short form of a name such as *Paurubāta (Hinz 1975: 191).

PETER BEDFORD

PORCH. One of several words used to designate architectural spaces that are transitional between the closed interior of a building and the courtyards that are clearly external. Some of these spaces are roofed; others are open to the sky. RSV "porch" denotes the space in front of the Hall of Pillars of Solomon's palace (1 Kgs 7:6). The Hebrew *›ûlām* is elsewhere rendered "nave" or "vestibule," in reference to the forecourt of the temple. In the RSV, that feature is denoted by "porch" only in Ezek 8:16 (cf. Matt 26:71, where *pulōn* may mean the entrance to a courtyard). The term *›ûlām* is discussed in TEMPLE, JERUSALEM.

CAROL MEYERS

PORCIUS FESTUS (PERSON). See FESTUS, PORCIUS.

PORCUPINE. See ZOOLOGY.

PORTICO, SOLOMON'S. See SOLOMON'S PORTICO.

POSIDONIUS (PERSON) [Gk *Posidōnios* (Ποσιδωνιος)]. One of three members of a delegation sent by Nicanor, according to 2 Macc 14:19, to work out the terms of a peace with Judas Maccabeus and his followers. This envoy, bearing a familiar Greek appellation, was named after Poseidon, the Greek god primarily of earthquake and water who in cult was viewed as the sea god. For the other members of the delegation, see THEODOTUS and MATTATHIAS.
